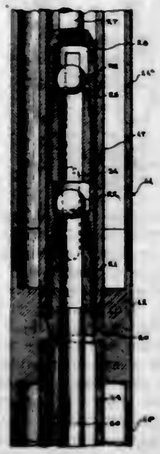
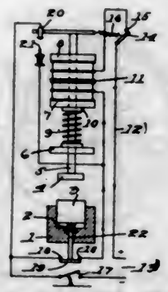
1. In a two stroke cycle internal combustion engine the combination of a crank shaft, a crank case, a stationary cylinder radial to the shaft, having its bore enlarged at the inner end to form a compression chamber, and having also a compression chamber at the outer end, a piston cylinder slidable in said stationary cylinder, having a pumping member working in said inner compression chamber, and having a head at its outer end, a piston in said piston cylinder, and means connecting said piston cylinder and said piston respectively to said shaft, for imparting rotation to said shaft by reciprocation in opposite directions, said stationary cylinder having transfer ducts, and said cylinders having ports controlled by movements of said piston cylinder and piston respectively, whereby while said piston cylinder is moving towards said shaft air is admitted to said inner compression chamber and combustible mixture is admitted to the outer compression



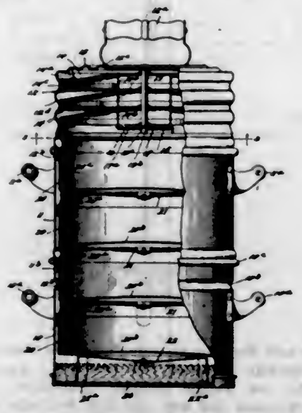
chamber, and while said piston cylinder is moving towards said outer compression chamber said mixture and said air are compressed, and ports are opened for exhaust from the space between said piston and the head of said piston cylinder, and the compressed air is admitted to said space, and then the compressed mixture is admitted to said space.

1,684,294. DIRIGIBLE HEADLIGHT FOR AUTOMOBILES. WILLIAM H. BABCOCK, Groton, Conn. Filed June 16, 1927. Serial No. 199,336. 1 Claim. (Cl. 240—62.)



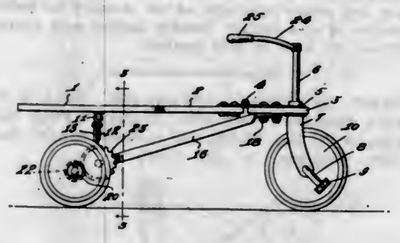
In a device of the class described, comprising in combination, the tie rod of an automobile, arms connected to the tie rod and having sockets therein, a bar having rack teeth, said bar having extensions carried thereby and engageable in the sockets of the arms, springs in the sockets engaged with the extensions, bolts carried by the extensions and slidably engaged with the arms, casings supported by the automobile, shafts rotatable in the casings and having spindles carried thereby which extend below the casings, gears fixed to the spindles, pedestals fixed to the upper ends of the shafts and rotatable therewith, headlights upon the pedestals, said gears being adapted to mesh with the rack teeth of the bar, whereby rotary movement is imparted to the shafts upon movement of the tie rod and bar.

1,684,295. COMBINATION WORKING BARREL AND SAND TRAP. ELTON L. BOYD and JAMES T. JOHNSON, Healdton, Okla. Filed Oct. 18, 1927. Serial No. 226,893. 5 Claims. (Cl. 103—179.)



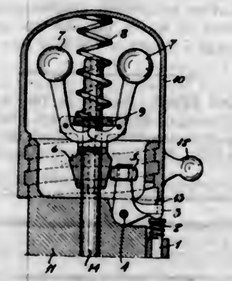
1. Apparatus for the purpose indicated comprising concentric tubular members of which the intervening space between the two constitutes a sand trap, a working valve operating in the inner tubular member, a bodily movable standing valve of which the body portion in one position closes openings of communication between said sand trap and the interior of the inner tubular member, and operative connections between the working valve and the body portion of the standing valve to effect movement of said body portion only when the stroke of the standing valve exceeds its normal stroke.

1,684,296. PRESSING OR PUNCHING MACHINE. GREGORY BRODSKY, Worcester, Mass. Filed Dec. 16, 1925. Serial No. 75,855. 5 Claims. (Cl. 192—134.)



1. In a machine of the class described, a safety device comprising relatively movable members, one of which is yieldable with respect to the other, an electromagnet for causing one of said members to approach the other, means for energizing said magnet to cause the approach of said members, means for automatically deenergizing said magnet upon the depression of the yieldable member, and means for automatically reenergizing said magnet when said members reach a predetermined relative position.

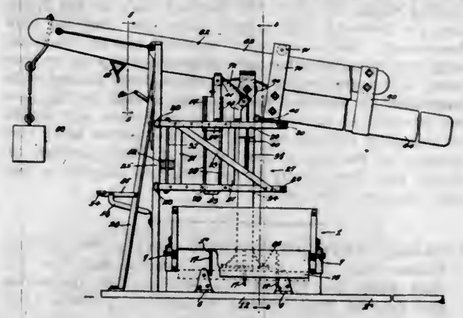
1,684,297. COOKER. ELMER E. CARY, Hollywood, Calif. Filed Feb. 16, 1927. Serial No. 168,761. 10 Claims. (Cl. 53—2.)



1. A steam cooking utensil including in combination, a boiler section, and a condenser section adapted to form a closure for the boiler, said condenser section comprising a casing, a plurality of separate and independent condenser plates arranged in said casing one above the other, a bracket secured beneath each of said plates and resting on top of the plate below, whereby the plates are spaced apart, a rod secured to said casing and extending downwardly through each of said plates and said brackets, and means for detachably securing said plates to said rod.

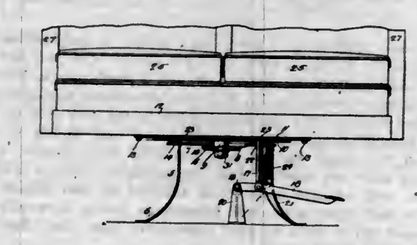
1,684,298. CHILD'S VEHICLE. ROBERT W. CASH, Hannibal, Mo. Filed June 20, 1927. Serial No. 200,110. 4 Claims. (Cl. 208—38.)

1. A child's vehicle of the character described comprising a platform including a body portion and a separate part which is hingedly secured to the body portion, steering means for said vehicle, a front wheel included in said steering means, a crank draft, means connecting said crank shaft to the body portion of the platform, rear wheels for said vehicle, and a gear connection between one of said rear wheels and said crank shaft.



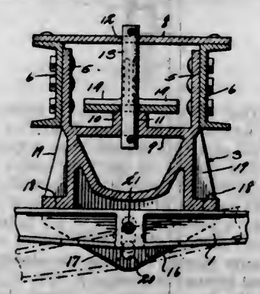
1,684,299. STARTING AND CONTROLLING DEVICE FOR INTERNAL-COMBUSTION MOTORS. BROR ALGOR DE WAERN, Stockholm, Sweden, assignor to J. & C. G. Bolinders Mekaniska Verkstads Aktiebolag, Stockholm, Sweden, a Corporation. Filed Dec. 18, 1924, Serial No. 756,851, and in Sweden May 13, 1924. 4 Claims. (Cl. 103—28.)

1. An arrangement in internal combustion motors for pumping fuel to effect starting and adjustment of the pump governor, including in combination, a support, a spring mounted pump plunger on said support, a stroke regulating member for the plunger, a spring controlled governor coacting with the regulating member and manually operable means arranged about the governor and adjustably engaged with the support so that when adjusted thereon it will actuate the regulating member and thereby the plunger and will in addition effect an adjustment of the spring controlled governor.



1,684,300. TOBACCO-BALING PRESS. ABE WEST, St. Cloud, Minn. Filed Jan. 8, 1927. Serial No. 159,860. 8 Claims. (Cl. 100—4.)

1. A baling press comprising a box, a carrier, means for supporting the carrier for movement into operative position over the box and into inoperative position laterally beyond the box, means for releasably securing the carrier in the first of said positions, a plunger mounted on the carrier, a plunger operating lever adapted when in



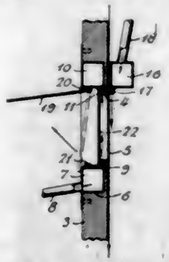
one position to render said means ineffective and means for moving the carrier into the second of said positions when said second means is rendered ineffective.

1,684,301. CAR SEAT. WALTER S. ADAMS, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1927. Serial No. 179,858. 2 Claims. (Cl. 155—96.)

1. The combination in a seat, of a pedestal having a slotted platform, said platform having an annular rail thereon; a seat plate mounted on the rail and having a depending pivot pin extending through the slot in the platform; a double-ended locking plate on the pivot pin; lugs on the underside of the platform between which either end of the locking plate is located when the seat structure is in its normal position; and means for locking the seat plate against lateral movement.

1,684,302. BOLSTER. FRANKLIN E. ARNDT, Galion, Ohio, assignor to The Galion Iron Works & Mfg. Co., Galion, Ohio, a Corporation of Ohio. Filed Oct. 25, 1927. Serial No. 228,675. 3 Claims. (Cl. 280—111.)

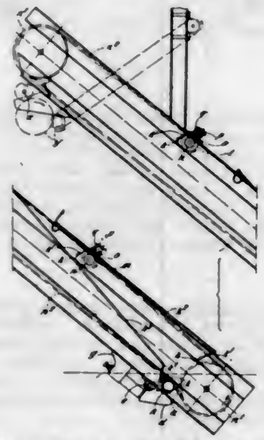
1. In an implement of the character described, frame bars, a front axle, and a bolster adapted to support the forward end of the frame bars upon and above said axle,



central aisle, an upper deck having a similar aisle, and said bolster being formed with a forwardly inclined face plate provided at its side portions with rearwardly extending wings to which the forward ends of the frame bars are fastened, said bolster being also provided with downwardly projecting skirt portions spaced longitudinally one from the other and embracing the axle between them, said skirt portions being respectively formed with longitudinally disposed slots, a pin carried by the axle and movable at its ends freely in said slots, and means for retaining said pin in said slots, the bolster being also provided at the ends of and joining the skirt portions together with downwardly facing shoulders adapted to rest upon the top of the axle.

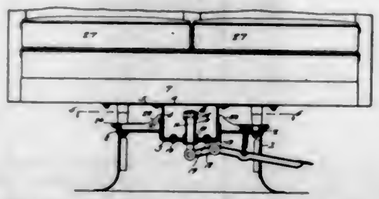
1,684,303. AUTOMOTIVE BUS. RUFUS W. BAILEY, Kansas City, Mo. Original application filed Dec. 15, 1924, Serial No. 755,901. Divided and this application filed July 24, 1925. Serial No. 45,772. 1 Claim. (Cl. 296—28.)

A coach comprising a lower deck having a longitudinal central aisle, an upper deck having a similar aisle, an exit at the right rear of the lower deck, and a penthouse in continuous open communication with the lower deck, having its entrance substantially opposite and facing the deck exit, the floor thereof being raised, a penthouse exit facing the rear of the coach having a self-closing door therein, a winding staircase leading from the penthouse exit to said central aisle of said upper deck adapted to lead passengers to said upper deck, said passengers facing forwardly into said upper aisle as said passengers take their final step on said upper deck.



1,684,304. COOLING AND FIRE-PREVENTION APPARATUS FOR MOTION-PICTURE PROJECTORS. BORIS J. BERO, New York, N. Y. Filed Sept. 2, 1927. Serial No. 217,034. 4 Claims. (Cl. 88—17.)

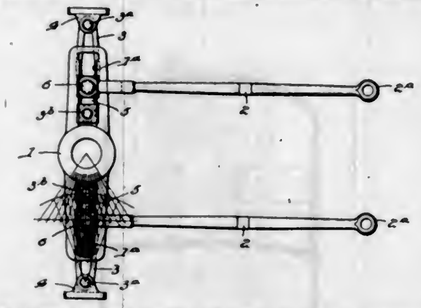
1. In a motion picture projector, a device having an aperture past which a film passes, means on one side of said aperture for passing a current of air adjacent the film on the same side thereof as the light source of the projector, suction means for causing said current of air to pass over the entire surface of the film exposed to the light source, whereby a protective layer of air is interposed between the entire surface of the film exposed to the action of the light source thereby to reduce the absorption of heat by the film, and means for passing a current of air on the other side of the film whereby to remove heat absorbed by the film.



3. In a motion picture projector, a film trap having an aperture past which a film passes, means on one side of said aperture for blowing a current of air across said film, suction means for said current of air on the opposite side of said aperture, a shutter for said aperture movable by gravity to closing position, a transparent partition cooperating with said film to form a chamber for said passage of air, and means externally of the chamber for deflecting a portion of said current directly against said shutter to maintain the same in open position.

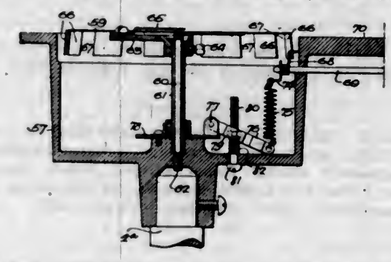
1,684,305. SCREENING APPARATUS. FRANCIS WHITWELL BRACKETT, Colchester, England. Filed May 1, 1926, Serial No. 106,058, and in Great Britain Dec. 28, 1925. 6 Claims. (Cl. 209—307.)

1. A screen of the kind described comprising a lower grooved drum, an upper grooved drum, a continuous rope wound in the grooves of the two drums and at least one guide roller having peripheral grooves alternately of different depth and of which the shallow grooves are each adapted to engage a length of the said rope.



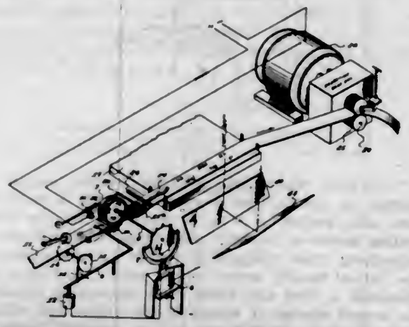
1,684,306. CAR SEAT, JAMES A. BROOKS, Kirklyn, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1927. Serial No. 179,857. 5 Claims. (Cl. 155—96.)

1. The combination in a car seat, of a pedestal; a platform secured thereto and having a depressed portion forming a centre bearing and having an annular rail depressed at certain points; a centre plate having a portion extending into the centre bearing and resting thereon; legs on the centre bearing arranged to travel on the annular rail and to normally rest in the depressed portions; means for raising the centre plate to allow it to be turned; and a seat structure secured to the centre plate.



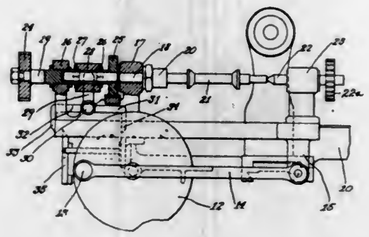
1,684,307. SHIP'S STEERING GEAR. ANDREW MAURICE BUTTERFIELD, Bath, Me. Filed Jan. 30, 1928. Serial No. 250,620. 4 Claims. (Cl. 114—144.)

3. The combination, with a rudder post, of a horizontal arm carried thereby having a lengthwise guideway, a member slidable in said guideway, a link disposed parallel to said arm when the parts are in neutral position and having its outer end articulated to a fixed pivot beyond the end of said arm, and its inner end articulated to the inner end



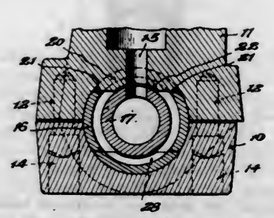
of said member, and a push and pull rod pivotally connected to said member between its point of pivotal connection to the link and the fixed pivot of the link.

1,684,308. STOP MOTION FOR KNITTING MACHINES. FRANK CRAWFORD, Sr., New Brunswick, N. J., assignor to The Crawford Manufacturing Company, New Brunswick, N. J., a Corporation of New Jersey. Filed Dec. 7, 1923. Serial No. 679,185. 7 Claims. (Cl. 66—160.)



1. The combination in a stop motion, of a casing; arms radiating from the casing; a rod carried by each arm, each rod having a finger at the outer end over which the thread passes; an arm at the inner end of each rod; trip mechanism common to all of the rods and adapted to be directly operated by any one thereof; and means for independently adjusting the tension of each rod.

1,684,309. METHOD OF AND MEANS FOR FEEDING TAPE AND PROJECTING DATA THEREFROM. ROBERT F. DIEKES, Jamaica, N. Y., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Apr. 28, 1926. Serial No. 105,333. 59 Claims. (Cl. 88—24.)

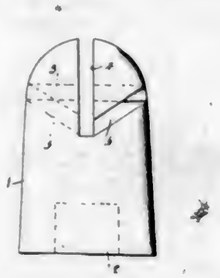


7. In combination, a recording device adapted to eject a tape therefrom with an intermittent motion, a support, means to feed said tape across said support with a continuous motion, and means starting and stopping said continuous feed with a gradual acceleration and gradual retardation.

1,684,310. MACHINE FOR FORMING HELICAL CHANNELS. WILLIAM EISENBERG, Evansville, Ind. Filed June 28, 1927. Serial No. 202,065. 2 Claims. (Cl. 90—29.)

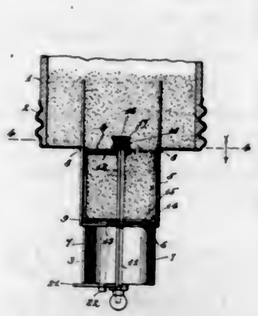
1. A machine for cutting helical channels comprising a reciprocating table, means for reciprocating said table, a rotatable turn table beside the first-named table extending angularly to the path of travel of the turn table, said turn table being mounted stationary, a dove-tailed rail on said turntable, a carriage slidable on said rail, said carriage being movable with the table, a spindle on said first-named table, a split cane rotatably mounted loosely on said spindle, a gear rigid with the cone, said gear being adapted to be releasably locked to said spindle at intervals, a collar engaging said gear for locking the latter to the spindle, and means pivotally connected to said carriage for rotating the spindle a part of a revolution when said carriage and table is simultaneously reciprocated.

1,684,311. LOCK HOUSING. CHARLES N. FAIRCHILD, Milford, Conn., assignor to Fairchild Lock Corporation, New York, N. Y., a Corporation of Delaware. Filed July 27, 1925. Serial No. 46,369. 8 Claims. (Cl. 70—90.)



7. A lock housing recessed to receive a cylindrical steering post and having a bore to receive a bolt adapted to lock the steering tube to the casing, characterized by the provision of a transverse guide integral with the housing, extending laterally through the steering post casing, surrounding the bolt to support the bolt between the tube and casing, said guide transmitting side thrusts from the end of the locking bolt direct to the side walls of the lock housing.

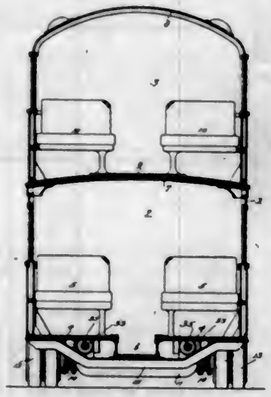
1,684,312. ELECTRICAL INSULATOR. JOHN J. FISCHER, Marion, Ind., and WARREN R. PAYNE, Denoya, Okla. Filed Jan. 19, 1926. Serial No. 82,310. 1 Claim. (Cl. 173—316.)



An insulator having a diametrical wire receiving opening, an axial slot arranged at right angles to the opening and

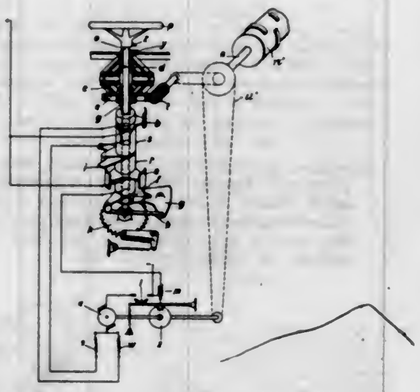
extending out through opposite sides of the insulator, said slot extending from the outer end of the insulator to a point inwardly beyond the opening, and slots arranged at

opposite sides of the first named slot and extending inwardly and laterally in opposite directions from the ends of said opening to the inner ends of the slot.



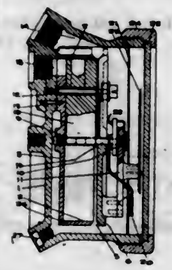
1,684,313. MEASURING AND DISPENSING DEVICE. RONALD V. GRAHAM, Yonkers, N. Y. Filed Mar. 8, 1927. Serial No. 173,698. 3 Claims. (Cl. 221—113.)

1. A device of the character described, including a casing having an opening in its bottom and having longitudinal slots in the side wall thereof, a U-frame having extensions thereon mounted to move in the slots and having longitudinal side members covering the slots, a partition supported by and movable with said frame having an opening therein, a shaft mounted centrally in the casing, shutters on said shaft oppositely disposed and alternately controlling said openings, and means for turning the shaft.



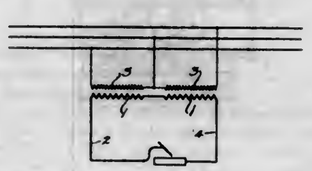
1,684,314. DRIVING MECHANISM FOR VEHICLES. CHARLES O. GUERNSEY, Philadelphia, Pa. Original application filed Nov. 3, 1924, Serial No. 747,645. Divided and this application filed Mar. 3, 1927. Serial No. 172,362. 4 Claims. (Cl. 180—57.)

1. The combination in a vehicle, of a body portion having a floor; spaced seat structures mounted on the floor at each side of the car; a depressed longitudinal aisle in the floor and between the seats; a depressed axle extending under the depressed aisle; and driving mechanism disposed on each side of said aisle and connected to said



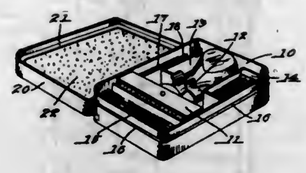
axle, said mechanism being positioned above the floor of said aisle and beneath the seat structure body portion.

1,684,315. ELECTRIC CONTROL APPARATUS. ARNOLD HALLER, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri & Cie., Baden, Switzerland. Filed Jan. 3, 1928, Serial No. 244,328, and in Germany, Dec. 11, 1926. 2 Claims. (Cl. 172—239.)



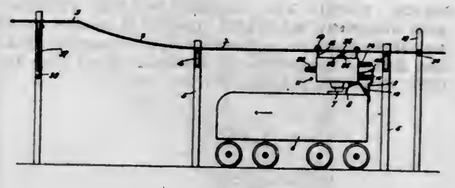
1. Electric control apparatus for traction motors comprising, in combination, a control handle, a motor-operated main switching drum, a control switch for the operating motor of the said main drum, a differential gear comprising three systems of wheels and interconnecting the control handle, motor control switch, and main drum aforesaid, a fork and roller lever mechanism connecting the second system of wheels of the differential with the motor control switch, and a slack coupling device connecting the aforesaid control switch with the field reversing switch of the motor operating the main drum.

1,684,316. FLUID-FLOW METER. WILLIAM WILSON HAMILL, Birmingham, England. Filed Oct. 12, 1922, Serial No. 594,205, and in Great Britain Oct. 28, 1921. 3 Claims. (Cl. 73—167.)



1. A flow meter, comprising a substantially cylindrical casing having a wall at its rear end and its forward end open and provided with an outlet at its upper portion, a substantially cylindrical member of smaller external contour than the interior of said casing, said cylindrical member having its rear end closed and its forward end open, the rear end of said member being detachably secured to the rear wall of said casing in substantially concentric relation with the latter, a cover plate for the forward end of said member, spaced from the latter to afford a passage for fluid from said member to the space between said member and the interior of said casing, said member and cover forming a supply chamber, a spindle extending through said cover and having its rear end journalled in the rear end of said member at approximately the center of said rear end, a journal for the forward end of said spindle carried by said cover, a vane in said supply chamber secured to said spindle, said vane being throughout its length of substantially the same width as the depth of said supply chamber and subject throughout its extent to the flow of fluid through said supply chamber, a partition extending from the axis of said supply chamber to the side wall of the latter, said vane in its normal position being in close proximity to said partition, said casing having an inlet opening and said cylindrical member having an inlet opening registering with that of the casing for admitting fluid into said chamber between said partition and said vane, means for returning said vane to normal position, a dial and a pointer associated with the front face of said cover and said vane, said dial and pointer being relatively movable during the movement of said vane, and transparent means detachably closing the forward end of said casing.

1,684,317. ARC WELDING SYSTEM. JOHANNES FRANS KAREL HARMS, Amsterdam, Netherlands, assignor to Jonkheer Meester Doctor Jelle Roelof Clifford Kocq van Breugel, Driebergen, Netherlands. Filed Feb. 24, 1927, Serial No. 170,584, and in the Netherlands, Feb. 11, 1927. 3 Claims. (Cl. 219—8.)

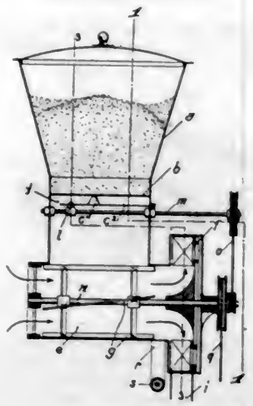


1. An alternating current arc welding apparatus, comprising a plurality of transformers, each of said transformers having a primary winding and a secondary winding, said primary winding of each transformer being adapted to be connected across each phase of a poly phase alternating current source of supply, said secondary windings being in series with each other, and a work circuit connected to said secondary windings.

1,684,318. STAMP BOX. CARL C. HARRIS, Orange, Mass. Filed June 18, 1926. Serial No. 116,998. 4 Claims. (Cl. 91—54.5.)

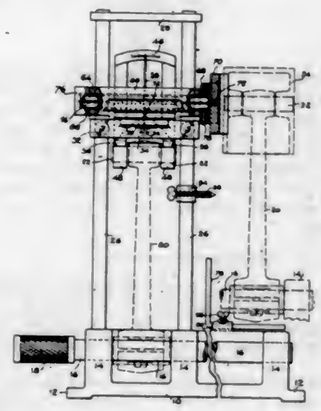
1. As an article of manufacture, a stamp box comprising a box proper having a cover of a different depth pivoted thereto on a horizontal axis and reaching down when open to the bottom of the box, whereby the cover and box will rest on the same horizontal surface when open, and a stamp pad located in the cover, the cover overlapping the top of the box part way down when closed.

1,684,319. LOCOMOTIVE-TENDER-TANK FEEDER. SIMON HEIDEN, Detroit, Mich. Filed Mar. 22, 1927. Serial No. 177,443. 2 Claims. (Cl. 214—43.)



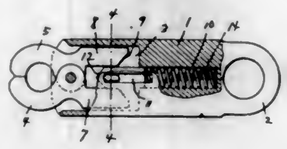
1. In a structure of the class described, a suspension rail, a water supply pipe located alongside of the rail and having a control valve, operating means for said control valve including an extension, a storage tank supported from said rail and movable along the rail, a float in said tank, a stem carried by said float, and curved fingers extending at right angles from said stem and adapted for cooperation with the extension on the operating means for said valve.

1,684,320. APPARATUS FOR FEEDING POWDERED FUEL TO A FURNACE. EWALD HERMSDORF, Brunswick, Germany. Filed Oct. 11, 1924. Serial No. 743,125, and in Germany Oct. 17, 1923. 3 Claims. (Cl. 302—37.)



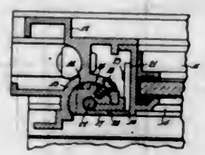
1. An apparatus for supplying powdered fuel to a furnace, comprising a cylindrical horizontal conduit having its discharge end adapted to be connected with the furnace, means for supplying powdered fuel to said conduit throughout the length thereof and at a right-angle to the axis of said conduit, a rotary shaft extending through the conduit and having a fan mounted thereon for producing a current of air lengthwise of and through the conduit and at a right-angle to the axis of the conduit toward the furnace, and wings supported by said shaft at a distance therefrom and extending throughout the length of

the conduit, the outer edges of said wings moving in proximity to the inner wall of said conduit and forming helices for mixing the air passing through the conduit parallel to the axis of the conduit with the powdered fuel supplied to said conduit in a direction transversely of the



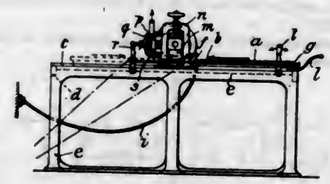
air current, the wings raising into said current of air the particles of fuel from the lower portion of the conduit and at the same time moving the heavier particles of fuel in the direction of the air current toward the discharge end of the conduit.

1,684,321. PISTON AND CONNECTING ROD TESTING AND ALIGNING MACHINE. GEORGE E. HOLTON, Jackson, Mich., assignor to Hinckley-Myers Company, Jackson, Mich., a Corporation of Michigan. Filed June 14, 1926. Serial No. 115,854. (Cl. 33—180.)



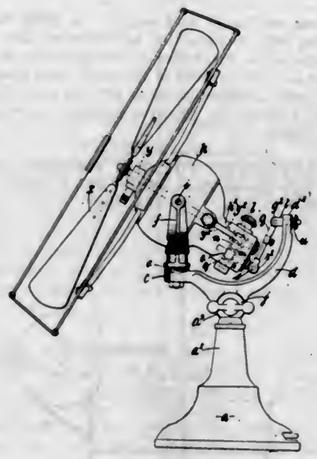
1. In a connecting rod testing and aligning machine, a support for the bearing at one end of the rod a pair of indicating devices, means supporting said indicating devices in operative position with respect to said support, said indicating devices adapted to individually contact the wrist pin of a rod mounted upon said support, each indicating device being angularly adjustable upon said supporting means with respect to the axis of said support and with respect to the other device.

1,684,322. SNAP HOOK. MARTIN ITJEN, Skagway, Territory of Alaska. Filed Apr. 11, 1928. Serial No. 269,160. 1 claim. (Cl. 24—238.)



In a snap hook, a solid body formed at its rear end with an attaching eye, the forward end of the body being formed with a rearwardly extending socket that terminates at the intermediate portion of the body, a pair of complementary jaw members pivotally secured at their inner ends in the outer end portion of the socket, said jaws projecting beyond the forward end of the body, an inwardly extending leg formed on the inner end of each jaw, the inner end of each leg being bevelled, a plunger slidable in the rear portion of the socket, the solid body being provided with a longitudinally extending cavity in the rear portion thereof which communicates with the rear end of the socket, said plunger being also slidable in the cavity, the forward edge of the plunger being bevelled to cooperate with the bevelled inner ends of the legs, a reduced pin formed on the rear end of the plunger and disposed within said cavity, expansible coil spring arranged within the cavity, the rear end of said spring engaging the rear end of the cavity, the forward end of said spring encircling the reduced pins and engaging the rear end of the plunger for normally urging the same forwardly into the socket for disposition between the legs to maintain the jaws in a closed position, said body being formed with a slot in one side for communication with the cavity and the socket, and a handle forming member carried by the sliding plunger and projecting through said slot to facilitate the manual rearward movement of the plunger in said cavity and out of engagement from between said legs whereby the jaws are disposed in such a position as to be capable of separation.

1,684,323. WEATHERPROOF CONCEALED HINGE AND JAMB CONSTRUCTION. JERRY KUBELKA, Ridgewood, N. Y. Filed Dec. 19, 1927. Serial No. 241,116. 6 Claims. (Cl. 189—69.)



1. A casement and closure hinge construction, comprising pintles fastened to the closure, and a part fastened to the casement in which the pintles turn, the pintles being enclosed by portions respectively on the casement and closure.

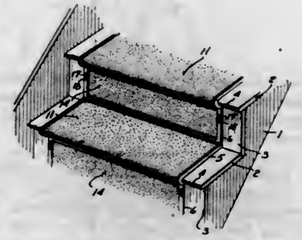
1,684,324. REGISTER SHEET FOR PRINTING PRESSES AND THE LIKE. CARL LINGNER, Dessau in Anhalt, Germany, assignor to Hofbuchdruckerei von C. Dunnhaupt G. m. b. H., Dessau, Germany. Filed May 16, 1927, Serial No. 191,839, and in Germany Nov. 24, 1925. 5 Claims. (Cl. 41—25.5.)

5. A method of preparing register-sheets for printing presses and the like, consisting in making an impression in the press, which is as sharp as possible and has much shading, on a sheet of paper containing a magnetizable substance, such as iron or nickel dust, stretching the sheet face down on a magnetic flat plate, grinding off the raised places on the back of the sheet by means of a rotating roller, and thereupon treating the weak places by spraying on an adhesive and hardening the same, as and for the purpose set forth.

1,684,325. AUTOMATICALLY-OSCILLATING ELECTRIC FAN. JAMES FRASER LISTER and HORACE WILL SMALLWOOD, Birmingham, England. Filed May 20, 1927, Serial No. 192,985, and in Great Britain June 7, 1926. 2 Claims. (Cl. 230—273.)

1. A support comprising a pedestal, a member mounted on said pedestal and having a pair of arms one of which extends laterally from said pedestal, a second member mounted to oscillate on said laterally extending arm on an axis in a plane common to said arms and said pedestal, said second member having a pair of arms between which a casing may be mounted to rock on an axis at substantially a right angle to the axis of oscillation of said second member, the other of said first-mentioned arms having means for connection thereto of means for rocking a casing mounted between the arms of said second member and for oscillating said second member on its axis.

1,684,326. SKI HANDLE. ANDREW E. MARTINSON, New York, N. Y. Filed Dec. 10, 1927. Serial No. 239,193. 4 Claims. (Cl. 208—184.)

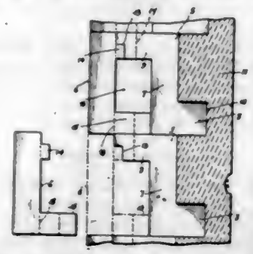


1. A ski provided with a body, a foot clamping strap connected with said body intermediate the ends, and a substantially arc-shaped handle carried by said body but looped over said strap, said handle being of a height to be grasped by the hands of the person using the ski.

1,684,327. VAT DYESTUFF FROM DIANTHRAQUINONYLAMINE-PHENANTHRENEQUINONE. WALTER MIEG and ALBERT JOB, Elberfeld, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed June 28, 1926, Serial No. 119,197, and in Germany June 25, 1925. 7 Claims. (Cl. 260—46.)

1. In processes of making carbazolated dianthraquinonylamino-phenanthrenequinonylenes the step comprising treating dianthraquinonylamino-phenanthrenequinonylenes with carbazol ring forming condensing agents.

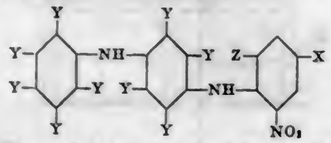
1,684,328. STAIR-COVERING APPARATUS. CHARLES M. MOLINELLI, New York, N. Y. Filed May 9, 1928. Serial No. 276,380. 1 Claim. (Cl. 20—79.)



A device of the character described, including a rectangular frame adapted to be positioned on the tread of a stairway, said frame having its forward portion curved rearwardly and adapted to project over and under the nose of the tread, the members of said frame having grooves in their inner faces, floor covering sections having beads thereon movable in said grooves, frames adapted to be positioned against the risers of the stairway, floor covering sections supported by said last mentioned frames, and movable pins mounted in the riser frames nad adapted to be forced upwardly under the nose portions of the tread.

1,684,329. AIR-COOLED BLOCK FOR LINING WALLS. GUSTAV RAU, Kansas City, Mo. Filed Apr. 29, 1926. Serial No. 105,434. 1 Claim. (Cl. 72—41.)

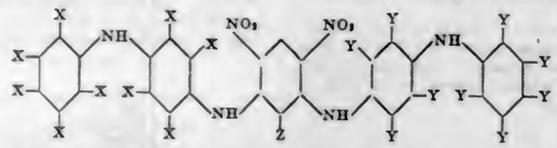
Air cooled blocks for service as components of a lining or belt for and combined with a furnace wall, each block comprising a vertical body member with an upper terminal inwardly projecting extension and a lower terminal outwardly projecting extension, both extensions being at planes at right angles to the vertical body member, and the upper extension having a lower angular inwardly opening corner recess continuing fully over the width of the extension, and a removable and replaceable nose member having a vertical body and a lower outwardly projecting extension which terminally abuts against the inner side



of the lower portion of the vertical body of the first named member with the bottom thereof flush with the bottom of the said outward extension of first named member, the upper terminal of the body of the nose member having a flange fitting in and flush with the recess of the inner terminal of the upper inwardly projecting extension of said first named member, the upper inwardly projecting extension of the first named member and the lower outwardly

projecting extension of the nose forming a central flue continuing uniformly transversely through the complete block, and the upper inwardly projecting extension of the first named member and the outwardly projecting extension of the nose respectively having a pair of spaced vertical flues opening in to said central flue, whereby when a number of the complete blocks are assembled the said vertical flues become continuous through all the blocks and communicate with the horizontal flues of the blocks.

1,684,330. WATER-SOLUBLE DYESTUFF AND PROCESS OF PRODUCING SAME. OTTO SIEBERT, Dessau, KARL THIESS, Hochst-on-the-Main, BERNHARD SCHÖNER, Wolfen, near Bitterfeld, ROBERT SCHMIDLIN, Hochst-on-the-Main, WALTHER BENADE, Dessau, and BERNHARD DEICKE, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed June 17, 1926, Serial No. 116,706, and in Germany May 5, 1923. 6 Claims. (Cl. 260—129.)

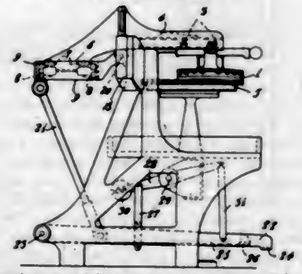


1. As new products water-soluble dyestuffs of the general formula:

wherein X represents hydrogen or the sulfonic acid group, Z hydrogen or the nitro group, and Y the hydrogen-, nitro-, alkyl-, or sulfonic acid group.

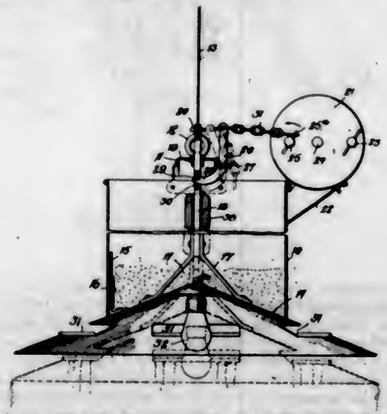
1,684,331. POLYARYLAMINE DYESTUFF AND PROCESS OF PRODUCING THE SAME. KARL THIESS, BERNHARD DEICKE, and ROBERT SCHMIDLIN, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed May 10, 1926, Serial No. 108,111, and in Germany May 22, 1925. 8 Claims. (Cl. 260—128.)

7. As new products, dyestuffs of the general formula:



wherein at least one symmetrical X—Y pair represents sulfonic acid groups, the other symmetrical X—Y pairs represent hydrogen or a monovalent substituent and Z represents hydrogen or methyl.

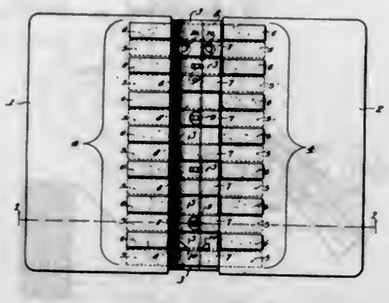
1,684,332. METHOD OF PRODUCING GLASS. MAX THOMAS, Weisswasser, Oberlausitz, Germany, assignor to Patent-Treuhand-Gesellschaft für Elektrische Gluhlampen m. b. H., Berlin, Germany. Filed June 26, 1926, Serial No. 118,796, and in Germany Aug. 1, 1925. 4 Claims. (Cl. 106—12.)



1. The process of producing a glass for insulating purposes, which comprises melting a glass batch substantially free of alkali metal and containing silica, an alkali earth metal oxide and an iron oxide sufficient to act as a flux, and maintaining the oxide in its oxidized condition.

1,684,333. IRONING MACHINE. HERMANUS FRANCISCUS TOL, The Hague, Netherlands, assignor to Naamlooze Vennootschap: machinefabriek "Reinveld," Delft, Netherlands, a Corporation of Netherlands. Filed Feb. 10, 1927, Serial No. 167,246, and in the Netherlands July 21, 1926. 5 Claims. (Cl. 68—9.)

1. An ironing machine comprising a stationary table; a reciprocatory iron-support; a mechanism for imparting a reciprocating motion to said support; a guide member parallel to the table along which said support may travel pivotally mounted in the frame of the machine so as to swing around an axis parallel to the table; and means for moving said guide member so as to lift the iron from the table and to control the effective pressure between the iron and the table.

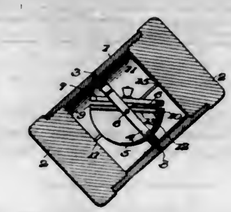


1,684,334. AUTOMATIC POULTRY FEEDER. ROBERT F. TOOPE, New Haven, Conn. Filed Apr. 7, 1927. Serial No. 181,757. 1 Claim. (Cl. 161—10.)

In a poultry feeder comprising a cylindrical feed hopper, a movable conical bottom therefor consituting a distributor plate for the fed, a bracket secured to the inner face of the bottom adjacent the apex thereof; a rod rigidly connected with the upper end of the bracket, a cross bar at the upper end of the hopper and provided with a

sleeved central opening through which said rod is adapted to have a limited sliding movement, said rod having a slot therethrough below said cross bar, a time-controlled lever detent normally positioned in said slot for holding the rod in elevated position to maintain the bottom in closed position, a lamp switch supported on the hopper from the cross-bar, a weight slidably mounted on said rod, a lamp suspended beneath the center of the conical bottom plate, an ear projecting from the aforesaid weight, a pull chain connecting said ear with the said lamp switch, said weight held in inactive position by said bracket and adapted to light said lamp through said switch upon release of the rod by the said time-controlled detent.

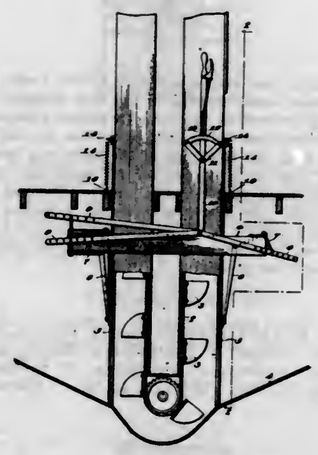
1,684,335. COVER FOR BOOKS, BINDERS, AND THE LIKE. PAUL O. UNGER, Syracuse, N. Y., assignor to McMillan Book Company, Syracuse, N. Y., a Corporation of New York. Filed Dec. 13, 1924. Serial No. 755,734. 10 Claims. (Cl. 281—29.)



1. A cover for books and binders, comprising a back member; two cover-boards; and hinges connecting said cover-boards and back member, said hinges being formed of flexible material having a series of separated bands passing across the outer face of the back member in a direction transverse thereto and a second series of bands similarly passing across the inner face of said back member, the portions of the flexible material lying beyond the longitudinal boundaries of the back member being secured to the cover-boards in any convenient manner.

1,684,336. MEDICINAL SOAP. HANS HOFFMÜLLER VON KORNATZKI, Ziegenhagen, Post Reetz, Germany. Filed Aug. 7, 1926, Serial No. 127,971, and in Germany Aug. 26, 1925. 1 Claim. (Cl. 87—16.)

A soap for therapeutic purposes consisting of 6 parts by weight of a soap mixture obtained from fatty oils and caustic soda, one part of 95% alcohol, 1 part of freshly prepared rectified amber oil, and 0.2 part succinic acid.

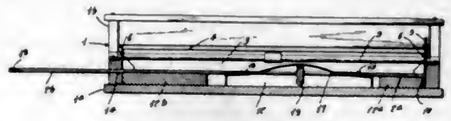


1,684,337. INSTRUMENT FOR SURVEYING BORE HOLES. LAWRENCE BOYNTON WRIGHT, ARTHUR BRAKLEY YATES, and ART AMMON LEASE, Lead, S. Dak. Filed June 25, 1925. Serial No. 39,608. 4 Claims. (Cl. 234—1.)

2. In an instrument of the character described, a casing, a body having a face, a magnetic needle pivoted on the face of the body, means for suspending the body in the casing so that the face is maintained in a horizontal position irrespective of the inclination of the casing, a film mounted on the face of the body, means for impressing on the film the representation of a needle and comprising a radioactive substance applied to the underside of the needle, a film arranged within the casing, said

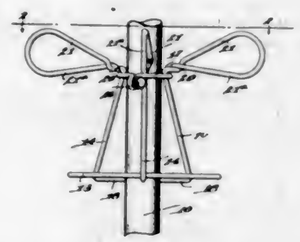
body having an angular groove, radioactive substance in the groove of the body for impressing upon the film a representation indicative of the relative position of the body to the casing, and means for orienting the films.

1,684,338. GRAIN-BIN FEED. OLE F. APLIN, Culbertson, Mont. Filed Feb. 26, 1927. Serial No. 171,319. 3 Claims. (Cl. 198—207.)



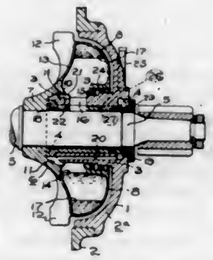
1. In combination a pair of parallel grain elevator legs each of which having a vertically movable slide, crank shafts journalled adjacent each leg, each of which have operative connection with one of the slides, a manually adjustable lever, and longitudinally shiftabl elevers connected with the manually adjustable lever and having operative connection with the crank shafts whereby to actuate the slides upon movement of the manually actuated lever.

1,684,339. PEDOGRAPH AND METATARSAL-PAD LOCATOR. JOSEPH L. BARTH, Bismarck, N. Dak. Filed July 22, 1926. Serial No. 124,229. 5 Claims. (Cl. 282—1.)



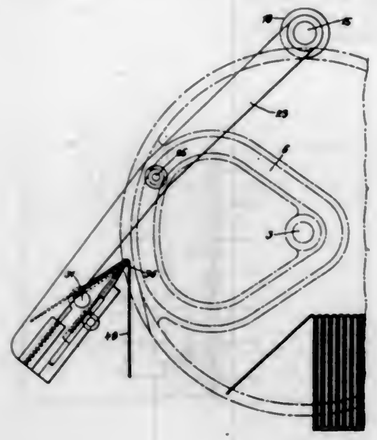
1. A device of the character set forth, including a plate upon which the foot is adapted to be placed and embodying

sections adjustable relatively to provide an opening in the plate in registration with the arch of the foot, a



flexible plate located below said first plate, and means for bowing the flexible plate upwardly through the opening and into contact with the arch of the foot.

1,684,340. DISPLAY STAND. RAYMOND O. BERKE, Albuquerque, N. Mex. Filed Apr. 17, 1928. Serial No. 270,734. 4 Claims. (Cl. 211—112.)

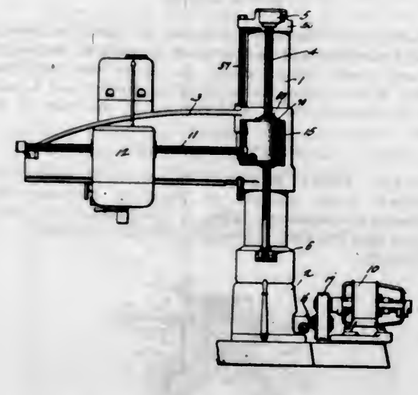


3. A display rack unit comprising a wire frame having a base member, arms secured to the base member, a supporting ring secured to the arms in spaced relation with the base member and being split to provide for the expansion of the ring, the free ends of the split ring being provided with eyes in close contact for clamping the split ring on the fixed support, and article clamping means extending from the arms, said article clamping means forming continuation of the upper end of an arm and having a rear portion provided with a hook adapted to engage around the extension.

1,684,341. ROTARY OILER. CLAUDE BETHEL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 24, 1925. Serial No. 45,748. 8 Claims. (Cl. 308—117.)

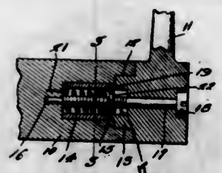
8. The combination with a stationary bearing, of a rotary oiler therefor comprising a rotating part having an oil-storing chamber, said chamber being sufficiently large to hold all of the oil, without overflowing, at standstill, said oil being thrown to the outer portion of said chamber by centrifugal force during rotation, means for supplying oil from said chamber to said bearing, and means for passing all or a part of the oil drained from said bearing back into said bearing without first being returned to the main body of lubricating oil in the outer portion of said chamber.

1,684,342. SADDLE FOR THE TABLES OF THREAD-STITCHING MACHINES. ULRICH BISCHOF, Horgen, Switzerland, assignor, by mesne assignments, to Smyth Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 7, 1925, Serial No. 13,809, and in Switzerland Nov. 20, 1924. 5 Claims. (Cl. 112—21.)



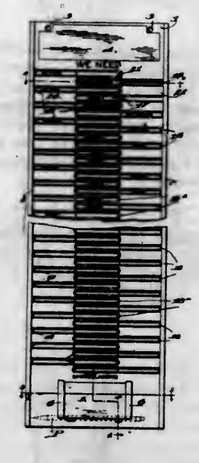
1. A table-saddle for thread-bookstitching machines, including a single plate having a wedge shaped upper supporting edge of about 35° and provided with grooves for housing puncturing needles and with a sloping surface below the supporting edge on the side having the said grooves to lead away the thread loops outwardly to prevent pinching in of the thread loops, the said table-saddle being carried by swinging arms fixed to a horizontal shaft located over the saddle.

1,684,343. IGNITION APPARATUS FOR INTERNAL-COMBUSTION ENGINES. MICHELANGELO MARIA CARBELLINO, Turin, Italy. Filed June 28, 1927, Serial No. 202,029, and in Great Britain July 21, 1926. 2 Claims. (Cl. 171—252.)



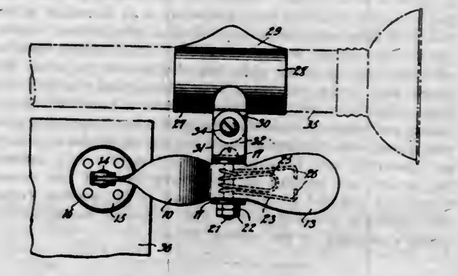
1. A multi-polar ignition magneto for internal combustion engines comprising a rotor having a laminated iron core, a single winding on the core forming a coil, laminated pole shoes on the ends of the core having a number of teeth equal to half the number of sparks to be produced at each revolution, and laminated bars of the same length as the rotor arranged between each two teeth and constituting a cylindrical cage for the coil whereby the flux alternately closes within and without the coil, always in the same direction through the magnet.

1,684,344. TRANSMISSION FOR RADIAL DRILL ARMS, ELEVATING MECHANISM, AND DRILL SPINDLES. JACK C. CARLTON, Cincinnati, Ohio, assignor to The Carlton Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 9, 1926. Serial No. 80,318. 9 Claims. (Cl. 77—28.)



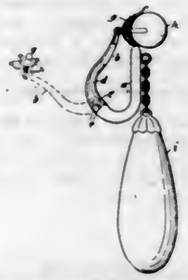
2. A radial drill including a column, an arm translatable on the column, a transmission casing upon the arm having two meshed bevel gears independently journalled therein adapted for connection respectively with a column shaft, and an arm shaft, arm raising mechanism connected with one of the gears, said casing having openings in its walls one in axial alignment with and in opposition to each gear for permitting a corresponding shaft to traverse the casing and be connected with or disconnected from a corresponding gear, to alternately constitute either gear a driver.

1,684,345. SAFETY APPLIANCE FOR TOOLS. MELCHOR CENTENO V., Chicago, Ill. Filed June 13, 1925. Serial No. 36,894. 1 Claim. (Cl. 145—50.)



In a tool, the combination of a pair of rotatable parts, one of said parts having a recess therein, co-acting teeth on said parts, a shaft freely extending through one of said parts and journalled in the other of said parts, a head provided on the outer end of said shaft and counter-sunk in said first mentioned part, said head having a kerf therein, screw threads provided on said shaft for a portion of its length, a collar co-acting with said screw threads and disposed within said recess, and a contractile spring encircling said shaft, one end of said spring being fixed to the end wall of said recess and the other end fixed to said collar whereby rotation of said shaft will cause said collar to be adjusted longitudinally thereon to regulate the tension of said spring to hold the co-acting teeth in engagement against a predetermined turning force when applied to either of said parts.

1,684,346. INDICATOR OR PROMPTER FOR HOUSEHOLD OR OTHER PURPOSES. JOSEPH DE BRACHT, Altoona, Pa., assignor of one-half to Paul Epright, Altoona, Pa. Filed Jan. 10, 1928. Serial No. 245,768. 3 Claims. (Cl. 116—135.)



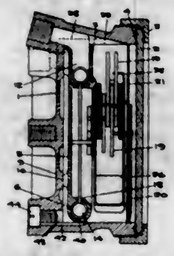
1. A device of the class described comprising a base having a plurality of guides, said guides extending alternately in opposite directions and having a portion thereof arranged parallel and one above the other, indicia carrying slides mounted to travel in said guides, and means for manipulating said slides.

1,684,347. HOLDER. ADNA S. DOBBS, New Brunswick, N. J. Filed Apr. 9, 1927. Serial No. 182,487. 3 Claims. (Cl. 248—20.)

1. A holder comprising a pair of spring actuated clamping members, a pivot connecting said clamping members together for coaction, a clamp, and means between the pivot and the clamp allowing the clamp to have universal movement.

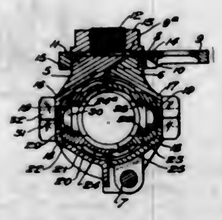
1,684,348. EARRING WITH CLAMPING BOW. HEINRICH FETZER, Pforzheim, Germany. Filed Feb. 2, 1927, Serial No. 165,388, and in Germany May 1, 1926. 1 Claim. (Cl. 63—14.)

A clamping earring, comprising in combination, a clamping bow composed of a stationary element and of a movable element, a spring-controlled hinge connecting said movable bow element to the said stationary bow element, a clamping plate rigidly fixed on the free end of said stationary bow element, a rivet in the free end of said movable bow element, and a cup-shaped clamping plate loosely mounted on said rivet.



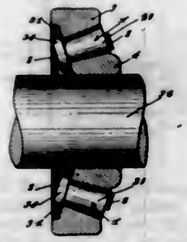
1,684,349. WINDOW SCREEN. ERNEST P. GARNER, Charlotte, N. C. Filed Jan. 22, 1926. Serial No. 83,120. 1 Claim. (Cl. 156—14.)

The combination in a window screen, adapted to extend full length of the outer side of a window frame and be movably suspended at its upper extremity from the frame, a wood screen frame covered on the outside with wire gauze which is drawn taut and secured at its edges to the wood of the screen frame to effect a longitudinal curvature of the latter frame, channeled metal strips fixed in all directions over the side, top and bottom edges of the gauze, said strips extending over and beyond the side and upper edge of and applied to the outer side of the screen frame and adapted to cover the joints between the screen frame and window frame when the screen frame is closed, an upwardly and forwardly inclined metal strip extending below and secured to the lower edge of the screen frame and adapted to engage the sill of the window frame and having a yielding action, and fastening means at the lower extremity of the screen frame.



1,684,350. ROTARY-TYPE FLOW METER. WILLIAM WILSON HAMILL, Birmingham, England. Filed Oct. 12, 1922, Serial No. 594,204, and in Great Britain Oct. 26, 1921. 5 Claims. (Cl. 73—37.)

1. Apparatus of the character described, comprising a casing, a pair of separate circular, channelled members, secured together in said casing with their channels in opposed relation and their inner perimeters spaced apart, and together forming a continuous curved fluid channel, said casing having an inlet and an outlet communicating with said channel, said outlet being above said inlet and connected to said channel at one side of the latter, a rotor



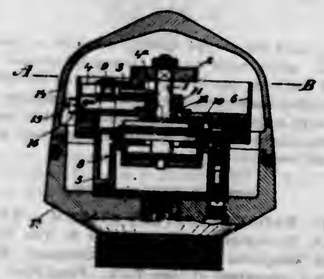
extending into the space between the inner perimeters of said members and having vanes movable in said channel and closely fitting within the latter, and indicating means in said casing actuated by said rotor and located on the opposite side of said channel to the inlet of the latter.

1,684,351. DRILL BOXING. LESTER C. HARDSOCG, Ottumwa, Iowa, assignor to Hardsocg Manufacturing Company, Ottumwa, Iowa, a Corporation of Iowa. Filed May 18, 1925. Serial No. 31,196. 4 Claims. (Cl. 255—46.)

1. In a drill boxing of the class specified, the combination with hinged casing sections, of linings having inner screw-threaded sides disposed within the casing sections, and removable fastening means inserted through the centers of the linings and casing sections, the outer sides of the linings and the inner portions of the casing sections having interfitting structural features through which the fastening means extend to prevent longitudinal shifting movement of the linings relatively to the casing sections.

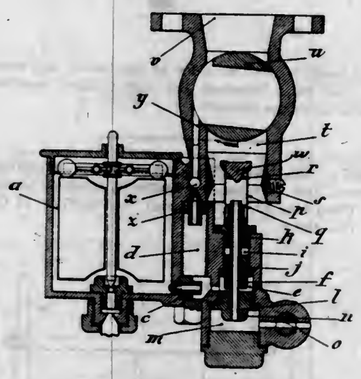
1,684,352. ANTIFRICTION BEARING. OTTO HENKELMAN, Canton, Ohio. Filed Aug. 18, 1925, Serial No. 51,021. Renewed July 1, 1927. 2 Claims. (Cl. 308—215.)

1. In an anti-friction bearing the combination with a bearing roller formed of a body portion tapered throughout and gradually increasing in diameter from its inner



to its outer end and a circular head of greater diameter than and having the central part of its forward face formed integral concentrically with the smaller end of said body portion, said body portion in lengthwise section from its point of joinder with said head extending continuous in the same plane throughout, that portion of said head projecting from said body portion providing an annular flange having its forward face inclining rearwardly from said body portion, of an annular bearing element having a bevelled outer side face of the same length as said body portion and upon which the latter is seated, said element further having the outer part of its rear end formed to provide a rearwardly extending annular abutment of semi-circular cross section at any point throughout thereof to provide a curved contacting surface positioned between the inner and outer faces of said body portion, said contacting surface bearing against the forward face of said flange in close proximity to the point of joinder of the disc with said body portion, and said element further having the inner part of its rear end arranged forwardly throughout with respect to said contacting surface and of a concave cross section to provide a lubricant reservoir.

1,684,353. DRAWING-BOARD ATTACHMENT. ALFRED P. JACOB, New York, N. Y. Filed Mar. 4, 1927. Serial No. 172,899. 4 Claims. (Cl. 24—71.2.)

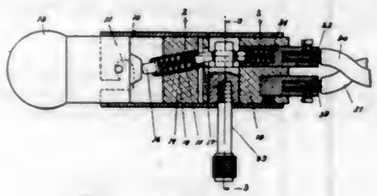


1. A cable tensioning device for drawing boards comprising a base having an opening therein, and a winding stem having a cable receiving kerf therein and frictionally engageable with the walls of said opening, and means for varying the degree of friction between the winding stem and the walls of said opening.

1,684,354. MECHANICAL TIME FUSE WITH CLOCKWORK. PAUL LIEBERGELD, Bad Thal, Germany. Filed Oct. 6, 1927, Serial No. 224,425, and in Germany Oct. 8, 1926. 4 Claims. (Cl. 102—36.)

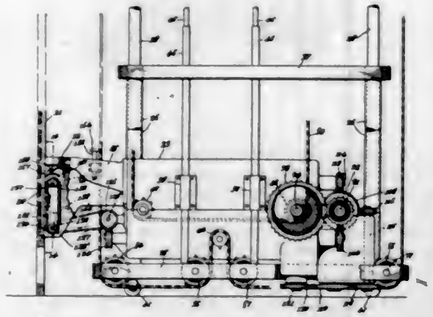
1. A mechanical time-fuse with clock-work and with a ring for determining the fusing time rotatable with regard to the fuse-casing and having an aperture for releasing the fuse, comprising in combination with a main axle of the clockwork a pointer rigidly fixed on the main axle of said clockwork, a spring-controlled pointer-pin shiftably mounted in said pointer so that, when at the predetermined moment, it arrives at the aperture of said time-determining ring, it projects through this aperture and liberates the fuse-mechanism.

1,684,355. CARBURETOR. FRANK LIOUD, St. Etienne, France. Filed Apr. 21, 1924, Serial No. 708,012, and in France Oct. 24, 1923. 1 Claim. (Cl. 261—18.)



A carburetor for two liquids, a lower, an intermediate and an upper chamber separated from one another the lower chamber being in communication with the bottom of a central air admission tube and provided with a valve for regulating the admission of air thereto, the intermediate chamber being in communication with the inner of two vertical annular liquid supply tubes and with a well adapted to hold a reserve of light liquid fuel fed through a submerged calibrated nozzle feeding in response to the suction of the engine acting in said well, said well communicating through a calibrated orifice with a conduit in connection with the suction pipe of the engine which pipe is provided with a suitable throttle, the upper of said chambers being in communication with the outer of said annular liquid supply tubes and fed with a second and different liquid, the delivery mouth of the inner annular tube being at a higher level than the delivery mouth of the outer annular tube so as to ensure the preponderance of the supply of light fuel during low speeds and an increase in the proportion of the second liquid at high speeds of the engine, the said mouths being freely enclosed in a cylindrical chamber situated on the axis of said suction pipe of the carburetor and provided with air admission orifices at the level of said second mouth and with mixture outlets above said mouths and opposite a depending conical member at the upper end of said chamber and adapted to deflect the flow of the mixture so that it flows through said mixture outlets perpendicular to the axis of said choke tube, all substantially as herein described.

1,684,356. ELECTRIC-LAMP SOCKET. LEO MAYER, Boston, Mass., assignor to Henry Cole Company, Boston, Mass. Filed Nov. 18, 1927. Serial No. 234,204. 2 Claims. (Cl. 173—350.)

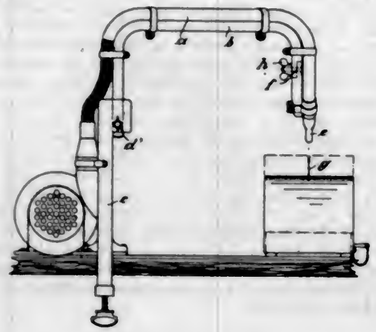


1. A lamp socket of the class described comprising a casing having means at one end thereof to receive a lamp; a plug fixedly secured in the casing and having a tubular member secured therein, said member being arranged angularly in respect to the axis of said casing, a terminal plug fixedly secured in the other end thereof, and having a tubular member secured therein, a revolving switch mem-

ber arranged between the said tubular members comprising a rectangular insulating block, having an opening therein, which carries a metallic contact member, whose two ends

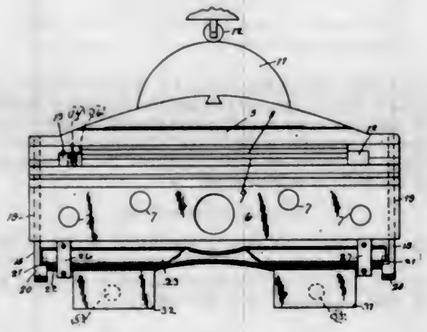
are bent against the two sides of the block, and means to rotate said block between the two tubular members to make and break the circuit.

1,684,357. PLASTERING MACHINE. FITZHUGH S. MIOTON, New Orleans, and LOUIS H. GUERIN, Covington, La. Filed May 19, 1927. Serial No. 192,677. 11 Claims. (Cl. 72—130.)



3. A plastering machine comprising a frame, a carriage movably mounted thereon, and an applicator moving with said carriage and composed of an endless conveyor, flat slats carried by said conveyor for smoothing the plaster in place, and means for driving said conveyor.

1,684,358. DEMOUNTABLE BRUSH. LEONCIO LOPEZ MOSQUERA, Buenos Aires, Argentina. Filed Feb. 2, 1926. Serial No. 85,557. 2 Claims. (Cl. 15—133.)

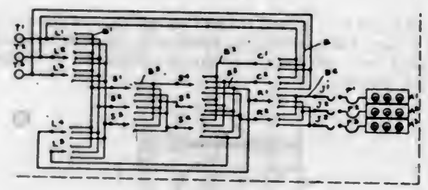


1. A paint brush of the character described, including in combination a tubular handle having one end opened and threaded interiorly and exteriorly, a bristle carrying head adjustably engaged with the threaded inner portion of the handle, a sleeve-like bridle surrounding the bristles and having the inner portion enlarged and threaded for adjustable engagement with the external threads on the handle, and the head being adjustable independently of the bridle so as to provide for the wearing action at the outer ends of the bristles carried thereby substantially as and for the purposes set forth.

1,684,359. FUR TESTING AND CUTTING DEVICE. ERNST MÜLLER, Berlin, Germany. Filed Nov. 7, 1927. Serial No. 231,583. 1 Claim. (Cl. 149—24.)

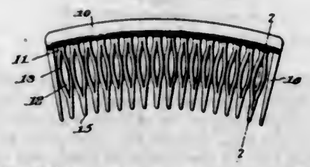
In a fur testing and cutting device of the character described, an air nozzle, a flexible pipe connected to said nozzle, a U-shaped arm supporting the pipe and holding the nozzle along one of its members, said latter member being jointed so as to allow the nozzle to be set at different angles, and a socket holding the other member of the arm so as to allow the latter and the nozzle to be vertically adjusted.

1,684,360. MOLD. JOSEPH C. NORWOOD, San Francisco, Calif., assignor to Intertype Corporation, a Corporation of New York. Filed July 16, 1927. Serial No. 206,222. 3 Claims. (Cl. 199—55.)



1. In a mold for a type casting machine, a lower mold section, an upper mold section, liners interposed between said mold sections, one of said liners being movable longitudinally with respect to the upper mold section and immovable with respect to said lower mold section, and means for maintaining said liner in intimate contact with said upper mold section.

1,684,361. RADIO RECEIVING SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 14, 1925. Serial No. 69,132. 5 Claims. (Cl. 179—2.)



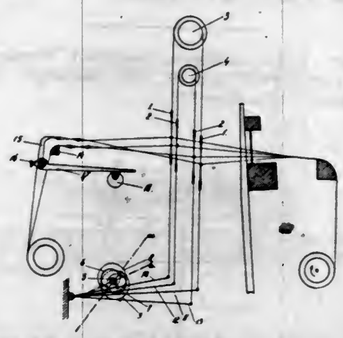
1. In an automatic telephone system, a calling line, a called station, a discriminating trunk associated with said called station, means controlled over said calling line in

series for thereafter extending said discriminating trunk to said calling line, and means including said discriminating trunk for disabling the usual busy test feature of said

called line whereby a connection is extended to said calling line over a simplex circuit including said calling line in multiple.

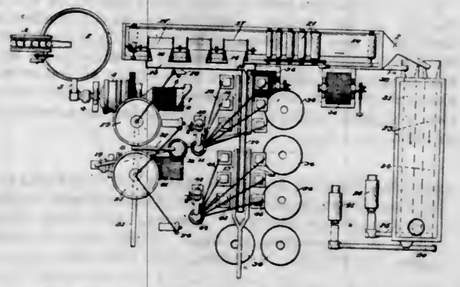
1,684,362. HAIR RETAINER OR COMB. LESTER THORNDIKE SAWYER, Fitchburg, Mass. Filed July 24, 1926. Serial No. 124,659. 2 Claims. (Cl. 132—20.)

1. A hair retainer comprising an elongated back, and a plurality of relatively small teeth mounted closely adjacent thereon, all of said teeth having closed smooth points and certain of said teeth having relatively large elongated openings throughout the major portion of their length and having relatively thin resilient side portions, the sides of adjacent teeth being normally in substantial engagement with each other, and said resilient side portions being yieldable to permit insertion of hair between said teeth and to grip and retain the hair thus inserted.



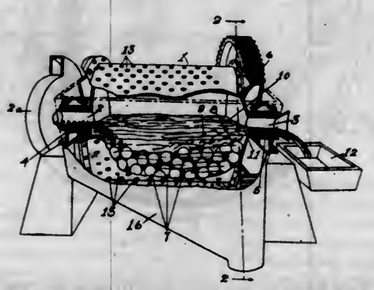
1,684,363. LEAD-SHEATHED TELEPHONE CABLE. EUGEN SCHÜRER, Cologne-Mulheim, Germany, assignor to Felten & Guilleaume Carlswerk Actien-Gesellschaft, Cologne-Mulheim, Germany. Filed Nov. 26, 1927, Serial No. 235,891, and in Germany Nov. 27, 1926. 1 Claim. (Cl. 173—266.)

A telephone cable comprising in combination a core containing electric conductors and electrically conducting covers on the said conductors, a lead sheath for the said core and a wrapping of muslin band having metallic threads running through it between the core and the lead sheath, as and for the purpose set forth.



1,684,364. METHOD FOR WEAVING TEXTILE FABRICS. GERRIT JAN SECKEL, Enschede, Netherlands. Filed July 2, 1925, Serial No. 41,184, and in the Netherlands May 19, 1925. 6 Claims. (Cl. 139—79.)

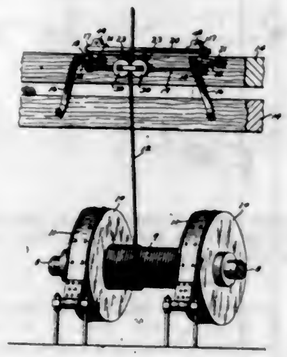
1. In the process of weaving textile fabrics which comprises passing more than two warp threads through the same slit of the reed, the method of preventing reediness which consists in controlling the tension of the warp threads within each slit of the reed at the moment at



which the weft thread is beaten up so that the threads immediately adjacent the wires of the reeds are less tensioned than the interjacent threads.

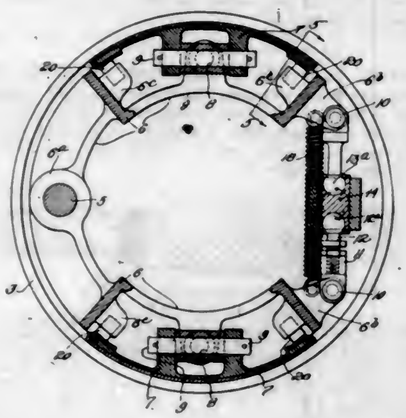
1,684,365. PROCESS OF TREATING ASBESTOS ORE. SAMUEL H. DOLBEAR, New York, N. Y., assignor to Selective Treatment Company Limited, Montreal, Canada, a Corporation of Quebec. Filed June 5, 1924, Serial No. 717,385, and in Canada Sept. 20, 1923. 42 Claims. (Cl. 209—2.)

1. The method of treating asbestos ore which consists in reducing and separating the same in pencil-like form from associated rock.



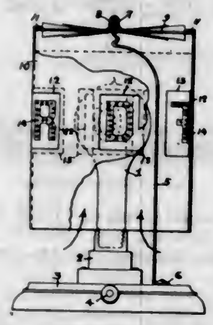
1,684,366. METHOD OF TREATING ASBESTOS ORES. SAMUEL HOOD DOLBEAR, San Francisco, Calif., assignor to Selective Treatment Company Limited, Montreal, Canada, a Corporation of Quebec. Filed June 3, 1924, Serial No. 717,556, and in Canada Nov. 11, 1922. 9 Claims. (Cl. 209—2.)

1. The method of concentrating asbestos ore which consists in subjecting the ore to under-water treatment, loosening the asbestos and at the same time preserving its



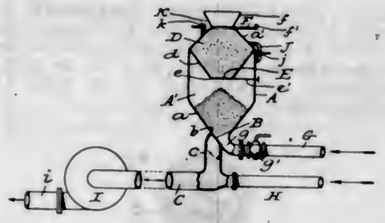
natural length, causing the loosened asbestos to pass into a body of water adjacent the comminuting-zone, and maintaining the loosened asbestos in a state of suspension in said body of water until overflowed.

1,684,367. LINE CONTROL. WALTER L. FOSTER, Whittier, Calif. Filed Apr. 23, 1923. Serial No. 633,891. 19 Claims. (Cl. 242—157.)



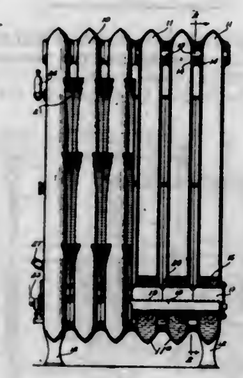
1. In combination with a drum and a line to be reeled thereon, a line control comprising a frame resiliently mounted to rock in a plane parallel with the axis of said drum and substantially perpendicular to said line, a carriage mounted on said frame to slide axially of said drum, means to resist the sliding of said carriage in either direction, and guide means on said carriage for the passage of the line.

1,684,368. BRAKE FOR GYRATORY CENTRIFUGALS. EUGENE ROBERTS, Salt Lake City, Utah, assignor to The Western States Machine Company, Salt Lake City, Utah, a Corporation of Utah. Filed Apr. 6, 1923. Serial No. 630,239. 4 Claims. (Cl. 188—78.)



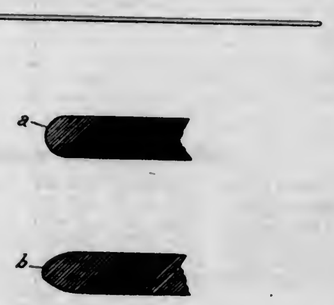
1. In a brake for gyratory centrifugals, the combination of a brake pulley secured to the gyratory basket shaft and oscillating therewith, a pair of brake arms pivotally mounted interiorly of said pulley, the fulcrumed ends and the free ends of said brake arms being supported against downward movement, and means for expanding said brake arms by horizontal thrust into engagement with the surrounding pulley, substantially as described.

1,684,369. SCINTILLATING SIGN. ARTHUR W. SIEVERS, Valparaiso, Ind., assignor to Noah S. Amstutz. Filed Jan. 24, 1924. Serial No. 688,315. 6 Claims. (Cl. 40—40.)



1. In scintillating sign, a source of illumination, an enclosing cylinder supported for rotation above the source of light, means attached to the cylinder adapted to automatically rotate the same through air currents set in motion by the radiant heat of the source of light, and light transmitting advertising media secured to openings in the wall of the cylinder, said media comprising relatively large translucent areas and a plurality of small openings therethrough adapted to produce scintillations as the cylinder is rotated.

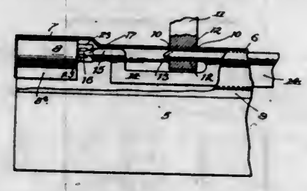
1,684,370. ART OF TRANSPORTING MIXED MATERIALS. KARL R. SCHUSTER, Hopatcong, N. J. Filed Sept. 18, 1925. Serial No. 57,238. 17 Claims. (Cl. 83—73.)



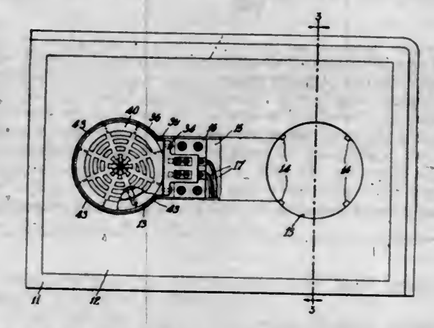
1. In the art of mixing and transporting materials such as concrete, the method which consists in accumulating within a chamber the materials to constitute a charge to be mixed; feeding said charge to a second chamber; blowing compressed air upwardly within the second chamber and exposing the components of the mass consituting the charge to the upward flowing air for effecting the admixture of the materials within the second chamber; accumulating the inflowing air above the mass composing said charge concurrently with the admixture of such charge; dislodging the mixed charge from the second chamber by gravity of the charge and by pressure exerted upon the charge by the air accumulated above the charge; feeding the dislodged mixed mass constituting the charge into a conduit, and transporting the mixed charge within said conduit.

1,684,371. GAS-HEATED STEAM RADIATOR. JAMES FRANCIS FIRTH, New York, N. Y. Filed May 10, 1927. Serial No. 190,308. 2 Claims. (Cl. 237—17.)

1. A gas heated steam radiator comprising a plurality of spaced and connected sections adapted to contain water in their lower portions, a transversely extending burner chamber in the lower part of the radiator and so located therein that it will be surrounded by water, a gas burner in the chamber, said chamber having openings in the top between the radiator sections for the passage of the products of combustion, and baffles extending upwardly and forwardly from the chamber adjacent the openings therein between the radiator sections for directing the products of combustion passing through said openings.



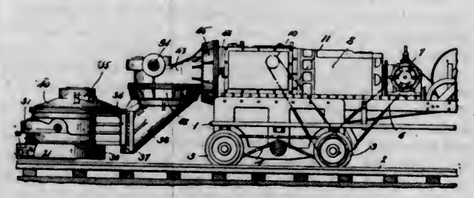
1,684,372. METALLIC PLAYING CARD. MAX MAENNLEIN, Vienna, Austria. Filed Sept. 12, 1927, Serial No. 219,131, and in Austria Apr. 26, 1927. 1 Claim. (Cl. 273—152.)



A playing card comprising a thin body of flexible and springy light aluminium alloy having rounded edges, and having such a weight that it has substantially no rebound when falling flat upon a flat surface.

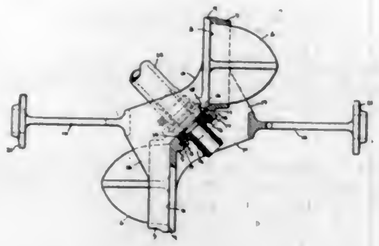
1,684,373. LOOSE-LEAF BINDER. JOHN L. MCMILLAN, Syracuse, N. Y. Filed Dec. 24, 1925. Serial No. 77,565. 6 Claims. (Cl. 129—24.)

1. In a loose leaf binder of the character described, the combination of a housing having a hollow longitudinal edge of substantially cylindrical cross section enlarged at one end to receive a lock, and provided at intervals with openings in said cylindrical edge for the introduction of leaf-carrying links; links provided with transverse openings near their ends to receive pintles; a pintle-bearing slide longitudinally movable in the housing; a lock mounted in the enlarged end of the housing; and means for connecting and disconnecting the pintle slide and the lock, to prevent longitudinal movement of said slide.



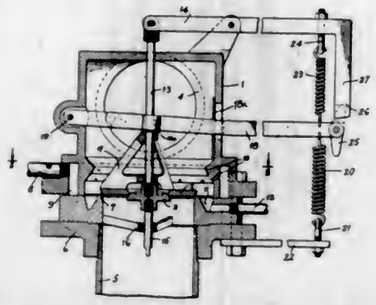
1,684,374. ELECTRIC HOT PLATE. WILLIAM G. NORDLING, Newark, N. J. Filed Dec. 26, 1925. Serial No. 77,681. 9 Claims. (Cl. 219—37.)

1. An electric hot plate, comprising an openly supported electric heating member including a heating element, a metallic top plate with solid portion entirely covering the heating element and having intermediate openings through which heated air may be delivered from the heating element, and a reflector member beneath said heating element.



1,684,375. MINING MACHINE. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 13, 1924, Serial No. 699,119. Renewed June 29, 1927. 64 Claims. (Cl. 262—28.)

1. In a wheeled mining apparatus, in combination, guiding means, a support movable longitudinally thereof, self contained power operated support wheel driving mechanism for effecting opposite rectilinear movements of said support at a cutting speed, cutting mechanism including a cutter bar, a support to which said bar is pivotally connected for swinging movement, said second mentioned support being pivotally connected to said first mentioned support for movement about an axis parallel to the axis of swing of said cutter bar, a motor driven power shaft



journaled on said first mentioned support rotatable on an axis which remains at all times in a vertical plane parallel to the direction of said guiding means, and driving connections between said shaft and said cutting mechanism.

1,684,376. AUTOMATIC TRAIN-PIPE-CONNECTER HEAD. JOSEPH ROBINSON, New York, N. Y. Filed Apr. 2, 1921, Serial No. 458,119. Renewed Oct. 22, 1926. 10 Claims. (Cl. 285—58.)

1. An automatic train pipe connecter head, comprising in combination, a perforated stem connected with the head at one end and having at the other end a flange, a pair of guides positioned one in advance of the other on opposite sides of the longitudinal axis of said stem, the base of each of the guides being disposed in a plane at substantially a right angle to said axis, a perforated portion extending diagonally across said axis and joining said guides, a fluid conduit mounted in said perforation and extending therethrough and suitably locked therein to conduct a fluid diagonally through said head, and a horizontally extending web projecting across said conduit and joining said guides and said stem.

1,684,377. PRESSURE AND VACUUM RELIEF VALVE. JAMES L. GRAY, Port Arthur, Tex., assignor of one-fourth to E. Bruce, Goose Creek, Tex. Filed Jan. 13, 1925. Serial No. 2,128. 5 Claims. (Cl. 277—45.)

1. A combined pressure and vacuum relief mechanism comprising a pressure relief valve, a vacuum relief valve positioned in the face of said first valve and oppositely disposed with respect thereto, means for maintaining said second valve in open position for gradual release of pressure while maintaining said first valve in closed position, and means for automatically releasing said first valve upon development of sudden pressure.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 374—No. 3. TUESDAY, SEPTEMBER 18, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,555,634, S. Cohen, Variable condenser, decided August 10, 1928, claims 1, 2, 4, 5, 7, and 8.

Pat. 1,568,182, J. Primrose, Oil still, decided July 6, 1928, claims 3, 4, 5, and 10 to 15, inclusive.

Pat. 1,574,710, C. C. Spreen, Cover, decided August 11, 1928, claim 1.

Pat. 1,578,802, E. M. Clark, Progenesis of petroleum, decided August 7, 1928, claim 8.

Final decisions in interferences have been rendered against the following trade-marks:

T. M. 130,533, Fresh citrus fruits—namely, oranges, grapefruit, and tangerines—Lake Reedy Packing Company, Frostproof, Fla. Registered April 27, 1920. Decided August 29, 1928.

T. M. 209,688, Wall board and plaster lath, Buttress Manufacturing Co., Los Angeles, Calif. Registered March 2, 1926. Decided August 10, 1928.

APPLICATIONS.

PRELIMINARY AMENDMENT.

Additional Claims.

U. S. PATENT OFFICE, *Washington, Aug. 18, 1928.*

My attention has just been called to an application filed with 64 claims and a filing fee of $64.00, as required by statute. Six days after the application was filed the applicant presented an amendment adding 84 additional claims, without the extra fee of $1.00 per additional claim, as would have been required by the statute had the claims been presented six days earlier. In cases in which claims in excess of the number corresponding to the filing fee are presented before the first official action on the case, the Examiners will place the amendment in the file and enter it on the file wrapper, but will defer action on the claims presented in the amendment. In his first action the Examiner should act on the claims originally presented and for which the appropriate fee was paid. If, after the official action is made, the applicant believes that any of the claims presented by the amendment are patentable, he can have them entered and considered in the next action, but only by specifically pointing out wherein the claims presented in the amendment are patentable over the references cited by the Examiner.

THOMAS E. ROBERTSON,
Commissioner.

Condition of Applications Under Examination at Close of Business September 7, 1928.

(Total number of applications awaiting action, excluding Trade-Mark Division, 112,495; Trade-Mark Division, 1,340. Oldest new case, Nov. 9, 1927; oldest amended, Nov. 10, 1927. The dates given are 1927 except where † indicates 1928.)

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

HAYDE *v.* BOYNTON.

No. 2,986. Decided May 7, 1928.

INTERFERENCE—PRIORITY.

Priority awarded to H. on the ground that he was the first to conceive the invention and that B. derived his knowledge thereof from him.

APPEAL from Patent Office. Reversed.

Mr. A. V. Cushman and *Mr. W. H. Cloud* for Hayde.

Mr. A. E. Dowell, Mr. F. S. Lyon, and *Mr. L. S. Lyon* for Boynton.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.:*

Appeal from a decision of an Assistant Commissioner of Patents awarding priority to the party Boynton.

The two counts of the interference read as follows:

1. A concrete block or structure, consisting of cement, and an aggregate of vesicular material free from laminations or planes of cleavage resulting from subjecting suitable earthy material containing compounds capable of evolving gases to sufficient heat to incipiently fuse the material and generate gases therein which expand the material and render it vesicular; as and for the purpose set forth.

2. As an article of manufacture, a crushed cellular cement aggregate comprising expanded argillaceous material free from laminations or planes of cleavage.

In the spring of 1913 Hayde, who theretofore had been in the building and contracting business and who had made experiments with cinder concrete, turned his attention to the production of light aggregate, and subsequently engaged in the brick-making business. He testified that in 1913, through the use of a blowtorch and two crucibles, he burned a small quantity of clay or shale into a lightweight, cellular product, a considerable portion of which would float. In August or September, 1914, the evidence discloses that he burned some lightweight aggregate material at the Ocean Shore Iron Works in San Francisco and sent some of it to his nephew, George Hayde, at Kansas City, Mo., where he formerly lived and to which place he returned late in 1915. The letter, dated October 7, 1914, accompanying this material is in evidence as Exhibit 8, and the material sent is also in evidence as Exhibits 9, 10, and 11. The Examiner of Interferences found that Exhibit 8 clearly discloses the use of light, burned clay material in concrete, and that the sample exhibits of the material are light, that some of them will float in water, and that they do not show laminations. Therefore, he ruled that these exhibits and the testimony concerning them constituted a reduction to practice of count 2 and disclosure of count 1 as of October 7, 1914.

After his return to Kansas City, Hayde took charge of the brick plant of the Flannigan-Zeller Brick Company, and did nothing further with his invention until the fall of 1916, when he produced a quantity of burned shale and burned clay of the light expanded type. In the winter of 1917 he rigged up a rotary kiln on the plant site of the Flannigan-Zeller Brick Company in Kansas City and burned a considerable amount of material. On January 29, 1914, Hayde wrote a patent attorney concerning his invention, and considerable correspondence ensued, which is in evidence. This attorney died and the correspondence was taken up with another attorney, who on July 3, 1917, filed an application for patent, and Patent No. 1,255,878 issued to Hayde on February 12, 1918.

In the specification it is stated—

> My invention relates to the manufacture of brick, tile terra cotta, and like molded articles for building, paving and other purposes, from a raw material the basis of which is clay, shale, or similar argillaceous material. * * * It is to be understood that my invention includes such variations and modifications of the preferred procedure hereinafter referred to in detail and at length as will be obvious to those skilled in the art to which my invention relates. * * * The basic raw material will, during or after the mining operation in which it is removed from the original deposit, be broken up so as to pass through a screen having about a four inch mesh, the large lumps being rejected, or broken into finer particles before being used, in order to facilitate the working of my process. * * * The breaking up or spontaneous disintegration of the material is prevented as much as possible during the cooling thereof so that when the same is crushed the stronger and tougher portion will go through the crusher in as large lumps as the construction of the crusher will permit, while the weaker and more friable portion of the mass will be broken into finer pieces (dependent upon the toughness of various portions of the material), whereby particles ranging in size from the coarsest which may pass through the crusher to an impalpable dust will be produced at a single crushing operation.

This patent carried no claims of the scope of those in issue.

During the pendency of his application for patent, Hayde formed an association with a Mr. Appo for the purpose of exploiting burned clay products, the name of the company being The Haydite Products Company.

In February, 1918, Boynton entered the employ of the concrete-ship section of the United States Shipping Board Emergency Fleet Corporation in Washington, D. C. He was an engineer, and his immediate superior was Chief Engineer R. J. Wig.

Entertaining the view that his aggregate might be useful to the Government in the construction of concrete ships, Hayde, through the Haydite Products Company, addressed a communication dated February 18, 1918, to the director of the Department of Concrete Ship Construction, U. S. Emergency Fleet Corporation, Washington, D. C., offering the use of his patented invention to the Government, without charge, and inclosed "a small sample of Haydite concrete." After stating the results of the Kansas City testing laboratory, the communication continues—

> As applied to concrete ship construction, the lighter weight of Haydite concrete as compared with the ordinary sand and stone concrete, entirely overcomes Admiral Taylor's objection in this respect. In reasonably rich mixes Haydite concrete will successfully meet all strength requirements. * * * Obviously, we shall be glad to place all of our data at your disposal and, further, we shall be very glad to supply you with such quantities of Haydite *as will enable the Bureau of Standards to test it in every respect and to your entire satisfaction.*

On March 6th following, the letter offering the use of Haydite was acknowledged by the Shipping Board, the letter being signed by R. J. Wig as chief engineer, and initialed by "CWB," who it is admitted was Carl W. Boynton, the appellee. In this letter, written by Mr. Boynton, it is stated—

> We are quite interested in burnt clay as a concrete aggregate in connection with boat construction and anticipate that this material can be developed to a point where it will give us the required strength at the same time reducing the weight of concrete materially. The Bureau of Standards, at our suggestion has requested you to forward 500 lbs. of your Haydite for tests.

The 500 lbs. of Haydite requested was sent the Bureau of Standards, and its receipt acknowledged. On July 3, 1918, over the signature of Mr. Boynton as chief inspecting engineer, the report of the tests made at the Bureau of Standards of the material sent was furnished to the Haydite Company, with a further statement that—

> as soon as the missing 28 day results are reported by the Bureau of Standards, they will be forwarded to you for your information.

On October 4, 1918, the results of the 28-day tests were sent, with the request that the Haydite Company would—

> consider this information as confidential and not for publication or other publicity.

Under date of June 20, 1918, Richardson, an engineer in the concrete-ship section, wrote Appo that—

> the 28-day test of your shale Haydite gave over 4000 lbs. and was considered satisfactory. Your clay Haydite, which I found had not been tested, I had made up the last day I was there. All of this floated on water and I presume was a select lot.

Hayde also introduced in evidence, as his Exhibit 31, a certified copy of pages of the Engineering News-Record of the issue of July 11, 1918, containing an abstract of a paper delivered by "Messrs. Wig and Hollister at Meeting of American Concrete Institute." In the article it is stated that concrete for concrete ships "must have a compressive strength of at least 4000 lbs., per square inch at 28 days, and a minimum weight;" that—

> The commercial future of the concrete ships is in large measure dependent upon obtaining a light-weight concrete. Investigations are quite promising. *The strength and weight of one of these mixtures which meets our requirements* is as follows: One part cement, to one part special fused clay below ¼ inch size to two parts same aggregate between ¼ and ½ in. size, had a compressive strength of 3380 lb. per square inch at seven days and 4350 lb. per square inch at 28 days. It weighed 106 lb. per cubic foot in a saturated condition.

These specifications are the same as those given in the report of the Bureau of Standards on the tests of the Haydite sent by the Haydite Company, and, as observed by the Examiner of Interferences,

> The conclusion is irresistible that the figures used by Wig and Hollister in their paper before the American Concrete Institute prior to July 11, 1918, with regard to the satisfactory concrete made with "fused clay" were taken from Government reports on concrete made with Haydite.

In May of 1918 Mr. Appo had an interview with Mr. Boynton at the office of the Shipping Board, the interview having been arranged through Mr. Davis of the Bureau of Standards. Mr. Wig was present for a time. The test of Haydite that had been made by the Bureau of Standards were under discussion, and Appo explained to Boynton the process of burning Haydite, and a rough sketch was made of the burning kiln that Hayde then was using. Boynton expressed the opinion that the process was contrary to all known burning processes and "was entirely outside of his knowledge of burning material and burning processes." Finally, Appo suggested that Boynton delegate some representative of the Shipping Board to go to Kansas City, where material would be burned in the presence of this representative, and that it would be found "on test that it approximated the material that we had originally sent to the Bureau of Standards." This suggestion was adopted by Boynton, and Richardson was sent to Kansas City. On May 26, 1918, Richardson made a detailed report to his superior, Boynton. In this report he said,

> Some of the clay came through the cylinder a light cinder and a good deal of it was not burned to a cinder and was heavy. Some of this was put back and went thru a second time with no appreciable improvement. Mr. Hayde thought it would have given better results if it had been disintegrated or broken up finer.

In our view of the case, it is unnecessary further to consider the evidence for Hayde.

The interference originally involved applications of Willard D. Richardson and H. P. Brown (employees under Boynton in the Shipping Board), Croll, Boynton, and Larson. Subsequently Hayde was made a party. All of these parties but Hayde and Boynton have been eliminated. As originally declared, the interference involved but a single count, which contained no limitation that the aggregate should be "free from laminations or planes of cleavage."

The case came before the Law Examiner on a motion by Croll to substitute Croll's claim 1 for the issue, and a motion by Boynton to amend the issue. Both motions were denied by the Law Examiner, who, being of the view that the claim as drawn was anticipated by the patent to Senn, No. 930,801, required the insertion of the words "free from laminations or planes of cleavage", and suggested the addition of a second count not limited to a concrete block. Both Boynton and Croll appealed to the Board of Examiners in Chief, who sustained the Law Examiner, and the issue was amended accordingly.

After an unsuccessful effort to have his patent reissue with claims to a process and an aggregate, Hayde filed the application in issue as "a continuation in part" of his patent, and was made a party to this interference. Thereupon, Boynton moved to dissolve, on the ground that Hayde's application did not disclose the invention. In disposing of the motion, the Law Examiner said, in part—

> It is evident that the raw material employed by Hayde may be laminated, since shale is a laminated material. The issue does not call for an unlaminated raw material and count 2 is satisfied, so far as freedom from laminations is concerned, if the final product prior to crushing is unlaminated. It is immaterial that Hayde did not describe his burned product as free from laminations, if as a matter of fact it is in that condition. It would appear that raw material of a character which will produce the cellular structure described and claimed by Hayde will when broken up and heated to the necessary extent to produce incipient fusion result in an unlaminated material. There is no reason to confine the size of the broken pieces to a relatively large size or such as will pass a four inch mesh and Hayde's specification avoids restriction to any definite size.

The case then was considered by the Examiner of Interferences, who found that the earliest date could be awarded Boynton for conception and reduction to practice was early in July, 1918, and that Hayde had established conception and reduction to practice prior to that date.

The Board of Examiners in Chief found that there was no disclosure by Hayde of a material free from laminations or planes of cleavage, and awarded priority to Boynton, although he had introduced no evidence of conception or reduction to practice earlier than July, 1918. The Assistant Commissioner affirmed the Board.

We are of the view that the decisions of the Board and the Assistant Commissioner are based upon a misconception of the evidence and the real meaning of the counts of the issue. It will be remembered that before Hayde became a party to the interference, Boynton had objected to the insertion in the counts of the words "free from laminations or planes of cleavage." The Law Examiner found that Hayde's

> burned material is crushed and conforms to the requirement of count 2, which calls for a crushed cellular cement aggregate comprising expanded argillaceous material free from laminations or planes of cleavage,

and that—

> the aggregate disclosed by Hayde when used in the ordinary method of making concrete will produce the concrete block or structure of count 1, and Hayde obviously contemplates such use of his aggregate.

In other words, it was the view of the Law Examiner that these counts as finally drawn meant that the crushed aggregate should be free from laminations or planes of cleavage. We agree with this view. Crushed aggregate and cement are used to make the concrete block of the first count, and if that aggregate is free from laminations or planes of cleavage, the block will possess the requisite strength, and such was the real object of the limitation. That Hayde had a conception of the use of his crushed aggregate and cement in ship construction conclusively appears from his communication to the Fleet Corporation, and whatever information he possessed concerning the subject was either directly or indirectly imparted to Boynton. The small sample which he inclosed with his original communication inspired a request by Boynton for the 500 lbs., which was sent for the express purpose of exhaustive tests. What was the purpose of these tests? Obviously, to determine whether the material could be used in ship construction, and the result of those tests demonstrated that it could. It is strange, indeed, that if laminations or planes of cleavage appeared in the mixture the Bureau of Standards did not discover it. No such question was raised by Boynton until long afterwards, for the obvious reason that there was nothing upon which to base it.

The Examiner of Interferences has carefully and impartially reviewed the evidence, and we are in accord with his reasoning and conclusion. We are fully convinced that Boynton derived his knowledge of the invention from Hayde, and that Hayde is entitled to the award of priority.

The decision is reversed.

Reversed.

Patent Suits.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

1,018,502 (*a*), Just & Hanaman, Manufacture of incandescent electric lamps; 1,180,159, I. Langmuir, Incandescent electric lamp, C. C. A., 3d Cir., Doc. 3514, *Desmond Incandescent Lamp Co. et al.* v. *General Electric Co.* Grant of preliminary injunction, affirmed July 16, 1928. Doc. 3770, *Sunray Lamp Co., Inc., et al.* v. *General Electric Co.* Decree as above. Doc. 3701, *Republic Electric Co., Inc., et al.* v. *General Electric Co.* Grant of preliminary injunction affirmed as to one defendant, reversed as to the other, July 16, 1928.

1,018,502 (*b*), Just & Hanaman, Manufacture of incandescent electric lamps, C. C. A., 3d Cir., Doc. 3769, *Atlas Specialty Co. et al.* v. *General Electric Co.* Grant of preliminary injunction affirmed July 16, 1928.

1,082,405, C. E. Cleveland, Lumber trimmer; 1,267,130, Skeith & Burrows, Power lifting mechanism for saw trimmers, D. C. Oreg. (Portland), Doc. E 8749, *Allis-Chalmers Mfg. Co. et al.* v. *Southeast Portland Lumber Co. et al.* Decree for plaintiffs July 3, 1928.

1,089,315, A. A. Brown, Waistband lining for trousers; 1,126,379, same, Trousers, filed July 19, 1928, D. C., S. D. Ohio, W. Div., Doc. E 550, *Brown Method Co., Inc.*, v. *The Becker Tailoring Co.*

1,125,476, G. Claude, System of illuminating by luminescent tubes; 1,191,495, same, Method for separating neon from gases with which it is mixed, C. C. A., 2d Cir., Doc. 9960–1, *Claude Neon Lights, Inc.*, v. *E. Machlett & Son.* Patent 1,125,476 held valid and infringed as to claim 1, decree so modified (notice dated July 16, 1928).

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 18, 1928.

[VOL. 374. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

Ser. No. 251,560. JEDDO-HIGHLAND COAL COMPANY, Jeddo, Pa. Filed July 6, 1927.

No claim is made to the exclusive use of any of the wording on said trade-mark.
For Coal.
Claims use since Apr. 1, 1927.

Ser. No. 269,534. J. M. MCCULLOUGH'S SONS CO., Cincinnati, Ohio. Filed July 13, 1928.

EdenPark

For Lawn-Grass Seed.
Claims use since June, 1923.

Ser. No. 269,535. J. M. MCCULLOUGH'S SONS CO., Cincinnati, Ohio. Filed July 13, 1928.

WASHINGTON PARK

For Lawn-Grass Seed.
Claims use since June, 1923.

Ser. No. 269,661. HUNT-RANKIN LEATHER CO., Boston, Mass. Filed July 16, 1928.

PERMALOID

For Leathers.
Claims use since Jan. 3, 1928.

Ser. No. 269,727. FLOATSTONE PRODUCTS COMPANY, Las Vegas, Nev. Filed July 17, 1928.

FLOATSTONE

For Diatomaceous Earth in the Natural State and in a Cleaned and Purified Condition for Various Uses in the Arts.
Claims use since June 23, 1928.

CLASS 2.

Receptacles.

Ser. No. 270,365. BRIGHTON MILLS, Allwood, N. J.; Shannon, Ga.; and Passaic, N. J. Filed July 31, 1928.

BRIGHTONET

For Netted Woven Cord Laundry Bags of Cotton.
Claims use since Oct. 15, 1927.

CLASS 4.

Abrasive, Detergent, and Polishing Materials.

Ser. No. 245,218. REGINALD JOHN HOOTON HOPE, doing business as Hope, Hartope & Co., London, England. Filed Mar. 4, 1927.

"KOMPOSILL"

For Materials for Cleaning Surfaces of Furniture and of Motor Cars.
Claims use since May, 1926.

Ser. No. 246,317. VANIVA PRODUCTS COMPANY, INC., New York, N. Y. Filed Mar. 24, 1927.

VANIVA

For Shaving Creams Adapted for Use as a Stimulant and Conditioner of the Skin and as an Aid to Shaving the Beard from the Skin.
Claims use since Feb. 18, 1927.

Ser. No. 258,717. MORTIMER K. BRIGSTOCKE, Catskill, N. Y. Filed Dec. 10, 1927.

VEL-VO

For Nickel, Silver, Aluminum, and Glass Polish.
Claims use since about Oct. 1, 1920.

Ser. No. 261,800. PAUL PETER MÜLHENS, doing business as Eau de Cologne- & Parfümerie-Fabrik "Glockengasse No. 4711" gegenüber der Pferdepost von Ferd. Mülhens, Cologne-on-the-Rhine, Germany. Filed Feb. 17, 1928.

The drawing is shaded to show the colors dark blue, greenish blue, and gold, the solid black lines representing gold, the closely-arranged shade lines representing dark blue, and the widely-spaced shade lines representing greenish blue.
For Soaps Including Toilet Soaps, Shaving Sticks.
Claims use since May, 1927.

Ser. No. 266,706. ISADOR BARNETT, doing business as Barnett Janitor Supply Co., New York, N. Y. Filed May 21, 1928.

For Metal-Polishing Cream, Soap Powder for Grime and Dust, Scouring Powder, and Cleaning Powder for Grime, Rust, and Dirt, All for Household Cleansing.
Claims use since June 12, 1927.

Ser. No. 266,871. JUAN MANUEL GARCIA Y MIRANDA, Madrid, Spain. Filed May 23, 1928.

Applicant disclaims all of the wording appearing on the drawing.
For Soaps.
Claims use since 1927.

Ser. No. 267,286. M. O. WILKINS CORPORATION, New York, N. Y. Filed May 31, 1928.

KAL

For General Household Cleaning Preparation.
Claims use since Mar. 6, 1928.

Ser. No. 268,817. JAMES H. ROSENHEIM, doing business as Littlejim Co., Bluefield, W. Va. Filed June 28, 1928.

NOT A POLISH
Littlejim
CLEANER

The words "Not a Polish" and "Cleaner" are disclaimed apart from the other features of the mark shown in the drawing.
For Cleaning Preparation in Several Forms, Liquid, Paste, and Soap Form.
Claims use since June 1, 1928.

Ser. No. 268,898. THE WILBERT PRODUCTS CO., INC., New York, N. Y. Filed June 29, 1928.

DRY ZIT CLEANER

The words "Dry Cleaner" are disclaimed apart from the mark shown on the drawing.
For Dry-Cleaning Fluid for Removing Spots from Fabrics and Clothing.
Claims use since Apr. 16, 1928.

Ser. No. 269,067. THE ABBOTT FINISHING CORPORATION, Wakefield, Mass. Filed July 5, 1928.

PERI-GLO

For Preparations for Polishing or Softening Leather.
Claims use since June 16, 1928.

Ser. No. 269,142. PARKER-REGAN CORPORATION, San Francisco, Calif. Filed July 5, 1928.

For Chemically-Impregnated Polishing Dust Cloths.
Claims use since June 11, 1928.

Ser. No. 269,434. RALPH W. E. SOUTHWORTH, doing business as The Magic Swan Co., Tuckahoe, N. Y. Filed July 11, 1928.

The horizontally-lined shading indicates blue.
For Nonsaponaceous Liquid Dry Cleaner.
Claims use since June 16, 1928.

Ser. No. 269,686. THE PALMOLIVE-PEET COMPANY, Chicago, Ill. Filed July 16, 1928.

Kwiksolv

The lining on the drawing is for purposes of shading and does not indicate color.
For Soap.
Claims use since Mar. 18, 1925.

Ser. No. 269,687. THE PALMOLIVE-PEET COMPANY, Chicago, Ill. Filed July 16, 1928.

CRYSTAL BLANCO

For Soap.
Claims use since Apr. 6, 1921.

Ser. No. 270,384. MID-STATES CHEMICAL COMPANY, INC., St. Louis, Mo. Filed July 31, 1928.

BONOL

For Liquid Dry Cleaner.
Claims use since Apr. 2, 1928.

Ser. No. 270,615. ADOLPHUS H. STINES, West Asheville, N. C. Filed Aug. 4, 1928.

"Stine-O-Clene"

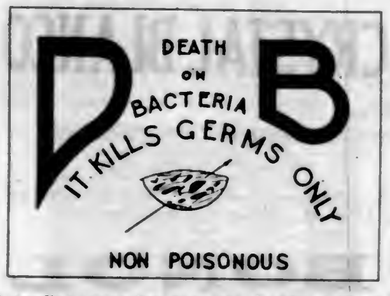
For Soap.
Claims use since July 14, 1928.

Ser. No. 270,747. HOWARD JOHNSON, doing business as Arima Soap Paste Co., Bethlehem Pa. Filed Aug. 8, 1928.

ARIMA SOAP PASTE

The words "Soap" and "Paste" are not claimed apart from the mark shown.
For Soap Paste.
Claims use since June 11, 1928.

Ser. No. 270,941. PERMANIZING STATIONS OF AMERICA, INC., Denver, Colo. Filed Aug. 13, 1928.



permanize

For Cleaner for Automobile Bodies, Painted, Varnished, and Other Surfaces.
Claims use since Dec. 1, 1926.

CLASS 6.

Chemicals, Medicines, and Pharmaceutical Preparations.

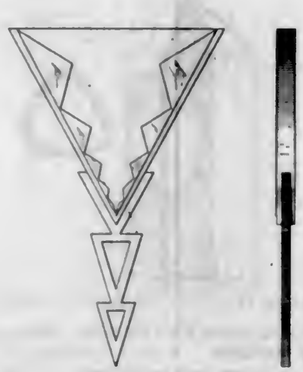
76,359. DOLL. DOROTHY STENNARD, Palo Alto, Calif. Filed Dec. 12, 1927. Serial No. 24,444. Term of patent 3½ years.

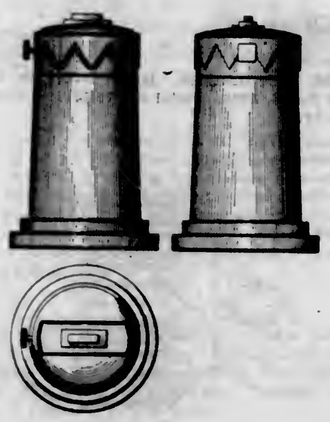


The ornamental design for a doll as shown.

76,360. MIRROR BACK OR SIMILAR ARTICLE. ELSA TENNHARDT, New York, N. Y., assignor to E. & J. Bass, Inc., a Corporation of New York. Filed May 23, 1928. Serial No. 26,831. Term of patent 3½ years.

The ornamental design for a mirror back, or similar article, substantially as shown and described.

76,361. MIRROR BACK OR SIMILAR ARTICLE. ELSA TENNHARDT, New York, N. Y., assignor to E. & J. Bass, Inc., a Corporation of New York. Filed May 23, 1928. Serial No. 26,832. Term of patent 3½ years.

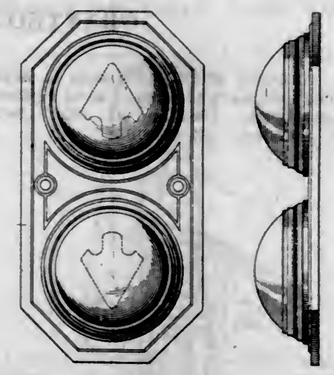


The ornamental design for a mirror back or similar article, substantially as shown and described.

76,362. CIGAR LIGHTER. ELSA TENNHARDT, New York, N. Y., assignor to Alfred Vester Sons Inc., Providence, R. I. Filed July 3, 1928. Serial No. 27,373. Term of patent 7 years.

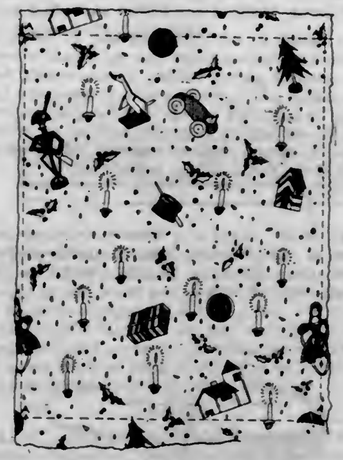
The ornamental design for a cigar lighter as shown.

76,363. CIGAR LIGHTER. ELSA TENNHARDT, New York, N. Y., assignor to Alfred Vester Sons Inc., Providence, R. I. Filed July 3, 1928. Serial No. 27,374. Term of patent 7 years.



The ornamental design for a cigar-lighter as shown.

76,364. BOOSTER PLATE FOR AUTOMOBILE RADIATOR ORNAMENT OR SIMILAR ARTICLES. GRIFFIN P. TURNER and HULAH U. HUFF, Chattanooga, Tenn. Filed June 2, 1928. Serial No. 26,984. Term of patent 7 years.

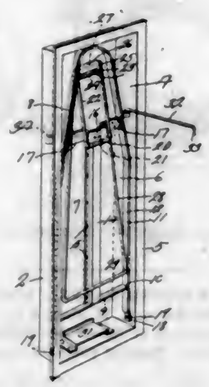


The ornamental design for a booster plate for automobile radiator ornament or similar articles, as shown.

76,365. ELEVATOR-SIGNAL PANEL. PAUL SCHUYLER VAN BLOEM, Great Neck, N. Y., assignor to Viking Products Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 24, 1927. Serial No. 24,644. Term of patent 7 years.

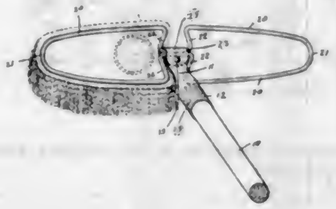
The ornamental design for an elevator signal panel, as shown.

76,366. BOX-WRAPPING PAPER. RUTH WILMOT, New York, N. Y., assignor to R. H. Macy & Co. Inc., New York, N. Y., a Corporation of New York. Filed Aug. 8, 1927. Serial No. 23,018. Term of patent 3½ years.



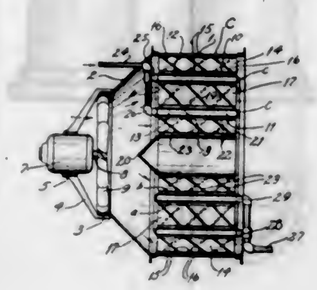
The ornamental design for a box wrapping paper, as shown and described.

PATENTS



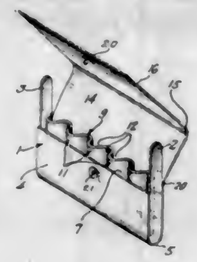
GRANTED SEPTEMBER 18, 1928.

1,684,378. IRONING BOARD. CHARLES L. ACKERMAN, Lima, Ohio, assignor to Lima Sheet Metal Products Company, Lima, Ohio. Filed Apr. 11, 1927. Serial No. 182,809. 2 Claims. (Cl. 68—10.)



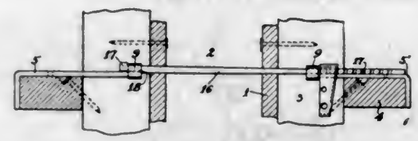
1. In a device of the kind described, a vertically disposed cabinet, an ironing board, one end of said board being hingedly mounted on the cabinet, a transversely disposed brace carried by said ironing board, a transversely disposed roll carried by said brace, a rectangular shaped link hingedly mounted at one end in said roll, and an approximately rectangularly shaped support hingedly connected to the other end of the rectangularly shaped link.

1,684,379. MOP. JESSE I. ANDERSON, Indianapolis, Ind., assignor to J. I. Holcomb Mfg. Co., Indianapolis, Ind., a Corporation. Filed Jan. 18, 1927. Serial No. 161,795. 3 Claims. (Cl. 15—229.)



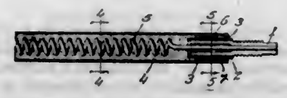
1. A mop frame including a wire arranged in two portions semi-elliptical in outline with the side portions as continuations of each other, the free ends of the sides extending inwardly therefrom towards each other, and lateral extensions thereof terminating adjacent each other and constituting a single pivot substantially in the plane of the elliptical frame for pivotally supporting the same.

1,684,380. AIR HEATER. HENRY BAETZ, St. Louis, Mo. Filed Jan. 6, 1926. Serial No. 79,541. 6 Claims. (Cl. 257—137.)



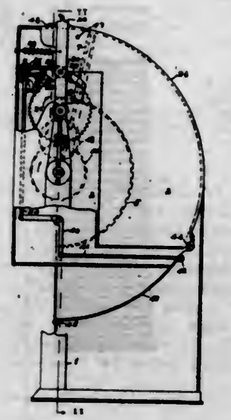
2. An air heater comprising a casing, a plurality of annular heating elements concentrically arranged within the casing, a plurality of radially disposed partitions between said heating elements forming a succession of air passages, said partitions being spaced from the heating elements to provide ducts leading from one passage to that next adjacent, means for moving air through said passages, and deflectors arranged in said passages to direct the air against the heating elements.

1,684,381. CIGARETTE CASE. JOHN F. BAHR, New York, N. Y. Filed Apr. 10, 1925. Serial No. 22,075. 2 Claims. (Cl. 206—41.)



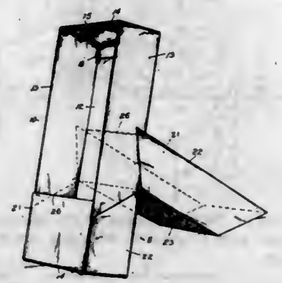
2. A cigarette holder consisting of a rigid box having relatively low front and rear walls and side walls extending above the front and rear walls which are of substantially the same width and height as the cigarettes which are adapted to be disposed in the box and from which their one ends lie exposed, a flexible cover connected to one of the low walls and having back, top and front portions so that when closed the cover will be supported and spaced by and will conform to the rigid sides of the box in order to protect the exposed ends of the cigarettes against mutilation.

1,684,382. WALL-FORM TIE STRUCTURE. WALTER E. BAUMBERGER, San Francisco, Calif. Filed Sept. 18, 1926. Serial No. 136,292. 6 Claims. (Cl. 25—131.)



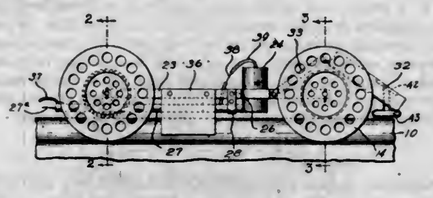
1. A knock-down holding device for wall forming moulds comprising a pair of anchor members, a connecting tie member detachably uniting the anchor members in adjustable relation, said connecting tie member being tapered toward one end provided with a lateral projection at one end for cooperation with one of the anchor members, and slotted at its opposite end for cooperation with the other anchored member.

1,684,383. ELECTRIC TERMINAL. JOSEF AMON, New York, N. Y., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 9, 1921, Serial No. 468,151. Renewed Mar. 23, 1925. 7 Claims. (Cl. 201—64.)



1. A terminal for electric heaters and the like, having tubular jackets, comprising a hollow conducting plug adapted to receive a connector, insulation surrounding the plug, and a compressible bushing arranged to rigidly fasten the plug to the jacket, the rigid fastening being effected by contraction of the jacket.

1,684,384. MAIL BOX. WILLIAM R. BANKSON, Pittsburgh, Pa. Filed Aug. 23, 1927. Serial No. 214,895. 7 Claims. (Cl. 232—17.)

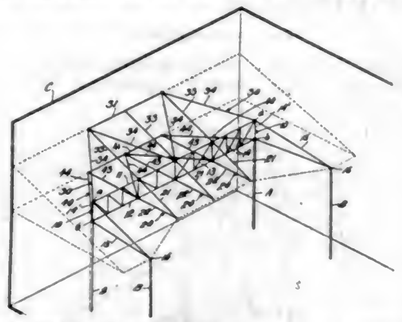


1. In a mail box of the character described, a mail receptacle provided with a mail inlet opening, a shiftable closure member for said mail inlet opening and normally closing the latter, a carrier plate mounted in said receptacle, and means actuated by the movement of said closure member for shifting said carrier plate to a predetermined position in said receptacle.

1,684,385. CARTON. HYMAN BATKIN, Brooklyn, N. Y. Filed Oct. 7, 1926. Serial No. 139,988. 3 Claims. (Cl. 206—44.)

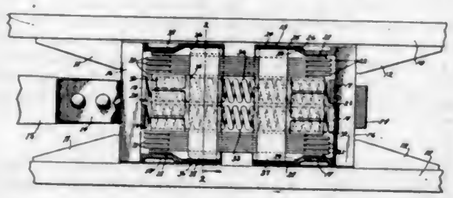
3. A carton of the character described, comprising a container having side and end walls, and a cover therefor comprising a tubular member divided into two portions hinged together, the side walls of the hinged portion of the cover being of trapezoid shape, the base angles thereof at the hinged end projecting beyond the abutting ends of the top wall of the cover, whereby the hinged portion when folded on its hinge brings the said projecting base angles of the sides into a position overlying the sides of the container and the free end of the cover parallel with the supporting surface.

1,684,386. RAILWAY SIGNALING. ROBERT S. BLAIR, Stamford, Conn. Filed Apr. 5, 1924. Serial No. 704,370. 17 Claims. (Cl. 246—166.)



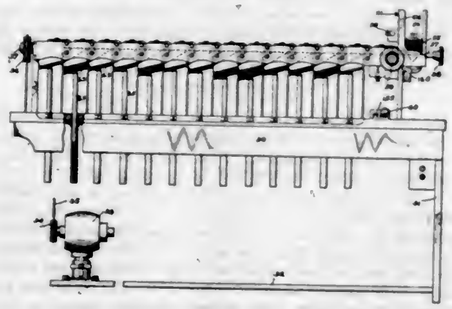
8. In a railway signal, in combination, a flanged wheel adapted to travel along a single rail, supporting means mounted on said wheel and adapted to follow the same with said wheel in engagement with the rail, a rearwardly discharging rocket mounted on said supporting means, and a signal mounted on said supporting means, the flanges of said wheel being of open construction to reduce the wind resistance thereon.

1,684,387. BUILDING CONSTRUCTION. ARTHUR L. BOBBS, Chappaqua, N. Y., assignor to Kenneth N. Woodward, trustee, Chappaqua, New Castle, N. Y. Filed Mar. 25, 1927. Serial No. 178,173. 6 Claims. (Cl. 20—1.12.)



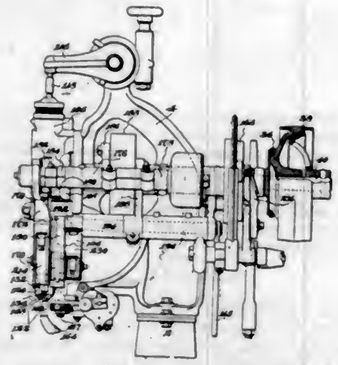
1. In building construction, the combination of a girder positioned with one of its cords directly above the other, supports for the ends of the girder, tapering balance trusses extending forward from the ends of the girder and having the rear ends of their upper and lower cords secured to the ends of the upper and lower cords of the girder, means for supporting the front ends of said balance trusses, a forwardly overhanging load carried by the intermediate portion of the girder, and means for applying the overturning moment of such load at the junctures of the girder and balance trusses, such means comprising two longitudinal trusses located behind the girder, one of which extends

between the rear ends of the upper cords of the balance trusses and has its front cord coincident with the upper cord of the girder, and the other of which extends between



the rear ends of the lower cords of the balance trusses and has its front cord coincident with the lower cord of the main girder.

1,684,388. DRAFT GEAR. WALTER H. COTTON, Chicago, Ill., assignor to Union Draft Gear Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 23, 1925. Serial No. 17,612. 11 Claims. (Cl. 213—36.)

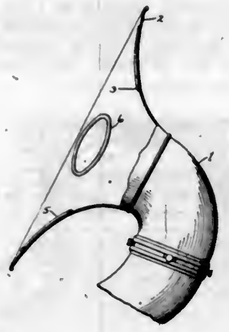


1. A draft gear comprising a pair of follower casings, intercalated friction elements within said casings, means for creating lateral pressure on said elements during compression of said gear, and separate means for releasing said pressure at each end of said gear after compresaion, said means comprising a plurality of springs within said casings extending substantially the length of said gear.

1,684,389. CARD FEEDING AND HANDLING DEVICE. EUGENE A. FORD, Scarsdale, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed June 1, 1925. Serial No. 34,077. 21 Claims. (Cl. 271—44.)

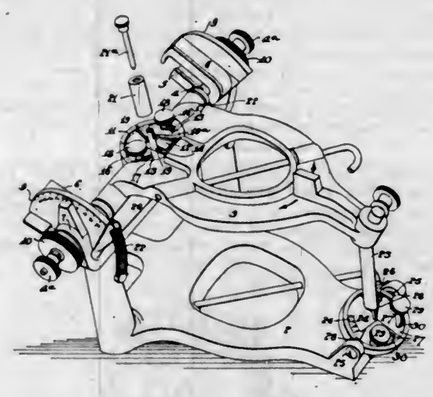
1. In a machine of the character described, in combination, a card magazine, a floating card throat, and automatic means to maintain said throat in alignment with the edge of the card about to be fed.

1,684,390. FASTENING-INSERTING MACHINE. GEORGE GODDU, Winchester, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 6, 1920. Serial No. 394,091. 42 Claims. (Cl. 1—18.)



1. In a machine of the class described, a frame, a head mounted for to and fro movement on the frame, a fastening receiver carried by the head for movement between fastening receiving position and a position in the line of drive of the fastenings, mechanism for operating the head, means for supplying fastenings to the receiver, means for driving the fastenings, an awl, a carrier for the awl mounted on the frame for movement independently of the head, and means for operating the awl carrier.

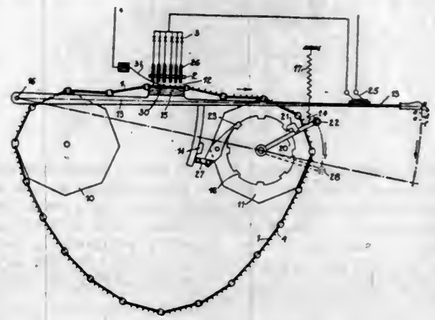
1,684,391. CONTAINER FOR ANNEALING AND SIMILAR PURPOSES. J BIRCHARD GREEN, Chicago, Ill. Filed Jan. 26, 1927. Serial No. 163,581. 5 Claims. (Cl. 263—40.)



1. A container for annealing and similar purposes composed of one of more anchorage pieces, a skeleton framework, and a sheet covering, said container being elongated and said covering being corrugated in a direction transversely of the elongation.

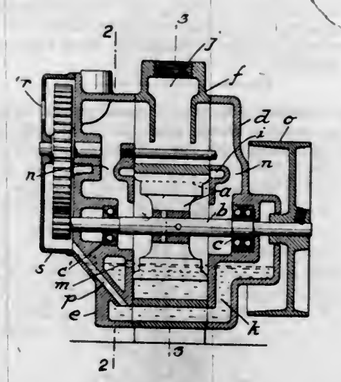
1,684,392. HORN BELL. EDWARD J. GULICK, Elkhart, Ind. Filed Apr. 3, 1926. Serial No. 99,436. 10 Claims. (Cl. 84—387.)

5. In a bell for a wind musical instrument of the class described, a reinforcing means for said bell and comprising a strip of metal bent longitudinally and laterally thereof to conform to the curve of the bell and having its ends united to form an endless element, said reinforcing element being soldered to the face of the bell.



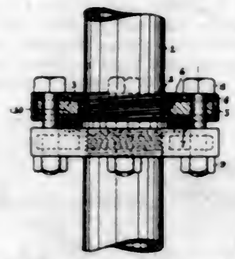
1,684,393. DENTAL ARTICULATOR. ALFRED GYSI, Zurich, Switzerland, assignor to The Dentists' Supply Company, a Corporation of New York. Filed Nov. 2, 1926. Serial No. 145,758. 8 Claims. (Cl. 32—1.)

1. In an articulator, the combination of two denture carrying frames having a relative pivotal connection whereby one may be adjusted relatively to the other, condyle guides between the frames, pivotal devices having an upright axis and separate from the condyle guides for causing one of the frames to oscillate relatively to the other, and means for putting the pivotal devices into and out of operative action, whereby when the normal pivotal action is put out of operation one of the frames may be given a protrusive movement relatively to the other frame.



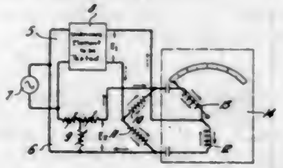
1,684,394. SIGN CONTROLLER. MAX HAASE, Buchschlag, Germany. Filed Feb. 10, 1927, Serial No. 167,187, and in Germany Dec. 24, 1925. 3 Claims. (Cl. 200—46.)

1. In an apparatus of the kind described, the combination with two rotatable drums of polygonal cross-section, of an endless chain composed of single elements hingedly connected together allowing for play between said elements, said elements being adapted to pass successively over said drums and provided with holes arranged in certain sequences, contact pins frictionally held in said holes, pivoted members, a plate carried by said members intermediate said drums, a system of lamp contacts disposed opposite said plate, a switch, means acting on said pivoted members to normally close said switch



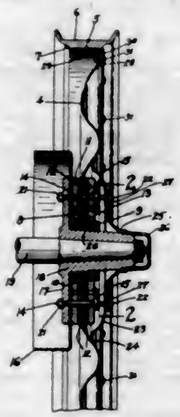
and move said plate toward said lamp contacts, and means adapted to be operated by said pivoted members to impart to one of said drums a partial rotation at any desired time intervals, the arrangement being such that upon the initial movement of said pivoted members to rotate one of said drums, said switch is opened, and said plate is withdrawn from said lamp contacts, so as to release the element supported by said plate.

1,684,395. VACUUM PUMP. CYRUS HOWARD HAPGOOD, Nutley, N. J., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 30, 1926. Serial No. 151,659. 2 Claims. (Cl. 230—205.)



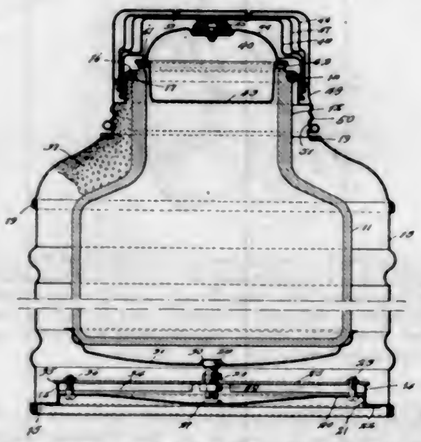
1. In a vacuum pump, the combination with a housing, a hollow rotor eccentrically disposed therein, slidable vanes extending into the hollow interior of the rotor and into the air space between rotor and housing, an oil reservoir in the housing, the housing being provided with an inlet and an outlet to said air space, and a discharge to atmosphere communicating with said outlet, of means providing a relatively unrestricted passage for air between the hollow interior of the rotor and said discharge, there being an opening between the oil reservoir and the hollow interior of the rotor allowing flow of oil from reservoir to rotor, said opening being relatively restricted to limit the flow of air therethrough relative to the flow of air between the hollow interior of the rotor and the discharge.

1,684,396. REENFORCED FLANGE. FLORENT HINNEKEN, Paterson, N. J. Filed Nov. 4, 1926. Serial No. 146,162. 1 Claim. (Cl. 285—137.)



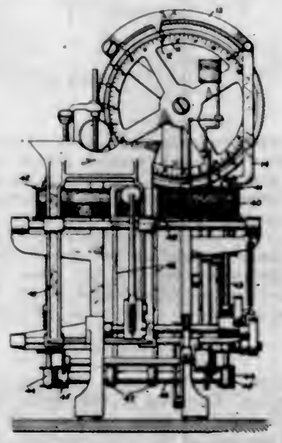
A peripherally threaded collet to have a screw-threaded engagement with and thus form a union-flange on one of two conductor parts to be joined comprising a metal annular core and a hard rubber annular shell and having holes for clamping devices extending substantially parallel with its axis and penetrating the core and shell, said shell completely encasing the core but leaving the metal of the core exposed within the holes.

1,684,397. ELECTRICAL TESTING. FRANCIS A. HUBBARD, Wyoming, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1924. Serial No. 758,978. 16 Claims. (Cl. 175—183.)



1. The method of comparing two voltages which comprises measuring the product of their vector sum, their vector difference, and the cosine of the angle between their sum and difference.

1,684,398. DISK WHEEL. CLARENCE S. JOHNSTON, Glendive, Mont. Filed Mar. 19, 1925. Serial No. 16,716. 6 Claims. (Cl. 301—9.)

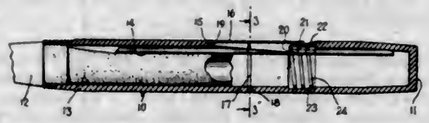


1. In a disk wheel, the combination with a peripherally flanged hub having a central bore, of a circular disk forming the body of the wheel, mounted thereon, annular clamping members also mounted on the hub to secure the disk thereto, flexible means interposed between the clamping members and the disk adapted to absorb vibration of the wheel when in motion, thereby to render it noiseless, and means for securing together said flexible means, clamping members and disk.

1,684,399. CONTAINER. JOSEPH F. LAMB and FRANK W. SCHADE, New Britain, Conn., assignors to Landers, Frary & Clark, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 21, 1925. Serial No. 17,169. 4 Claims. (Cl. 215—12.)

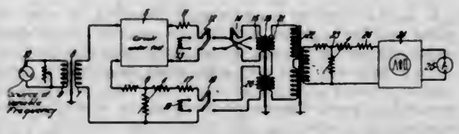
1. A container comprising a metal casing, a crock within the casing and spaced therefrom, the casing having a bottom opening capacitated for passage of the crock, the casing having an upright shouldered flange defining said opening, a supporting element seated on the edge of said flange, a yieldable seat for the crock supported from said supporting element, a heat-insulating filling material in the space between the crock and casing, a closure for the bottom opening having a shoulder embracing the shoulder of the flange, and screws removably securing the closure to said supporting element.

1,684,400. MULTICOLORED RIBBON-CONTROL DEVICE FOR TIME RECORDERS. CLINTON E. LARRABEE, Binghamton, N. Y., assignor to International Time Recording Company of New York, Endicott, N. Y., a Corporation of New York. Filed Jan. 20, 1925. Serial No. 3,574. 5 Claims. (Cl. 234—1.)



1. In a time recorder, in combination with a controlling member for controlling ribbon shifting operations, means for controlling the position of said member, said means including a time driven program wheel, a notched disk intermittently advanced under control of said program wheel, a star wheel rotatable with said notched disk, a follower cooperating with said star wheel and connections therefrom for controlling the position of the controlling member, and means for positively locking said notched disk and said cooperating star wheel against advance, or retraction after each advance thereof.

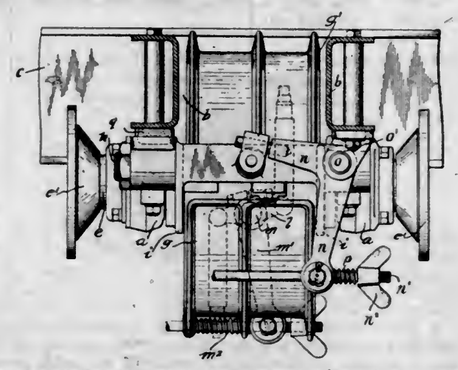
1,684,401. TEXTILE DYE. WINTHROP S. LAWRENCE, New York, N. Y. Filed Mar. 30, 1927. Serial No. 180,261. 2 Claims. (Cl. 8—6.)



1. A textile dye containing a basic-dye-zinc-tannate lake, a thickening agent and a glycolic compound.

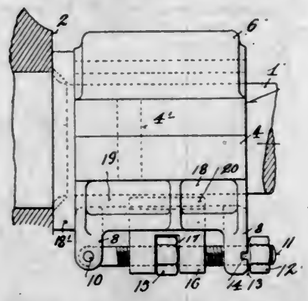
1,684,402. FOUNTAIN PEN. CLINTON E. MARSHALL, Brooklyn, N. Y. Filed Mar. 10, 1926. Serial No. 93,596. 5 Claims. (Cl. 120—46.)

1. In a pen of the class described, a lever pivotally mounted in the body of the pen, a finger piece at one end of the lever whereby the other end of said lever may be moved into the body of the pen, and means adjacent the finger piece end of the lever and cooperating therewith for retaining said lever in inoperative position and in parallel relation with reference to the wall of said pen body, said means comprising a coil spring mounted in the bore of said pen body and cooperating with a notched portion on said lever.



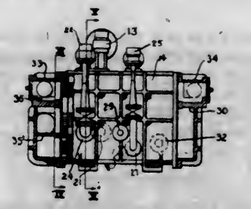
1,684,403. ELECTRICAL TESTING SYSTEM AND METHOD. WARREN P. MASON, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 29, 1926. Serial No. 112,598. 10 Claims. (Cl. 179—175.)

10. The method of measuring the phase shift through an electrical element comprising first determining a quantity involving only amplitude relations between current transmitted from a source through the element and another current from the same source transmitted around said element, and the deriving therefrom the angle of phase shift through said element.



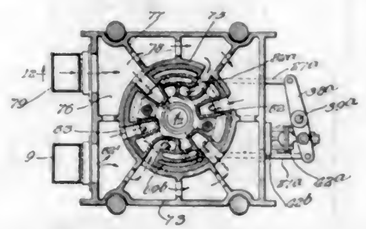
1,684,404. BRAKE MECHANISM. ALFRED F. MASURY and CHARLES FROESCH, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed May 23, 1924. Serial No. 715,297. 4 Claims. (Cl. 188—140.)

1. In combination, a propeller shaft, a brake drum mounted on said propeller shaft, a movable brake shoe anchor, a brake shoe for engagement with said brake drum and carried with said anchor, a vehicle wheel, a brake drum carried thereby, a brake shoe, means to apply said last named brake shoe to said last named brake drum, operative connections between said movable brake shoe



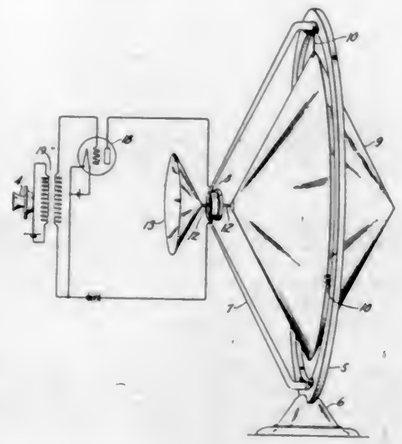
anchor and said means, and means to permit predetermined movement of the brake shoe anchor before the last named brake shoe is applied to the brake drum.

1,684,405. JOURNAL-BEARING CONSTRUCTION. JOHN S. MCWHIRTER, Southport, Conn. Filed Aug. 3, 1926. Serial No. 126,761. 3 Claims. (Cl. 308—237.)



2. In a bearing construction, the combination with a bearing housing, of a lining for said housing having a slot therein, a wedge adapted to move in said slot, a threaded rod pivotally mounted on said housing and a nut on said rod adapted to engage said wedge to move it in said slot.

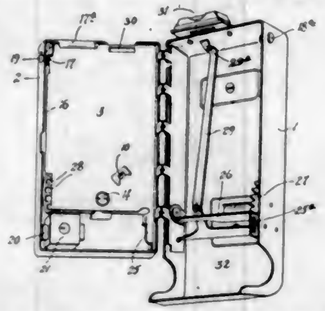
1,684,406. AIR-EJECTOR APPARATUS. DAVID W. R. MORGAN, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 12, 1926. Serial No. 141,165. 17 Claims. (Cl. 257—24.)



1. In a heat exchanger of the type described the combination of a shell, means dividing the shell into three adjacent chambers, water tubes in each chamber, and means for passing gaseous media through all of said chambers in series and upwardly through two of said chambers.

1,684,407. INTERNAL-COMBUSTION ENGINE. ERNEST NIBBS, New London, Conn., assignor to Electric Boat Company, Groton, Conn., a Corporation of New Jersey. Filed Nov. 1, 1926. Serial No. 145,386. 27 Claims. (Cl. 123—61.)

7. In combination with an internal combustion engine including a cylinder and a piston operating in the cylinder, a cylinder head having a series of air inlet ports of segmental shape extending therethrough from its outer face to its inner face and disposed radially of the head, the broader portion of the openings being toward the periphery of the head, and valve means for opening and closing said ports.



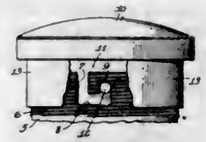
1,684,408. ACOUSTIC SYSTEM. ALEXANDER MCL. NICOLSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 23, 1923. Serial No. 620,721. 9 Claims. (Cl. 181—31.)

1. In combination in a loud-speaking sound-reproducing device, a plurality of freely moving large direct-acting diaphragms having widely different resonance characteristics and arranged to project sound waves into the same region of the atmosphere, and means for operating said diaphragms simultaneously in response to a common source of sound-wave energy.

1,684,409. VENDING MACHINE. MATTHEW G. O'NEIL, Dallas, Tex., assignor, by mesne assignments, to Standard Vending Corporation, Wilmington, Del., a Corporation of Delaware. Filed Feb. 11, 1921. Serial No. 444,244. 4 Claims. (Cl. 194—85.)

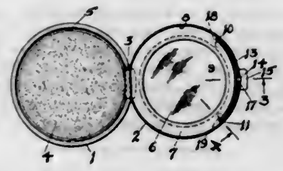
1. A coin-controlled vending machine comprising a box for containing the articles to be vended, a tiltable tray mounted in the box for supporting the articles, a toothed segment connected therewith, a hinged cover for the box, and coin-controlled mechanism supported in the cover including a notched segment adapted to engage with the toothed segment to tilt the tray to deliver the articles from the machine.

1,684,410. SHELVING. ROY A. OSTRAM and CARL EDWARD FRYKDAHL, Duluth, Minn., assignors to Duluth Show Case Company, Duluth, Minn., a Corporation of Minnesota. Filed Mar. 30, 1927. Serial No. 179,461. 7 Claims. (Cl. 211—148.)



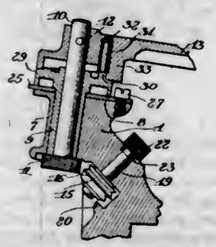
5. A store fixture comprising a plurality of rear uprights and lower posts, base boards connected to said uprights and said posts, upper and lower cross members connecting said uprights and said posts together, a longitudinal member mounted on said upper cross members, intermediate posts removably mounted on said top cross members and engaging said longitudinal member, a top mounted on said uprights and said intermediate posts and connected thereto, metal plates having a flange rabbeted in the base boards and arranged on the top and connected to the end posts.

1,684,411. WOOD-CHIPPING MACHINE. JOHN RAE, Ocean Falls, British Columbia, Canada. Filed May 15, 1926. Serial No. 109,404. 3 Claims. (Cl. 83—75.)



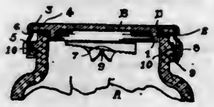
1. A chipper comprising a rotary knife-carrying disk; a triangular feed chute with a flat removable inclined top, the mouth of said chute being eccentric to the axis of said disk and projecting to just clear the knives of the latter; and a fixed knife disposed angularly to the horizontal plane and adapted to coact with the knives of said disk.

1,684,412. RADIATOR-CAP-LOCKING DEVICE. LEO A. REINER, Detroit, Mich. Filed May 13, 1925. Serial No. 29,969. 2 Claims. (Cl. 220—40.)



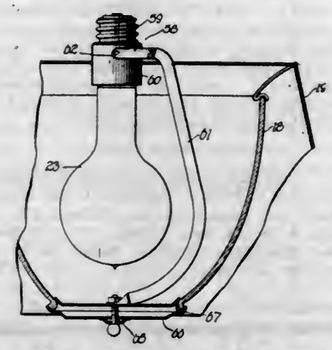
1. A radiator filling connection provided with a plurality of slots having return portions, a cap overlying said filling connection and having a neck to fit in the filling connection and cover said slots, outwardly extending studs carried by the neck of said cap and extending into the slots of said connection and adapted to engage in the return portions of said slots, and a ring screwed on said filling connection adapted to be shifted to cover said slots and engage under said cap to force said cap upwardly from said connection and hold said studs in the return portions of the connection slots.

1,684,413. SPRING CATCH FOR VANITY BOXES. PHILIP A. REUTTER, Waterbury, Conn., assignor to Scoville Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed May 21, 1928. Serial No. 279,416. 4 Claims. (Cl. 132—83.)



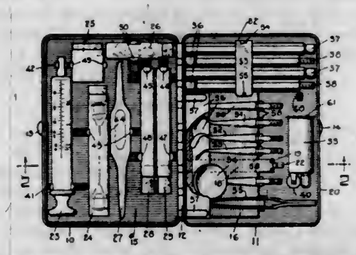
1. In a vanity case, a body, a cover, a hinge pivotally associating these parts, a toilet article in one of the parts, a bezel holding the article in place, shoulders formed on the bezel, and a spring strip having a catch for holding the body and cover together and a manual release, said strip having a part engaged beneath the bezel by which the strip is held in position, the ends of the strip lying between the shoulders of the bezel.

1,684,414. CAN-OPENING MACHINE. ADOLPH RYDQUIST, Rochester, N. Y. Filed Sept. 25, 1922. Serial No. 590,286. 5 Claims. (Cl. 30—3.)



1. In a can opening machine, the combination with an anvil adapted to cooperate with the inner side of the can bead, of a detachable reversible rotary cutter having, in one position, a cutting edge adapted to travel peripherally of the bead in direct opposition to the anvil and, in the other position, a second cutting edge adapted to travel peripherally of the can just below the bead.

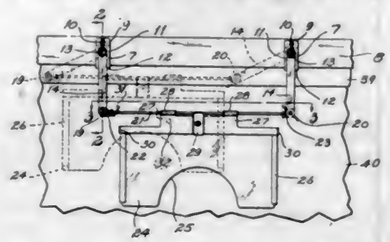
1,684,415. CONTAINER CLOSURE. FLAVIUS RANDOLPH SCHRIVER, Wilkinsburg Borough, Pa. Filed Mar. 5, 1927. Serial No. 173,025. 7 Claims. (Cl. 215—44.)



1. A container closure comprising a glass disk adapted to fit on the mouth of the container, and a metal clamping ring having a skirt arranged to engage the neck of the container and an inwardly extending annular flange, the disk being held within the clamping ring so that the closure may be applied to and removed from the container as a unitary structure, provision being made for relative rotative movement between the disk and the clamping ring.

1,684,416. LIGHTING FIXTURE. EDMUND O. SCHWEITZER, Chicago, Ill. Filed Feb. 18, 1921. Serial No. 446,199. 2 Claims. (Cl. 240—78.)

1. In combination, a combined plug and socket member, a supporting arm depending from said member and arched outwardly away from the same, said arm being pivoted at its upper end to the plug and socket member at diametrically opposite points thereof and the lower end of the arm being aligned with the plug and socket member, and a shade supported by the lower end of the arm and extending upwardly about the same and in concentric relation to the plug and socket member.



1,684,417. DENTIST'S KIT AND INSTRUMENT SUPPORT. HARRY A. SILBERMAN, Jersey City, N. J. Filed Apr. 28, 1925. Serial No. 26,360. 12 Claims. (Cl. 206—16.)

1. A dentist kit and instrument support comprising a pair of complemental compartment members, tray members in said compartments, said tray members including spring

finger clasps, struck up therefrom adapted to hold a plurality of dental instrumentalities in removable engagement, one of said tray members being arranged for pivotal movement in its respective compartment and including interchangeable instrument members, and a brace member adapted to hold said tray in an upright angular position whereby the assembly of said instrument members may be accomplished without hand contact therewith.

1,684,418. GLARE SHADE. WILLIAM A. SIMMONS, Eldon, Mo., assignor to Simmons Glare Shield Company, Eldon, Mo., a Corporation of Missouri. Filed Feb. 21, 1927. Serial No. 169,782. 5 Claims. (Cl. 296—97.)

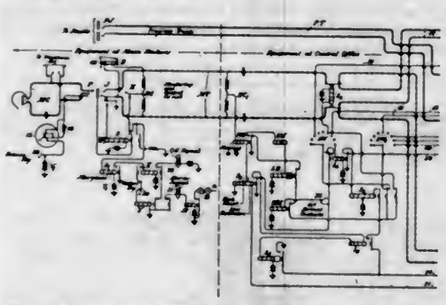
2. A glare shade comprising a pair of brackets adapted to be secured to a frame in spaced apart horizontal alignment to each other, a link pivotally carried at one end by each of said brackets, a rod pivotally carried by said links at their lower ends, means for locking said rod and links against movement, a sheet of translucent material slidably carried by said rod, and means for holding said translucent material against accidental sliding.

1,684,419. CENTRIFUGAL CASTING MACHINE AND METHOD OF CASTING. MICHAEL C. SMOTZER, Coshocton, Ohio, and JOHN A. BYERS, Chicago, Ill., assignors to James B. Clow & Sons, Chicago, Ill., a Corporation of Illinois. Filed Sept. 13, 1926. Serial No. 134,971. 11 Claims. (Cl. 22—65.)

1. A method of casting cylindrical bodies centrifugally comprising accumulating molten metal in one portion of a distributor adapted to be disposed substantially horizontally within a mold form, until a predetermined quantity has been accumulated therein, thereafter accumulating molten metal in a successive portion of the distributor until a predetermined quantity has been received therein, and thereafter flowing the metal accumulated in the said portions from the distributor into the mold.

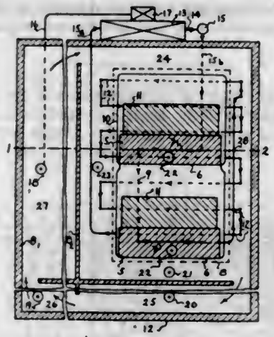
1,684,420. TIRE COVER. WILLIAM T. SUTHERLAND, Chicago, Ill. Filed Sept. 10, 1926. Serial No. 134,619. 6 Claims. (Cl. 150—54.)

1. A tire cover comprising a circular metal element transversely divided into sections of a segmental arc shape and pivotal hinges connecting the sections, each section in transverse cross section presenting an intermediate crown-like portion, and annular extensions from each edge curved to contact the curved side walls of the tire, the annular edge of one extension terminating in contact with the tire wall short of the point of widest transverse sectional width of the tire, the other extension being of greater width, the annular edge of which latter terminates in contact with the tire wall immediately adjacent the bead thereof.



1,684,421. METHOD OF INCASING EDIBLES AND THE INCASED EDIBLES. WILLIS D. THOMPSON, Spokane, Wash., assignor of one-fourth to Carl H. Crawford, Spokane, Wash. Filed Nov. 22, 1922. Serial No. 602,669. 4 Claims. (Cl. 99—8.)

1. The herein-described method of providing a perishable edible body with a hermetical casing and affording the consumer a way of shattering the set casing, which consists, in wrapping the bight of a string about a central portion of a cold edible body and holding the string ends in the fingers, in dipping the cold edible body in a hot casing forming bath whereby the bight of the string will bond with the casing when set, in withdrawing the casing enclosed edible body by the free string ends whereby the edible body will be completely incased without sealing or "touching" the casing, the free string ends being later stressed by the consumer to shatter the set casing substantially mid-way of the latter, whereby the upper portion of the casing can be removed and the lower portion employed as a cup for holding the edible.

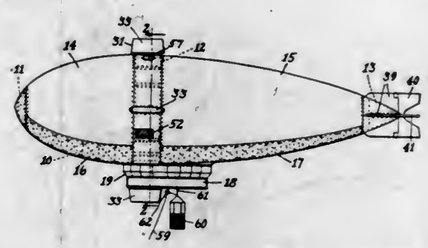


2. As an article of manufacture, an edible body, an integral casing enclosing said body and hermetically sealing the latter, and a subdividing string bonded to said casing and extending about the latter substantially midway of the ends of said casing for subsequently subdividing the latter, whereby one casing portion may be removed and the other used as a receptacle for the edible.

1,684,422. MONITORING AND CONTROLLING CIRCUITS FOR PROGRAM DISTRIBUTION. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 31, 1924. Serial No. 729,376. 12 Claims. (Cl. 179—170.)

1. In a signaling system, a transmission circuit extending between two stations, means to impress signals upon said circuit at one of said stations, an auxiliary monitoring circuit extending between said stations, an attendant's monitoring set at said first station, and means at said second station controllable by the attendant at said first station, to connect said monitoring circuit to the terminals of said first mentioned circuit at said second station to enable the attendant to monitor the transmission of signals from said first to said second station.

1,684,423. PROCESS AND APPARATUS FOR REFRIGERATION. GARDNER TUFTS VOORHEES, Boston, Mass. Filed Nov. 29, 1920. Serial No. 427,144. 11 Claims. (Cl. 62—170.)

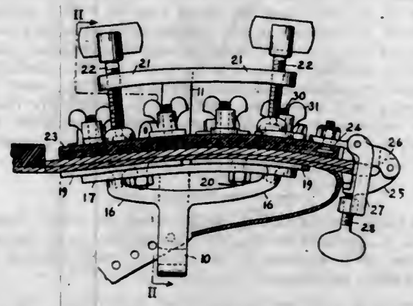


1. A process of cooling a storage space which consists of confining within said space a mass of water and a second mass of latent heat of fusion liquid having a lower freezing point than water in heat exchanging relation with each other, circulating a primary refrigerant in heat exchanging relation to the latent heat of fusion liquid until both liquid masses are all or partly frozen and then, when the refrigerant's circulation is stopped, preventing the all or partly frozen water from melting and maintaining the air within the storage space in a cold condition by the latent heat of said second all or partly frozen liquid.

1,684,424. VALVE MECHANISM. WILLIAM B. SMITH WHALEY, New York, CHARLES A. MULLER, Brooklyn, and CHARLES M. TURSKY, New York, N. Y., assignors, by direct and mesne assignments, of two-thirds to Whaley Engine Patents, Inc., New York, N. Y., a Corporation of Delaware, and one-third to said Muller. Filed Sept. 1, 1925. Serial No. 53,820. 20 Claims. (Cl. 123—188.)

1. In an internal combustion engine, a member having a valve port, a main air valve, an interrupter valve therefor, means for moving said valves relatively to said port to control the opening and closing thereof and for moving said interrupter valve relatively to said main valve to interrupt the flow of air through said port and main valve at a predetermined point in the engine cycle.

1,684,425. SEMIRIGID AIRSHIP. WELLINGTON B. WHEELER, El Segundo, Calif. Filed June 8, 1927. Serial No. 197,304. 5 Claims. (Cl. 244—10.)

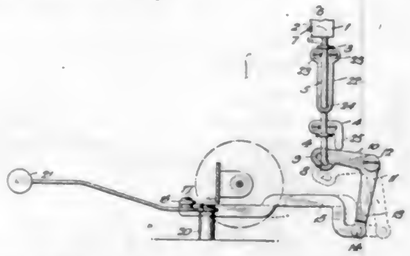


2. In an airship, of the dirigible type, a transverse ring compartment built into the body thereof, forwardly of its middle part; a blower mounted in said ring compartment with an engine adapted to drive it; a series of air conduits connected to said blower, said air conduits terminating in pivoted nozzles which project radially from said ring compartment and are bent so that their orifices extend at right angles to the axis of said conduits, and means for turning each of said nozzles about the axis of the conduit which it terminates.

1,684,426. METHOD OF TREATING PETROLEUM PRODUCTS. EVERETT RAYMOND WILES, Barnsdall, Okla. Filed Apr. 24, 1923. Serial No. 634,367. 1 Claim. (Cl. 196—20.)

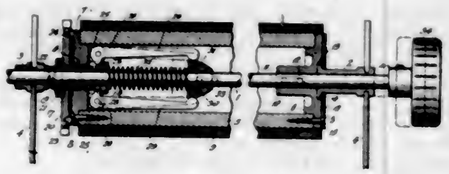
The method of recovering amorphous paraffin of high melting point from petrolatum, which comprises treating the petrolatum with a mixed solvent consisting of approximately 35% of acetone and 65% of benzol, cooling the solution and separating the paraffin therefrom.

1,684,427. SOLE CLAMP. APCAR YOSGATT, Hoboken, N. J. Filed Jan. 7, 1927. Serial No. 159,562. 4 Claims. (Cl. 12—38.)



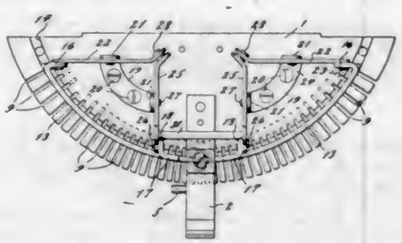
1. A sole clamp for pressing an outsole against a shoe bottom provided with a foot, and a plurality of pressure plates which are adjustably secured to the foot for bearing directly against the inner side of the shoe bottom.

1,684,428. BACK-SPACE MECHANISM. JOHN H. BARR, Ithaca, N. Y., assignor to Barr-Morse Corporation, a Corporation of New York. Filed Aug. 1, 1925. Serial No. 47,403. 18 Claims. (Cl. 197—91.)



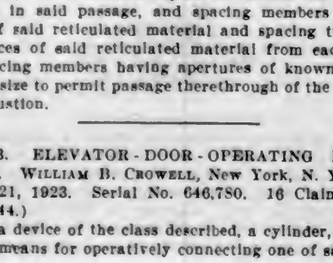
1. In a typewriting machine, a rack member movable with the carriage, a pawl mounted for sliding and rotary movement, a back space key, connections between said back space key and pawl for rotating said pawl into engagement with the teeth of said member, and then moving the pawl endwise to carry the carriage with it during

the one stroke of the key, and for rotating the pawl out of engagement with the teeth at the beginning of the return stroke and then moving the pawl endwise to its initial



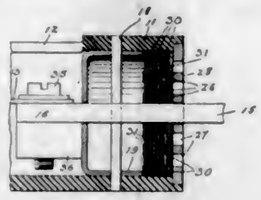
position while out of engagement with the teeth, and means frictionally engaging the pawl for yieldingly holding it in any of the positions in which it may be placed by said connections.

1,684,429. PLATEN-ADJUSTING MECHANISM. JOHN H. BARR, Ithaca, N. Y., assignor to Barr-Morse Corporation, a Corporation of New York. Filed Oct. 7, 1925. Serial No. 60,974. 18 Claims. (Cl. 197—123.)



1. In platen adjusting mechanism, a platen shaft, spaced apart bearings supporting said shaft for endwise and rotary motion, a platen core disposed on said shaft between said bearings and coupled to said shaft in such a manner that the platen will always be rotated upon rotation of the shaft and the shaft may be shifted endwise without interruption of the driving connection between it and the core, a ratchet wheel, a sleeve slidable and rotatable on said shaft and mounting said ratchet wheel, and means controlled by endwise movement of the shaft for drawing said sleeve into said core to frictionally couple the ratchet wheel and core for concomitant rotation, and operable to cause a release of said sleeve when disconnection of the ratchet wheel and platen is desired.

1,684,430. UNIVERSAL BAR. JOHN H. BARR, Ithaca, N. Y., assignor to Barr-Morse Corporation, a Corporation of New York. Filed Dec. 5, 1925. Serial No. 73,338. 16 Claims. (Cl. 197—97.)

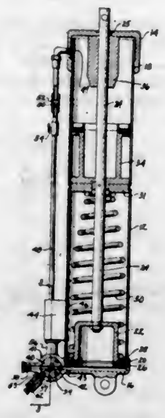


12. In a typewriting machine, a type bar support, a plurality of type bars arranged along the same and connected thereto for movement into printing position, a bar extending along said support in a position to be engaged and operated by any bar moving toward printing position, a plurality of substantially straight levers arranged substantially parallel to and adjacent the support and connected to one another and to at least three spaced points of said bar for insuring equal movements of all points of said bar independently of which type bar causes operation thereof.

1,684,431. PROCESS OF LETTERING ON STONE MONUMENTS AND OTHER HARD SUBSTANCES. JOSEPH H. BEHEE, Jr., Independence, Mo. Filed Sept. 25, 1926. Serial No. 137,804. 1 Claim. (Cl. 41—39.)

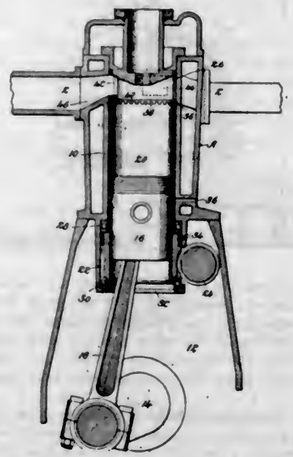
The process of lettering stone monuments consisting of applying on the face of the stone a composition having the consistency of gelatine and pressing therethrough outline forms of letters and withdrawing the same after the composition has stiffened and thereby leaving the face of the stone exposed corresponding to the outline forms of the letters and then applying a sand blast to countersink the outline forms of letters in the stone and then removing the composition from the face of the stone about the countersunk outline forms of the letters and apply thereto a sand blast and reduce the same to the plane of the countersunk outline of the letters to thereby form letters in relief on the face of the stone.

1,684,432. RENEWABLE FUSE. JOHN G. CLEMENS, Eggertsville, N. Y., assignor to Pierce Renewable Fuses, Inc., Buffalo, N. Y. Filed Oct. 1, 1926. Serial No. 138,978. 6 Claims. (Cl. 200—120.)



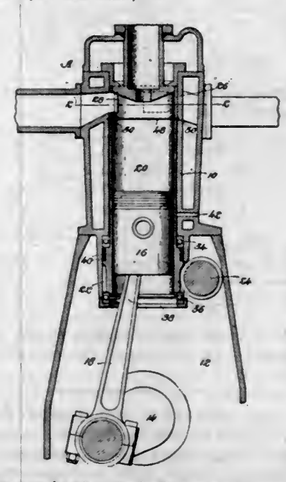
1. A fuse having a passage for products of combustion, a plurality of successive layers of reticulated metallic material in said passage, and spacing members between layers of said reticulated material and spacing two adjacent pieces of said reticulated material from each other, said spacing members having apertures of known and invariable size to permit passage therethrough of the products of combustion.

1,684,433. ELEVATOR-DOOR-OPERATING MECHANISM. WILLIAM B. CROWELL, New York, N. Y. Filed June 21, 1923. Serial No. 646,780. 16 Claims. (Cl. 121—44.)



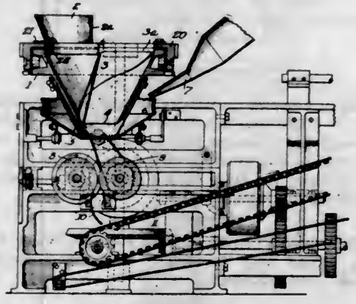
1. In a device of the class described, a cylinder, a piston therein, means for operatively connecting one of said parts

to a mechanism to be operated, means for admitting pressure fluid to operate said piston in one direction, spring means for opposing the said fluid pressure and for returning the piston when the said fluid pressure is released, a cup and plunger in the cylinder for cushioning the movements of said piston, a conduit connected to the lower



portion of the cylinder and adapted to conduct fluid to the cup and plunger to produce cushioning action during the pressure fluid operated stroke of the piston, means for releasing the fluid pressure on the piston, and means for entrapping a portion of the operating fluid to attain cushioning action during the return stroke of the piston.

1,684,434. INTERNAL-COMBUSTION ENGINE. DORSETT A. DAVISON, Richmond, Va. Filed Apr. 22, 1927. Serial No. 185,898. 12 Claims. (Cl. 123—80.)

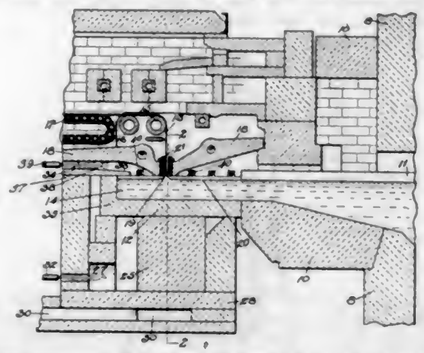


1. A valve mechanism including a split rotatable hollow cylindrical valve member, a rotatable hollow cylindrical liner for rotating said valve member, and a connection between said valve member and liner whereby the driving force of the liner is transmitted to the valve member only at the lead end of the latter as regards its direction of rotation.

1,684,435. INTERNAL-COMBUSTION ENGINE. DORSETT A. DAVISON, Richmond, Va. Original application filed Apr. 22, 1927, Serial No. 185,898. Divided and this application filed Apr. 22, 1927. Serial No. 185,899. 4 Claims. (Cl. 123—80.)

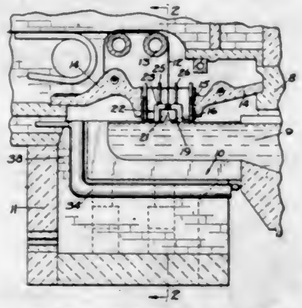
1. A valve mechanism including a split rotatable hollow cylindrical valve member, a rotatable hollow cylindrical liner for rotating said valve member, and a rigid connection between said valve member and liner of less circumferential extent than the distance around said valve member located at the lead end portion of said valve member as regards its direction of rotation.

1,684,436. SHEET-FORMING MACHINE. CHARLES E. DELLENBARGER, Philadelphia, Pa., assignor to Paul Carpenter, Glenview, Ill. Filed Sept. 23, 1920. Serial No. 412,239. 10 Claims. (Cl. 107—12.)



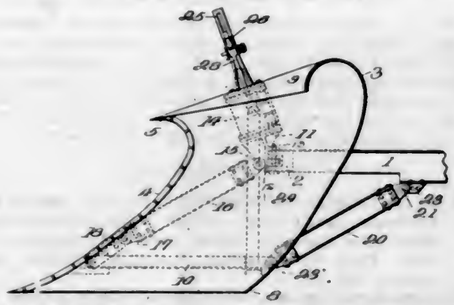
9. In a machine of the character described, in combination, a hopper and a mill, one of said elements being movable relatively to the other, about an axis, the hopper being provided with a passage from the inlet to the outlet thereof curved about said axis and an abutment adapted to guide the material into said passage, and an inclined surface by which the material is directed against said abutment.

1,684,437. SHEET-DRAWING APPARATUS. ENOCH T. FERNGREN, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 23, 1924. Serial No. 757,606. 13 Claims. (Cl. 49—17.)



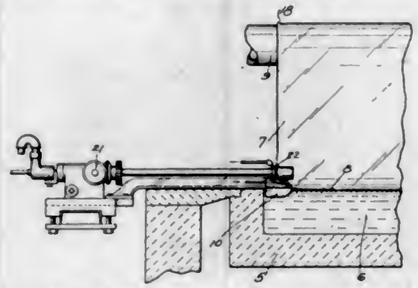
1. In sheet glass apparatus, means to draw a sheet of glass from a source of molten glass, including a sheet supplying meniscus, and heat absorbing means positioned on

both sides of the sheet and having a curved end whereby the said means can be placed relatively close to the sheet without interference to the sheet supplying meniscus, the



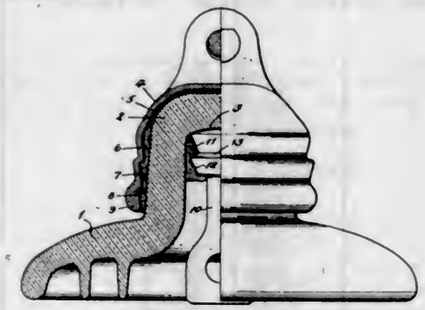
lower extremity of the heat absorbing means being a substantial distance from the base of the said sheet suplying meniscus.

1,684,438. PROCESS AND APPARATUS FOR MAINTAINING SHEET GLASS TO WIDTH. ENOCH T. FERNGREN, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 16, 1925. Serial No. 75,719. 14 Claims. (Cl. 49—17.)



1. The process of drawing sheet glass from a pot, consisting in containing a mass of molten glass, forming a sheet supplying meniscus thereon, and producing adjoined glass areas having relative viscosities at the base of the meniscus edges, the glass having the lowest viscosity being adjacent the pot walls.

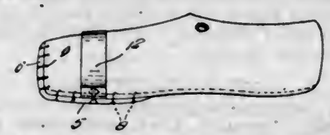
1,684,439. SNOWPLOW. HENRY FORT FLOWERS, Findlay, Ohio. Filed May 23, 1923. Serial No. 640,902. 3 Claims. (Cl. 37—30.)



2. In a device of the class described, the combination with a supporting member of a vehicle, a snow plow, parallel links jointed to said plow and said member at the respective sides and front of the vehicle, a fluid pressure cylinder fixedly mounted on said member in the central plane of the vehicle and having a piston rod actuated therefrom, a crosshead pivoted on said rod, and links connecting the ends of said crosshead with the respective sides of said snow plow.

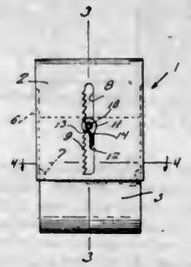
1,684,440. SHEET-GLASS-EDGE-FORMING MEANS. FRANK FRASER, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed June 5, 1925, Serial No. 35,062. Renewed Sept. 26, 1927. 10 Claims. (Cl. 49—17.)

1. In sheet glass apparatus, means for drawing a sheet from a mass of molten glass, stationary means arranged at the base of the sheet at its edges for retarding the movement of the glass entering the sheet edges, and rotatable means arranged above the said stationary means and closely adjacent thereto.



1,684,441. HIGH-TENSION INSULATOR. MINOR F. H. GOUVERNEUR, Baltimore, Md., assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Mar. 16, 1925. Serial No. 15,851. 4 Claims. (Cl. 173—318.)

1. In an insulator, a dielectric body and outer and inner metallic members secured thereto and each having a plurality of steps including conoidal surfaces, the angle of the conoidal surfaces of the outer member with respect to the vertical being substantially less than the angle of the conoidal surfaces of the inner member with respect to the vertical.

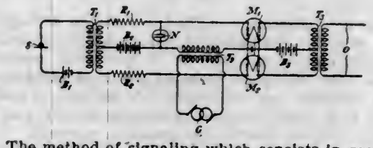


4. In an insulator, a body of dielectric material formed with an upstanding stem and further formed with a recess in its underside, a metallic cap secured upon the stem and a metallic pin secured within the recess, the cap having its lower portion formed with successive steps including conoidal surfaces connected by other conoidal surfaces normal thereto, and the pin being formed with a plurality of steps including conoidal surfaces connected by other conoidal surfaces normal thereto, the angle of the first named conoidal surfaces of the pin being a multiple of the angle of the first named conoidal surfaces of the cap when considered with respect to the vertical.

1,684,442. TAPPER AND PROTECTOR FOR TOE-DANCING SHOES. WILLIAM J. HANEY, North Vernon, Ind. Filed Sept. 22, 1927. Serial No. 221,320. 3 Claims. (Cl. 36—72.)

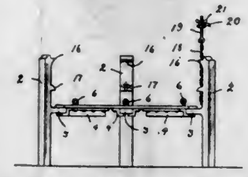
1. An attachment of the class described comprising an elongated plate slightly curved transversely and merging at one end in a right angularly extending toe plate, a split band having overlapping apertured ends and a bolt to extend through the apertures and through the elongated plate to secure the band thereto in different adjustments for fitting different size shoes.

1,684,443. BEDCLOTHES CLAMP. MARIE HARRIS, New York, N. Y., assignor of one-third to J. Boyd Burrowes, Washington, D. C., and one-third to Ernest Brayton, New York, N. Y. Filed Sept. 30, 1927. Serial No. 223,091. 1 Claim. (Cl. 24—72.5.)



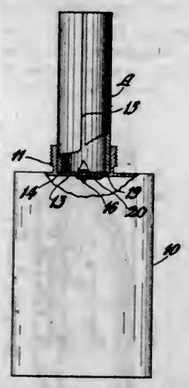
In a bed clothes clamp of the class described, a pair of complementary inner and outer plate-like sections having their inner opposed ends arranged in overlapped relations, the outer ends of the sections being bent to form opposed gripping jaws, inwardly extending ribs formed on the side edges of the outer section between which the inner plate like section is slidable, laterally extending ears formed on said ribs for maintaining the inner plate-like section in engagement with the inner face of the outer section, means for locking the complementary sections against sliding movement in one direction, said last mentioned means comprising a pawl and ratchet arrangement associated with said inner and outer plate like sections.

1,684,444. HOE WEEDER. ALFRED J. HAYDEN, Daytona Beach, Fla. Filed Aug. 29, 1927. Serial No. 216,237. 1 Claim. (Cl. 97—71.)



An improved hoe with a handle and a one piece hoe blade said blade having a series of relatively wide half-circle portions substantially at right angles to said handle on the lower edge, the side of said portions opposite to the side on which the handle is located being beveled to provide a sharp edge and with the side facing the handle plain, the spaces between said half-circle portions curving inwardly and upwardly to an apex point for gripping roots of weeds and the like, the depth of said half circle portions being such that the true character of the hoe, as such, is retained.

1,684,445. SIGNALING SYSTEM. RICHARD K. HONAMAN, Bloomfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 12, 1926. Serial No. 122,016. 13 Claims. (Cl. 179—171.)



1. The method of signaling which consists in generating a high frequency wave, generating low frequency signals, modulating the high frequency wave by the low frequency signals when the magnitude of the low frequency signals wave when the magnitude of the low frequency signals drops below a predetermined value and freely transmitting the high frequency wave modulated by the low frequency signals when the magnitude of the low frequency signals rises beyond the predetermined value.

1,684,446. STAND. NEWTON R. INGLIS, Duluth, Minn. Filed Feb. 24, 1928. Serial No. 256,797. 3 Claims. (Cl. 144—288.)

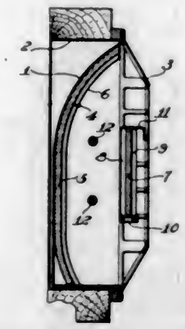
1. A stand of the class described comprising a flat body portion, a plurality of upstanding body and rim supporting legs horizontally adjustably attached to the extremities of the body portion, and extending above and below same for the purpose described.

1,684,447. CAN-SPOUT-SEAL CUTTER. ALFRED JAESCHKE, Los Angeles, Calif. Filed Sept. 25, 1926. Serial No. 137,707. 2 Claims. (Cl. 30—3.)

1. In a device for cutting a metal can spout seal, a tube having one end adapted to rest upon the seal, said tube also having a longitudinal slot from end to end whereby said tube is adapted to have its entire perimeter shortened so as to frictionally and rotatably engage the interior of the spout, and a portion of the wall of the tube being

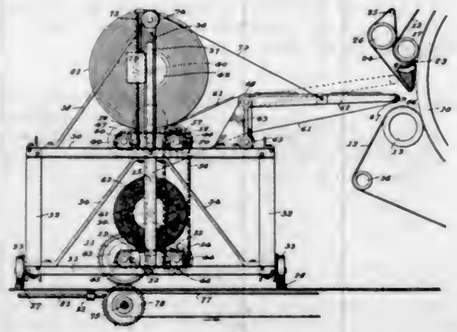
extended to form a dependent cutting element, said element being projected from the wall of the tube radially inwardly thereof and adapted to pierce said seal with a circular path when said tube is rotated whereby to leave an annular portion of the seal for the tube to rest upon while being rotated.

1,684,448. METHOD OF TREATING GARBAGE AND THE LIKE. REVERE P. KINKEL, Buffalo, N. Y. Filed Mar. 21, 1925. Serial No. 17,409. 9 Claims. (Cl. 23—119.)



7. The hereindescribed method of treating garbage and similar material, consisting of subjecting the garbage to the drying action of a current of hot gases, recovering ammonia from said gases, burning the dried garbage, conducting the heat evolved during the burning to garbage which is being dried, to assist the drying thereof, and then using the residual heat in the ammonia recovery.

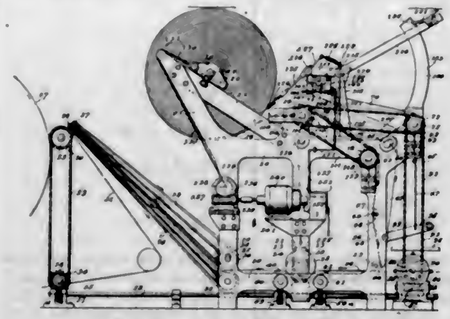
1,684,449. TENNIS RACKET. JACOB L. KLEINMAN, New York, N. Y. Filed July 31, 1926. Serial No. 126,210. 5 Claims. (Cl. 273—73.)



4. In a racket, a frame, a handle, a string tensioning device mounted in said frame, and removable means forming a part of said handle for operating said tensioning device.

1,684,450. ELECTRIC HEATER. JAMES H. KNAPP, Los Angeles, Calif., assignor to James H. Knapp Company, Los Angeles, Calif., a Corporation of California. Filed Aug. 27, 1926. Serial No. 131,899. 6 Claims. (Cl. 219—34.)

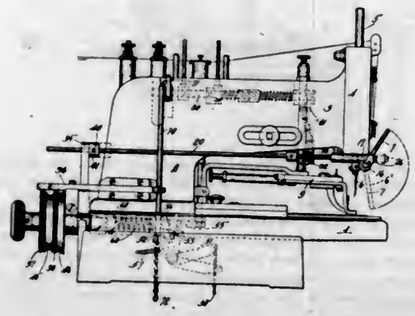
1. An electric heater comprising a casing having an open vertical front for lateral dissipation of heat, front and rear reflecting plates arranged in said casing, and an electric resistance element disposed between said plates, said plates forming a passage for upward flow of air between them, and the front reflecting plate being disposed between said resistance element and said open front of the casing to prevent direct radiation of heat from the resistance element through the front.



1,684,451. AUTOMATIC FEEDER FOR LAUNDRY MACHINERY. THOMAS L. LOWE, Devon, Conn., assignor to The Lowe Machinery Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Feb. 5, 1925. Serial No. 7,050. 36 Claims. (Cl. 68—9.)

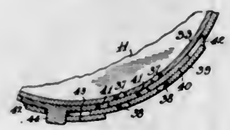
1. In a machine of the character described, an apron adapted to have pieces of laundry placed thereon, a roll for receiving said apron with said pieces, whereby the diameter of the rolled apron increases as it is rolled on said roll, constant speed drive means for imparting variable angular and constant surface rotation to said roll and rolled apron in rolling and unrolling directions, said apron adapted to be unrolled in reverse direction to feed said pieces therefrom to an ironer or the like at uniform speed.

33. The method which comprises assembling articles to be ironed in close relationship, the parts of each article being arranged suitably for ironing, storing and conditioning the articles so assembled, and then feeding said articles to an ironing machine in the reverse order to their assembly and without disturbing their arrangement.



1,684,452. LAUNDRY-DISTRIBUTING APPARATUS. THOMAS L. LOWE, Devon, Conn., assignor to The Lowe Machinery Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Jan. 12, 1926. Serial No. 80,762. 33 Claims. (Cl. 68—9.)

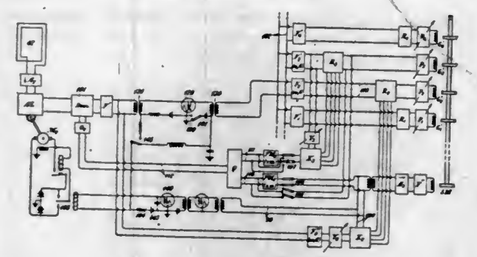
1. In a machine of the character described, an apron, a pair of spaced rolls respectively connected to the ends



of said apron whereby the apron is adapted to be wound from one upon the other, drive means with which said rolls may have frictional driving engagement, and means for moving said respective rolls into spaced relation with said drive means whereby as one roll is rotated by its drive means, the other roll may be free of its drive means.

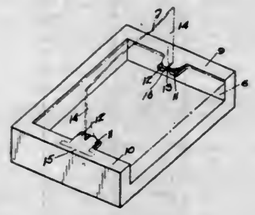
1,684,453. NEEDLE GUARD FOR SEWING MACHINES. ROBERT L. LYONS, Waltham, Mass., assignor to Frederick Osann Company, New York, N. Y., a Corporation of New York. Filed Jan. 9, 1925. Serial No. 1,431. 2 Claims. (Cl. 112—261.)

1. In a button sewing machine, a button clamp, means for moving said clamp into and out of button-presenting position, sewing instrumentalities including a needle, a needle guard movable to and from guarding position to protect the operator from flying pieces in case the needle breaks, and means actuated by said clamp moving means for moving said guard into and out of guarding position.



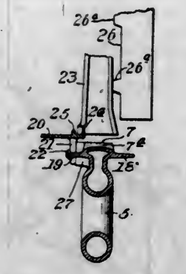
1,684,454. VANITY CASE. HARRY W. NOYES, West Haven, Conn., assignor of one-half to A. Graham Shields, New Haven, Conn. Filed Feb. 9, 1926. Serial No. 87,144. 29 Claims. (Cl. 132—83.)

1. In a vanity case; a body member; a powder compartment therein; powder ports through the walls thereof from the interior of the powder compartment to the exterior of the case; and a flexible diaphragm within the body member forming one wall of the powder compartment and a closure member for covering the ports.



1,684,455. MULTIPLEX CARRIER-CURRENT SIGNALING. HARRY NYQUIST, Millburn, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 13, 1926. Serial No. 108,939. 9 Claims. (Cl. 179—15.)

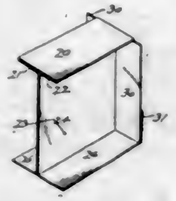
2. In a carrier current signal receiving system, a demodulator, a generator to supply current of carrier frequency to said demodulator, frequency controlling means for said generator, means to separate two components of different frequencies in the demodulator output, means to derive therefrom two currents that will be equal in frequency when and only when the said generator operates at the correct frequency, and means to compare said derived



currents and by their departure from equality of frequency to make compensating adjustment through said frequency controlling means.

1,684,456. DRAW POT. JOSEPH A. REECE, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed May 18, 1925. Serial No. 30,937. 12 Claims. (Cl. 49—17.)

1. In a sheet glass apparatus, a tank furnace containing a mass of molten glass, a draw-pot in open communication therewith, means for drawing a sheet from the glass in the pot, and slotted means carried by the sides of the pot, the slot therein being elongated in top plan and bulged at its center.

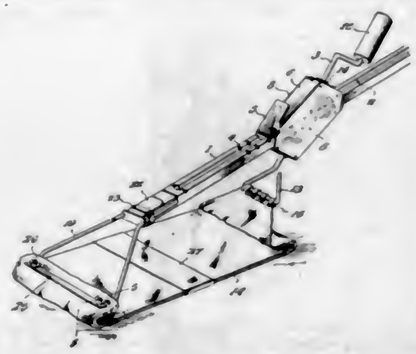


1,684,457. GAS BURNER. WILLIAM L. SHARP, Steubenville, Ohio, assignor to The Ohio Foundry and Manufacturing Co., Steubenville, Ohio, a Corporation of Ohio. Filed Mar. 10, 1927. Serial No. 174,150. 1 Claim. (Cl. 126—92.)

Burner structure comprising a burner head having a plurality of orifices disposed longitudinally thereof, a fire tube support disposed above and to the front of the said orifices, a series of tongues extending from the rear edge of said support, each adapted to engage the lower edge of a burner tube to support the same, and each being of small

width relative to the internal diameters of the tubes, and a tube-supporting member disposed above and to the rear of the burner head, for preventing rearward tilting of fire tubes.

1,684,458. PARTITION FOR CONTAINERS. ARCHIBALD G. SMITH, Buffalo, N. Y. Filed Jan. 16, 1926. Serial No. 81,697. 6 Claims. (Cl. 229—15.)



1. A partition for a container made of a single piece of sheet material folded upon itself intermediate its ends to provide an upright web portion and a top flange of double thickness of material, its free ends forming bottom flanges extending outwardly in opposite directions to the bottom of the web portion and adapted to rest against the bottom of the container.

1,684,459. TENSION AND PHYSIOTHERAPY TABLE. OLIVER P. SPILMAN, Houston, Tex. Filed Feb. 15, 1926. Serial No. 88,210. 9 Claims. (Cl. 128—71.)

5. A therapeutic device for use in the treatment of a patient, comprising a support, means at each end thereof to secure a patient on said support, means to exert tension between said securing means, a pneumatic cushion on said support, means to vary the pressure in different parts of said pneumatic cushion, and manually operated means to relieve said tension and deflate said cushion.

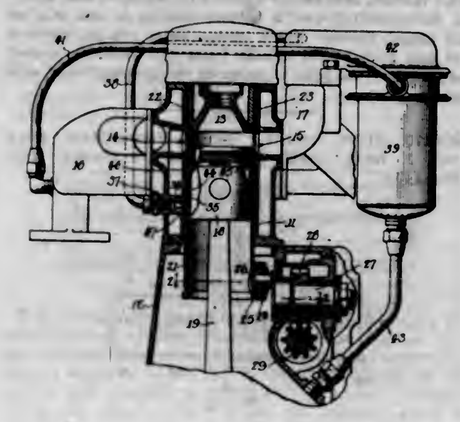
1,684,460. MOP. ROSS C. THOMPSON, Englewood, Colo. Filed June 10, 1927. Serial No. 197,920. 4 Claims. (Cl. 15—120.)

1. In a device of the character specified, a handle, a bail having end portions of its side members brought together against opposite sides of the handle and terminating in inner extensions which engage the handle, a clip having parts embracing the top and bottom of the handle and engaging the end thereof, the portion engaging the end of the handle projecting at the sides and notched to receive side portions of the bail, and a band encircling the clip and attaching ends of the bail to hold the same to the handle.

1,684,461. ELECTRICAL DEVICE. HARRY R. VAN DEVENTER, New York, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 1, 1922. Serial No. 604,395. 3 Claims. (Cl. 175—41.5.)

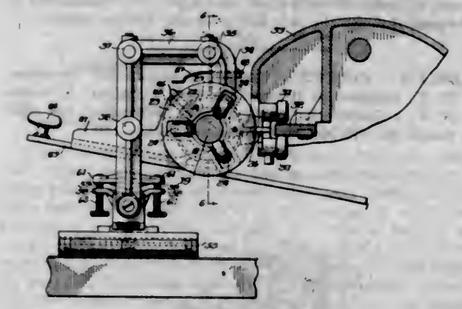
1. A variable condenser comprising a base, an element of electrically conductive material mounted on said base, a resilient element of electrically conductive material associated with the first element, but separated therefrom by a dielectric, said elements being retained in close proximity to each other at one point, said resilient element being divergent with respect to the first-named element from said point towards the end of said resilient element, a threaded shaft passing through said base, and a grooved nut upon said shaft, the resilient element having a bifurcated end to engage the grooved nut, so that upon turning the shaft, the grooved nut can move the resilient element into close relation to the first-named element progressively throughout its length.

1,684,462. MOUNTING FOR CUTTERS OF ROTARY WELL-DRILLING DISK BITS. WALTER T. WOODS, Long Beach, Calif., assignor to U. S. Tool Company, Long Beach, Calif., a Corporation of California. Filed Oct. 24, 1927. Serial No. 228,206. 6 Claims. (Cl. 255—71.)



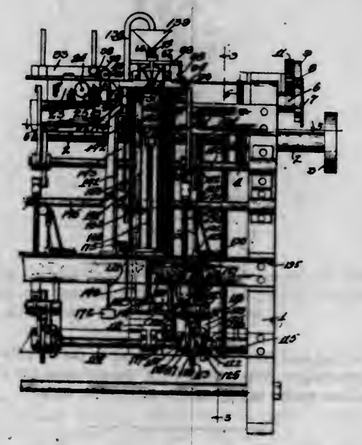
1. A rotary well drilling bit comprising a body, an opening through the body, a pin extending through said opening, a bushing mounted upon said pin, a disk cutter carried by said bushing, a washer between said disk cutter and body, said washer having a recess therein fitting the engaging end of the bushing.

1,684,463. LUBRICATION OF SINGLE-SLEEVE ENGINES. ARTHUR A. WOODWARD, Detroit, Mich., assignor to Skinner Automotive Device Co., Inc., Detroit, Mich., a Corporation of California. Filed Dec. 29, 1926. Serial No. 157,675. 8 Claims. (Cl. 123—196.)



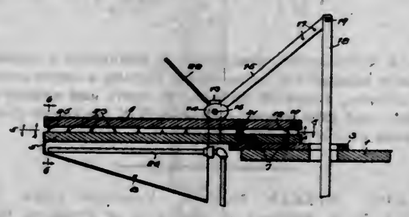
1. In an internal-combustion engine, the combination of an engine-cylinder having inlet and exhaust ports, a single

movable sleeve in said cylinder controlling said ports, a piston reciprocatory in said sleeve, means to lubricate said cylinder, sleeve and piston, and means to withdraw fluids



continuously from around said sleeve and intermittently from around said piston through the same cylinder port during the operation of the engine.

1,684,464. SANDING MACHINE. EARL R. YOUNG, Beloit, Wis., assignor to Yates-American Machine Company, Beloit, Wis., a Corporation of Delaware. Filed June 20, 1927. Serial No. 199,876. 2 Claims. (Cl. 51—141.)

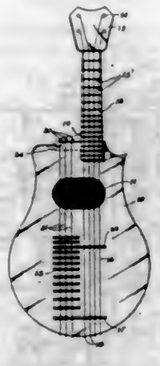


1. In a sanding-machine, the combination of a main-frame, a work-table reciprocatory thereon, a driven endless abradant-belt above said table, a stationary round shaft disposed lengthwise of said frame, a stationary bar arranged longitudinally of said frame, a sleeve slidable axially on said shaft and capable of turning around the axis of said shaft, a yoke in which said sleeve may turn, means to cause said sleeve and yoke to move lengthwise as a unit, means on said yoke cooperating with said bar preventing turning of the yoke but permitting its longitudinal travel, a standard on said yoke, a link hinged to said standard, an upright frame hinged to said link, an arm rigid with said sleeve hinged to said upright frame, an operating handle on said arm, and a pressure shoe mounted on the lower part of said upright frame, the mounting of said upright frame constituting a parallel-motion construction confining the position of said frame to a vertical relation.

1,684,465. SUNDAE-DISH-FORMING MACHINE. CESARE BARBIERI, New York, N. Y., assignor to The Vortex Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 6, 1924. Serial No. 748,009. 23 Claims. (Cl. 93—36.)

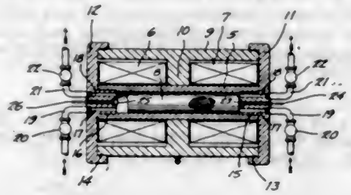
13. A receptacle forming machine comprising a driving mechanism, a plurality of receptacle forming units, and a plurality of independently controlled devices for each of said units to permit the devices of each of said units to be selectively connected with or disconnected from said driving mechanism independently of the operation of the remaining units.

1,684,466. ARTICLE-FORMING DEVICE. ROBERT BEARDSLEY, Chicago, Ill. Filed Apr. 4, 1927. Serial No. 180,925. 10 Claims. (Cl. 93—1.)



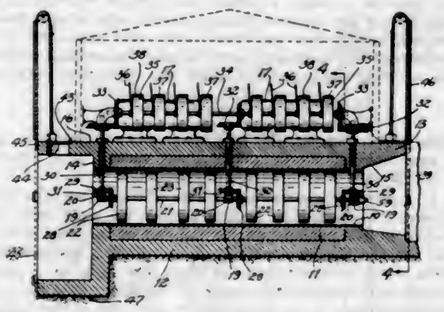
9. In a device of the kind described and in combination, a support, means mounted on said support for positioning one edge of a blank, a presser bar, means mounted upon said presser bar for positioning a second edge of said blank relative to said first mentioned edge, and means for producing relative movement between said support and presser bar to bring the positioned edges into contacting relation.

1,684,467. STRINGED MUSICAL INSTRUMENT. ALBERT BOOTHE, Colfax, Iowa. Filed Apr. 30, 1923. Serial No. 635,697. 4 Claims. (Cl. 84—263.)



1. A stringed musical instrument of the guitar type comprising a body, a neck having a head, the neck being attached to and extending from the end of the body and to one side of the longitudinal center thereof, an auxiliary head which extends laterally from the neck to a point beyond the longitudinal center of the body, pegs for connecting strings to the heads and to the body of the instrument, a series of frets carried by the neck and body over which strings attached to the head on the neck pass, a series of frets attached to the body over which strings attached to the auxiliary head pass, a tail bridge common to both

sets of frets, a fret constituting one of the series for the strings which extend from the auxiliary head, said fret underlying the strings which overlie the neck, and a com-

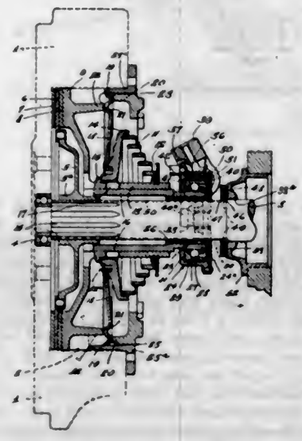


bined bridge and fret located adjacent to the auxiliary head and extending to constitute one of the series of the frets for the strings which engage the head on the neck.

1,684,468. PUMP. WARREN G. BROWN, Detroit, Mich. Filed Aug. 26, 1926. Serial No. 131,793. 2 Claims. (Cl. 230—55.)

1. A device of the class described comprising a cylinder, a piston adapted for reciprocation therein, a sleeve around the cylinder, a pair of coils in the sleeve and around the cylinder and caps secured on the ends of the sleeve closing the ends of the cylinder.

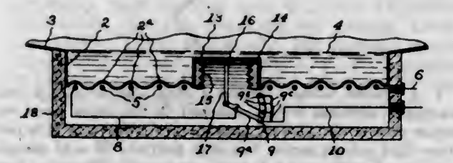
1,684,469. STREAM MOTOR. PASQUALE BUDA, New York, N. Y., assignor of one-fourth to Frederick Horowit, St. Louis, Mo. Filed Sept. 14, 1925. Serial No. 56,294. 2 Claims. (Cl. 170—130.)



1. A stream motor comprising a cylindrical tunnel, a shaft extending longitudinally of its center, a second shaft located above said tunnel and parallel to the first mentioned shaft, driving means connecting both of said shafts whereby the same will rotate simultaneously, means carried by the first mentioned shaft and adapted to co-operate with water passing through said tunnel for placing said shaft in operation, means for regulating the passage of water through said tunnel whereby the speed of said motor can be controlled, and a by-pass located to one side of said tunnel through which excess water can be diverted past said tunnel, said by-pass being automatically opened and closed by the head of water at the in-take end of said tunnel.

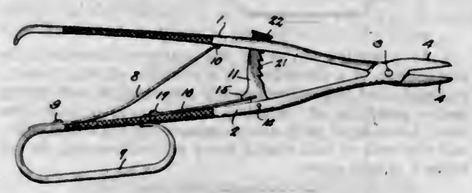
1,684,470. SIGN. GEORGE P. BUTLER, Boston, Mass. Filed Oct. 1, 1926. Serial No. 139,002. 4 Claims. (Cl. 40—145.)

1. A sign comprising, in combination, a hollow post; two sign boards arranged one above the other at the top of the post, the lower board having on its top a vertically rising non-round head and on its bottom a depending cylindrical sleeve adapted to telescope the top of the post, and the upper board having on its bottom a depending socket, internally formed with many equal sides to receive the non-round head of the lower board; means securing said head and socket together; means for locking the lower board to the post and a stiffening and strengthening rod with a plug at its lower end housing said locking means; the said rod extending thence axially through the lower sign board and having connection with the said non-round head, whereby stresses upon said head are transmitted to the post through the said rod, plug and locking means.



1,684,471. CLUTCH. GEORGE C. CARHART, Syracuse, N. Y., assignor to Brown-Lipe Gear Company, Syracuse, N. Y., a Corporation of New York. Filed Nov. 14, 1923. Serial No. 675,066. 9 Claims. (Cl. 192—110.)

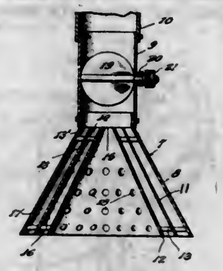
1. In a clutch, the combination of a shaft, a member shiftable axially of the shaft, means for shifting said member, including a release bearing concentric with the shaft,



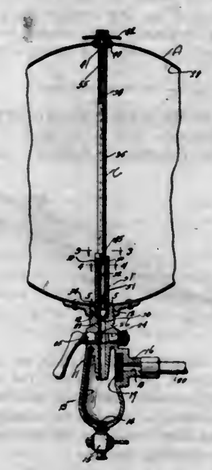
and an actuator, an oil casing enclosing said bearing, and supported thereby, the actuator comprising a yoke embracing the bearing and the casing, and having arms thrusting against the casing on diametrically opposite sides of the shaft, and the casing having fulcrum points thrusting against the bearing and located midway between the points of engagement of the yoke arms with the casing.

1,684,472. ELECTRIC HEATER. HARRY G. CATHCART, Cleveland, Ohio. Filed Mar. 23, 1925. Serial No. 17,550. 3 Claims. (Cl. 219—38.)

2. A heater of the character described, including a radiator casing, a quantity of volatile fluid therein, an electric resistance element for heating the fluid to vaporize the same, a chamber within the radiator and having an enclosing wall adapted to be moved by internal pressure within the chamber, fluid within the chamber which is slightly less volatile than the volatile fluid previously mentioned, a rheostat interposed in the circuit of the resistance element, and means actuated by the movements of the said movable wall of the chamber for operating the rheostat to control the current flowing through the resistance element.



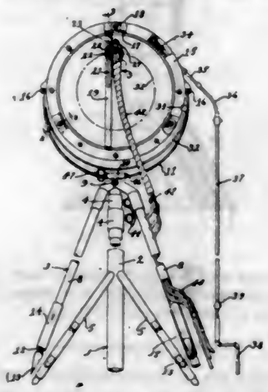
1,684,473. NEEDLE HOLDER. ULYSSES S. CHAPMAN, Carthage, Mo. Filed Jan. 2, 1926. Serial No. 79,009. 1 Claim. (Cl. 128—340.)



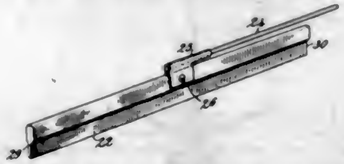
A tool of the class described, comprising pivotally connected first and second levers having jaws, the first lever being provided with a transverse opening, a ratchet latch extended through the opening and engageable with the first lever, a first spring engaging the latch to hold it in working position, a second spring engaging the first lever and tending to open the jaws, means for mounting the latch for swinging movement, means for securing the first spring, and means for securing the second spring; the tool being characterized by the fact that all three of the means specified are mounted on the second lever, thereby confining the hand work, in manufacture and assembly, to that lever; and the tool being further characterized by a button on the outer end of the latch and of larger area than the opening, whereby neither the direct thrust of the second spring against the first lever, nor the reaction of the first spring against the second lever, can swing the first lever clear of the latch.

1,684,474. COOLING AND VENTILATING DEVICE. FRANK L. CHATHAM, Orleans, Ind. Filed July 12, 1927. Serial No. 205,220. 1 Claim. (Cl. 98—40.)

The combination with a cabinet, of a branch pipe having communication therewith, distributors in communication with the branch pipe and including conical outer casings, conical deflectors mounted within the casing and spaced therefrom and from each other, the innermost deflector having a plurality of perforations formed therein, said casings and deflectors having open upper and lower ends, the openings in the upper ends being in communication with the branch pipe to permit air therefrom to pass between the casings and deflectors and through the perforations into the innermost deflector, and means for controlling the flow of air into the distributors.

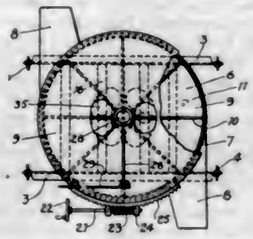


1,684,475. FUEL-TANK ATTACHMENT. JOHN H. COLLIER and EARL D. CHISUM, Altus, Okla.; said Chisum assignor to said Collier. Filed Feb. 21, 1927. Serial No. 169,917. 2 Claims. (Cl. 158—46.5.)



1. In a fuel tank attachment of the class described a tank having a compartment therein, the tank having an outlet opening in the bottom thereof, a tube extending from the outlet opening upwardly into the tank compartment having spaced upper and lower drain ports transversely therein, a rotatable tube bearing at its lower end in said first mentioned tube and extending vertically across the tank compartment and at the top of the tank compartment extending therethrough, the said last mentioned tube having upper and lower ports adapted to alternately register with the ports of the first mentioned tube, means to limit the amplitude of movement of the second mentioned tube with respect to the first mentioned tube, an air pressure check valve detachably supported in the top of the second mentioned tube, a detachable cap exteriorly of the tank for the second mentioned tube, a drain trap connected with the tank having a compartment therein below the tank and a passageway extending between the outlet opening of the tank and the trap compartment, a valve in said trap for closing said passageway, and an outlet conduit connected with said trap.

1,684,476. ROTARY ACETYLENE TORCH. FRANK J. CULLEN, Culver City, PETER E. BINDER, El Segundo, and CLARENCE C. HARSHMAN, Los Angeles, Calif., assignors to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Dec. 27, 1926. Serial No. 157,223. 15 Claims. (Cl. 266—23.)

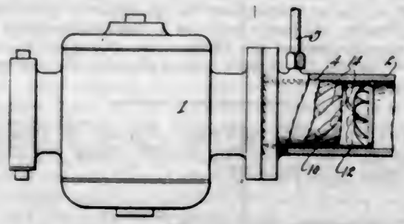


1. In a device for cutting an opening in a tank or the like, the combination of a supporting frame having means enabling the same to be set up near the wall of the tank, a guide frame carried by the supporting frame, a torch carried by the guide frame, and means for rotating the torch so as to move the same in a circle adjacent the face of the tank.

1,684,477. SQUEEGEE AND THE MOUNTING THEREOF. JOSEPH DEMAND, New York, N. Y. Filed Nov. 20, 1926. Serial No. 149,568. 3 Claims. (Cl. 15—255.)

1. A squeegee comprising a flexible metal bar of non-circular cross-sectional form, a protective sheath of relatively soft moisture-proof material enveloping said bar and covering all surfaces thereof including its ends, and a flexible lip extending from one of the margins of said sheath to form a cleaning element.

1,684,478. GRAIN-STOWAGE DEVICE. JOHN CROMIE DILL, Vancouver, British Columbia, Canada. Filed Apr. 7, 1926, Serial No. 100,388, and in Canada May 19, 1925. 3 Claims. (Cl. 198—128.)

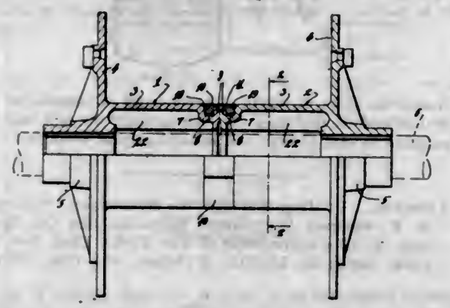


1. A grain stowing device comprising a distributor head having a circumferential outlet and a top inlet, a fan rotatable within said head and provided with a plurality of vanes between which the grain is delivered through the inlet, and means for changing the position of the inlet to vary the setting thereof with respect to the vanes of the fan.

1,684,479. SHINGLE HOLDER. CLARENCE R. ECKERT, Highwood, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed June 28, 1924. Serial No. 722,896. 9 Claims. (Cl. 108—8.)

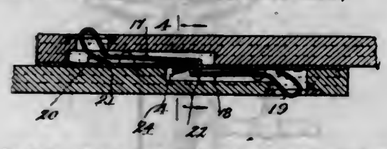
1. A flexible shingle having a strip like holder of substantially uniform width attached to its edges near one corner of said shingle, said holder being provided with portions that extend across the edge portions of said shingle and also being provided with outwardly extending portions adapted to project under the edges of other shingles.

1,684,480. MIXING DEVICE FOR INTERNAL-COMBUSTION ENGINES. MARSHALL W. EVANS, Detroit, Mich. Filed Feb. 21, 1927. Serial No. 169,796. 5 Claims. (Cl. 48—180.)



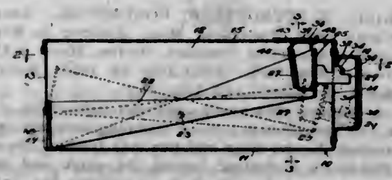
1. In a mixing device of the character described, the combination of a sleeve having a plurality of slots therein, a plurality of baffles transversely arranged in said sleeve, and a plurality of radiating blades on each baffle, the outer portions of said blades passing through said slots, and the ends of said blades being secured against the periphery of said sleeve.

1,684,481. BRUSH. LEO F. EXLEY, Johnson City, N. Y. Filed Dec. 16, 1926. Serial No. 155,314. 5 Claims. (Cl. 15—198.)



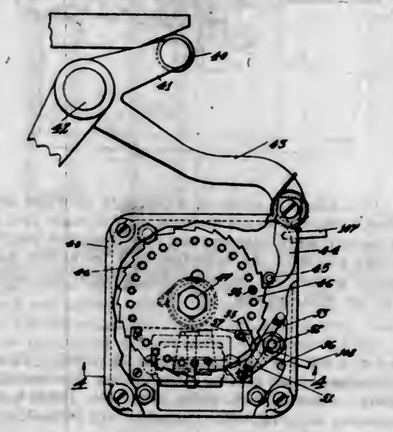
1. A brush comprising a rotatable shank, a carrier connected therewith, extending therefrom and bodily rotating therewith, a combined coupling and holding member connected to, extended therefrom and bodily rotating with the carrier, said member having a tapered outer part, a brush element supported by said member intermediate the ends thereof and coupled by said tapered part free of the carrier to bodily rotate with the member, a centering spindle slidably mounted in the shank, carrier and element and normally projecting beyond the brush element and a controlling spring within the shank for said spindle.

1,684,482. DRAW-WORKS DRUM AND METHOD OF LOCKING THE DRUMS AND FLANGE SECTIONS THEREOF. DAVID S. FAULKNER and EDWARD TIMBS, Los Angeles, Calif., assignors to The National Supply Company of Delaware, New York, N. Y., a Corporation of Delaware. Filed Oct. 19, 1927. Serial No. 227,136. 6 Claims. (Cl. 242—117.)



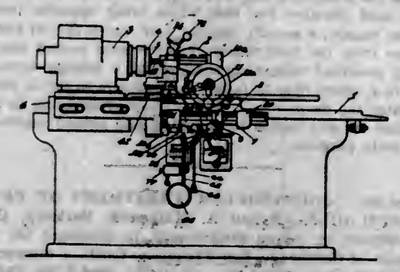
1. A rotary drawbacks drum having two drum and flange sections having annular flanges at their adjacent ends, a split ring mounted between said sections with the annular flanges extending into a channel formed in said split ring, and means for securing the split ring to said drum and flange sections at the surface of the drum.

1,684,483. JOINT FOR EXTENSION RULES. HERMAN GASSTROM, Mount Vernon, N. Y. Filed Apr. 1, 1927. Serial No. 180,200. 6 Claims. (Cl. 33—161.)



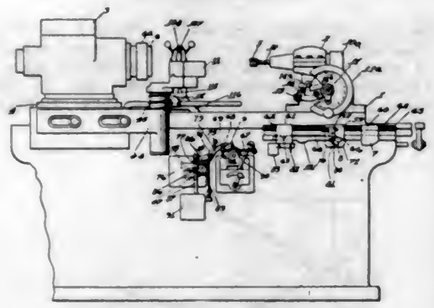
1. In an extension rule, a plurality of slidably held rule lengths in combination with cooperating joint sections secured on said lengths, said sections having plates, means for interlocking said sections in positive position including abutting edges extending across said section plates for limiting the relative positions of said sections in their locked position.

1,684,484. ANIMAL TRAP. AUGUSTINE H. GILKEY, Chicago, Ill. Filed Sept. 22, 1926. Serial No. 137,009. 10 Claims. (Cl. 43—61.)



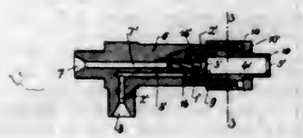
1. In an animal trap, the combination with an enclosure having an opening therein through which animals may enter the enclosure, of a closure member for said opening mounted to swing around a pivotal axis spaced from the opening, and bait holding means disposed on the other side of said pivotal axis and constrained to move with said closure means, said closure means being of sufficient weight to remain in its closed position when less than a predetermined weight of bait is held by the bait holding means.

1,684,485. GRINDING MACHINE. WALDO J. GUILD and FREDERICK H. GRIMSHAW, Worcester, Mass., assignors to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 26, 1926, Serial No. 124,954. Renewed Apr. 3, 1928. 15 Claims. (Cl. 125—11.)



1. In a grinding machine, the combination with a grinding wheel, work holding means, and means for reciprocating one of said parts relative to the other, of a wheel dressing device, means for extending the amplitude of said reciprocation to dress said wheel by said dressing device, and means causing said dressing device to operate only periodically, upon the completion of the grinding of a predetermined plurality of work pieces by the machine.

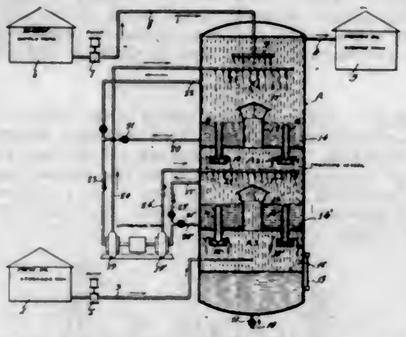
1,684,486. GRINDING MACHINE. WALDO J. GUILD, Worcester, Mass., and LEWIS CLIFFORD KENYON, New York, N. Y., assignors to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 7, 1926, Serial No. 79,849. Renewed Apr. 3, 1928. 14 Claims. (Cl. 125—11.)



1. In an internal grinding machine, the combination with a grinding wheel, work holding means, and means for reciprocating one of said parts relative to the other, of a wheel dressing device, and automatic means for extending the amplitude of said reciprocation a plurality of times during the operation on a single work-piece, whereby to dress said wheel a plurality of times during said operation,

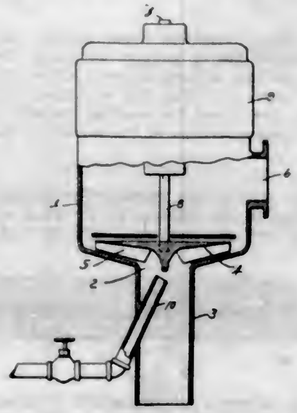
1,684,487. GRINDING MACHINE. RICHARD A. HEALD, CARLE J. HIGHBERG, and EDWARD M. TAYLOR, Worcester, Mass., assignors to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed May 11, 1926, Serial No. 108,379. Renewed Apr. 3, 1928. 12 Claims. (Cl. 125—11.)

1. In a grinding machine, a plurality of wheel dressing devices, hydraulic means automatically brought into action to severally move said devices into operative position at different stages in the reduction of a workpiece, and mechanical means also automatically brought into action to reposition said devices.



1,684,488. ATOMIZER FOR LIQUIDS. FRIEDRICH HABUSSER and RUDOLF BESTEHORN, Dortmund, Germany. Filed Sept. 9, 1924, Serial No. 736,713, and in Germany Sept. 13, 1923. 1 Claim. (Cl. 299—115.)

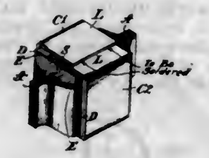
A device for atomizing heavy oils comprising a body portion having a gas inlet and an oil inlet; a nozzle in said body portion and arranged in said gas inlet, said nozzle having helical grooves therein to impart a rotary motion to the gas; a mixing chamber for the oil and gas in the body portion and provided with an opening having sharp edges for atomizing the drops of oil, said nozzle extending into said chamber and said edges being opposite the end of the nozzle; a second chamber into which the oil and gas issues from the first-named chamber, said second chamber being provided with a member having a passage terminating in a sharp edge to form an opening in order to further atomize the drops of oil, and said openings being in axial alignment; and means for securing said second chamber in the body portion.



1,684,489. COUNTERFLOW TREATMENT OF PETROLEUM OILS. RALPH A. HALLORAN, Berkeley, Calif., assignor, by mesne assignments, to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Dec. 19, 1923. Serial No. 681,472. 8 Claims. (Cl. 196—45.)

8. A continuous process of treating petroleum oils and with a liquid reagent substantially immiscible therewith comprising continuously supplying fresh oil into a treating vessel and continuously removing treated oil from such treating vessel, simultaneously continuously supplying fresh reagents to the treating vessel so as to cause the reagents to flow in a direction opposed to the flow of oil being treated, accumulating partially spent reagent within a portion of said treater and circulating said accumulated partially spent reagent counter-current to the oil being

treated so as to maintain a larger ratio of reagent to oil within said treater than the ratio of fresh reagent and oil supplied to said treater and removing spent reagent.



1,684,490. PUMP. NELSON H. HENDERSON, Syracuse, N. Y., assignor to Syracuse Industrial Gas Co., Syracuse, N. Y., a Corporation of New York. Filed Nov. 21, 1924. Serial No. 751,273. 6 Claims. (Cl. 103—113.)

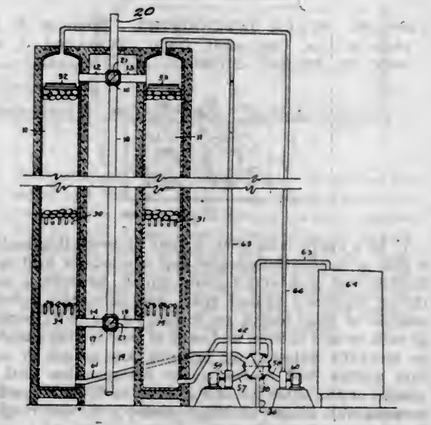
1. In a centrifugal pump, a case, a rotor in the case, an unobstructed open inlet pipe arranged coaxially with the rotor and extending downwardly from the case, the case having an outlet above the rotor, a pipe arranged to discharge liquid upon the inlet side of the rotor directly against the rotor for the purpose of evacuating air from the unobstructed inlet pipe and thereby raising the water therein until it reaches the rotor and primes the pump.

1,684,491. ELECTROSTATIC CONDENSER. REGINALD HUNTER HOYT, Roslindale, Mass., assignor to Wireless Specialty Apparatus Company, Boston, Mass., a Corporation of New York. Filed June 14, 1926. Serial No. 115,863. 6 Claims. (Cl. 175—41.)

1. A clamped sheet-stack condenser comprising a foil-stack and two U-shaped metal clamping members extending around the end faces and two side faces of the stack, the foil-sheets projecting beyond the stack and beyond the clamping members from the remaining two opposite side faces of the stack; the intermediate portions of the U-shaped clamping members engaging the end faces of the stack; the end legs of the clamping members telescoping one another at those opposite side faces of the stack from which the foil-sheets do not project; and the ends of the outside end legs of the clamping members being soldered to the surfaces of the inside end legs; the intermediate

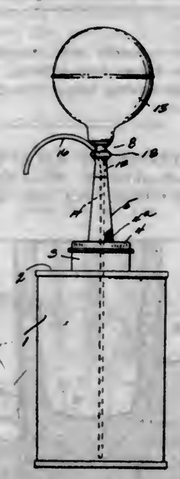
portions of the U-shaped clamping members being spaced apart in positions holding the stack under end-to-end compression, and said soldering holding said intermediate portions in their clamping relations to the end faces of the stack.

1,684,492. TONE POST. CHRISTIAN HULTGREN, Parish of Svinhult, Sweden. Filed Jan. 27, 1927, Serial No. 163,960, and in Sweden Feb. 18, 1926. 3 Claims. (Cl. 84—277.)



1. A tubular tone post adapted to be interposed between the front and rear walls of a violin and having a single notch provided at its upper edge, turned toward the "f" hole of said violin.

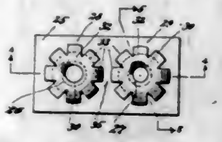
1,684,493. BRACKET CARRIER FOR WINDSHIELD DEFLECTORS. BERN JASSEN and HARRY JASSEN, Brooklyn, N. Y. Filed July 31, 1924. Serial No. 729,250. 8 Claims. (Cl. 296—84.)



2. In a device of the character described, a side wind deflector, a pair of clamps adapted to engage opposite edges of the deflector, a cushion chamber fixedly connected with one of the clamp members, a plunger carried by the remaining clamp member slidably received within the cushion chamber, and resilient means within said chamber to draw the plunger into said chamber and hold the clamp members against the deflector.

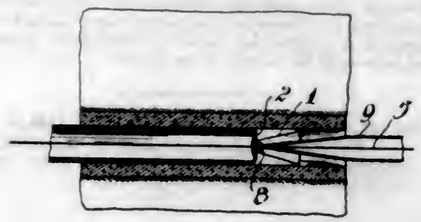
1,684,494. APPARATUS FOR MAKING BISULPHITE LIQUOR. JACOB DARRE JENSSEN, New York, N. Y., assignor to G. D. Jenssen Company, New York, N. Y. Filed May 4, 1927, Serial No. 188,737, and in Canada Sept. 23, 1926. 7 Claims. (Cl. 23—260.)

1. In an apparatus for making bisulphite liquor, a circulation system comprising a plurality of towers having gas inlets and outlets and water and liquor inlets and outlets and piping from all of said inlets and outlets and from the water supply and to the atmosphere, four-way valves introduced in the gas connections having rotary deflecting plates adapted to reverse the direction of the circulation and indicators therefrom and a six-way valve having rotary deflecting plates and indicators therefrom and introduced in the liquid connections.



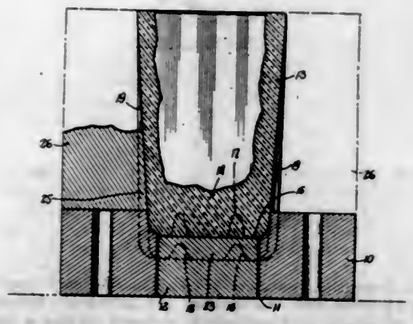
1,684,495. DISPENSING CONTAINER. ANDREW EDWARD KUNZL, Chicago, Ill., assignor to Churchill's, Incorporated, Chicago, Ill. Filed Feb. 16, 1928. Serial No. 254,731. 1 Claim. (Cl. 221—76.)

A dispensing container having a nozzle, said nozzle being provided with one element of a detachable connection at its mouth, a dispensing attachment having a hollow shank provided with an element of a detachable connection engageable with the said element on the nozzle, a thin walled tube in the shank extending through the nozzle



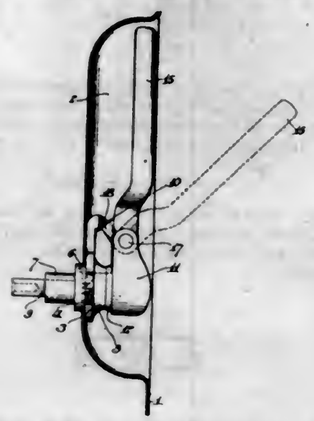
to a point adjacent the bottom of the container, said tube having a bent portion extending without the shank, a compressible bulb, and the upper end of said shank having an integral part to which said bulb is directly attached.

1,684,496. SPARK INTENSIFIER. WILLIAM F. LAUTENSCHLAGER, Cincinnati, Ohio. Filed Aug. 1, 1921. Serial No. 488,942. 2 Claims. (Cl. 175—183.)



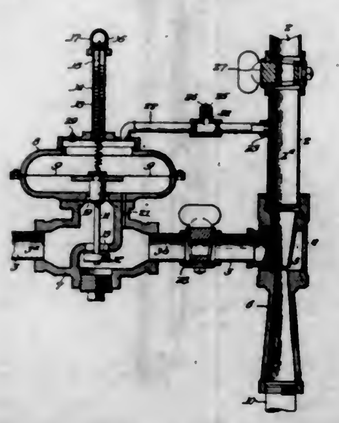
1. In a spark intensifier, a body of insulating material, a pair of duplicate rotatable and frictionally held eyelets therein and each eyelet being scored, whereby a plurality of uniformly spaced apart and outwardly extending tongues of equal length are formed on the outer periphery of each of said eyelets, and each of said eyelets adapted to be manually adjusted for bringing any tongue of one of said eyelets into spaced apart juxtaposition with any tongue of the other of said eyelets to form a spark gap between any tongue of either eyelet with any tongue of the juxtaposed eyelet.

1,684,497. COLLAPSIBLE CONDUIT CORE. HENRY E. LINDAS, Colorado Springs, Colo. Filed Apr. 7, 1926. Serial No. 100,267. 7 Claims. (Cl. 25—128.)



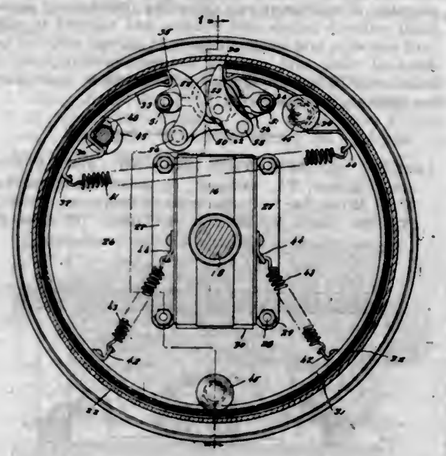
1. A collapsible conduit core, comprising inner and outer casings, the inner casing being inflatable and expansible, the outer casing being invertible and comparatively non-expansible.

1,684,498. MOLDED-GLASS RECEPTACLE. JOHN E. MARSDEN, Philadelphia, Pa. Filed Apr. 7, 1927. Serial No. 181,642. 3 Claims. (Cl. 206—2.)



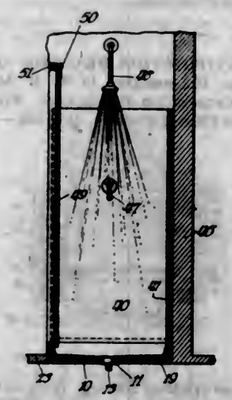
1. An article of molded glassware having an inner vertical partition therein leading upward from the bottom to the level of the top, and having a channel in the bottom surface of the bottom portion of the receptacle in the plane of said partition, whereby the mass of glassware at the bottom is accordingly reduced and distributed as to thickness.

1,684,499. LATCH-MECHANISM HANDLE. WILLIAM JOHN MAYER, Roxborough, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 13, 1927. Serial No. 160,859. 5 Claims. (Cl. 292—347.)



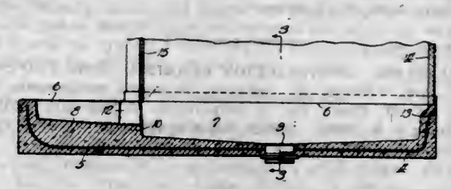
1. In a latch actuating mechanism, an escutcheon plate having an inclined surface thereon, a spindle oscillatably journalled in said escutcheon, a two part handle connected to said spindle, and means on one of said handle parts coacting with the said inclined surface to cause the part to move toward and away from the escutcheon during actuation of the latch bolt by the handle.

1,684,500. APPARATUS FOR PROPORTIONATELY MIXING FLUIDS. GARNET W. MCKEE, Rockford, Ill. Filed Feb. 2, 1924. Serial No. 690,333. 6 Claims. (Cl. 48—184.)



1. In an apparatus of the character described, the combination of an air supply pipe, a fuel supply pipe, a diaphragm governor interposed in said fuel supply pipe, a connection between said governor and said air supply pipe, and means comprising the combination of a restriction and an air vent open to the atmosphere for regulating the delivery of pressure from said air supply pipe to the governor.

1,684,501. BRAKE. EDWARD C. NEWCOMB, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Sept. 15, 1927. Serial No. 219,761. 8 Claims. (Cl. 188—78.)

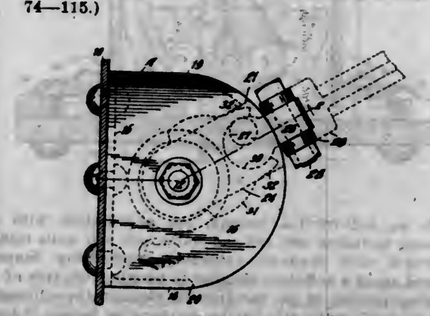


1. A brake mechanism comprising a rotatable drum, a braking element movable to engage said drum, and actuating means for said braking element comprising a pair of levers engageable therewith, a rotatable member mounted on one of said levers engaging a face of the other of said levers, and means for operating one of said levers.

1,684,502. SHOWER RECEPTOR. GUSTAF ALBIN NILSON, Glencoe, Ill. Filed July 19, 1926. Serial No. 123,374. 12 Claims. (Cl. 4—145.)

1. A self-contained unitary base plate structure for shower baths and the like comprising a pan shaped element made of cement-like material having a smoothed exposed face and having a drain opening, and having its floor portion sloping toward said drain opening, and having upwardly extending side portions adapted to accommodate upwardly extending wall portions thereon, said side portions having a surrounding flange extending upwardly outside said wall portions to direct the drippings therefrom inwardly along said side portions.

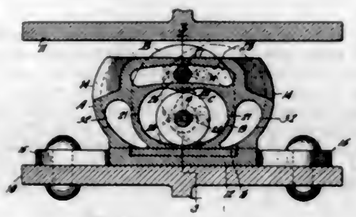
1,684,503. SHOWER RECEPTOR. GUSTAF ALBIN NILSON, Chicago, Ill. Filed Nov. 4, 1926. Serial No. 146,260. 7 Claims. (Cl. 4—145.)



1. A self-contained unitary base-plate structure for shower baths and the like comprising a pan-shaped element having a drain opening and having its floor portion sloping toward said drain opening, said element having upwardly-extending side portions, and a pair of oppositely disposed upwardly-extending portions projecting inwardly from said side portions, the floor portion on one side of said inwardly-projecting portions being raised above the floor portion on the other side thereof.

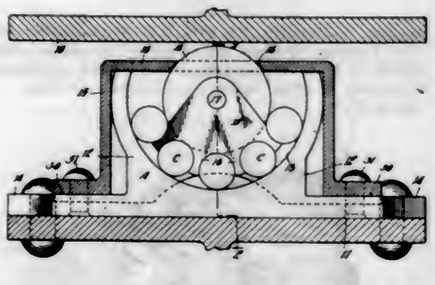
1,684,504. SUBMERGED-CHANNEL INDUCTION FURNACE. EDWIN F. NORTHRUP, Princeton, N. J., assignor to The Ajax Metal Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 1, 1925. Serial No. 47,593. 14 Claims. (Cl. 266—1.5.)

1. In an electric induction furnace of the submerged resistor type, a channel resistor unsymmetrical on opposite sides of the secondary having two end connections with the furnace staggered laterally of the winding, a transformer core threading the resistor and a transformer winding upon the core, the current in which exerts different pressures upon the two branches of the resistor at the same heights thereof and causes flow by reason of the lack of symmetry of the secondary.



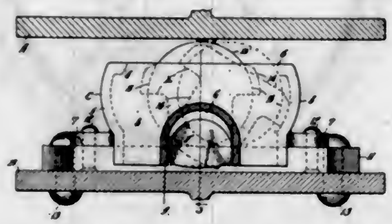
1,684,505. HAND BRAKE FOR RAILWAY CARS. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Mar. 6, 1922. Serial No. 541,314. 4 Claims. (Cl. 74—115.)

4. In a hand brake for railway cars, the combination with a brake staff; of means for rotating said staff in a direction to tighten the brakes, said means including a clutch



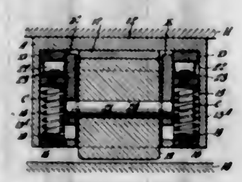
element and an operating lever mounted for swinging movement about the axis of said staff, said lever including a pivoted arm portion provided with an eccentric head coacting with said clutch element.

1,684,506. ANTIFRICTION BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 5, 1923. Serial No. 649,423. 6 Claims. (Cl. 308—226.)



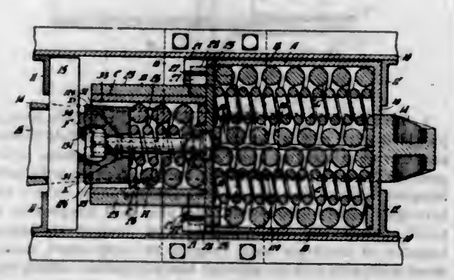
6. In an anti-friction bearing, the combination with a retainer; of an anti-friction element disposed in said retainer, said element having fixed spaced diametrically disposed eccentric projections at its end, said retainer being provided with a separate and independent guide slot for each of said projections, whereby one of said projections is prevented from entering the guide slot of the other, the opposite walls of each of said guide slots being spaced apart to permit a minimum of operative clearance for said projections, and said guide slots being curved in a path common with the path of movement of said projections during the movement of said anti-friction element to either side of central position, whereby said element is prevented from bodily shifting with reference to said retainer during rotation of said element, and maintained in assembled relation with said retainer.

1,684,507. ANTIFRICTION ROLLER BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Jan. 14, 1924. Serial No. 686,008. 1 Claim. (Cl. 308—226.)



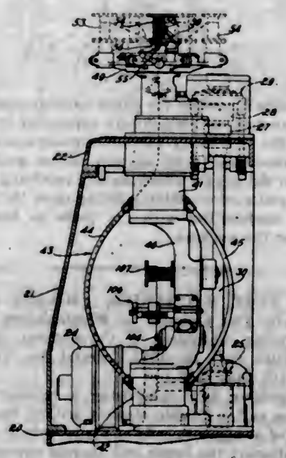
In an anti-friction bearing, the combination with a housing including side and end walls, said end walls being provided with inwardly extending overhanging flanges spaced apart a sufficient distance to permit projection of a bearing portion of an anti-friction element therethrough and said side walls also having overhanging flanges of less extent than the flanges on said end walls, said housing being open at the bottom and provided with outwardly extending lugs at each end; of a bearing member to which said lugs are adapted to be secured, said member being provided with a curved bearing surface projecting upwardly into said housing to provide a semi-circular raceway; a main anti-friction roller projecting outwardly from said housing between the flanges thereof, said roller being of a greater size than the opening between said flanges; and a plurality of smaller rollers extending transversely substantially entirely across said housing and adapted to roll on said raceway, said smaller rollers, in normal position, being disposed along said raceway circumferentially about said main roller to support the latter in relatively fixed position for rotation about its axis.

1,684,508. ANTIFRICTION BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Dec. 27, 1924. Serial No. 758,346. 4 Claims. (Cl. 308—226.)



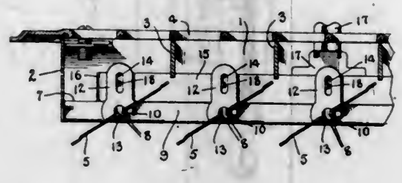
4. In an anti-friction bearing, the combination with a mounting adapted to be applied to a bolster or the like and having a bearing surface associated therewith; of a plain cylindrical roller adapted to move back and forth on said bearing surface; guide means associated with said mounting and being vertically arranged; an independent retaining device having counterweighted portions mounted in said guides and movably retained thereby, said device being disposed in supporting contact with the opposite sides of the curved surface of the roller above the center thereof to maintain the said roller in assembled relation with said mounting, said retaining device operating to center said roller when free from load.

1,684,509. ANTIFRICTION BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 5, 1926. Serial No. 86,159. 2 Claims. (Cl. 308—226.)



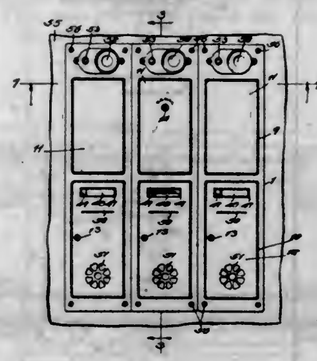
1. In an anti-friction bearing, the combination with a housing having side and end walls, and a bearing surface, the side walls of said housing being provided with vertically arranged guideways extending from points adjacent the free extremities of each of said side walls inwardly to and terminating substantially at said bearing surface; an anti-friction element disposed within said housing and adapted to roll back and forth on said bearing surface, said element being of greater extent than the extent of said side walls, so as to project beyond the free extremities of the latter when in engagement with said bearing surface; followers slidably disposed in said guideways, a coil spring disposed in each of said guideways, and links connected to said anti-friction element and to the said followers, whereby movement of said anti-friction element to either side of central position flexes said springs which operate to return said element to central position, said followers, springs, and links being interposed between the side walls of said housing and the adjacent ends of said anti-friction element.

1,684,510. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed May 21, 1927. Serial No. 193,344. 10 Claims. (Cl. 213—24.)



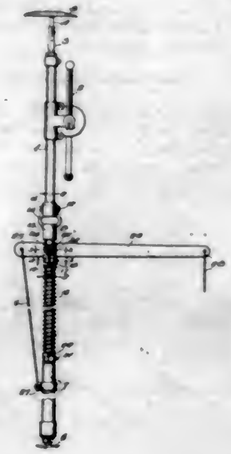
1. In a friction shock absorbing mechanism, the combination with a spring cage; of a friction shell telescoped within the spring cage, said shell and cage being relatively movable; removable means for lining said shell, said removable means being anchored to the spring cage, said anchorage providing for limited longitudinal movement between the shell and cage; friction means cooperating with the liner means of the shell; and spring resistance means opposing movement of the shell and friction means inwardly of the mechanism.

1,684,511. STRAND-TWISTING APPARATUS. THOMAS EDWARD O'DONNELL, Riverside, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 27, 1926. Serial No. 83,993. 6 Claims. (Cl. 117—49.)



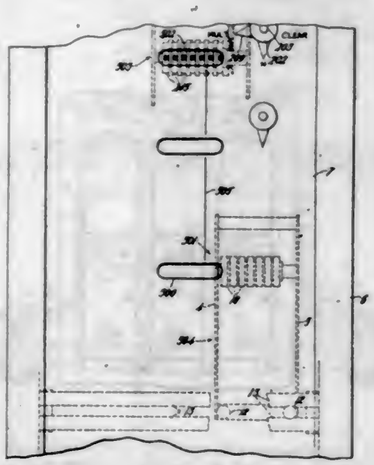
1. In strand twisting apparatus, strand twisting means, strand take-up means, a rotatable member interposed therebetween for rotating a portion of the strand bodily around an axis of rotation, means interposed between the member and the twisting means for advancing the strand through the twisting means, and means operated independently of said take-up means interposed between the rotatable member and the take-up means and for advancing the strand through the rotatable member.

1,684,512. FURNACE REGISTER. THOMAS OLINGER, Holland, Mich., assignor to Federal Manufacturing Company, Holland, Mich., a Corporation of Michigan. Filed July 20, 1925. Serial No. 44,057. 7 Claims. (Cl. 98—110.)



1. A furnace register comprising, a sheet metal frame, pairs of lugs stamped from the metal of the frame and projecting therefrom, and shutters having openings each to receive one of said pairs of lugs and to be pivotally mounted thereon.

1,684,513. MAIL BOX. THOMAS L. PARKER, Chicago, Ill., assignor to The Standard Electric Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 4, 1924. Serial No. 741,700. 8 Claims. (Cl. 232—25.)



5. In a device of the kind described and in combination, a series of receptacles, each of which is provided with a door, a key-controlled lock associated with one of said doors, a bar operatively connected to said lock and controlling the opening and closing of all of said doors in unison, and additional locking means for said doors also acting in unison and controlled by said lock.

1,684,514. HAMMER. JOHN H. PHILLIPS, Chicago, Ill. Filed Jan. 12, 1924. Serial No. 685,885. 7 Claims. (Cl. 255—45.)

1. The combination with a hammer of the kind described, of a feeding device quickly detachable from said hammer, said feeding device comprising extensible cooperating parts, a spring arranged to normally move said parts to extend the same, and means operable by a flexible connection remotely from said device for controlling the operation of said spring.

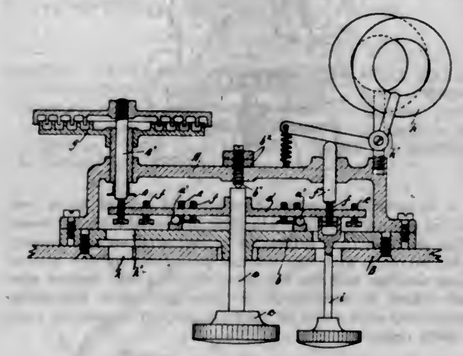
1,684,515. COMPUTING MACHINE. HENRY L. PITMAN, Westfield, N. J., assignor, by mesne assignments, to Elliott-Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 26, 1922. Serial No. 556,661. 17 Claims. (Cl. 235—60.)

1. In a computing machine, having a plurality of accumulating computing units arranged in denominational order, and carrying-over mechanism for each unit to carry one digit at every tenth step thereof to the computing unit of next higher order, the combination of a non-accumulating computing unit adjacent to and below the accumulating computing unit of lowest order, said non-accumulating computing unit comprising means to carry one digit to the accumulating computing unit of lowest order when the non-accumulating computing unit is actuated through less than ten steps.

1,684,516. COUPLING FOR CONDUITS. FINIS E. ROACH, Chicago, Ill. Filed July 20, 1927. Serial No. 207,198. 14 Claims. (Cl. 285—174.)

1. In a coupling for conduit sections, a socket member provided with means for attachment to a conduit section, and having a locking groove on its inner surface, a plug member provided with resilient tongues formed with beads adapted to snap into said locking groove, and a rubber tube arranged within said socket and plug and adapted to expand against the walls thereof and against the spring tongues to maintain said tongues in interlocked engagement with said locking grooves and to provide a fluid tight connection between the socket and plug members.

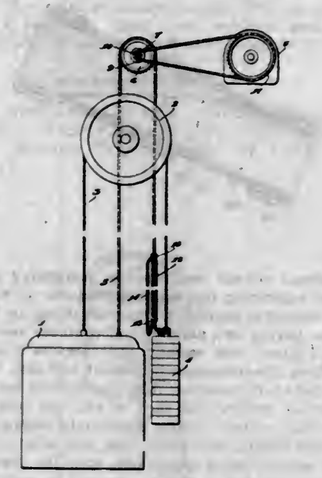
1,684,517. PAPER-NAPKIN HOLDER. HENRY L. SAMSON, New York, N. Y. Filed Mar. 14, 1927. Serial No. 175,172. 2 Claims. (Cl. 312—60.)



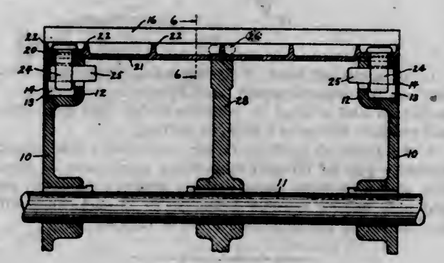
1. A portable dispenser for paper napkins comprising an elevated slotted plate horizontally supported by end standards with the slot freely accessible underneath the plate from both front and rear, upright corner guides on the plate open at the top for receiving and retaining a quantity of napkins, and a cover slidably fitting upon the guides and adapted in conjunction with the plate to form a tight enclosure for the napkins.

1,684,518. FUSE MECHANISM. MAURITS J. SANDIN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 25, 1921. Serial No. 510,280. 20 Claims. (Cl. 200—127.)

1. An expulsion fuse comprising a tubular receptacle closed at one end, a fusible element within the receptacle and supported at opposite ends of the receptacle and having a portion adjacent the lower end thereof extending transversely across the mouth of the tube and in the path of arc gases discharged from the receptacle whereby the end of the fuse adjacent the open end of the receptacle is fused by arc gases discharged from the receptacle, a tubular shield surrounding the fusible member and supported within the receptacle by the fusible member and means for causing the fusible element to rupture at a predetermined point within the receptacle in response to a predetermined current.

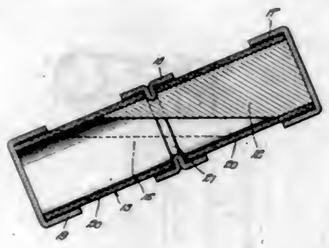


1,684,519. APPARATUS FOR AUTOMATIC REGULATION OF DIFFERENT WAVE LENGTHS FOR WIRELESS RECEIVERS. FRIEDRICH WILHELM MAXIMILIAN LUDWIG SCHERBARTH, Altona-Bahrenfeld, Germany. Filed Nov. 2, 1925, Serial No. 66,351, and in Germany Nov. 21, 1924. 2 Claims. (Cl. 250—40.)



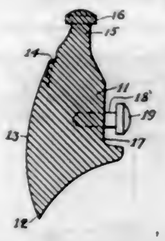
1. Apparatus for automatic simultaneous tuning of a plurality of tuning devices, comprising a rotatable dial, a plurality of circular series of abutments mounted on said dial, the number of said series corresponding to the number of tuning units, said abutments being independently adjustable in a direction perpendicular to the plane of rotation of said dial, each series forming a circular cam track of variable contour, each adjusted abutment in one series corresponding to a correlatively adjusted abutment in another series, and a plurality of rods connecting said tuning devices with the respective series of abutments, adapted to ride the said cam tracks and positioned so as to contact simultaneously with the correlated adjusted abutments.

1,684,520. CHAIN TRANSMISSION FOR ELEVATOR DEVICES. OSCAR F. SHEPARD, Cincinnati, Ohio. Filed Nov. 5, 1926. Serial No. 146,514. 6 Claims. (Cl. 187—29.)



5. In combination with an elevator car and elevator device including a sprocket wheel, operated in relation with the position of the car in the hatchway and in transmission connection with the car, the car driving the elevator device and the elevator device controlling the operation of the car, of a sprocket chain connecting with the car and engaging with the sprocket wheel of said elevator device providing a positive transmission for said elevator device and in relation to the position of the car in the hatchway and by which the relation is definitely maintained.

1,684,521. ROLL FOR BEATING ENGINES. HERBERT R. SIMONDS, Dayton, Ohio, assignor to The A. A. Simonds-Dayton Company, Dayton, Ohio, a Corporation of Ohio. Filed June 12, 1924. Serial No. 719,494. 20 Claims. (Cl. 92—22.)

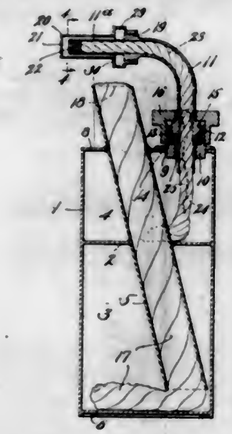


1. A beater roll comprising a shaft, roll heads mounted thereon, fly bars extending from one head to the other, and staves closing the spaces between the bars in the zone adjacent to the inner edges of the bars, and carrying outwardly projecting struts which extend annularly from one bar to the next, giving additional lateral support to the bars.

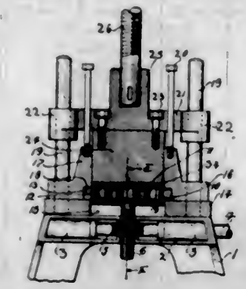
1,684,522. THERMAL-CUT-OUT CONSTRUCTION. JOHN F. SLOAN, Peoria, Ill. Filed Nov. 6, 1925. Serial No. 67,205. 1 Claim. (Cl. 200—124.)

A thermal cut-out construction comprising a pair of clips for embracing the annular contacts of a cartridge fuse, a reversible cartridge fuse comprising an insulating container having two annular end contacts and an intermediate contact, said annular end contacts being equally spaced from the intermediate contact and said clips being spaced apart a distance equal to the distance between said intermediate contact and each of the end contacts, said annular end contacts being alternately engageable with one of said contact embracing clips, and said intermediate annular contact being engageable with the other contact embracing clip and a fusible element in said container which when fused breaks electrical connection between the intermediate contact and one end contact and makes electrical connection between the intermediate contact and the other end contact.

1,684,523. ARTIFICIAL TOOTH. LAKE H. SPRINKLE, Brooklyn, N. Y. Filed Apr. 16, 1927. Serial No. 184,330. 4 Claims. (Cl. 32—9.)



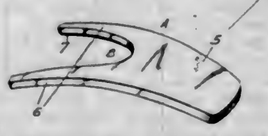
1. An artificial tooth or facing having thereon a root, which is integral therewith, said root being formed into a projection and a head on said projection, for connecting said tooth or facing to a plate or backing.



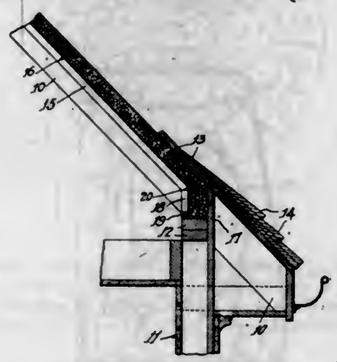
2. An artificial tooth or facing having on a lingual side thereof a pair of circular cylindrical pins, made of porcelain, said pins being comparatively large in diameter, and said pins having thereon heads made integral therewith for connecting the same to a plate or backing.

1,684,524. TORCH. STANLEY STANCZYK, Lynn, Mass. Filed June 6, 1927. Serial No. 196,930. 3 Claims. (Cl. 158—35.)

1. A torch of the character described having in combination two separate reservoirs; a burner tube leading from one of said reservoirs; a wick within said burner tube; a delivery tube leading from the other reservoir having its delivery end portion opposite and crosswise of the end of said burner tube; a wick within said delivery tube; a retort surrounding the delivery end portion of the delivery tube whose wall is interposed between the burner tube and said delivery end portion, and a vapor outlet for said retort adjacent the rear end of the latter positioned in spaced relation to said burner tube wick and approximately opposite the middle thereof.

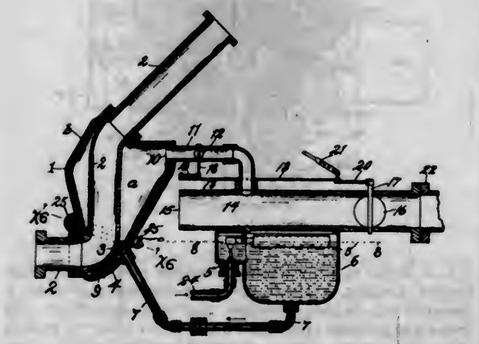


1,684,525. METHOD OF FORMING CEMENT BLOCKS. MARCUS TOMARIN, Chicago, Ill. Filed June 2, 1927. Serial No. 195,891. 7 Claims. (Cl. 18—61.)



1. A method of producing an inlaid cement block consisting of first forming a plurality of spaced colored cement inlay sections, then filling the spaces between said colored inlay sections with dry cement, and covering the colored inlay sections and the dry cement with a wet cement mixture which is compressed to force the water therefrom, permitting said water to saturate the dry cement to form a solid cement block.

1,684,526. SHIM DRIFT. JESSE D. TUCKER and EMMITT M. TUCKER, Sacramento, Calif. Filed June 16, 1925. Serial No. 37,523. 5 Claims. (Cl. 81—3.)

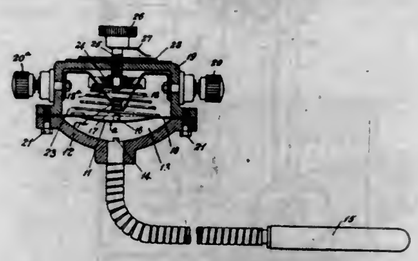


1. A shim drift comprising a rigid element having uninterrupted parallel top and bottom surfaces, one end of the element having a crotch cut into the parallel surfaces to form a pair of diverging arms of substantially equal length adapted to engage and hold a split spoke tightening shim and to move against the sides of the shim when the drift is hammered to press the split ends of the shim together.

1,684,527. INSULATED ROOF. HAROLD S. ASHENHURST, Chicago, Ill., assignor, by mesne assignments, to Insulex Corporation, Chicago, Ill., a Corporation of Delaware. Filed Feb. 16, 1925. Serial No. 9,641. 2 Claims. (Cl. 108—6.)

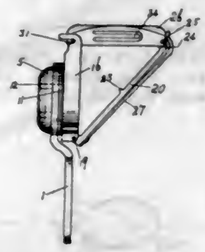
1. A roof comprising in combination rafters in spaced relation, a weatherproof covering secured to said rafters at their upper faces and held by said rafters substantially against vertical movement with respect thereto, sheet-like means secured to said rafters underneath the weatherproof covering and in spaced relation to said weatherproof covering, and a light porous monolithic body hardened in highly cellular form in the enclosed space between the rafters in close contact with the surfaces of the weatherproof covering and the other space defining parts and extending into all the irregularities of such surfaces.

1,684,528. APPARATUS FOR SUPPLYING FUEL TO INTERNAL-COMBUSTION ENGINES. JOHN MILES BARTLEY, Long Beach, Calif., assignor to General Combustion Company, Long Beach, Calif., a Corporation of California. Filed June 29, 1922. Serial No. 571,721. 4 Claims. (Cl. 123—133.)



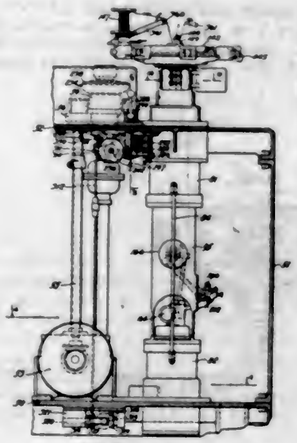
1. The combination with an internal combustion engine, of an upright exhaust pipe with an expansion chamber extending longitudinally thereof and arranged one inside the other, an air inlet conduit leading to the cylinders of the engine, means for conducting a hydrocarbon liquid to the lower end of said chamber, and a conduit leading from the upper end of the chamber to said air inlet conduit, said chamber being open from end to end and having its walls converging downward at an acute angle until the chamber arrives at a relatively small cross sectional area at its extreme lower end as compared with that at its upper portion.

1,684,529. GROCER'S HELPER. PAUL K. BASMADJIAN, Philadelphia, Pa. Filed June 27, 1924, Serial No. 722,654. Renewed Jan. 22, 1927. 13 Claims. (Cl. 294—22.)



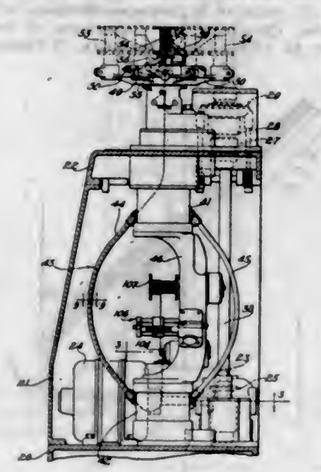
1. In a lifter for packages and cans, a handle, a sharply pointed projection from the upper end of the handle adjacent one side thereof, a downwardly directed and upwardly moved hook having hook portions on opposite sides of the point, and means pressing the hook downwardly.

1,684,530. PRESSURE-CONTROLLED DEVICE. FRANK J. BAST, New York, N. Y., assignor to Charles J. Tagliabue Mfg. Co., Brooklyn, N. Y., a Corporation of New York. Filed Oct. 6, 1925. Serial No. 60,930. 16 Claims. (Cl. 200—140.)



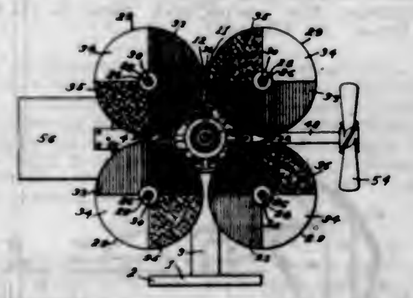
1. In a pressure controlled device, the combination of pressure developing means, a member provided with a deformed active section subject to the developed pressure and adapted to change its position abruptly upon the application of pressure extraneously thereto and to abruptly resume its normal position of its own accord when said pressure is released, and means whereby the interval between the snapping instant in one direction and in the return direction may be variably adjusted.

1,684,531. FINDER. CARL A. BORNMANN, Binghamton, N. Y., assignor, by mesne assignments, to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Feb. 3, 1926. Serial No. 85,755. 8 Claims. (Cl. 88—1.5.)



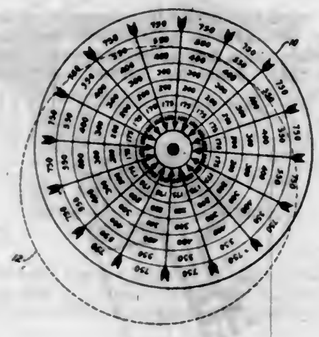
1. An article of manufacture comprising a support, a folding view finder rotatable on said support, means for automatically adjusting the field of said finder as the same is rotated on said support, and an element on said finder cooperating with means on said support, whereby said means is operative only when said finder is entirely unfolded.

1,684,532. METHOD OF AND APPARATUS FOR FORMING STRANDED ARTICLES. GEORGE ALFRED BOUVIER, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 12, 1926. Serial No. 80,709. 16 Claims. (Cl. 117—35.)



1. In stranding apparatus, a rotatable rigid member for guiding a strand, the member being shaped to guide the strand through a path conforming to the curve which a strand assumes when its ends are fixed to spaced points on an axis of rotation and it is rotated bodily around the axis.

1,684,533. STRAND-TWISTING APPARATUS. GEORGE ALFRED BOUVIER, Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 27, 1926, Serial No. 84,000. Renewed May 10, 1928. 7 Claims. (Cl. 117—35.)

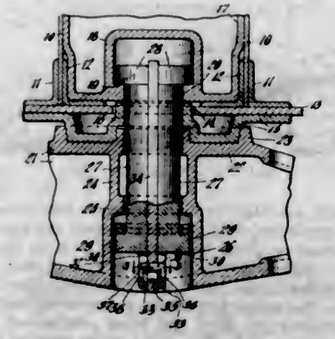


1. In strand twisting apparatus, strand twisting means, strand take-up means, a tubular member for carrying the twisted strand bodily around an axis of rotation and for guiding the strand from the twisting means to the take-up means, means for advancing the strand through the tubular member, and means for rotating the tubular member and said advancing means around a common axis of rotation other than that of the take-up means.

1,684,534. ADVERTISING DEVICE. HORACE L. CAMPBELL, St. Louis, Mo. Filed June 4, 1925. Serial No. 34,772. 2 Claims. (Cl. 40—34.)

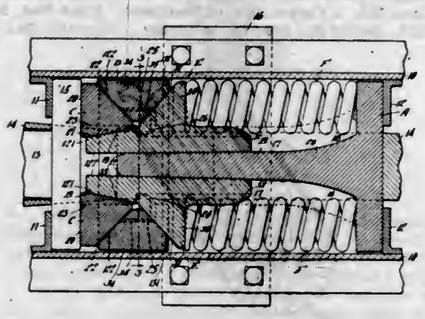
1. A device of the character described comprising a supporting member, a frame rotatably connected thereto, a plurality of display members rotatably carried by the frame and grouped around the axis thereof adjacent to each other and having similar character-bearing sections similarly arranged thereon, and a parallel-motion mechanism connecting said supporting member and said display members whereby the vertical and horizontal diameter of each display member remains parallel with the same diameters of the other display members when said frame is rotated.

1,684,535. AMUSEMENT DEVICE. ARTHUR B. DEWES, St. Louis, Mo. Filed Sept. 21, 1927. Serial No. 220,950. 3 Claims. (Cl. 273—102.)



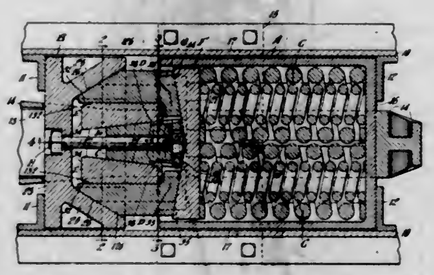
1. A disc pitching game comprising, in combination, a target provided with radially arranged columns of numbers, and a plurality of playing members of substantially the same shape and size as the target for use in pitching at the target.

1,684,536. FLOTATION PROCESS. ARTHUR H. FISCHER, New York, N. Y., assignor to Guggenheim Brothers, New York, N. Y., a Copartnership. Filed Jan. 24, 1927. Serial No. 163,310. 8 Claims. (Cl. 209—166.)



1. The improvement in the concentration of minerals by froth flotation which comprises subjecting the mineral in the form of a pulp to a flotation operation in the presence of a water-repellent reaction product resulting from the reaction between a metal xanthate and an organic acid chloride.

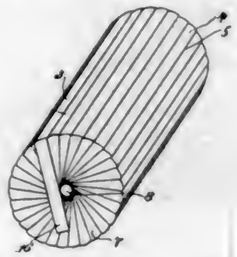
1,684,537. CAR CONSTRUCTION. WILLIAM A. GEIGER, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed July 18, 1927. Serial No. 206,549. 7 Claims. (Cl. 105—200.)



1. In a structure of the character described, the combination with the under-framing of a car, and a truck bolster, said under-framing and truck bolster providing king pin openings and oppositely disposed bearing shoulders; of a locking pin insertable from beneath the truck bolster and including flanged sections adapted to be disposed in line with said bearing shoulders when in position, each of said sections being provided at its lower end with an extension; a spreader disposed between said sections for maintaining the flanges of the latter in line with the bearing shoulders of said under-framing and truck bolster, said spreader being provided with an opening adjacent its lower end; and a fastening device having abutments thereon adapted in one position to engage with abutments on the extensions of said sections and in a different position, being detachable with reference to said extension abutments, said fastening devices extending through the opening in said spreader and being held thereby in position to prevent disengagement of said abutments.

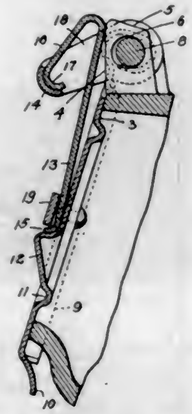
1,684,538. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 23, 1925. Serial No. 25,237. 5 Claims. (Cl. 213—36.)

1. In a friction shock absorbing mechanism, the combination with a central friction post of I-beam cross-section, said post having opposed longitudinal extending friction surfaces; a plurality of wedge blocks having transverse outer end faces; a pressure transmitting member directly engaging said outer end faces of the wedge blocks; friction shoes cooperating with the wedge blocks and friction post; a lateral pressure resisting means having interior wedge faces cooperating with the wedge blocks and shoes; and spring resistance means opposing inward movement of the shoes.



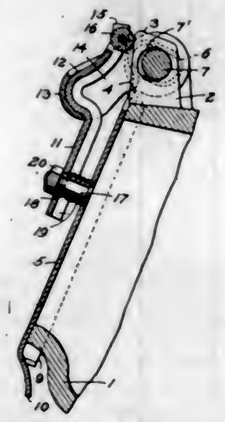
1,684,539. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Dec. 24, 1926. Serial No. 156,821. 6 Claims. (Cl. 213—36.)

1. In a friction shock absorbing mechanism, the combination with a friction post having inwardly diverging friction surfaces; of a follower acting means, said means and post being movable toward and away from each other, said follower having laterally inwardly acting wedge means movable therewith; friction shoes having wedging engagement with said wedge means; friction elements interposed between the shoes and post and having friction sur-



faces co-operating therewith, the co-operating surfaces of said post and friction elements being inclined with respect to the co-operating friction surfaces of the shoes and friction elements, whereby said last named co-operating surfaces will offer less resistance to longitudinal movement than the remaining co-operating surfaces, said friction elements being normally spaced from the follower acting means a distance less than the full compression stroke of the mechanism, whereby when said mechanism is compressed to a predetermined extent, the friction elements will be forced to move relatively to the post; and spring means yieldingly opposing movement of the shoes inwardly of the mechanism.

1,684,540. PACKAGE. JAMES P. HOOPER, Ruxton, Md., assignor to William E. Hooper & Sons Company, Baltimore, Md., a Corporation of Maryland. Filed Mar. 23, 1927. Serial No. 177,574. 4 Claims. (Cl. 206—59.)



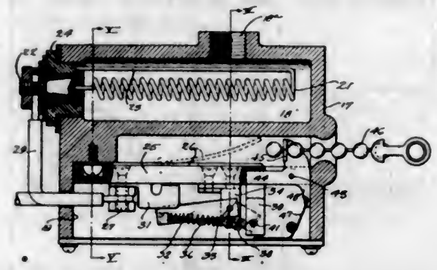
1. A package comprising a cylindrical body and a wrapping therefor in the form of strip material extending around the package in a series of loops, each loop encompassing the entire outside surface of the package and lying thereon in a line which is substantially the intersection with the cylindrical surface of a plane parallel to the axis, and each loop being at an angle to the succeeding loop whereby the wrapping material is caused to contact as to the edge portions and cover the sides and ends of the cylinder.

1,684,541. JOURNAL-BOX LID. LEIGH W. HOSTETTLER, Tarentum, Pa., assignor to Allegheny Steel Company, Brackenridge, Pa., a Corporation of Pennsylvania. Filed Nov. 23, 1923. Serial No. 676,559. 8 Claims. (Cl. 308—47.)

8. The combination with a journal box having a lug provided with angularly disposed bearing faces, of a lid hinged to said lug, a lid closing spring connected to said lid at one end and means hinged to said lug and co-operating with the other end of said spring for maintaining said spring in operative engagement with said lug.

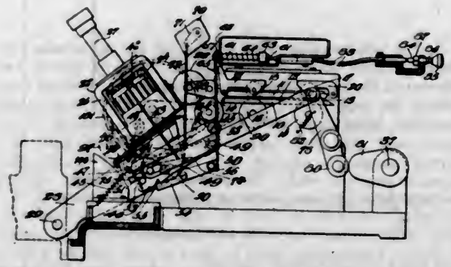
1,684,542. JOURNAL-BOX LID. LEIGH W. HOSTETTLER, Tarentum, Pa., assignor to Allegheny Steel Company, Brackenridge, Pa., a Corporation of Pennsylvania. Filed Nov. 23, 1923. Serial No. 676,560. 3 Claims. (Cl. 308—47.)

1. The combination with a journal box having a hinge-pin lug provided with angularly disposed bearing faces, of a hinge pin extending through said lug, a lid hinged on said pin, a rigid member adapted to press said lid closed, at one end cooperating with said bearing faces and at the other end yieldingly associated with said lid and a support for said member mounted on said pin.



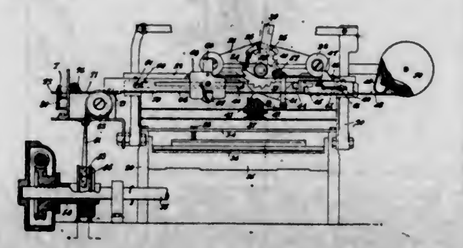
1,684,543. TURN SHOE. RUBIN KAMINSKY, Jersey City, N. J., assignor to Melrose Slipper Co. Inc., New York, N. Y., a Corporation of New York. Filed Dec. 19, 1927. Serial No. 241,032. 4 Claims. (Cl. 36—18.)

1. A hard sole shoe or mule having a sole reduced in thickness on the flesh side to form a feather and having the feather turned up about its margin to form an elongated pocket, an upper sewed to the outer face of the feather and doubled back upon itself, a soft resilient filler located in the elangoted pocket of the sole, a cover piece closing the pocket, enclosing the filler and being overseamed to the edge of the upturned feather, and a shank stiffener located between the cover piece and the filler.



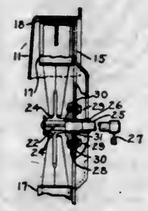
1,684,544. THERMOSTATICALLY-CONTROLLED HEATING ELEMENT. LEWIS H. LAMONT, Oak Park, Ill. Filed Oct. 24, 1925. Serial No. 64,503. 4 Claims. (Cl. 219—38.)

1. A heating device of the class described comprising an electric heating element and a snap-over switch controlling the current supply therefor, said switch comprising a pair of oppositely extending U members pivoted at a common axis, a spring connecting said U members, insulated terminals adapted to be bridged by one of said members, a



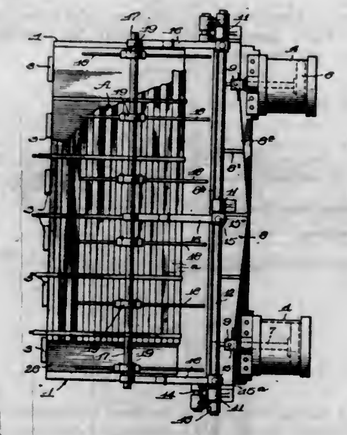
thermostatic member adapted to mechanically open said switch, and a manual control for closing said switch against the action of the thermostatic member.

1,684,545. NUMBERING AND COUNTING DEVICE. WILLIAM W. LASKER, Brooklyn, N. Y., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed May 15, 1924. Serial No. 713,534. 18 Claims. (Cl. 101—78.)



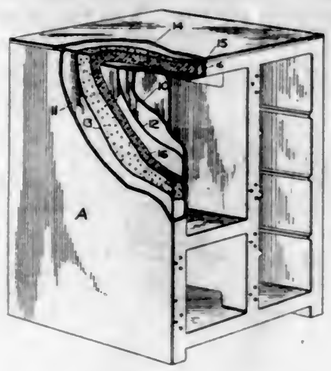
1. In a mechanism of the character stated, the combination of a machine having a reciprocable registration device for separately acting upon a series of cards, means for printing numbers on said cards, and means actuated by a card in said device for permitting said printing means to function.

1,684,546. CARRIAGE RETURN AND NORMALIZING MECHANISM FOR CARD-PERFORATING MACHINES. WILLIAM W. LASKER, Brooklyn, N. Y., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 28, 1927. Serial No. 187,194. 5 Claims. (Cl. 164—112.)



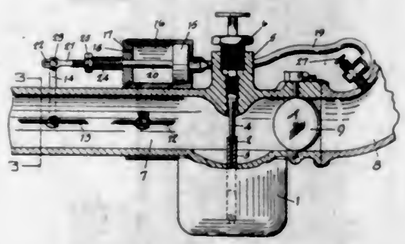
1. The combination with the carriage of a card punching machine, of a block normally out of the normal traverse of said carriage and formed with means for engagement with a portion of said carriage, electro-magnetic means for moving said block to effect return of said carriage to home position, and automatic means for returning said block to normal position after it has effected the return of said carriage.

1,684,547. BRAKE. VINCENT LINK, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Sept. 22, 1924. Serial No. 739,096. 4 Claims. (Cl. 188—78.)



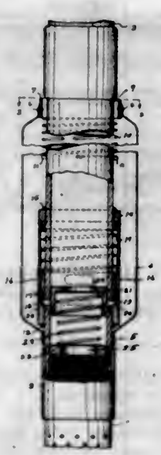
1. In a vehicle brake, a brake drum, a plurality of shoes pivotally supported within said drum and movable to contact therewith, a cam to expand said shoes journaled in a bracket attached to a brake dust cover having a plurality of slotted openings therein, and screws received within said slotted openings and threaded into said bracket whereby said bracket can be moved and secured in position whereby said cam can apply equal pressure to said shoes.

1,684,548. POWER CLAMP. EMIL C. LOETSCHER, Dubuque, Iowa. Filed May 6, 1927. Serial No. 189,446. 10 Claims. (Cl. 144—291.)



1. A power clamp comprising a bed, a clamping bar mounted for edgewise sliding movement adjacent one edge of said bed, a cylinder mounted adjacent said clamping bar, a fluid actuated piston in said cylinder having direct connection with said clamping bar, a rock shaft journalled on said clamping bar, resilient arms fixed to said rock shaft, pressure bars mounted at the ends of said arms and above said bed, and a lever arm fixed to said rock shaft and having pivotal connection with said bed.

1,684,549. REFRIGERATOR CONSTRUCTION. CHARLES EDWARD LUCKE, New York, N. Y., assignor to The Hoover Company, a Corporation of Ohio. Filed Apr. 23, 1926. Serial No. 104,054. 2 Claims. (Cl. 217—17.)

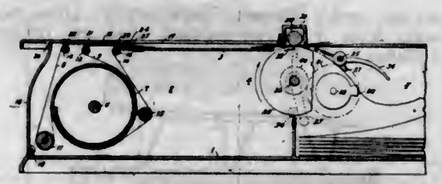


1. The method for constructing refrigerator walls, consisting in providing two plates each having a surface coated with a material having a moderately high temperature melting point, mounting said plates with said coated surfaces facing each other and arranged relatively spaced and thereby forming a mould, filling said mould with a heat insulating material in a fluid or liquid state but of a character which may be solidified to form a cellular structure, and finally heating the mould to cause said coating material to fill such interstices which may appear in said insulating material and which are exposed thereto and also maintain close adhesion thereof to said plates.

1,684,550. CARBURETOR. MARION MALLORY, Toledo, Ohio. Filed May 3, 1926. Serial No. 106,305. 3 Claims. (Cl. 261—61.)

1. In a carburetor for an internal combustion engine, the carburetor having a passageway communicating at one end with the intake of the engine, the carburetor having a fuel inlet communicating with the passageway, a throttle valve located in the passageway, the wall of the carburetor being closed as against entrance of air as between the fuel inlet and the throttle valve, a choke valve for closing the entrance of air to the passageway and located on the side of the fuel inlet opposite to that on which the throttle valve is located, and a pneumatic means responsive to the pressure in the passage-way at a point between the throttle and the engine for closing the choke valve as the pressure at said point is increased.

1,684,551. CEMENTING APPARATUS. SANFORD E. MANNING, Smackover, Ark. Filed Mar. 1, 1927. Serial No. 171,849. 6 Claims. (Cl. 166—1.)

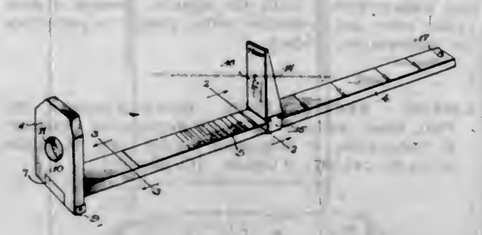


2. The combination with a pipe, of an expansible container around the pipe, one end of which is closed and secured to the pipe, there being a passageway leading from within the pipe into the container, the other end of the container being open, yieldably mounted valves, one on the inside and the other on the outside of said pipe, said valves normally closing said passageway and being adapted to yield, under the influence of pressure exerted through said pipe to open said passageway.

1,684,552. SECTIONAL WHEEL. ALEXANDER MELDRUM, Syracuse, N. Y. Filed Apr. 23, 1925. Serial No. 25,382. 1 Claim. (Cl. 301—65.)

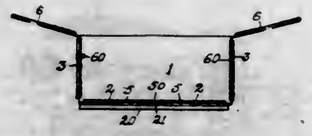
In a vehicle wheel, in combination, integral complementary sections each including integral parts which when the sections are placed together form a solid hub, hollow spokes radiating therefrom, a hollow felloe and a rim closing the outer side of said felloe, rivets securing said sections together at the hub and felloe and a boss on each felloe section surrounding each rivet, said bosses abutting to prevent crushing of the rim during riveting.

1,684,553. AUTOGRAPHIC REGISTER. WILLIS B. RICE, New York, N. Y., assignor to American Sales Book Company, Limited, Toronto, Canada, a Corporation of Ontario, Canada. Filed Feb. 14, 1925. Serial No. 9,156. 9 Claims. (Cl. 242—55.)



2. The method for feeding a plurality of interwound strips from a roll at a uniform rate, which comprises taking the strips from the roll at equally spaced intervals around its circumference.

1,684,554. PROTECTIVE SHEATH FOR FLEXIBLE SHAFTS. GUSTAV RIEPENSTAHL, Berlin-Treptow, Germany, assignor to Deutsche Gold- und Silberscheideanstalt, Frankfort-on-the-Main, Germany. Filed June 22, 1927, Serial No. 200,723, and in Germany June 23, 1926. 2 Claims. (Cl. 64—30.)

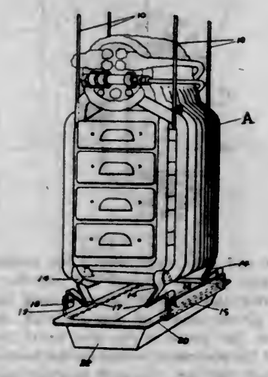


1. A protective sheath for flexible shafts comprising at least two helical wire coils of equal pitch and of different diameters screwed together to form a closed sheath, connecting sockets at the ends of said coils, rotary members on said sockets, flanges underlying the ends of the coils on said rotary members, and projections on said flanges for engaging the ends of the wires of the coils.

1,684,555. EYE TESTER. BENJAMIN D. RITHOLZ, Chicago, Ill., assignor to National Watch & Jewelry Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 17, 1926. Serial No. 136,093. 1 Claim. (Cl. 88—20.)

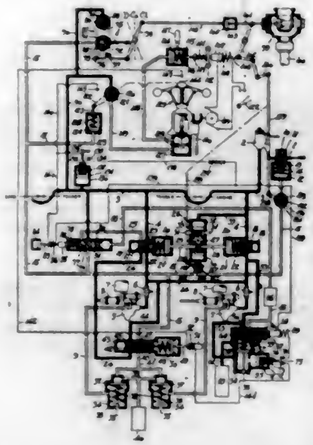
An eye testing device comprising a slide bar oblong in cross section, a lens holder having an opening and a recess therein, a lens at the rear end of the opening, a paper sheet having an opening therein to register with the lens and the opening in the holder and affixed to the holder to secure the lens in place, a slide bar having its end seated in said recess, a strip secured to the bottom of the holder over the end of the slide bar and to the slide bar, and a chart carrying slide block mounted on the slide bar.

1,684,556. FRUIT-BOX PAD AND LINING. DAVID H. ROSENBERG, Medford, Oreg. Filed June 29, 1926. Serial No. 119,315. 3 Claims. (Cl. 217—3.)



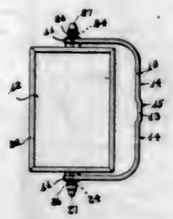
1. In combination with a fruit packing box, a fruit packing protector embodying a mounting sheet and a padded member secured by hinged means to said mounting sheet in spaced relation thereto, said spaced relation forming an aerating slot between said mounting sheet and padded member, said mounting member being held in position by the fruit pressing against the same.

1,684,557. GAME BALL. ADDISON T. SAUNDERS, Akron, Ohio, assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Feb. 3, 1927. Serial No. 165,663. 2 Claims. (Cl. 273—61.)



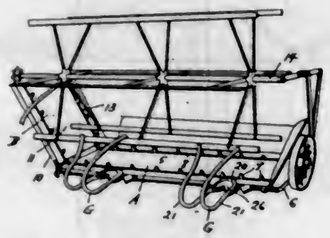
1. A hollow game ball as a substitute for the shuttle in badminton or for light tennis and the like, comprising a thin resilient perforated indentable rubber wall, said wall being adapted to be locally sharply indented upon impact of slight force and when so indented in any portion to retain its spherical form in other portions, and to recover from indentation, the perforations being of small size such that the spherocity of the ball will be substantially unimpaired, substantially as described.

1,684,558. REMOVABLE DRAIN PAN FOR REFRIGERATORS. EMIL P. SCHWARZ, St. Paul, Minn., assignor to Seeger Refrigerator Company, a Corporation of Minnesota. Filed Oct. 14, 1926. Serial No. 141,629. 9 Claims. (Cl. 62—95.)



1. A removable drain pan for refrigerating units and means for holding said pan slidably below and directly by a refrigerating unit.

1,684,559. AIR-BRAKE APPARATUS. DANIEL HERBERT SCHWEYER, Easton, Pa. Filed Apr. 2, 1925. Serial No. 20,103. 45 Claims. (Cl. 303—18.)

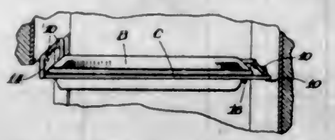


6. In an air brake apparatus, a main reservoir pipe, a train line brake pipe, a locomotive brake pipe normally connected to the train line brake pipe, means operable for initiating caution or service brake application conditions, means operable under such conditions for shutting off communication between the brake pipes, means operable under such conditions for opening the train line brake pipe for the discharge of air and operable to shut off such discharge below a predetermined train speed, means operable under such conditions for establishing communication between the main reservoir and locomotive brake pipes, means operable below a predetermined train speed for opening the locomotive brake pipe for the limited discharge of air therefrom, and means operable following the operation of the fifth named means for connecting the main reservoir and train line brake pipes to recharge the train line brake pipe.

1,684,560. REAR-SIGHT MIRROR. HARRY T. SCOTT, Los Angeles, Calif. Filed Apr. 28, 1926. Serial No. 105,181. 2 Claims. (Cl. 45—97.)

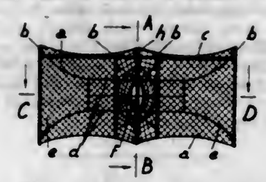
2. In a rear and side view mirror for inclosed cars, a reflector, a frame formed around the reflector and made of light material and having punched and burred bearing portions, pivots made of screws with the grooved heads folded on the plane of the slot until the top horizontal edges of the slot meet seated in the bearing portions and held against turning, the said bearing portions having shapes to seat the folded screw heads, a supporting frame having apertured ends to engage the pivots, cup-washers disposed over the burred portions of the reflector-frame and between the reflector-frame and the supporting frame, and locking means for drawing and holding the said bearing portions of the reflector-frame into the said washers and against the supporting frame.

1,684,561. CORN BINDER. CHARLES T. SULLIVAN, Cassoday, Kans. Filed July 26, 1926. Serial No. 125,030. 5 Claims. (Cl. 56—77.)



1. In a binder structure; wherein the binder includes a horizontal conveyor frame among other elements; brackets fixed on the front edge of the frame, a cutter bar slidable through the brackets, two pairs of blades on the cutter bar, a pair of guides, each guide comprising a U-shaped body, a block, and extensions on the block forming a shoulder with the block, the end of the extension merging into the body adjacent its ends and disposed with its major portion spaced from the body, and arms extending from the ends of the body and curved upwardly and rearwardly, a pair of blades in each body, said cutter bar adapted to slide on top of the blocks when fixed to the forward edge of the frame, and the blades on the cutter bar adapted to move in the space provided between the extensions and the bodies.

1,684,562. PROCESS OF PRODUCING A NEW ACID AND ITS SALTS STRONGLY ABSORBING ULTRA-VIOLET RAYS. TSUNEO SUZUKI and SUEO SAKURAI, Tokyo, Japan, assignors to Zaidan Hojin Rikagaku Kenkyujo, Tokyo, Japan. Filed Aug. 11, 1924, Serial No. 731,488, and in Japan Dec. 20, 1923. 2 Claims. (Cl. 260—10.)

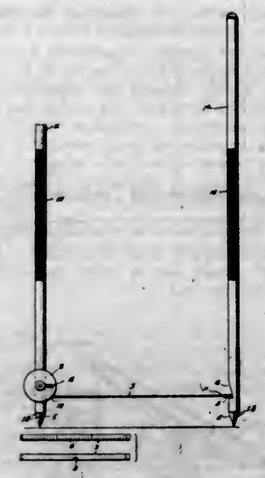


1. The process of preparing a condensation product of sugar and a parasulphonic acid compound of phenylhydrazine which comprises heating a water solution of an osazone-forming sugar, para-sulphonic acid compound of phenylhydrazine in quantity sufficient to form an osazone, and sodium acetate until the solution assumes a dark yellow color, and thereafter adding alcohol to precipitate the condensation product.

1,684,563. REFRIGERATOR. ENOCH SWEDMAN, St. Paul, Minn., assignor to Seeger Refrigerator Company, a Corporation of Minnesota. Filed Jan. 18, 1928. Serial No. 247,597. 9 Claims. (Cl. 62—95.)

9. A refrigerator having a refrigerating unit, a supporting means for a receptacle including a frame member having side rails positioned near said unit and means for supporting said side rails in a manner to permit a receptacle to slide thereon.

1,684,564. WEEL MADE OF NETTING. FRIEDRICH WILHELM HEINRICH TOPPE, Schwartau, near Lubeck, Germany. Filed Mar. 3, 1927, Serial No. 172,343, and in Germany Mar. 4, 1926. 4 Claims. (Cl. 43—100.)

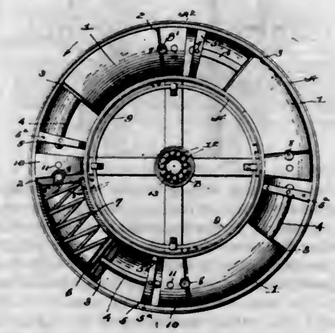


1. A fish and eel trap comprising a tubular net body having end and lateral wall openings, hoops arranged transversely of the body for maintaining the openings in said body at the proper extension, funnel-shaped inlet nets at the end and lateral openings of said body, stretching rods fastened to said hoops for maintaining the net body in an open position, an oval hoop projecting beyond the sides of the net body, and guide nets fastened to said oval hoop.

1,684,565. COATED METALLIC ARTICLES SUCH AS STEREOTYPIC PLATES AND METHOD OF PRODUCING SAME. COLBY CHARLES WALLER, New York, N. Y. Filed Feb. 7, 1924. Serial No. 691,284. 27 Claims. (Cl. 22—200.)

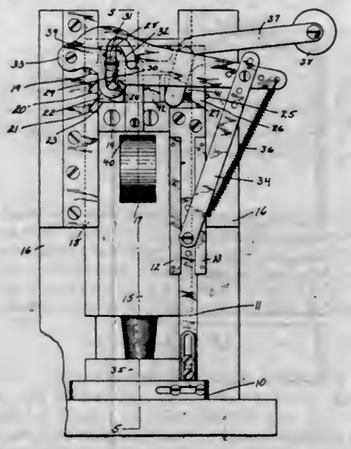
16. The method of producing a copper coating upon a stereotypic plate which includes impregnating a fibrous blank with an emulsion containing copper sulphate, hydrous aluminum silicate, boiling water and powdered gum arabic, impressing said matrix with the desired characters at a temperature approximating 240° F., casting molten type metal against said matrix, removing said casting and cleaning the surface thereof.

1,684,566. TEN-YARD LINE. MOSES H. WINKLER, Meridian, Miss. Filed July 12, 1927. Serial No. 205,112. 6 Claims. (Cl. 33—86.)



1. A ten yard line for foot ball games comprising two poles having pointed ends, one of said poles having a cut-out above its pointed end and the other pole having a notch above its pointed end, a tape case fastened in the cut-out of the first pole, a tape within the said case and adapted to unroll therefrom, and a fastener anchored in the notch of the second pole and adapted to engage the free end of the tape for detachably securing the latter to said second pole.

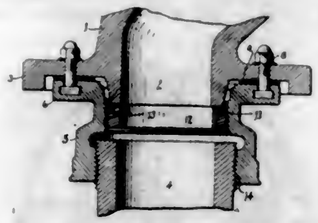
1,684,567. PROPELLER. CHARLES ARTHUR WRAGG, Washington, D. C., assignor of one-half to Louis H. Crook, Washington, D. C. Filed Dec. 30, 1925. Serial No. 78,392. 15 Claims. (Cl. 170—165.)



1. In a propeller structure, a main blade and an auxiliary blade, the auxiliary blade being substantially parallel sided and positioned with its leading edge adjacent the trailing edge of the main blade and parallel thereto.

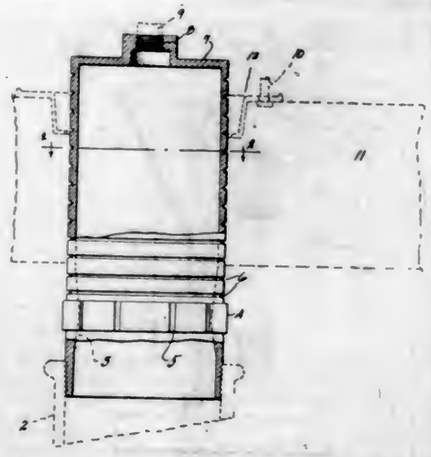
1,684,568. FLYWHEEL. ARTHUR A. ALEXANDER, New York, N. Y. Filed Aug. 8, 1922. Serial No. 580,428. 5 Claims. (Cl. 74—6.)

4. In a shock absorbing device, a casing, a plurality of arcuate pneumatic cylinders contained in said casing, pistons operatively mounted in said cylinders, a cover for said casing having a shaft co-axial with and journaled in said casing, suitable connecting means between said cover and said pistons so that said pistons are operated in said cylinders whenever there is relative motion between said casing and said cover.



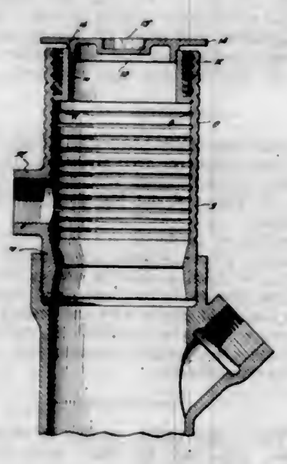
1,684,569. SAFETY DEVICE FOR FOOT-POWER PRESSES. CLIFFORD G. ARMSTRONG, Meriden, Conn., assignor of one-half to Herbert C. Armstrong, Meriden, Conn. Filed Mar. 2, 1927. Serial No. 172,035. 5 Claims. (Cl. 192—137.)

1. A safety device for foot power presses, comprising a guard, a slide to which the guard is attached, a guideway for said slide arranged vertically at one side of the ram, a



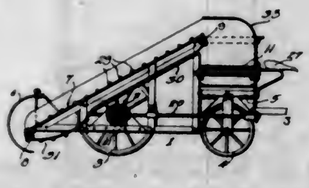
block connected with the ram of a press, said guideways connected with said block, a rack secured to the frame on the opposite side of the ram, a longitudinally-movable bolt mounted in said block, means tending to throw the bolt forward, a latch for holding said bolt in its retired position and provided with a stud, a guard-lever pivotally connected with the said rack and formed with a cam-slot into which the said stud extends, and a link connecting said guard-lever with said slide.

1,684,570. CLOSET FLANGE. EDWARD W. N. BOOSEY, Detroit, Mich. Filed Nov. 18, 1922. Serial No. 601,857. 2 Claims. (Cl. 295—34.)



1. The combination with a closet bowl having a base and a discharge horn extending downwardly from the base, of a discharge fitting comprising a tubular body having a lateral flange at one end, means for securing the flange to the bowl base, a gasket between said flange and base, the said body having an internally threaded throat into which the horn extends, a ring member in threaded relation with the throat and movable to engage the end of the horn, said member being shaped at the upper end and exterior surface to provide a pocket between the said horn end and the threaded throat to receive a sealing material, said body being further provided with an enlarged portion provided with internal threads in spaced relation with the threaded throat adapting said body to be attached to an externally threaded pipe providing a conduit having an internal diameter at least as great as the internal diameter of said horn and ring.

1,684,571. FERRULE FOR CONNECTING PLUMBING FITTINGS WITH PIPING. EDWARD W. N. BOOSEY, Detroit, Mich. Filed July 3, 1926. Serial No. 120,367. 1 Claim. (Cl. 137—75.)

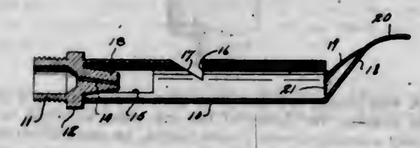


A ferrule for connecting a plumbing fitting with a pipe comprising a hollow tubular member open at one end and externally threaded at the said end for introduction into the pipe, a portion of the wall of the ferrule above the threaded end being of greater thickness than the remaining portion thereof, a shoulder portion provided on the exterior of the member at the said thicker wall portion of a form to provide a wrench hold, the wall of the ferrule above the wrench hold being formed with spaced circumferential grooves providing weakened lines along any one of which said ferrule may severed, the opposite end of the ferrule being closed by a well integral therewith, a central projecting boss at said closed end having a threaded aperture to receive a plug for closing the same.

1,684,572. CLEAN-OUT FITTING FOR PLUMBING SYSTEMS. EDWARD W. N. BOOSEY, Detroit, Mich. Filed Nov. 26, 1926. Serial No. 150,756. 8 Claims. (Cl. 137—75.)

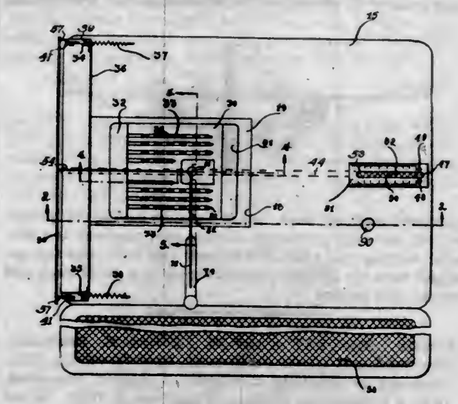
1. A cleanout fiting for plumbing installations comprising a hollow cylindrical member having a threaded open end and means for closing the opposite end providing a wrench-hold for threading the device to a conduit, said fitting having a hub adjacent the threaded end for connection of a conduit therewith, the wall of the fitting being internally and externally circumferentially grooved providing a series of weakened areas permitting severance of the closed end thereof at any of a number of points, the internal grooves being in staggered relation with the external grooves.

1,684,573. HAY RAKE AND BUNCHER. JOHN BOYD, Byron, Calif. Filed Oct. 8, 1924. Serial No. 742,381. 2 Claims. (Cl. 56—357.)



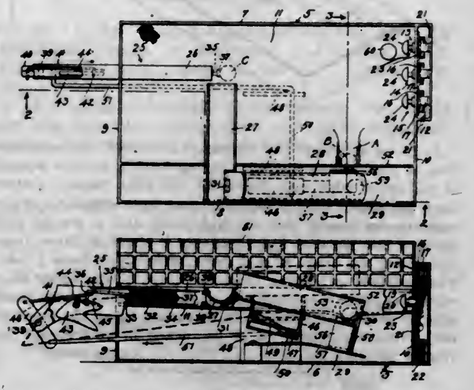
2. A device of the class described, comprising a rake having its forward side concave, an inclined endless conveyor mounted on rollers and extending into the forward side of said rake, said conveyor being loose on its rollers, and supporting means for the lower reach of said conveyor, said supporting means terminating at a substantial distance from the lower roller to permit a portion of said lower reach adjacent said rake to droop to a substantially horizontal position to enable it to force material into the rake.

1,684,574. PAVING RAMMER. ERNST HJALMAR CARLSSON, Oscarshamn, Sweden. Filed Sept. 22, 1926, Serial No. 137,023, and in Sweden Aug. 28, 1926. 5 Claims. (Cl. 94—49.)



1. In a ramming machine of the character described, the combination of an upright reciprocating ram, and lifting means for the ram comprising a rotary driving member, an oscillating element associated with said driving member, means to connect and disconnect the oscillating element from the driving member whereby the oscillating element partakes of the movement of the driving member a predetermined distance and then disconnects from the member to permit the oscillating element to return to its initial position with fall of the ram, and a yieldable braking means operating on said oscillating element to hold the latter stationary subsequent to the fall of the ram.

1,684,575. GAS BURNER. HAMMEL H. CARRELL, Lubbock, Tex., assignor of one-half to Solomon Nathan Jackson, Lubbock, Tex. Filed Feb. 14, 1928. Serial No. 1 Claim. (Cl. 137—75.)

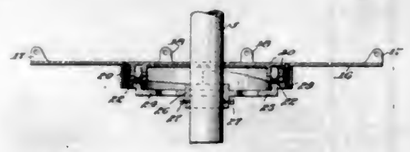


3. A gas burner of the character described comprising a tubular member having a gas jet entering one end thereof, the longitudinal axis of the jet being disposed at a slight angle to the longitudinal axis of the tube whereby the gas discharged from the jet will strike the wall of the tube, the tube adjacent the jet on each side thereof being formed with air inlet openings and in advance of these inlet openings being formed in its top wall with an air inlet opening defined by two walls one extending downward and forward into the tube and one extending transversely, said last named opening being disposed rearward of the place where the gas strikes the wall of the tube, the forward end of the tube being formed with an integral upwardly and outwardly extending, longitudinally curved deflector, the inner corners of the deflector being bent over and inward to form wings extending diagonally outward from the mouth of the tube and defining air inlet openings, the body of the deflector being formed with air inlet openings.

1,684,576. GOLF INDICATING MECHANISM. HARRY G. CONNER, Detroit, Mich. Filed Sept. 11, 1926. Serial No. 134,805. 5 Claims. (Cl. 273—85.)

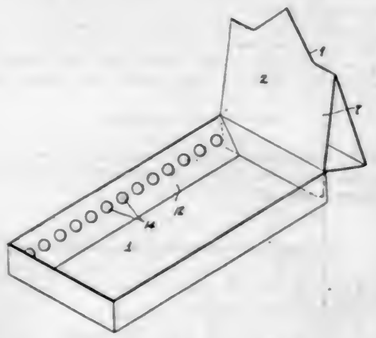
1. In a device of the class described a golf ball; a yieldable indicating member; means for attaching said golf ball to said indicating member, said indicating member indicating the force of said ball in a flight; a plurality of movable members for indicating departure of said ball from the normal path of flight; and means for preventing a rebounding of said ball into engagement with said movable members.

1,684,577. SHOOTING GAME. GEORGE B. DEACON, Los Angeles, Calif. Filed July 22, 1927. Serial No. 207,699. 4 Claims. (Cl. 273—119.)



1. A game structure comprising a platform having a low point adapted to deliver balls therefrom; a tiltable track arranged adjacent said platform; a catapult; means for releasing the projecting mechanism of said catapult and means for tilting said track to propel balls delivered thereto from said platform to a point for impulsion by said catapult.

1,684,578. GATE-CLOSING DEVICE. WILLIAM K. EDWARDS, Big Spring, Tex. Filed May 4, 1926. Serial No. 106,648. 1 Claim. (Cl. 39—53.)

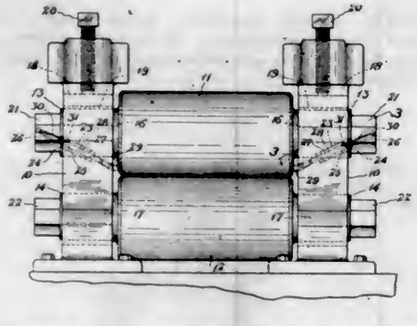


In a gate, the combination of a frame having a vertical post, supporting means comprising a disk having upturned flanges formed as inclined tracks, depressions at the bases of the tracks, arranged substantially diametrically opposite each other, a gate mounted to swing from open to

closed position about said post as a center, spaced lugs projecting below said gate, anti-friction rollers between said lugs having axles with bearings in said lugs, said rollers arranged at diametrically opposite points and resting

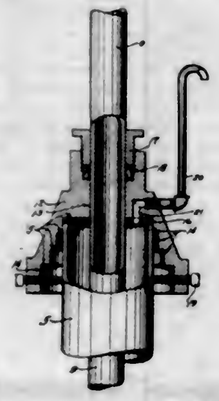
upon said inclined ways, and a housing having its bottom portion centrally perforated to pass over the post and provided with spaced apertures to pass over said lugs and arranged with an annular depending portion to protect and conceal said rollers.

1,684,579. DISPLAY CARTON. JAMES E. FERGUSON, Cleveland, and HENRY L. MOONEY, East Cleveland, Ohio, assignors to The Lake Lithograph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 8, 1924. Serial No. 736,490. 5 Claims. (Cl. 206—44.)



1. In an article of the character described, the combination of the base section of a carton having a cover hinged at an upper edge and therewith carrying display matter upon its upper side, a fold along an approximately intermediate transverse line of said cover and a second fold along a line parallel to and spaced a short distance from the line of the hinge of said cover, whereby to form a rearward support extending from the hinge at the upper edge when the cover is opened, and a tongue formed at the front edge of said cover adapted to be tucked in at the front of the carton for closing or to be tucked in at the rear for display position.

1,684,580. CHAIN COUPLER. MATHEW J. FRAMBACH, Hartley, Iowa. Filed Dec. 21, 1927. Serial No. 241,602. 4 Claims. (Cl. 24—237.)

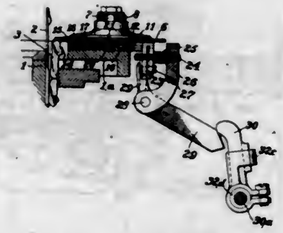


1. A coupling lever having a pair of arms connected at one end by a loop and provided with hooks at their opposite ends to engage through a keeper, said arms being movable toward and away from one another in one plane, and said loop being located at one side of said plane and in a plane at substantially right angles with the first named plane.

1,684,581. DEVICE FOR PREVENTING COLLECTION OF GREASE ON ROLLS. HENRY J. HARRIS, Youngstown, Ohio. Filed Aug. 27, 1926. Serial No. 131,030. 6 Claims. (Cl. 80—1.)

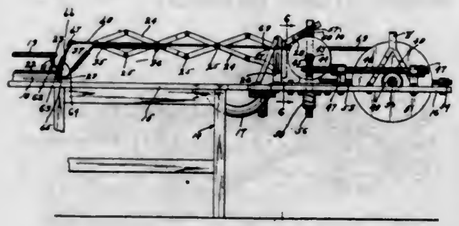
1. A device for preventing grease from contacting with the working surfaces of rolls of rolling mills comprising means adapted to be secured to the mill and extending into engagement with the shoulder of a roll.

1,684,582. SANITARY WELL CAP AND PIPE CLAMP. EARNEST E. HOAGLUND, Minneapolis, Minn. Filed Dec. 24, 1926. Serial No. 156,963. 1 Claim. (Cl. 166—14.)



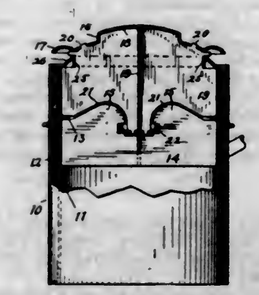
A well casing cap and drop pipe clamp having a drop pipe passage, the flange of the cap being arranged to be loosely telescoped onto a well casing, an annular internal packing in the cap, means for compressing the packing to contract the same onto a drop pipe extending through said passage for fictionally holding said pipe against lifting movement during pumping action, a compressible gasket in the cap arranged to rest on the upper end of the casing and support the cap thereon and be compressed thereby to seal the joint between said cap and casing, and a set screw having threaded engagement with the flange of the cap and arranged to impinge against the casing.

1,684,583. SPRING-BEARD KNITTING MACHINE. KENNETH HOWIE, Norristown, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Jan. 31, 1927. Serial No. 164,844. 9 Claims. (Cl. 66—101.)



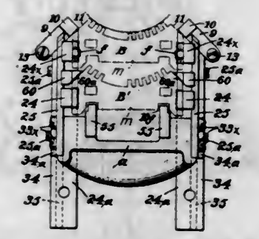
1. In combination in a spring beard needle knitting machine, individual pressers for the needle beards, having their cam contacting edges differently formed relative to each other for knitting and tucking, a tuck presser wheel

adapted to operate certain of the pressers to knit and having deep notches to permit certain pressers to remain idle for tucking and cam means for eliminating the action of



the tuck wheel upon certain of the pressers by operating said certain pressers and missing others, the latter being left under the control of the tuck presser wheel, substantially as described.

1,684,584. IRONER. RUDY HILGEDICK, Chicago, Ill. Filed Mar. 14, 1927. Serial No. 175,180. 10 Claims. (Cl. 68—9.)

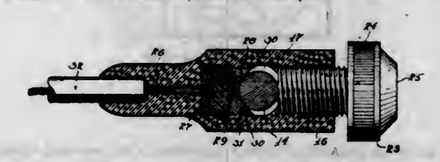


1. The combination with a table having an ironing surface, of a support, a sadiron having a handle by which pressure may be applied thereto, said sadiron being carried by the support for movement over the ironing surface and out of contact therewith, said sadiron being movable on the support into a position in which it rests on the ironing surface for ironing action, motor-actuated connections for moving the support to impart to and fro movements to the sadiron, and manually-controlled connections arranged to be actuated by the handle of the sadiron for causing the motor-driven connections to reverse their movements.

1,684,585. BURNER. RUDOLPH HOFFMAN, Cleveland, Ohio. Filed Oct. 26, 1925. Serial No. 64,742. 9 Claims. (Cl. 158—94.)

3. In burners of the class described, the combination of inner and outer wick tubes forming an annular wick space therebetween, said inner tube having a ledge on the interior thereof, a flame spreader arranged above said tubes with its periphery projecting over said space, vertically disposed radial vanes to which said spreader is attached, said vanes fitting within the inner tube and resting on said ledge, and a frusto-conical air barrier carried on said members and closely fitting the interior of said inner tube and projecting inwardly and upwardly from the upper edge thereof.

1,684,586. NEEDLE-SELECTOR JACQUARD FOR KNITTING MACHINES. KENNETH HOWIE, Norristown, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Filed Apr. 5, 1927. Serial No. 181,088. 11 Claims. (Cl. 66—50.)

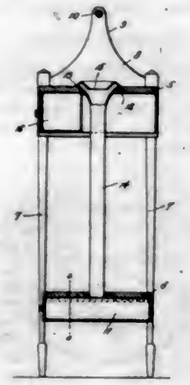


1. In combination with a needle bed, a stack of unattached toothed plates for controlling the action of the needles, means for moving said plates individually from the stack to needle controlling position at the needle bed and for retracting said plates individually to take their places in the stack, and a magazine carrying the stack of plates removably mounted on the machine, to be handled with said stack of plates as one body in placing it into or removing it from position in the machine.

1,684,587. CARBON-MONOXIDE-TESTING MEANS AND METHOD. EDGAR W. HULTMAN, Los Angeles, Calif. Filed Mar. 23, 1926. Serial No. 96,882. 4 Claims. (Cl. 23—5.)

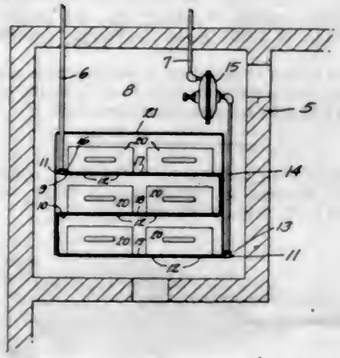
1. As a means of detecting poisonous gases, test papers containing palladium protochloride, said papers being kept moist by the presence of a hygroscopic salt.

1,684,588. ELECTRICAL CONNECTER. CHARLES G. JANSKY, Berwyn, Ill. Filed Oct. 18, 1926. Serial No. 142,171. 11 Claims. (Cl. 173—269.)



1. In an electrical connecter, a non-corroding body portion, having an opening thereinto, a threaded bore communicating therewith and providing a pocket below said opening, and a smaller bore leading from said pocket out of said body, an electrical conductor extending from said smaller bore into said pocket, and a non-corroding screw for clamping other conductors in contact with said first named conductor.

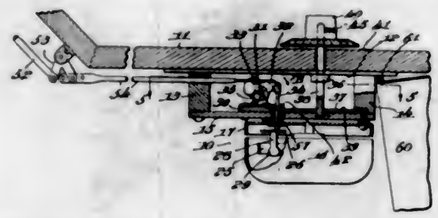
1,684,589. SMOKING STAND. OWEN C. KIRTS, Marion, Ohio. Filed Mar. 26, 1927. Serial No. 178,593. 1 Claim. (Cl. 131—51.)



In a smoking stand including horizontal upper and lower spaced walls, and interconnecting supporting legs, the top wall being formed with an enlarged central opening, the

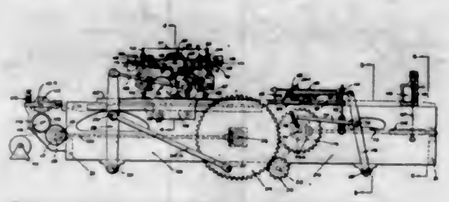
edge of which is beveled, the bottom wall being formed with a central smaller opening, a refuse receptacle slidably arranged beneath the bottom wall, a refuse pipe arranged vertically, the lower end of said pipe extending into the opening formed in the bottom wall of the stand, the upper

end of the pipe being flared for disposition in the enlarged central opening in the top wall of the stand, and a relatively U-shaped drawer slidably mounted beneath the top wall, the side forming arm portions of said U-shaped drawer being disposed on opposite sides of the refuse pipe.



1,684,590. REFRIGERATOR FREEZING DEVICE. THOMAS J. LITLE, Jr., Detroit, Mich., assignor to Copeland Products, Inc., Detroit, Mich., a Corporation of Michigan. Filed June 12, 1926. Serial No. 115,687. 10 Claims. (Cl. 62—95.)

1. A refrigeration device comprising superposed sheets of metal having their edges sealed, said sheets being spaced apart to form an expansion chamber between them, and bent to form a plurality of platforms for the reception of liquid freezing trays.

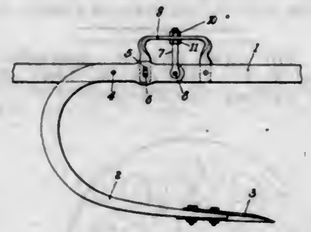


1,684,591. VEHICLE ALARM. ALBERT V. LOCKE, Belmont, Mass. Filed Feb. 2, 1926. Serial No. 85,593. 5 Claims. (Cl. 116—33.)

2. An alarm for vehicles comprising a mechanically operated bell; an emergency brake lever; a normally spring controlled rocking lever; a pin carried by said lever; a bell hammer; means to normally lock said hammer against operation; a disk having a blank spot and a plurality of perforations each side thereof arranged to be alternately positioned beneath said pin; a pin interposed between said first pin and said hammer locking means, and arranged to be operated by said first pin when one of said perforations is positioned beneath said first pin to unlock said hammer upon a movement of said brake lever; and means including a slotted link interposed between said brake lever and said

rocking lever whereby said brake lever may be operated regardless of the position of said rocking lever, and whereby said rocking lever may be actuated at times by said brake lever.

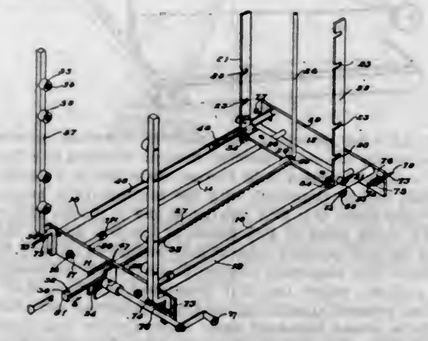
1,684,592. PRINTING PRESS. WILLIAM F. LUCK, Portland, Oreg., assignor, by mesne assignments, to Francis W. Chausse, Salem, Oreg. Filed Jan. 17, 1925. Serial No. 3,031. 7 Claims. (Cl. 101—23.)



1. A web-pulling mechanism consisting of a bar slidably and transversely placed across a web; a shaft mounted on said bar; a plurality of clamping jaws on said shaft opposite said bar; a hinged track alongside of said slidable bar; an arm on said jaw-carrying shaft having a roller mounted thereon riding on said hinged track; a cam for rocking said jaw-carrying shaft; a crank for sliding said bar; and a printing mechanism adapted to print said web while said jaws are not gripping said web.

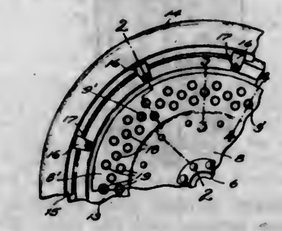
1,684,593. PAINT OR WATERPROOFING MATERIAL AND PROCESS OF PRODUCING THE SAME. FREDERICK W. MCRAE, Eagle Rock, Calif., assignor to McRae Paint Products, Inc., Los Angeles, Calif., a Corporation of California. Continuation of application Serial No. 154,045, filed Dec. 10, 1926. This application filed Mar. 13, 1928. Serial No. 261,416. 6 Claims. (Cl. 134—51.)

6. A process of the class described which comprises heating Trinidad type asphalt to a temperature maintained for a sufficient period of time to substantially complete the vaporization of the light oils of said asphalt, then adding to the hot asphaltic residual a cold petroleum distillate so as to immediately cool and dissolve the organic constituents and permanently suspend inorganic constituents of the asphaltic residue in said distillate and adding thereto a pigment.



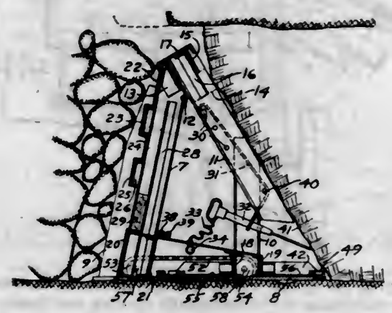
1,684,594. SOIL-WORKING IMPLEMENT. HANS OLSEN, Alslov, near Karise, Denmark. Filed July 5, 1927, Serial No. 203,639, and in Denmark July 13, 1926. 1 Claim. (Cl. 97—198.1.)

An adjustable fastening device for a soil-working implement, comprising, in combination a downwardly extending arm carrying the respective soil-working implement, a bolt by which said arm is hinged to a rearwardly extending part of the implement, a bow secured to said part, an adjusting and fixing bolt hinged at one end to the said arm and extending with its other end which is threaded through said bow, nuts located upon said threaded bolt end, and separate



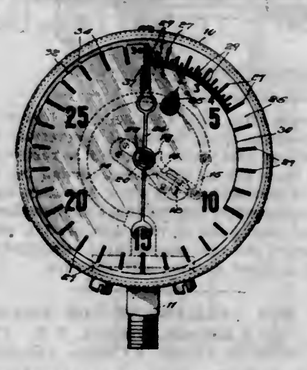
means for securing the said arm with its tool in its adjusted position substantially as and for the purpose set forth.

1,684,595. OVEN AND BROILER RACK HANDLING DEVICE. WILLIAM PARKE, New York, N. Y. Filed Oct. 26, 1925. Serial No. 64,840. 12 Claims. (Cl. 126—339.)



1. In an organization of the general character described: a plurality of substantially vertical food-support advancing arms secured at but one end and spaced apart upon a transversely extending member which is movable to and from the rear of an oven; and means for imparting movement to said member.

1,684,596. RESILIENT WHEEL. HARRY M. PATCH, Seattle, Wash. Filed June 8, 1927. Serial No. 197,287. 5 Claims. (Cl. 152—36.)

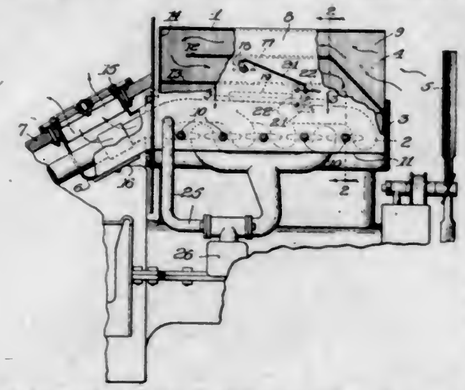


1. In a resilient wheel, the combination with a rigid hub member having spaced apart plate elements, and a rigid rim member having an annular plate element extending into the space between the plate elements of said hub member, of rubber rings located at opposite side of the rim element, each of said rings being arranged concentrally of the wheel axis to surround the latter said rubber rings and the plate elements of both of said rigid members being provided with protuberances and recesses whereby interengaging connection is had between the rubber rings and both of said rigid members to resiliently couple the same together.

1,684,597. LONG-WALL MINING SHIELD. ERSKINE RAMSAY, Birmingham, Ala. Filed Nov. 8, 1926, Serial No. 147,043. Renewed Feb. 18, 1928. 25 Claims. (Cl. 262—1.)

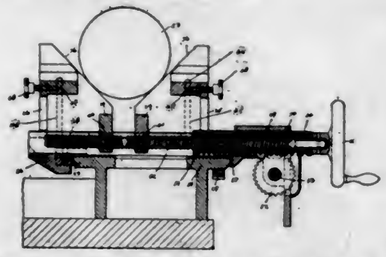
24. A portable shield adapted for use in an untimbered portion of a mine or other excavation, said shield having two oppositely-inclined sides, one of which is partially open and is opposed to the face to be worked upon, while the other one of said sides is closed, and is reinforced to withstand the pressure of material dislodged from the roof during the excavating operation.

1,684,598. DIAL. ALEXANDER D. ROSE, Chicago, Ill., assignor to Jas. P. Marsh & Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 30, 1926. Serial No. 84,907. 5 Claims. (Cl. 116—129.)



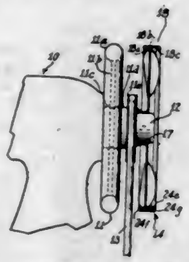
2. A dial having a series of radially disposed markings, symbols assigning values to said markings, and a line positioned adjacent the lower portions of only some of said markings, and a secondary line positioned adjacent the upper ends of a portion only of said markings, said lines contrasting different portions of the series from each other.

1,684,599. MOTOR-VEHICLE HEATER. ELMER RYDER, Berwyn, Ill. Filed Dec. 9, 1925. Serial No. 74,304. 3 Claims. (Cl. 257—2.)



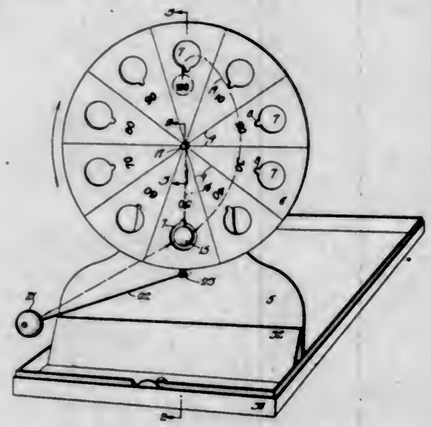
1. A motor vehicle heater having a casing adapted to be applied over the exhaust manifold of the vehicle engine, said casing having a cold air intake and a hot air outlet, partition means dividing the casing into a plurality of passages communicating with each other and with the intake and outlet, respectively, to increase the length of

travel of the air through the casing, a damper in one of said passages for controlling the flow of air through the casing, and a thermostat responsive to the temperature of



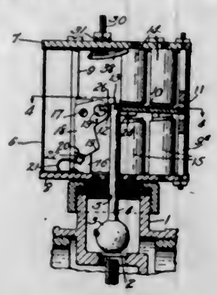
the air in the casing, and means connecting the thermostat with the damper for automatically opening and closing the same.

1,684,600. UNIVERSAL HOLDING CARRIAGE FOR TEST STANDS AND LATHES. JOSEPH C. SCHAF, Jr., Indianapolis, Ind. Filed Apr. 22, 1927. Serial No. 185,679. 5 Claims. (Cl. 248—15.)



3. The combination with a frame and a pair of slidably supported complementary blocks, of a reversely threaded screw for moving said blocks as a unit or relative to each other, each block having a threaded portion for engaging said screw, a bearing for said screw rotatably supporting the same but preventing longitudinal axial movement therebetween, and means for moving said bearing and screw longitudinally of the axis comprising a rack rigid with the bearing and a pinion meshing with the rack.

1,684,601. FAN ATTACHMENT FOR SEWING MACHINES. DAVID SHPATER, Brooklyn, N. Y. Filed Dec. 4, 1925. Serial No. 73,155. 3 Claims. (Cl. 230—246.)

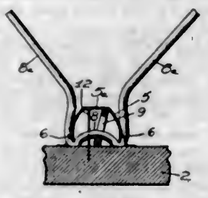


1. A fan of the character described made of a single piece of sheet material cut, bent and folded to form gripping means adapted to frictionally clamp the fan to a drive shaft, spaced fan blades extending on opposite sides of the plane of said sheet material, and a guard member extending about said blades to protect against accidental contact therewith as and for the purpose described and specified.

1,684,602. TOY GAME DEVICE. ALEXANDER SPITZER, Brooklyn, N. Y. Filed Dec. 16, 1927. Serial No. 240,373. 5 Claims. (Cl. 273—98.)

1. In a toy device of the character described, a panel, an aperture therein, a pendent element attached to a flexible cord and adapted to be thereby suspended in a position behind and in alignment with the said aperture, another aperture above that first mentioned and so spaced with respect to the point of attachment of the said flexible cord, that the said pendent element may be thrown upward and brought into alignment therewith, an elastic cord secured at a point below the first mentioned aperture, and a striker element attached at the free end thereof and adapted to be drawn backward under tension of the said elastic cord, and upon release to strike the aforesaid pendent element.

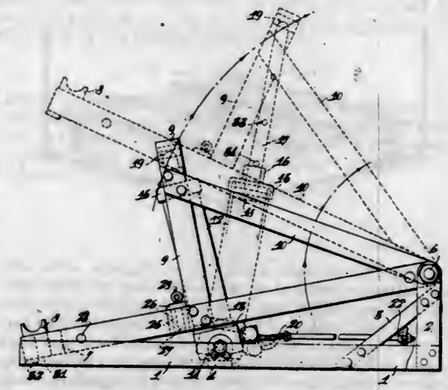
1,684,603. VALVE. HENRY L. STEPHENSON, Buffalo, N. Y. Filed June 3, 1927. Serial No. 196,204. 11 Claims. (Cl. 137—139.)



1. An electrically operated valve, comprising a valve element movable between open and closed positions, a pivoted armature connected to said valve element to cause movement of the latter between said positions, electromagnetic means disposed to attract said armature alternately between open and closed positions, a lever pivoted adjacent the armature for oscillation upon an axis parallel to the axis of oscillation of the armature, said lever having in its edge nearest the armature a notch embracing a portion of the armature, whereby the armature will rock in said notch and cause oscillation of said lever in either direction, and a spring device acting upon said lever to bias it and said armature in either direction from an intermediate position, whereby the armature and valve element will be yieldingly biased into either open or closed position.

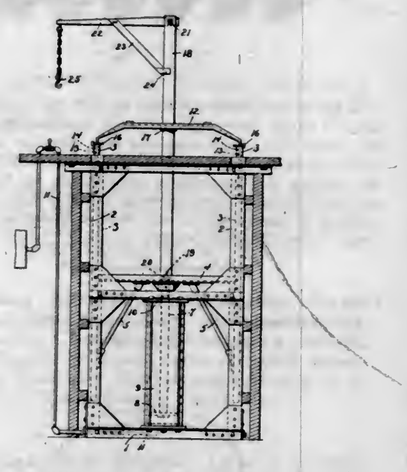
1,684,604. CUSHION COVERING FOR MOP HANDLES. LORETTA STOESSEL, Ottumwa, Iowa. Filed Feb. 16, 1928. Serial No. 254,735. 2 Claims. (Cl. 15—246.)

1. A protective cover for mops comprising a sleeve adapted to fit over the handle of a mop, and an extension at the lower end of said sleeve adapted to engage over the head portion of the mop to protect furniture against which the mop may come in contact.



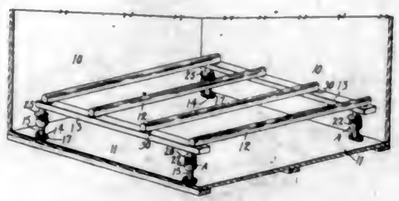
1,684,605. BUILDING CONSTRUCTION. EWALD F. TECHMER, Chicago, Ill. Filed Nov. 22, 1926. Serial No. 150,100. 3 Claims. (Cl. 72—105.)

1. A building construction, comprising a concrete ceiling having a plurality of cup-shaped metal forms embedded in the lower surface thereof, certain of said forms being in axile alignment, a U-shaped anchor for each form, said anchor having a central bowed portion disposed within the form, and angularly disposed guide portions above and to one side of the top of the form, and a suspending loop carried by said central portion.



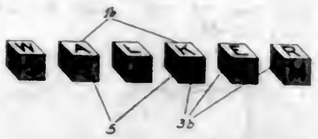
1,684,606. HOIST. EDWARD ADAM THIELEN, Dorrance, Kans. Filed Apr. 8, 1926. Serial No. 100,753. 4 Claims. (Cl. 254—93.)

1. A hoist of the class described comprising a base frame, a lifting frame including side bars and being pivoted to said base frame, means for elevating and lowering the lifting frame, and a U shaped frame pivoted to the free ends of and between the side bars in position for being extended beyond the ends of said bars or folded back between said bars to



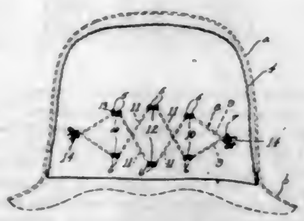
form a lifting frame cross extension or an open space between the side bar free ends accordingly as said U shaped frame is extended or folded back.

1,684,607. HOIST. EDWARD ADAM THIELEN, Dorrance, Kans. Filed Sept. 15, 1927. Serial No. 219,641. 5 Claims. (Cl. 212—34.)



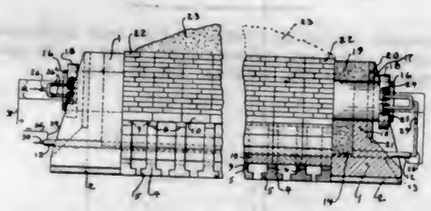
1. In a device of the class described wherein is provided a pair of stationary vertical guide standards, a vertically movable lifting unit including slide standards slidably carried by said guide standards, and slide operating means cooperative with the aforesaid structure to lift and lower said lifting unit; said lifting unit's slide standards having sockets in their upper ends, a U-shaped bridge member having portions adapted to be removably received in said sockets, said bridge member having an opening through the same, a brace member connecting said guide standards having a thrust bearing in alignment with said U-shaped member's opening, and a post provided with a collar and projecting through said opening and bearing with the collar resting on said bridge member, and a derrick arm carried by said post, said post adapted to swivel on its axis for the purposes specified.

1,684,608. ROOST. HENRY F. THUMANN, Redfield, Ark. Filed Nov. 5, 1926. Serial No. 146,408. 11 Claims. (Cl. 119—25.)



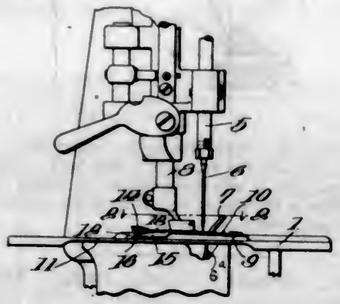
1. In a chicken roost, a plurality of supports, cross bars, roost members mounted on and connecting the cross bars, said cross bars being rested upon said supports, said roost members being supported on and spaced from the cross bars by spacer members having holes through them and slots in their walls extended through said holes and by fastening means extending from the roost members through the holes through the cross bars.

1,684,609. SET OF DICE. WILLIAM D. WALKER, Sacramento, Calif. Filed Dec. 14, 1926. Serial No. 154,706. 1 Claim. (Cl. 273—146.)



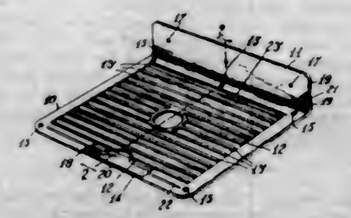
A set of dice, different face of each die having letters thereon which, with the letters on corresponding faces of the other dice, form complete and different words, the letters being such that when the dice are arranged to expose the spelling of a preselected word on the top faces of the dice the side and front faces of the dice will expose the spelling of words which will read in sense making continuity with the first words.

1,684,610. ADJUSTABLE HAT LINING. LELA B. WEIR, Los Angeles, Calif. Filed Oct. 8, 1927. Serial No. 224,793. 3 Claims. (Cl. 2—190.)



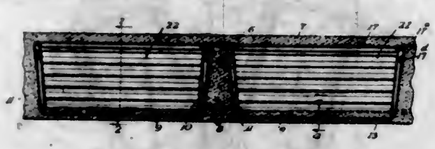
1. An adjustable hat lining comprising a cup-shaped body of limp lining material, and a draw string slidably connected with said body, a portion of said draw string being connected with the body at a higher level than another portion of said draw string so that tightening of the draw string will reduce the depth of the body.

1,684,611. ELECTRIC FURNACE FOR PRODUCING SILICON CARBIDE. HAROLD E. WHITE, Anniston, Ala., assignor to Federal Abrasives Company, Birmingham, Ala., a Corporation of Alabama. Filed Sept. 4, 1925. Serial No. 54,562. 15 Claims. (Cl. 266—16.)



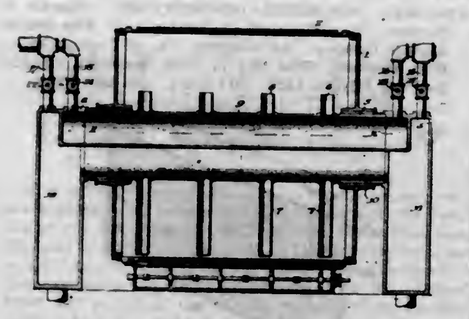
1. An electric furnace of the character described, comprising a hearth, spaced concrete supports for said hearth, and concrete end walls for the furnace free of fixed connection to the hearth supports.

1,684,612. THREAD CUTTER FOR SEWING MACHINES. HARRY L. WILLIS, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 11, 1925. Serial No. 8,467. 7 Claims. (Cl. 112—252.)



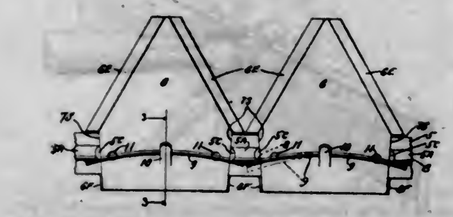
1. The combination with a cloth plate, a needle, a feed dog and a presser foot, of a combined thread cutter and thread clamp secured to the cloth plate and located in rear of the presser foot and at one side of the line of feed whereby when the stitched article is swung on the cloth plate in the usual manner toward the front of the machine, the stitching threads are drawn beneath the thread clamp and against the thread cutter for severing the threads.

1,684,613. AUTOMOBILE STEP PLATE. OLIVER C. RITZ WOLLER, Chicago, Ill. Filed Aug. 5, 1927. Serial No. 210,740. 10 Claims. (Cl. 280—169.)



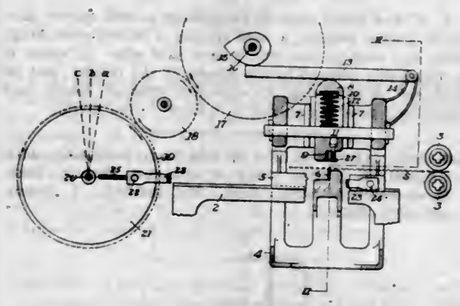
1. An automobile step plate, comprising in combination a metal frame having an upstanding portion along the rear edge, a mat secured in said frame, and a metal reinforcing member at the angle between said frame and said upstanding portion in spaced relation thereto and having bearings thereon for providing a truss arrangement therewith.

1,684,614. FORM FOR CONCRETE. FRANCIS M. BARTON, Chicago, Ill., assignor to Barton Spider Web System, Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1926. Serial No. 143,873. 12 Claims. (Cl. 72—66.)



1. A sheet metal form for concrete comprising a bottom and sides having a continuous series of corrugations extending upwardly in and to the upper edges of the sides, a cover consisting of a sheet of metal provided with marginal flanges having a continuous series of corrugations conforming to and fitting the corrugations in and lapping the sides.

1,684,615. VACUUM PIPE CONNECTION FOR CYLINDER MACHINES. EARL E. BERRY, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis., a Corporation of Wisconsin. Filed June 13, 1923. Serial No. 645,028. 23 Claims. (Cl. 92—43.)



1. A machine of the class specified having a hollow rotary member and a supporting shaft therefor, said shaft being divided into separate compartments, one of which is for forming communication to the upper part of the cylinder for withdrawing air, and the other of which is for withdrawing water from the lower part of the cylinder, and separate air pipes communicating with said separate compartments.

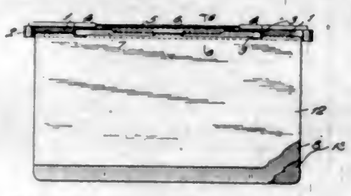
1,684,616. SICKLE-BAR SECTION. FRANK J. BICEK, Le Sueur Center, Minn. Filed Apr. 1, 1927. Serial No. 180,133. 3 Claims. (Cl. 56—300.)

1. In a sickle bar section a reciprocable bar having a series of flat recesses tapered transversely of the bar and in its upper face, a cutting blade for each said recess and having a correspondingly tapered shank adapted to be frictionally and removably retained in said bar, a longitudinal rib on the top of said bar, a lug in the upper central part of each blade and means engaging said lug and the adjacent parts of said rib for pressing and retaining each said blade in the tapered recess.

1,684,617. FLYING SHEARS. FLORENCE C. BIGGERT, Jr., Crafton, Pa., assignor to United Engineering and Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Feb. 21, 1923. Serial No. 620,394. 5 Claims. (Cl. 164—49.)

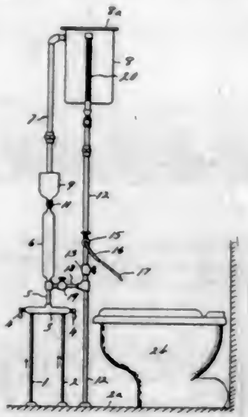
1. Shearing mechanism, comprising shearing means adapted to reciprocate relative to a moving material to shear the material into lengths, a pivoted cam following lever on the reciprocating means, and a cam for actuating the lever to effect a shearing stroke of the shears.

1,684,618. SAFETY-SWITCH SYSTEM. WILLIAM C. DAVIS, Jr., Jasper, Ala. Filed Mar. 18, 1927. Serial No. 176,476. 8 Claims. (Cl. 246—219.)



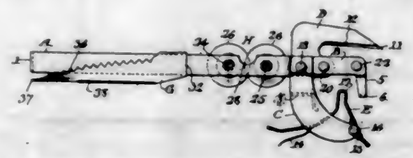
1. In a safety switch system, the combination with separate tracks and a normal switch connecting the same, oppositely disposed cross-over tracks extending between the separate tracks, and train controlled switches at the entrance to each of said cross-over tracks.

1,684,619. RAIL-JOINT SPRING. LOUIS E. ENDSLEY, Pittsburgh, Pa., assignor to Verona Tool Works, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Sept. 13, 1927. Serial No. 219,272. 17 Claims. (Cl. 238—259.)



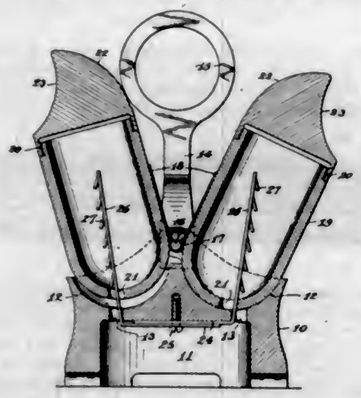
1. A rail joint spring comprising a longitudinally curved bar, the bar material being of varying thickness across its width.

1,684,620. CARD INDEX. SAMUEL L. FORBES, Mount Vernon, N. Y., assignor to The Globe-Wernicke Company, a Corporation of Ohio. Filed June 5, 1924. Serial No. 717,922. 3 Claims. (Cl. 129—16.7.)



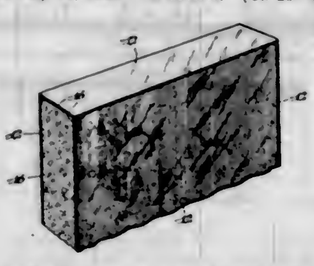
2. A card index element comprising a card carrier having a groove therein, a card having a turned-over flange along one edge of less length than said edge, by which it is detachably secured in the groove of the carrier, and an auxiliary card having an aperture through which said flange may pass and anchor both cards to the carrier.

1,684,621. APPARATUS FOR RECTAL, VAGINAL, AND SURGICAL USES. JEAN M. FULTON, Detroit, Mich. Filed Feb. 20, 1928. Serial No. 255,517. 5 Claims. (Cl. 128—227.)



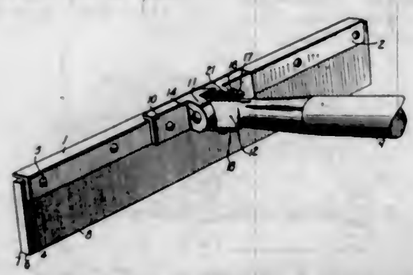
1. In an apparatus of the character described, the combination with an elevated tank, of a water supply pipe opening into said tank, means for introducing into said pipe a substance for delivery to said tank, a discharge pipe leading downwardly from said tank, a fitting providing for a lateral flow from said discharge pipe, a valve controlling the discharge pipe below the fitting, and a valve controlling said fitting.

1,684,622. COMBINATION KITCHEN UTENSIL. FERRIS P. HARKER, Bridgeport, Conn. Filed Feb. 18, 1926, Serial No. 89,166. Renewed Aug. 1, 1928. 4 Claims. (Cl. 7—1.)



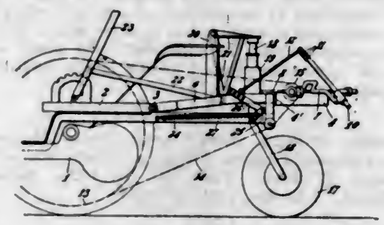
1. A combination tool comprising a body portion, a member attached thereto and having a portion bent at an angle to the body, jaws carried by the body portion, and an element pivotally supported by said jaws and coacting with said bent portion to form a vessel lifter and a cap remover.

1,684,623. DISPENSING DEVICE. CHARLES W. HARTWIG, Hastings upon Hudson, N. Y. Filed Dec. 2, 1927. Serial No. 237,174. 6 Claims. (Cl. 65—57.)



1. A dispensing device comprising a perforated base, a pair of perforated containers movably mounted on said base and a spring member disposed between said containers for normally keeping said perforations out of alignment and for permitting said perforations to be moved into alignment and to prevent lateral rocking of said containers.

1,684,624. CONCRETE CONSTRUCTION. HAROLD P. HAYDEN, Woodbridge, N. J., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed May 17, 1926, Serial No. 109,522. Renewed July 16, 1928. 10 Claims. (Cl. 25—154.)

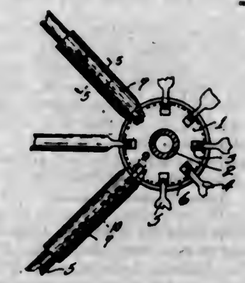


1. The method of curing concrete and stabilizing its water content which comprises completely and imperviously sheathing it, when poured, in a permanent bituminous covering.

1,684,625. WIPER. NEWTON S. HILLYARD, St. Joseph, Mo. Filed Oct. 28, 1927. Serial No. 229,453. 7 Claims. (Cl. 15—245.)

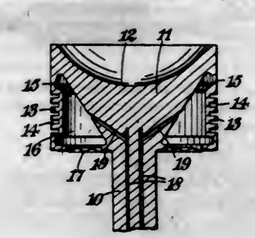
1. In a cleaner having a wiper-supporting head, a ferrule pivotally connected with the head, and adjustable members independently movable longitudinally on the ferrule and alternately engageable with the head upon opposite pivoting of the ferrule for limiting the pivoting of the ferrule on the member.

1,684,626. HARVESTING MACHINE WITH SCATTERER. THEODOR HINTERMANN, Bern, Switzerland. Filed Apr. 3, 1926, Serial No. 99,679, and in Switzerland Apr. 9, 1925. 2 Claims. (Cl. 56—371.)



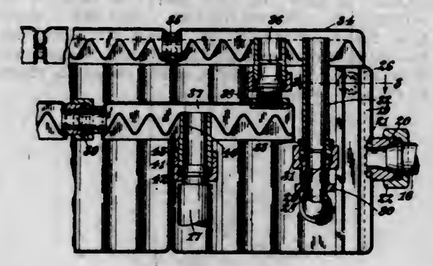
1. In combination with a harvesting machine a scatterer, comprising a frame carrying the scattering members and pivoted to said harvesting machine frame, said frame having unequal sides, a caster supporting the longer side of said frame, a supporting arm secured to said harvesting machine frame, and a spring controlled toggle joint connecting said supporting arm and the shorter side of said frame.

1,684,627. APPARATUS FOR DRYING WOOD. JOHN F. HOPE and JOHN T. HOPE, Kansas City, Mo. Filed July 19, 1926. Serial No. 123,273. 3 Claims. (Cl. 34—46.)



1. A wood drying kiln open at its front and rear ends and provided near its ends with side openings, the front end of the kiln being of greater cross-sectional area than the body portion, doors controlling the side openings, one or more suction fans at the rear end of the kiln to exert suctional force therein, a heating device in the enlarged front end to retard the passage of air drawn into the front end by the suctional action to a sufficient degree to insure the production of a vacuous condition in the kiln back of said heating device when the doors are closed.

1,684,628. UMBRELLA. OLAUS JENSEN, Seattle, Wash. Filed Feb. 20, 1928. Serial No. 255,604. 3 Claims. (Cl. 135—20.)



1. A repair sleeve for umbrella ribs having a notched end and spaced prongs thereon, combined with a lock bar adapted to engage said notched end, and means on the bar for engagement with an umbrella rib and said sleeve respectively.

1,684,629. PISTON FOR INTERNAL-COMBUSTION ENGINES. KARL OTTO KELLER, Sunderland, England, assignor to Robert Pile Doxford, Sunderland, England. Filed Feb. 1, 1926, Serial No. 85,238, and in Great Britain Nov. 19, 1925. 6 Claims. (Cl. 123—176.)

1. A piston for an internal-combustion engine, having a piston-head in the form of a massive block for conserving heat, which head is provided with a substantially cylindrical carrier for piston-rings, which carrier and piston-head are connected by a thin annular connection which, on the one hand, sufficiently connects them structurally together, but on the other hand provides for a restricted flow of heat from the crown of the piston towards the rings through the said connection.

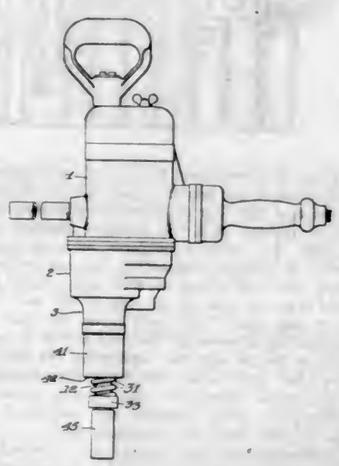
1,684,630. LIQUID-HEATING DEVICE. ALBERT JOHN LAMBERT, London, England, assignor of one-half to The Lambert Heater & Engineering Company Limited, London, England, a British Company. Filed May 18, 1927, Serial No. 192,358, and in Great Britain May 2, 1927. 3 Claims. (Cl. 122—23.)

1. A heater comprising groups of interconnected cells forming sides of the heater, a plurality of individual cells arranged in a plurality of layers one above another at the top of the heater, said cells being of shallow rectangular form with flat exterior surfaces and corrugated inner surfaces, detachable connectors for connecting the individual cells and groups of cells and serving to support a lower layer of cells at the top of the heater from the layer of cells above said lower layer, the said detachable connectors for connecting the said layers of cells at the top of the heater and for connecting the said layers to other of the cells being also lengthwise adjustable, and said detachable connectors also serving to provide communication in series through the individual cells and groups of cells from one terminal point to another, an inlet connection for the cell at one terminal point, an outlet connection for the cell at the other terminal point, a frame for supporting the cells and a heating element carried by said frame beneath the cells.

1,684,631. BRUSH. WILLIAM LAPINOJA, Enumclaw, Wash. Filed Nov. 19, 1927. Serial No. 234,305. 1 Claim. (Cl. 15—206.)

The combination with a brush having a twisted wire stem, resilient shanks on said stem, and laterally projecting heads at the ends of said shanks, of a separable

handle having a fixed ferrule with oppositely disposed sockets in its wall to receive said heads, and a transversely extending U-shaped resilient spreader located in



the path of said heads having its ends anchored in the ferrule and adapted to project said heads through the walls of the ferrule.

1,684,632. LINK FOR ANTISKID CHAINS. EDWARD LA PLANT, Arlee, Mont. Filed May 31, 1927. Serial No. 195,315. 1 Claim. (Cl. 59—90.)

In a chain link, a continuously formed upstanding rib arranged on one face of the link and constituting a ground gripping element and including a section extending transversely of the link and terminating in relatively short end sections extending at right angles therefrom in opposite directions and substantially parallel with the sides of said links and formed integrally with the chain link.

1,684,633. SCREW OR NUT DRIVING DEVICE FOR PORTABLE POWER-DRIVEN ROTARY TOOLS. AXEL LEVERDAHL, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 23, 1927. Serial No. 221,602. 13 Claims. (Cl. 81—54.)

1. In a portable power driven rotary tool, the combination with the tool spindle, of a screw or nut driving device comprising a shaft rotatably supported by said spindle, main and supplemental clutches for said shaft and spindle, said clutches consisting of separable clutch members having co-operating clutch teeth, and means permitting the teeth of the supplemental clutch to slip to release the shaft from the spindle as soon as the screw or nut becomes set.

1,684,634. CATALYTIC DEHYDROGENATION. MARTIN LUTHER, KURT PIEROH, and ERICH KRANEPUHL, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Nov. 27, 1926, Serial No. 151,244, and in Germany Nov. 30, 1925. 3 Claims. (Cl. 260—172.)

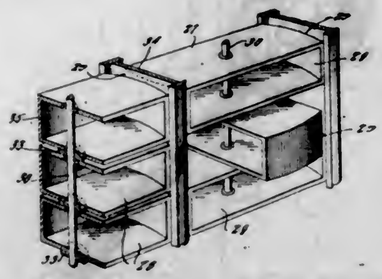
1. The process of catalytically dehydrogenating organic compounds which consists in passing the vapors of the said compounds at an elevated temperature over a catalyst comprising a compound of a metal with a metalloid alone selected from the fifth and sixth group of the periodic system having an atomic weight between 31 and 209.

1,684,635. PENCIL. JOHN P. LYNN, Chicago, Ill., assignor to Autopoint Products Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 14, 1924. Serial No. 685,942. 4 Claims. (Cl. 120—117.)

1. A pencil having, in combination, a body wherein is fomed a chamber for accommodating reserve leads, also an axial bore through which an active lead may be moved from the chamber through to the lower end of the body, a hollow tip rotatably connected with the body, and means for propelling the active lead through the axial bore and out through the tip with rotation of the latter relative to the body, said means including also an agitator extending into the reserve lead chamber and adapted to facilitate a successive transfer of leads therein into central position for travel through the axial bore of the pencil, substantially as described.

3. A pencil having, in combination, a body with which is associated a rotatable hollow tip, means within the tip for advancing a lead therethrough comprising a reciprocable lead gripping device, friction means engaging yieldingly with said device, and means operatively connected with both the body and tip adapted with rotation of one relative to the other in a single direction to reciprocate said device and move the same into lead gripping position, substantially as described.

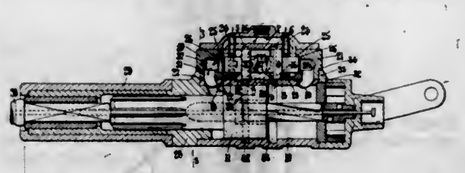
1,684,636. ANTIRATTLING DEVICE FOR WINDOWS. JAMES H. MENDENHALL, Nottingham, Pa. Filed Jan. 8, 1926. Serial No. 79,962. 1 Claim. (Cl. 292—74.)



An antirattling device for windows comprising a casing adapted to be secured to a window frame adjacent a slidably mounted window glass, said casing comprising a flat plate, a removable chambered section secured to one side of said plate, hollow rivets attaching the chambered section to the plate, a window engaging member slidably mounted

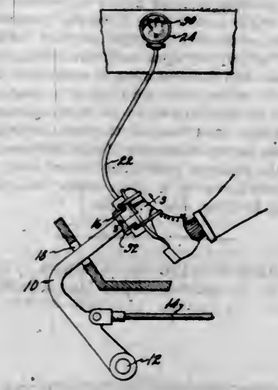
in the chamber of the chambered section, spaced coiled springs engaging the bottom of the chamber of the chambered section, the ends of said springs being disposed in recesses in the inner side of the window engaging member,

the opposite side of the window engaging member being convexed, flanges extending towards each other and carried by the chambered section at opposite ends of the chamber therein and lugs carried by the ends of the window engaging member in the path of said flanges.



1,684,637. SELF-SERVICE-STORE FIXTURES FOR VENDING MERCHANDISE. JOHN T. MYERS and JAMES H. CARROLL, West Palm Beach, Fla. Filed Mar. 17, 1926. Serial No. 95,407. 2 Claims. (Cl. 312—157.)

1. In self-service store fixtures, the combination of tiers of revoluble shelving, each unit of said shelving comprising a central post, a plurality of super-posed box-like structures open on one side to provide shelving and revolubly mounted on the post, each of said box-like structures being independently revoluble in either a right-hand or a left-hand direction, and each of said structures having opposite rounded ends revoluble past vertical partitions between adjacent units of the tiers of shelving.

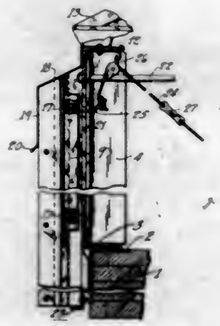


1,684,638. PERCUSSIVE ROCK DRILL. ERNEST PENBERTHY, Redruth, Cornwall, England, assignor to The Climax Rock Drill & Engineering Works Limited, London, England, a Company of Great Britain. Filed Mar. 24, 1927, Serial No. 178,028, and in Great Britain Apr. 21, 1926. 8 Claims. (Cl. 121—28.)

1. In a percussive rock drill a cylinder, said cylinder having two inlet ports one at each end thereof, said cylinder having two exhaust ports spaced apart and intermediate said inlet ports, said cylinder having passages therein, one passage leading from one exhaust port to a point outside said cylinder between the second exhaust port and the inlet port nearest thereto whilst the second passage leads from the second exhaust port to a point outside said cylinder between the first exhaust port and the inlet port nearest thereto, a hammer piston working in said cylinder, said hammer piston being adapted during its operation to control the opening and closing of said exhaust ports, a valve chamber mounted on said cylinder, said valve chamber having an inlet port and an exhaust port and passages leading from the inlet port in said valve

chamber to the inlet ports in said cylinder, said exhaust port in said valve chamber being adapted to be brought alternately into communication with the exhaust ports in said cylinder, and a valve member in said valve chamber, said valve member consisting of a tubular member and two spools mounted on said tubular member, said tubular member and spools being adapted to control the passages of said valve chamber and the exhaust ports of said cylinder, said valve chamber having small air vents therein.

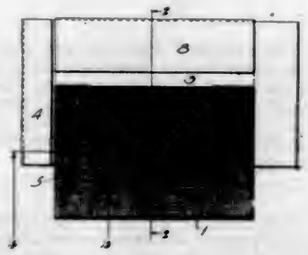
1,684,639. BRAKE PRESSURE GAUGE. ROY S. SANFORD, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 28, 1927. Serial No. 171,504. 1 Claim. (Cl. 265—47.)



A motor vehicle having a brake pedal and a dash in combination with apparatus for registering the pressure applied to the pedal by the foot of an operator comprising a pressure gauge mounted on the dash, a pressure pad mounted upon the pedal and communicating means extending from the pad to the gauge to register on the gauge the pressure applied to the pad.

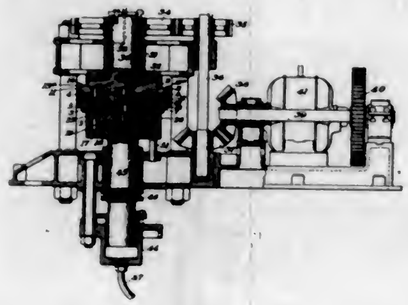
1,684,640. PURIFYING ORGANIC COMPOUNDS CONTAINING OXYGEN. OTTO SCHMIDT, KARL SEIDEL, and ALBERT FELLER, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed June 9, 1926, Serial No. 114,830, and in Germany June 18, 1925. 3 Claims. (Cl. 260—156.)

1. The process of purifying oxygen-containing organic compounds of a higher order than methanol obtainable by the catalytic hydrogenation of oxids of carbon which con-



sists in treating the said products in the vapor phase with hydrogen at a temperature of at least 50° C. but below that at which decomposition of the organic compounds under treatment would set in in the presence of a hydrogenating catalyst.

1,684,641. SKYLIGHT. WILLIAM SCHWARTZ, St. Louis, Mo. Filed June 3, 1925. Serial No. 34,623. 2 Claims. (Cl. 108—16.)



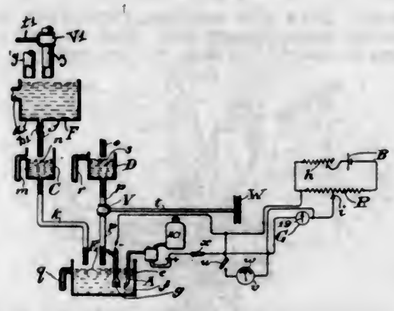
1. In a skylight, a base curbing having an anchor member thereon, a frame comprising a horizontal angle member secured to said anchor member, uprights comprising angle members secured to said horizontal member, a second horizontal angle member secured to the upper end portions of said upright angle members, a fixed top mounted on said second mentioned horizontal angle member, said top comprising a multiplicity of frame members having glass panels secured thereon and therebetween, a series of box-like sheet metal mullions secured to said upright angle members, said mullions having slideways in their opposed sides, a series of box-like sheet metal closures having marginal flanges working in the slideways of said mullions, and cords secured to said closures and being passed over pulleys on said frame and down to a place below the skylight for operating and holding said closures.

1,684,642. HAIR-WAVING EQUIPMENT. WILLIAM G. SHELTON, St. Louis, Mo. Filed May 31, 1928. Serial No. 281,837. 10 Claims. (Cl. 132—36.2.)

1. Hair waving equipment comprising a wrapping sheet, and an absorbent pad attached near its median line to said sheet near one edge of the latter so that the portion of said pad projecting beyond the edge of said sheet may be dipped into a solution with both faces exposed and without dipping said sheet into the solution.

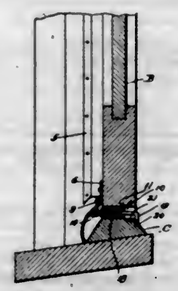
1,684,643. METHOD OF MAKING COLD-ROLLED ARTICLES. EDWIN E. SLICK, Pittsburgh, Pa. Filed Apr. 21, 1922. Serial No. 555,867. 4 Claims. (Cl. 80—60.)

1. In the method of cold-rolling circular articles, the steps comprising supporting the article to be rolled and subjecting at least one side face thereof to the substantially uniform action of independently movable floating rollers traveling concentrically over the article.



1,684,644. TOILET-POWDER APPLICATOR. ANDREW W. SMITH, Des Moines, Iowa. Filed July 16, 1927. Serial No. 206,291. 4 Claims. (Cl. 132—78.5.)

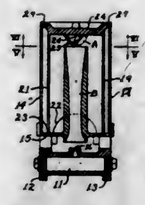
1. In a device of the class described, a body member having an opening in one of its sides for holding powder, an outwardly extending peripheral flange on the marginal edge of the side having the opening, and cloth fabric secured to said body portion and extending over said face and opening.



1,684,645. ION CONCENTRATION CONTROL. IRVING B. SMITH, Ambler, and EARL A. KEELER, Norristown, Pa., assignors to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 3, 1922. Serial No. 526,832. 35 Claims. (Cl. 23—230.)

1. In the utilization of changes of ion concentration, the method which comprises producing a potential difference varying in magnitude with variations in ion concentration, magnifying the change in potential difference per unit change in ion concentration by admixing with the solution containing the ions involved a material whose quantity bears a predetermined ratio to the quantity of said solution and of such character as to change the ion concentration to a position on the potential-ion-concentration

characteristic such that the potential gradient is greater than that of the unmodified solution, and utilizing the magnified potential difference to control the ion concentration of the unmodified solution.

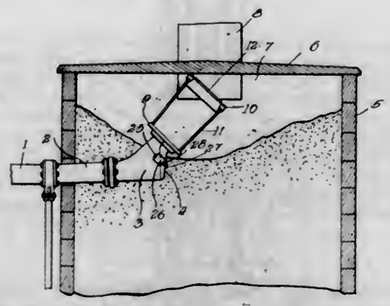


1,684,646. WEATHER STRIP. FRANK B. SNAVELY, Santa Monica, Calif. Filed Nov. 15, 1927. Serial No. 233,464. 2 Claims. (Cl. 20—65.)

1. In a weather stripping for doors comprising an elongated plate of transversely arcuate shape hingedly secured to the lower portion of a door, a latch member adapted for arrangement through an opening in the lower portion of the door, a horizontal pivotal connection between one end of the member and the hinged plate, the opposite end of the member being provided with a lateral projection, a collar on the member, an obstruction within the opening of the door, and a spring arranged between said collar and said obstruction to normally urge the latch member outwardly when the projection is released.

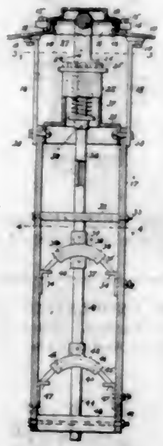
1,684,647. GAS BURNER. PHILIP J. SONNER, Winfield, Kans. Filed Nov. 28, 1927. Serial No. 236,221. 3 Claims. (Cl. 158—106.)

1. In gas burners, a box-like element including four side members and a bottom member; a tubular element integral with and vertically arranged as a part of the bottom member and extending more above than below said bottom; a cover element having a depressed central portion and upwardly and outwardly flaring edge portions, an inverted four-sided element integral with the base of said cover and having corner edge portions in a supporting contact upon the bottom of the first element, openings intermediate said corner edge portions and slots intermediate the cover and the upper edges of the first element;



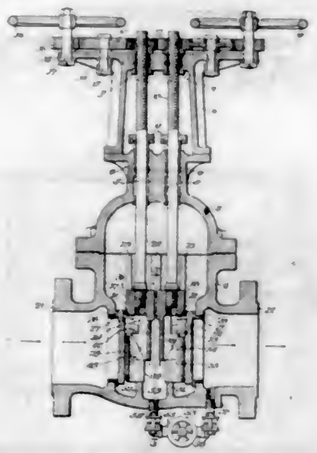
and a spirally ribbed member integral with and depending from the under side of said cover arranged above the tubular element.

1,684,648. HAIR-UNDULATING TONGS. ANDERS TINGBERG, Skien, Norway. Filed Dec. 8, 1926, Serial No. 153,434, and in Norway Dec. 12, 1925. 2 Claims. (Cl. 132—32.)



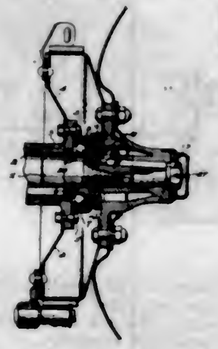
1. Hair undulating tongs, comprising, in combination with the grips and the legs of the tong body members, a gutter-like undulating member attached to one of said body members; another gutter-like undulating member attached to the other body member and adapted to be placed into the first-mentioned undulating member and having a longitudinal slot in its bottom; a ledge located in said slot and resting upon the bottom of the first-mentioned undulating member; transverse walls in the second undulating member; a shaft extending through this member and located in said walls; a cam affixed to said shaft and bearing on said ledge; means for turning said shaft with said cam; a slide located over said second undulating gutter; and spikes extending from the edges of said slide towards the other undulating gutter, substantially as set forth.

1,684,649. CONVEYING APPARATUS. EDGAR B. TOLMAN, Jr., Chicago, Ill. Filed July 5, 1924. Serial No. 724,472. 6 Claims. (Cl. 302—59.)



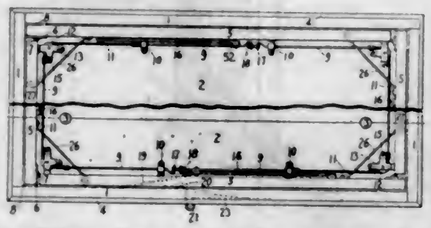
1. In a conveying apparatus of the kind described and in combination, a discharge fitting arranged with the outlet directed upwardly at an angle to the vertical and a target arranged in and transversely to the path of the material discharged from said outlet but spaced therefrom.

1,684,650. TAP CHANGER. GEORGE H. TUTTLE, Warren, Ohio, assignor to The Packard Electric Company, Warren, Ohio, a Corporation of Ohio. Filed June 2, 1927. Serial No. 195,973. 9 Claims. (Cl. 200—4.)



1. In a transformer, a tank having an opening therein, a removable cover adapted to be secured thereto, a tube of insulating material supported within said tank, a plurality of contacts mounted on the inside of said tube, an axially movable and rotatable rod arranged within said tube, a brush carried by said rod, and arranged to engage said contacts, a handle secured to said rod, cooperating means carried by said tube and said handle within the tank for locating said brush in its different positions, said cover when in closed position being adapted to hold said rod against axial movement.

1,684,651. VALVE. CHARLES A. G. WAYMAN and ADOLPH F. GARTZ, Jr., Chicago, Ill., assignors to Crane Co., Chicago, Ill., a Corporation of Illinois. Filed July 14, 1926. Serial No. 122,285. 5 Claims. (Cl. 251—68.)

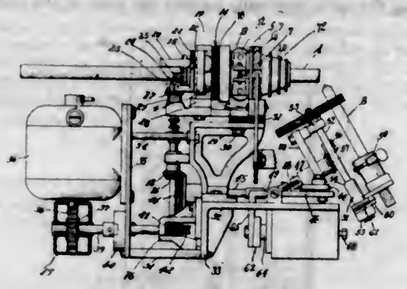


4. The method of operating a gate valve having independently operable inlet and outlet gates and a by-pass valve connection opening into said valve between said gates comprising, opening said by-pass valve connection to relieve built-up pressure between said gates, opening the outlet gate while the inlet gates remains closed, and thereafter opening the inlet gate.

1,684,652. AXLE AND BEARING THEREFOR. JOHN WILLIAM WHITE, Detroit, Mich. Filed Apr. 17, 1922. Serial No. 554,074. 1 Claim. (Cl. 308—187.)

In combination, an axle shaft having a tapered portion, a bearing having a tapered inner race ring adapted to fit over said tapered portion and to be held against movement in one direction on said shaft by said tapered portion, a hub on said shaft and a compressible member rigidly held between said hub and said bearing to hold said bearing against movement on said shaft in the opposite direction.

1,684,653. FOLDABLE TABLE. BENEDICT E. WILLETT, Dayton, Ohio. Filed Feb. 15, 1924. Serial No. 692,980 19 Claims. (Cl. 45—116.)



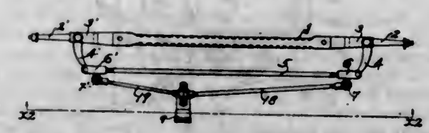
19. A table comprising a top, legs pivotally mounted on said top and adapted to be folded onto the same, an actuating bar for each leg slidably mounted on said top, means for connecting said actuating bars with the respective legs, and means cooperating with each actuating bar to lock the corresponding leg against outward movement beyond its extended position.

1,684,654. SOYA-BEAN FLOUR AND PROCESS OF PRODUCING THE SAME. GEORGE ALBERS, Seattle, Wash. Filed Nov. 14, 1925. Serial No. 69,198. 5 Claims. (Cl. 83—42.)

1. A process for making soya bean flour comprising comminution of soya bean cake, followed by drying, further comminution, additional drying, and pulverization.

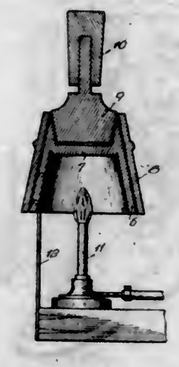
1,684,655. ARC LAMP. CLARENCE S. ASHCRAFT, Los Angeles, Calif. Filed Sept. 19, 1923. Serial No. 663,569. 10 Claims. (Cl. 176—51.)

1. In an arc lamp having a positive electrode, a negative electrode, and means for advancing the electrodes, the combination of: an arc striking means comprising a negative electrode carriage so disposed as to normally hold said negative electrode separated from said positive electrode by the weight of said carriage; and electro-magnetic means operative by the throwing on of the arc circuit for



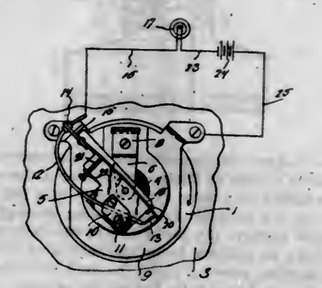
striking said negative electrode against said positive electrode, the striking of the arc being effective to reduce the strength of the pull of said electro-magnet whereby the weight of the carriage will cause it to fall back to normal operating position.

1,684,656. GASKET. CLAUDE B. BAILEY, Wyandotte, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed June 15, 1925. Serial No. 37,039. 4 Claims. (Cl. 288—1.)



1. A gasket made entirely of sheet metal and consisting of two separate annular sheet metal sections, each section having a tubular guide portion and an outwardly projecting lateral flange at the base of the guide portion, said sections being arranged one above the other with their base flanges in overlapping contact and with their guide portions projecting outwardly on opposite sides of the same, one of said base flanges being formed wider than the other and having its outer marginal portions bent over the outer edge of the other base flange and in contact therewith and extending across the same for holding the two sections of the gasket assembled by clamping their base flanges together, said base flanges and the folded marginal portion of one of the same forming the pressure receiving section of the gasket entirely of sheet metal and surrounding the tubular guides on one side of said base flanges.

1,684,657. SAFETY STEERING MECHANISM FOR AUTOMOBILES. GEORGE E. BEAL, Pasadena, Calif. Filed Mar. 24, 1924. Serial No. 701,419. 3 Claims. (Cl. 280—95.)

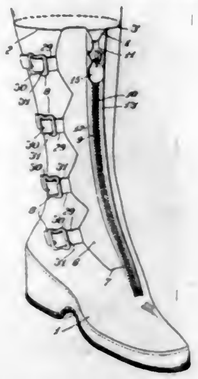


1. In combination with a steering apparatus for automobiles, a connecting arm; an auxiliary connecting arm, said arms having threaded ends; a steering arm; swivel balls on opposite sides of the free end of said steering arm and in the same vertical medial line; socketed members to engage said swivel balls; a threaded orifice in said socketed members opposite said sockets adapted to receive the threaded ends of said connecting arm and auxiliary connecting arm to form an auxiliary steering apparatus.

1,684,658. METHOD OF AND APPARATUS FOR FORMING ARTICLES. ROBERT BEARDSLEY, Chicago, Ill. Filed Nov. 30, 1923. Serial No. 677,719. 2 Claims. (Cl. 193—1.)

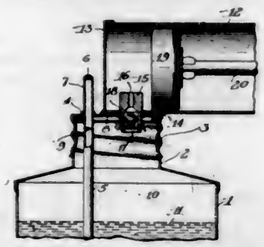
1. In apparatus for forming articles from parchmentized material, paper and the like, a mold comprising an inner member around which a sheet of such material may be wound, said inner member having a depression in its top, a tubular shell adapted to surround said inner member and adapted to seat on said sheet, a plug removably fitting into said depression to clamp a portion of the sheet betwen itself and the surrounding wall of said depression, and means for heating said inner member.

1,684,659. SIGNALING DEVICE. ARNOLD ORVILLE BECKMAN, Pasadena, Calif. Filed May 7, 1927. Serial No. 189,675. 5 Claims. (Cl. 200—56.)



1. In a circuit closer, the combination with a rotatable indicator and its supporting shaft, the supporting frame therefor, and a normally expanded spring operatively connected at one end to the shaft; of a plate supported above the frame adapted for manual adjustment in a horizontal plane, a stationary contact carried by the plate, a movable contact on the plate normally out of engagement with the stationary contact, the other end of the spring being secured to the movable contact whereby the contacts will be in engagement with each other when the indicator has rotated a predetermined distance.

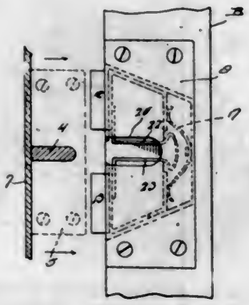
1,684,660. SHOE. GEORGE W. BLAIR, Mishawaka, Ind., assignor to Mishawaka Rubber & Woolen Manufacturing Company, Mishawaka, Ind., a Corporation of Indiana. Filed Mar. 15, 1924. Serial No. 699,408. 8 Claims. (Cl. 36—50.)



1. In a shoe, the combination of an upper having separable side portions one of which is composed of two sections, a quick operating fastener for connecting the two

side portions comprising opposed series of interlocking parts adapted to be interlocked and released by the movement of a slider along the juncture line of said parts, and

a plurality of spaced independently adjustable means connecting the two sections of the aforesaid side portion for varying the size of the upper part of the shoe.

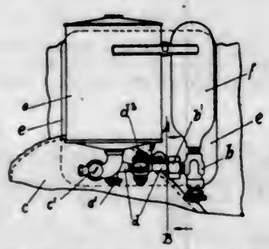


1,684,661. SPRAYING DEVICE. COLIN BROWN, Rochester, N. Y. Filed Oct. 7, 1926. Serial No. 140,000. 2 Claims. (Cl. 299—89.)

1. In a sprayer, the combination with a reservoir adapted to contain a body of liquid, and having a threaded neck thereon adapted to receive a screw cap, of a cap threaded on said neck, an atomizer tube extending through said cap and secured therein, the lower end of the tube on the interior having an opening below the fluid level of the reservoir and another opening above the fluid level thereof and the upper end of the tube having an exterior atomizing spraying opening, and a hand pump cylinder secured to the exterior of the cap and a check valve comprising a casing secured through registering apertures provided in said cap and the side wall of the pump cylinder and providing one-way communication from said pump to the interior of the reservoir to accumulate compressive pulsations of the pump and supply pressure to the top of the reservoir to create air pressure therein above the liquid body, and to also escape, successively, through the said interior and exterior openings of the tube.

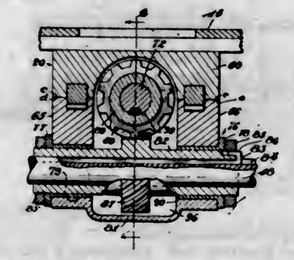
1,684,662. ANTIRATTLING DEVICE FOR AUTOMOBILE DOORS. JACK L. DAY and EDWARD L. DESCHLER, Sacramento, Calif. Filed Jan. 3, 1928. Serial No. 244,234. 3 Claims. (Cl. 16—85.)

1. In an anti-rattling device for automobile doors, a casing secured in a recess formed in the door frame, a pair of opposed members arranged for slidable movement in the casing, resilient means interposed between the rear wall of the casing and the inner ends of the slidable members for normally urging said members forwardly, striker projections formed on the forward edges of the slidable members and normally disposed beyond the outer face of the door frame, a pair of spring arms arranged between the inner opposed edges of the slidable members for normally urging the same outwardly against the sides of the casing



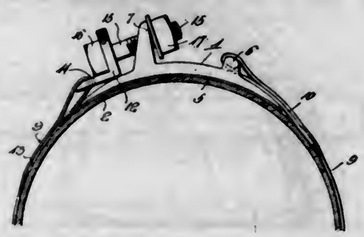
and further adapted to receive the lug on the edge of the door, the flange on the edge of the door striking said projection when the door is moved to a closed position and simultaneously forcing the slidable members rearwardly and also urging the spring arms into locking engagement with the lugs.

1,684,663. MANUFACTURE OF REENFORCED CONCRETE. RICHARD E. DILL, Alexander, Nebr. Filed Feb. 7, 1925. Serial No. 7,718. 3 Claims. (Cl. 72—71.)



1. The method of reenforcing concrete which consists in forming a body of green concrete with the reenforce embedded therein, in permitting the body of concrete to set, in preventing the bonding of the reenforce to the concrete during the setting of the concrete, and finally in subjecting said reenforce to tension.

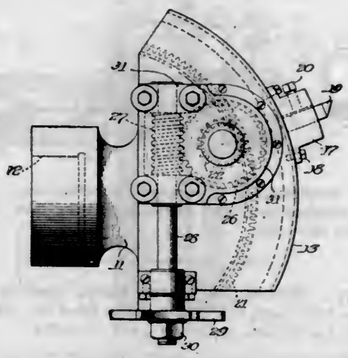
1,684,664. SELF-CONTAINED BREATHING APPARATUS. ALEXANDER BERNHARD DRÄGER, Lubeck, Germany; Elfriede Dräger, née Stange, executrix of said Dräger, deceased. Filed Oct. 29, 1925, Serial No. 65,693, and in Germany Sept. 5, 1925. 3 Claims. (Cl. 128—191.)



1. In a breathing apparatus including a vertical carrier plate, an air purifying cartridge and an oxygen container, the combination of a connecting-pipe rigidly attached to the carrier plate and extending between, and supporting the cartridge and the container, said connecting-pipe being provided with two axial opposite channels, one of which communicates with the oxygen container and the other leading to the cartridge, three lateral contact faces on said connecting-pipe, an automatic pressure-reducing valve fixed upon one of said contact faces, a manually controlled auxiliary valve carried by another of said faces, and a pressure gauge mounted upon the third of said faces, said contact faces being circumferentially disposed on said connecting-pipe in such a manner that the contact face for the gauge is upwardly and outwardly directed with respect to the carrier plate and that the contact face for the manual valve is downwardly directed and that the contact face for the automatic valve is upwardly and inwardly directed, the connecting-pipe being furthermore provided with radial branch-passages leading from the aforementioned axial channels to openings in the respective contact faces.

1,684,665. RADIAL DRILL. WILLIAM W. EDWARDS, Los Angeles, Calif. Filed Jan. 22, 1923. Serial No. 614,111. 3 Claims. (Cl. 74—56.)

2. An enclosed housing forming a lubricant chamber, a driven shaft extending through said chamber, a sleeve splined on said shaft and extending through the walls of said chamber, a gear wheel on said sleeve, a second sleeve extending through said chamber, a gear on said second sleeve meshing with the first named gear, and a drive shaft extending through said second sleeve on which said sleeve is splined, whereby on rotation of said drive shaft said sleeve may be rotated through the intermediary of said gears to effect rotation of said driven shaft.



1,684,666. PIPE BAND. CHARLES ALBERT FRAZIER, Fair Oaks, Calif. Filed June 1, 1925, Serial No. 34,143. Renewed July 27, 1928. 2 Claims. (Cl. 24—19.)

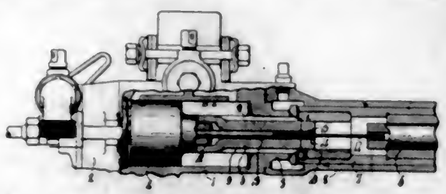
1. A pipe clamp comprising a rigid arcuate plate to fit the pipe, the ends of the plate being tapered, a fastening member on the top surface of the plate at a spaced distance from each end thereof, a flexible split band, each of the free ends of the band being secured to one of said fastening members and the band lying flat against the top surface of the plate between the fastening members and the adjacent ends of the plate, and means for drawing one free end of the band relative to the plate to secure the clamp in position.

1,684,667. RADIUS TOOL. HARRY E. FRENETTE, Duluth, Minn. Filed Oct. 5, 1925. Serial No. 60,569. 2 Claims. (Cl. 82—12.)

1. A tool support for forming spherical surfaces or the like comprising a base member, an arcuate surface on the base member, a channel in said surface, means for securing the base member to a support, said means being adapted to permit adjustment of the base relative to the support about an axis in the plane of said channel, a movable member

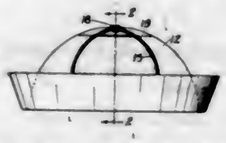
fitted in said channel, means for securing a tool to said movable member and means for moving the movable member in the channel.

1,684,668. LUBRICATING MECHANISM. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Apr. 13, 1922. Serial No. 552,274. 6 Claims. (Cl. 184—55.)



3. In a pressure fluid lubricating mechanism adapted to be actuated by a fluctuating fluid pressure, a pressure chamber, a lubricant reservoir, and means to allow flow of said fluid either to or from said reservoir and adapted to intermittently feed said lubricant including a movable ported stem extending between said chamber and said reservoir.

1,684,669. DRILLING MECHANISM. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 21, 1924. Serial No. 714,966. 13 Claims. (Cl. 121—10.)



1. The combination with a drilling mechanism having a motor and a hollow drill steel actuated thereby, of hole cleansing means cooperating with said steel comprising

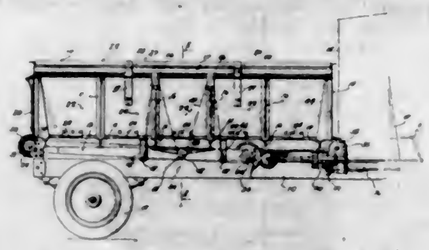
inner and outer fluid conducting tubes, the outer of said tubes having a circumferentially extending reduced portion at its free extremity engaging the other tube through-

out its circumference to support the latter tube against lateral displacement, and means permitting flow of fluid from said outer tube.

1,684,670. HEADGEAR. VITA HABIB, now by court decree Vita Habif, Cincinnati, Ohio. Filed Dec. 12, 1925. Serial No. 75,120. 2 Claims. (Cl. 2—176.)

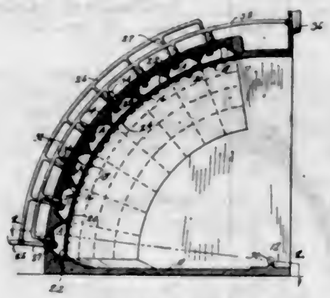
1. In a device of the class described the combination of a stationary crown member having spaced sector shaped apertures therein, a rim member secured to the outer edges of said stationary crown member, a sweat band disposed interiorly of the stationary crown member, a movable crown member comprising a plurality of spaced sectors disposed interiorly of the stationary crown member and having their outer edges disposed between the stationary crown member and the sweat band, and means for pivotally mounting the crown members together at their centers for permitting rotation of the movable crown member within the stationary crown member for alternately opening and closing the sector shaped apertures in the stationary crown members.

1,684,671. METHOD OF PREVENTING EVAPORATION FROM CONCRETE DURING CURING. HAROLD P. HAYDEN, Woodbridge, N. J., assignor to The Barber Asphalt Company, Philadelphia, Pa., a Corporation of West Virginia. Filed Oct. 12, 1925. Serial No. 62,194. 11 Claims. (Cl. 94—24.)



1. The method of preventing evaporation of water from cement concrete during the curing period which consists in applying to the surface of the concrete before curing an adherent film impervious to water.

1,684,672. MOTOR-VEHICLE HEATER. DAVID HILL, West Barrington, R. I. Filed July 16, 1926. Serial No. 122,836. 2 Claims. (Cl. 237—12.3.)

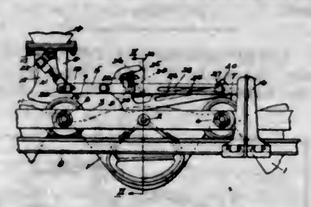


1. A heating system for a motor vehicle having a body and an exhaust conduit, comprising a conductor for heated air communicating at its upper end with the vehicle body, its lower end being open and extending in proximity to said exhaust conduit, an air heating and directing element mounted in contact with said conduit and having an upwardly extending tapering boss or protuberance extending into the open end of said conductor, and an outer casing about the open end of said conductor having an air intake opening.

1,684,673. TRUCK. THEODORE C. HOLLNAGEL, Milwaukee, Wis., assignor, by mesne assignments, to The Hughes-Keenan Company, Mansfield, Ohio, a Corporation of Ohio. Filed Mar. 26, 1923. Serial No. 627,895. 7 Claims. (Cl. 214—13.)

1. A load receiving body, comprising a pair of floor members, means hingedly connecting the inner edges of the floor members with the body, a pair of side members, means hingedly connecting one side member with each floor member, and means positioned outside of the body operable to move the floor and side members to form side walls inclined toward the medial portion of the body.

1,684,674. GOLF PRACTICE APPARATUS. CARL H. KRAETSCH, Des Moines, Iowa. Filed Apr. 20, 1927. Serial No. 185,204. 10 Claims. (Cl. 265—20.)



1. In a golf practice apparatus, a substantially rigid back, a series of resilient pockets arranged on the face thereof, and means for registering the impact of a blow on any of the pockets, the inner faces of the pockets being arranged to form a substantially continuous concave surface.

1,684,675. AUTOMATIC FEEDER. ALEXIS W. LEMMON, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed July 12, 1922. Serial No. 574,593. 14 Claims. (Cl. 198—59.)

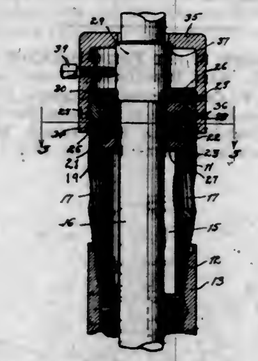
1. In a device of the kind described, the combination with a series of travelling receptacles, a spout adapted to direct material to said receptacles and a valve controlling

said spout; of valve operating means comprising a lever operatively connected at one end with the valve, means travelling with said receptacles adapted to rock said lever

to operate said valve, and means for varying the rocking period of said lever without variation of the extent of its angular movement.

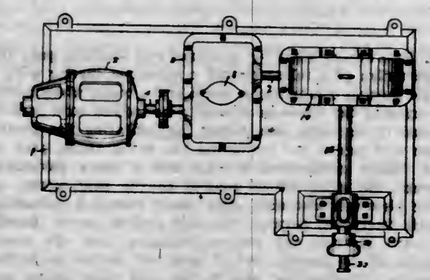
1,684,676. SOLE CONSTRUCTION FOR RUBBER BOOTS. LUIGI LORENZI and ANSELMO COLOMBO, San Francisco, Calif. Filed Feb. 7, 1925. Serial No. 7,492. Renewed May 9, 1928. 1 Claim. (Cl. 36—32.)

An integral rubber sole and heel made for rubber boots having a resilient metal plate of skeleton form embedded in and completely covered by said sole and heel and substantially following the outline of the sole and heel with its outer edge located close to but spaced from the outer edge of the rubber sole and heel piece, and socket members carried by said plate, said sole and heel portions having openings in the tread thereof into which said sockets extend whereby calks may be attached to the sole and heel portion.



1,684,677. BODY AND CHASSIS CONSTRUCTION FOR MOTOR VEHICLES. LOUIS U. MCABEE, Oakland, Calif., assignor to California Transit Company, Stockton, Calif., a Corporation of California. Filed Apr. 21, 1924. Serial No. 707,917. 3 Claims. (Cl. 200—106.5.)

1. In a chassis for motor vehicles, the combination with spaced longitudinal members resiliently carried on the vehicle axles, of longitudinally extending body supporting sills spaced outwardly from said members, and brackets supported by said members providing the primary support of said sills and the running boards of the vehicle, the parts of each bracket engaging said members and sills being directly connected whereby said sills are arranged to be supported in fixed spaced relation from said members.



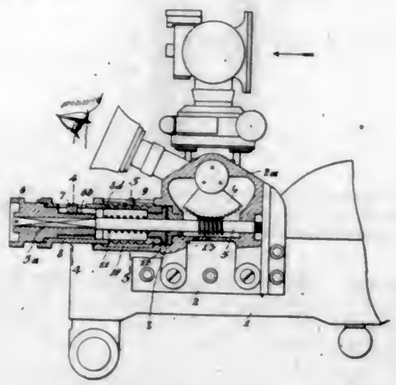
1,684,678. SEALING CASING HEAD. WILLIAM L. MCLAINE and WILLARD L. BOROUGH, Los Angeles, Calif. Filed Jan. 12, 1924. Serial No. 685,870. 2 Claims. (Cl. 166—14.)

2. The combination of a casing head comprising: a tubular body member having a counter-bore formed therein; tubing extending through said casing head; packing means around said tubing within said counter-bore comprising a pair of interchangeable rings, each of which has an annular wedge face, and a compressible member disposed between said rings so as to be engaged by one of said wedge faces, the other of said wedge faces engaging a

complementary shoulder of said counter-bore; and a coupling secured to the upper end of said tubing and adapted to engage said packing means to support said tubing.

1,684,679. POWER-TRANSMITTING APPARATUS. JEDDY D. NIXON, Houston, Tex., assignor to Humble Oil & Refining Company, a Corporation of Texas. Filed Feb. 16, 1925. Serial No. 9,655. 8 Claims. (Cl. 74—7.)

1. In power transmitting apparatus a driven shaft, a screw gear thereon, a transmitting gear formed of a driving section in mesh with said screw gear, a driven section, means clutching the driving section with the driven section, said clutching means being adapted to permit the acceleration of the driven section, and friction means housed within said transmitting gear adapted to frictionally engage the driven section on opposite sides for retarding said acceleration.

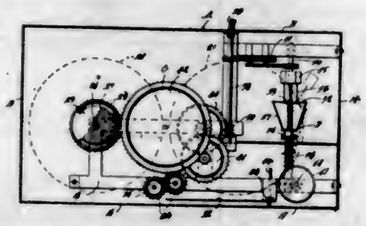


1,684,680. CONSTRUCTION OF TRACKS OF STREET RAILWAYS. GUSTAV OESS, Essen, Germany. Filed Mar. 7, 1928, Serial No. 259,661, and in Germany Mar. 19, 1927. 5 Claims. (Cl. 238—9.)

1. In a track, a rail, a pair of reinforcing blocks located alongside said rail at opposite sides thereof and each block extending with its top face to the surface of the

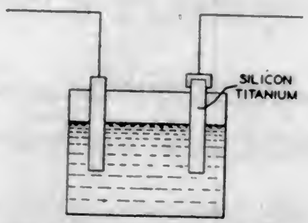
road, and means passing under the rail for securing said reinforcing blocks to said rail, the combined rail and blocks providing a beam capable of oscillation independently of the road-bed.

1,684,681. BREECH SIGHT FOR ORDNANCE AND MACHINE GUNS. KARL PETSCHENIG, Vienna, Austria, assignor to C. P. Goerz Optische Anstalt, Aktiengesellschaft, Akciova Spolecnost K. P. Goerz Opticky Ustav, Bratislava, Czechoslovakia. Filed Dec. 5, 1925, Serial No. 73,370, and in Germany Dec. 15, 1924. 2 Claims. (Cl. 33—48.)



1. In a breech sight for ordnance and machine guns the combination of a telescope and a telescope carrier with a single gearing comprising a worm and a worm wheel sector for turning the telescope around a horizontal axis perpendicular to the sight line, means for indicating the ground angle and means for indicating the firing angle, each of such means comprising a scale and a mark associated thereto, an inner sleeve secured to the said worm, an outer sleeve surrounding such inner sleeve, a releasable clutch interposed between the said sleeves, screw threads on such sleeves, nut sectors engaging into the screw threads of the sleeves, one of such nut sectors projecting through a longitudinal slot in the said outer sleeve and the other nut sector projecting through a longitudinal slot of a part of the carrier.

1,684,682. MAP HOLDER. HUGH W. PRETTYMAN, Inwood, W. Va. Filed Sept. 12, 1925. Serial No. 56,061. 7 Claims. (Cl. 40—86.)



1. In a display device, a casing having spaced tubular spool containers connected by an intervening flat bed plate, a back plate extending between said containers in spaced parallel relation to the bed plate to define an intervening spool storage compartment open at its ends, and freely removable end caps frictionally fitting over the ends of said containers to extend across the ends of said compartment.

1,684,683. SPEEDOMETER AND INDICATOR. WILLIAM J. RADKE, Marmath, N. Dak. Filed Jan. 23, 1924. Serial No. 688,025. 1 Claim. (Cl. 242—55.)

In recording mechanism, means for effecting feed of a record strip comprising a supply reel from which the strip is to be unwound, a take-up reel upon which the strip is to be wound, a shaft upon which the said take-up reel is fixedly mounted, a disk fixed upon the shaft for rotation therewith, a ring gear fitted to the periphery of the disk and rotatable with respect to the disk, the disk having recesses in its periphery, resilient clutch members mounted in said recesses in the disk and bearing frictionally against the inner periphery of the ring gear to frictionally clutch the gear with the disk, a main drive gear in mesh with the ring gear, a shaft the revolutions of which are to be recorded upon the record strip, guide rolls about which a portion of the strip which extends between the supply reel and the take-up reel is reversely wound, gears upon the rolls meshing with each other to provide for rotation of the rolls in unison, one of said gears being in mesh with the main drive gear, and a gear train interposed between the last mentioned shaft and the said main drive gear.

1,684,684. ELECTROLYTIC RECTIFIER. WILLIAM C. READ, Niagara Falls, N. Y., assignor to Electro Metallurgical Company, a Corporation of West Virginia. Filed Mar. 8, 1927. Serial No. 173,798. 16 Claims. (Cl. 175—318.)

1. An electrode for electrolytic rectifiers consisting of an alloy of silicon and titanium-group metal.

16. An electrolytic rectifier comprising an anode of lead composition, an electrolyte of 10% to 40% sulphuric acid containing a metal sulphate, and a cathode consisting of an alloy of silicon and titanium-group metal containing 10% to 40% of the latter.

1,684,685. LIQUID FUEL. ELMER H. RECORDS, Spokane, Wash. Filed Jan. 6, 1925. Serial No. 878. 1 Claim. (Cl. 44—9.)

A fuel comprising by volume

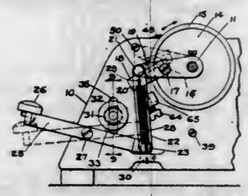
	Per cent.
Alcohol	72
Benzol	18
Ether	5
Naphthol	2.50
Hydrogen peroxide	1.50
Sodium hydroxide	1.00

1,684,686. AQUEOUS LIQUID FUEL. ELMER H. RECORDS, Spokane, Wash. Filed Jan. 6, 1925. Serial No. 879. 1 Claim. (Cl. 44—9.)

A liquid fuel solution comprising—

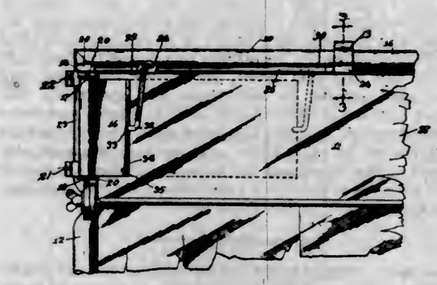
	Per cent.
Alcohol and water	72
Benzol	18
Ethyl ether	5
Naphthalene	2.50
Oxygen	1.50
Sodium hydroxide	1.00

1,684,687. STRAIN EQUALIZER. GOTTHILF J. RENLE, Lehi, N. Dak. Filed Oct. 22, 1927. Serial No. 228,055. 4 Claims. (Cl. 254—83.)



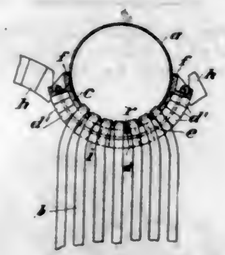
1. A strain equalizer of the class described comprising an arcuate frame, pulleys journalled in the ends of the frame, a chain trained over said pulleys, wire engaging elements on the extremities of the chain.

1,684,688. HEADLIGHT. WALTER D'ARCY RYAN, Schenectady, N. Y. Filed May 13, 1925. Serial No. 29,991. 3 Claims. (Cl. 240—41.)



1. A headlight comprising a housing, a reflector in said housing, trunnion means for pivotally mounting said reflector in said housing, a slotted bracket secured to said reflector, a screw projecting through said housing and said bracket, a nut carried by said screw and having a portion projecting through said slotted bracket, and a spring surrounding said screw and tending to hold a portion of said bracket against said nut, said bracket being bodily removable with said reflector from operative engagement with said nut.

1,684,689. PAPER HOLDING AND ADVANCING MECHANISM. GARLEN I. SNYDER, Indianapolis, Ind. Filed June 19, 1926. Serial No. 117,204. 1 Claim. (Cl. 74—53.)



The combination of a rotary element having a laterally extending rim, a lever mounted concentrically of said rim and extending beyond the periphery of the same, a clutch member mounted on said lever and having a slot receiving said rim, comprising means for oscillating the lever to rotate the rim, a manually operable lever spaced from said first-mentioned lever, a link connecting said levers, an adjustably mounted stop for limiting the stroke of the manually operable lever, and a lug for limiting the downward movement of the link, substantially as set forth.

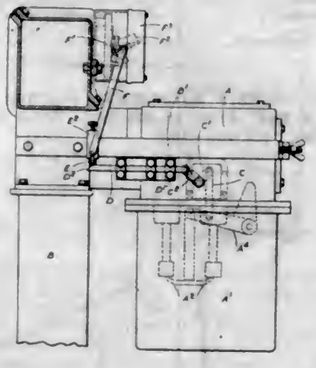
1,684,690. ANTIGLARE SHIELD FOR VEHICLES. ALEX STEGER, Vining, Minn. Filed Feb. 18, 1927. Serial No. 169,293. 2 Claims. (Cl. 296—97.)

1. The combination with a wind shield glass of a vehicle, a clip secured to the top frame member of the wind shield and having a portion providing a sleeve, a roller, clips secured to one of the side frames of the wind shield and providing brackets for rotatably supporting said roller, one of said clips having a portion providing a sleeve, a guide bar having one end portion inserted in the first mentioned sleeve and an opposite end portion inserted in the second mentioned sleeve, a carriage sleeve movable longitudinally with respect to the guide bar and having depending arms, a translucid shield secured to the roller for winding thereon, and a reenforcing strap connected to said arms and to the unsecured edge portion of said translucid shield.

1,684,691. WATER-TUBE BOILER. LEBRECHT STEINMÜLLER, Gummersbach, Germany, assignor to Firma L. & C. Steinmüller, Gummersbach, Rheinland, Germany. Filed Sept. 10, 1925, Serial No. 55,587, and in Germany July 11, 1925. 8 Claims. (Cl. 110—98.)

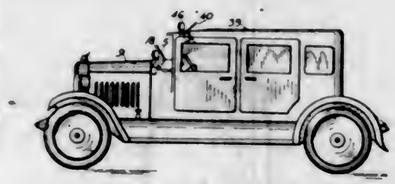
1. In combination with a boiler drum, spaced rows of tubes entering said drum and means for protecting the walls of said drum from direct flame action comprising strings of refractory blocks located in the space between the rows of tubes and refractory tiles located between said blocks and the wall of the drum and held in position by said blocks.

1,684,692. SPRING SUSPENSION FOR MOTOR VEHICLES. JOHN FIFIELD ADYE, Hilton, England. Filed Oct. 21, 1925, Serial No. 63,974, and in Great Britain Oct. 27, 1924. 2 Claims. (Cl. 280—104.)



1. In a vehicle, the combination with a main frame, of a wheel-carrying axle, a spring operatively interposed between said axle and said frame, a second wheel-carrying axle, a second spring operatively interposed between said second axle and said frame, and means comprising two lever arms pivoted on said frame and operatively connected together at one end, each lever arm being associated with one of said springs, said lever arms being so inclined with respect to each other, and being so disposed with respect to the frame and the springs that displacement of one axle tends to produce a progressively varying and opposite displacement of the other axle.

1,684,693. THRUST BEARING WITH FLUID FRICTION. GEORG BÖHM, Kiel, Germany, assignor to Fried. Krupp Germaniawerft Aktiengesellschaft, Kiel Gaarden, Germany. Filed Aug. 7, 1924, Serial No. 730,705, and in Germany Sept. 10, 1923. 11 Claims. (Cl. 308—160.)

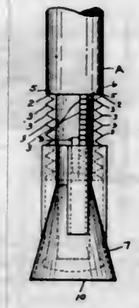


5. A thrust bearing in which one of the bearing members consists of a plurality of thrust segments each nontiltably secured to a yieldable member pivotally supported at a point offset with respect to the segment.

1,684,694. ELECTRICAL SWITCH GEAR. FRANK COATES, Cleadon, England, assignor to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England, a Company of Great Britain. Filed Mar. 12, 1926, Serial No. 94,303, and in Great Britain May 19, 1925. 7 Claims. (Cl. 200—50.)

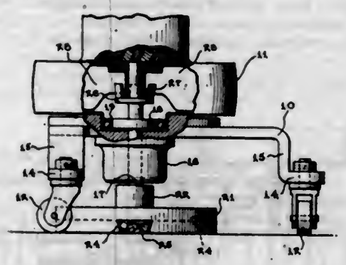
1. In electric switchgear of the armoured draw-out type, the combination with the operating mechanism for the main switch contacts carried on the draw-out portion of the switchgear, of a number of auxiliary switches mounted on the fixed portion of the gear, actuating mechanism for such auxiliary swithes also carried on the fixed portion of the gear, a coupling which is brought into engagement when the draw-out portion is moved into its closed position and is disengaged when the draw-out portion is withdrawn, and means whereby the operation of the main switch contacts causes power to be transmitted through the coupling, when engaged, for the actuation of the auxiliary switches.

1,684,695. LIGHTING DEVICE FOR VEHICLES. FRANK N. DRAPER, Denver, Colo. Filed Aug. 2, 1926. Serial No. 126,591. 7 Claims. (Cl. 240—7.1.)



1. A disappearing automobile light comprising a light in the automobile mounted for universal movement and adapted to move through an opening in the automobile to the outside thereof, means to move the light through said opening, means in the automobile for the universal movement of said light, and means closing the opening when the light is inside or outside of the automobile.

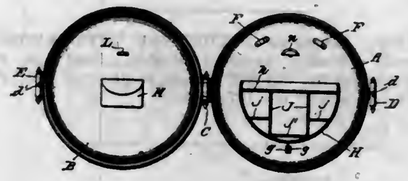
1,684,696. ALLOY AND PROCESS OF MAKING THE SAME. ALEXANDER L. FEILD, New York, N. Y., assignor to Electro Metallurgical Company, a Corporation of West Virginia. Filed Oct. 25, 1924. Serial No. 745,929. 3 Claims. (Cl. 75—1.)



1. The hereindescribed process of combining zirconium with copper which consists in introducing an alloy of aluminum and zirconium into a superheated bath of copper.

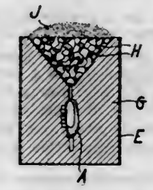
1,684,697. CRUTCH ATTACHMENT. HARRY FRANKLIN FRANTZ, Cleveland, Ohio. Filed Dec. 8, 1927. Serial No. 238,669. 1 Claim. (Cl. 135—54.)

In a crutch a sleeve adapted to be fixed to the foot of the crutch, said sleeve being provided with a plurality of vertical tenons carrying cog like teeth, a ferrule provided with a plurality of radial pockets adapted to accommodate the tenons of the sleeve, said pockets each provided at its opening with a tooth, to cooperate, upon turning the ferrule and sleeve relatively with any desired one of the cog like teeth carried by the tenons.



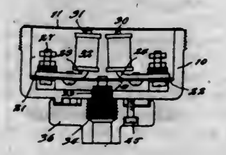
1,684,698. POLISHING ATTACHMENT FOR VACUUM CLEANERS. BERYL FREEMAN, Cambridge, Ohio. Filed Jan. 26, 1927. Serial No. 163,714. 1 Claim. (Cl. 15—246.)

In combination, a polishing device comprising a frame, a shaft rotatably mounted in the frame, a polishing head carried at the lower end of said shaft and disposed below the frame, and means on said shaft above the frame for attachment with the fan of a vacuum cleaner supported on said frame.



1,684,699. TIRE CARRIER AND TOOL KIT. FRANK M. HARSIN, Nampa, Idaho, assignor of one-half to A. D. Leedy, Portland, Oreg. Filed Feb. 9, 1926. Serial No. 87,098. 1 Claim. (Cl. 224—29.)

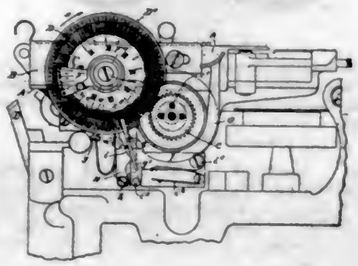
In a tire carrier, an imperforate casing comprising substantially identical sections, each section being of dish shape, and one section being fixed and the other hinged to the fixed section, a pair of spaced elongated brackets projecting axially from and secured to the upper part of the fixed section, said brackets being notched to receive and engage the sides and inner faces of a pneumatic tire rim for locating and clamping the rim to support the tire entirely out of contact with the casing, a single bracket projecting axially from and secured to the lower part of the fixed section of the casing, said single bracket having a recess forming a shoulder, and an adjustable lug carried by the end of the bracket opposite the shoulder, to form with the recess a third notch, the medial portions of the



notches being intersected by a plane flush with the edge of the fixed section to permit the operator to remove the tire from the casing without rubbing his fingers against the latter.

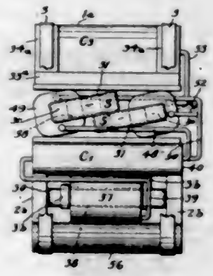
1,684,700. CASTING ARTICLES OF CORROSION-PROOF STEEL. FRIEDRICH HAUPTMEYER, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Rhur, Germany. Filed Jan. 26, 1927, Serial No. 163,768, and in Germany Feb. 18, 1926. 6 Claims. (Cl. 22—200.)

3. In the process for manufacturing articles of corrosion-proof steel by melting the steel by means of an open flame and casting it in a mold, embedding the steel to be melted in a receptacle, covering the steel with a deoxidizing flux, melting it down and casting it through a closed channel in a closed mold, the walls of said receptacle, channel and mold consisting of a material, which is free from carbon.



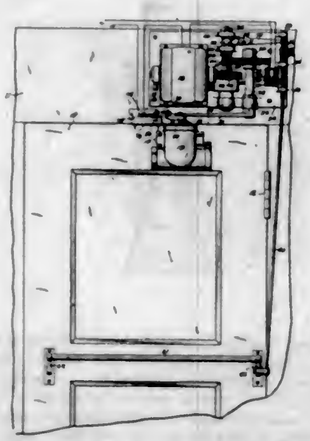
1,684,701. DIAPHRAGM-CONTROL MOUNTING. CHARLES MILTON HAYMAN, Brooklyn, N. Y. Filed Mar. 10, 1925. Serial No. 14,361. 14 Claims. (Cl. 179—119.)

1. In a device of the class described, the combination of a cup-shaped casing open at one end, a diaphragm marginally supported on the casing at said open end, said casing provided within the same with two diametrically spaced supports, a thin strip of spring metal bridged across the casing with its ends resting on said spaced supports, an electromagnet including L-shaped pole pieces each having one leg secured to the spring bridge and having their other legs extending laterally from the spring bridge and on opposite sides of its center, the free ends of said later-



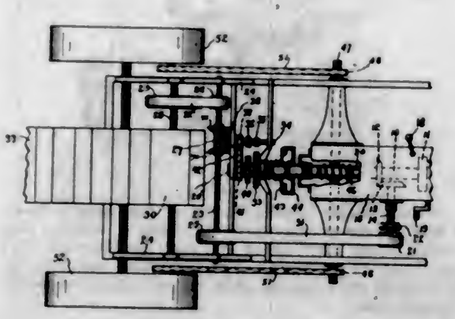
ally extending legs positioned close to but spaced from the diaphragm on opposite sides of its center, and a set screw extending through the casing and engaging said spring bridge to flex the same between its supported ends and thus cause the free ends of the pole pieces to move relative to each other.

1,684,702. LOCKING DEVICE FOR TYPEWRITERS. RUDOLF HEIMERS, Tacubaya, Mexico. Filed Apr. 23, 1926, Serial No. 104,207, and in Switzerland Apr. 24, 1925. 3 Claims. (Cl. 197—141.)



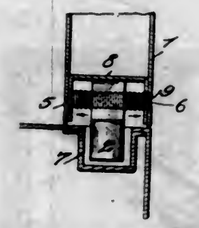
1. A locking device for typewriters, comprising a graduated counter connected with and revolved by the line spacing mechanism, means for disengaging said counter from the line spacing mechanism, a concentric adjustable stop on said counter for determining the number of lines to be written, means for disengaging through said stop the carriage rack from its pinion, and means for returning said counter to its primary position with each new sheet.

1,684,703. ARRANGEMENT OF ELECTRICAL APPLIANCES. HARRY W. HOUCK, East Orange, N. J., assignor, by mesne assignments, to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 24, 1924. Serial No. 745,660. 5 Claims. (Cl. 175—356.)



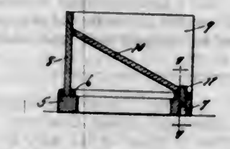
1. In a device of the character described having a source of varying current connected thereto, a plurality of inductance coils having magnetic cores, said cores being located adjacent each other in close physical relation, the inductance coils being connected with said source of current, and the windings of the coils being connected in such manner that like magnetic poles are induced in adjacent ends of the magnetic cores, whereby detrimental magnetic coupling effects between the coils are substantially reduced.

1,684,704. DOOR CONTROL. HARVEY HUBBELL, Bridgeport, Conn.; Louie E. Hubbell executrix of said Harvey Hubbell, deceased. Filed Jan. 6, 1926. Serial No. 79,619. 12 Claims. (Cl. 268—65.)



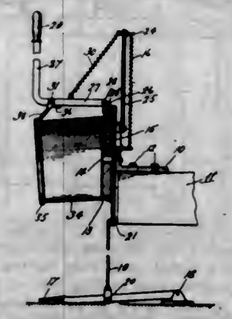
1. In combination, a movable door, a door check including a spring tending to move the door to closed position, and manually operable means carried by the door for rendering said check ineffective and permit the door to move independently thereof.

1,684,705. VARIABLE-SPEED MECHANISM. WALTER G. HUMPHREYS, Omaha, Nebr. Filed May 13, 1926. Serial No. 108,847. 2 Claims. (Cl. 180—70.)



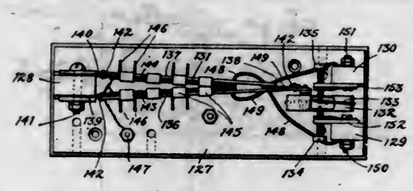
2. In driving mechanism for a vehicle, the combination with the usual propeller shaft, power shaft and disengageable gearing therebetween, a drive shaft connected to the power shaft in advance of said gearing, an operating shaft connected through a clutch to said drive shaft, a stub shaft reversibly connected to the operating shaft, another shaft disposed in parallel relation with the stub shaft, registering variable speed gears on the stub and said last named shafts, a shiftable connection between said gears for connecting the respective shafts in various ratios, and a clutch connection between said last named shaft and the propeller shaft.

1,684,706. ADJUSTABLE GUIDE FOR SLIDING DOORS. NICHOLAS KAUTH, Los Angeles, Calif., assignor to A. J. Bayer Company, a Corporation of California. Filed Feb. 7, 1927. Serial No. 166,522. 5 Claims. (Cl. 16—93.)



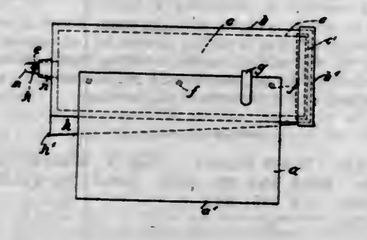
1. A shoe for sliding doors carried by supports from the door and having independent means for adjusting the shoe laterally on said supports in a transverse plane and securing it in its adjusted position.

1,684,707. MERCHANDISE SUPPORT. CICERO LA HATTE, Vicksburg, Miss. Filed Feb. 1, 1927. Serial No. 165,176. 6 Claims. (Cl. 211—148.)



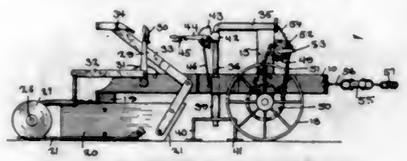
1. A merchandise holder comprising a base frame, a rear wall detachably mounted in upright position on said frame, a removable platform adpated to rest flatly on the base frame or to be arranged at an inclination thereon with the upper edge of the platform resting against the rear wall and a retaining strip engageable with the base frame to provide a supporting abutment for the lower edge of the platform when the latter is disposed at an inclination.

1,684,708. DEVICE FOR REMOVING FRICTION PLUGS FROM CONTAINERS. GEORGE A. LEIGHTON, Roslindale, Mass., assignor to American Can Company, New York, N. Y., a Corporation of New York. Filed Apr. 16, 1926. Serial No. 102,380. 9 Claims. (Cl. 81—3.1.)



2. In a device of the class described the combination of a support, a mandrel thereon adapted to fit within a friction plug with the can body assembled thereto, means for gripping the outer periphery of said plug, and means for pressing the can body away from said plug.

1,684,709. INTERMITTENT THERMAL SWITCH. HARRY F. LÖWENSTEIN, Washington, D. C. Filed Apr. 14, 1920. Serial No. 373,768. 11 Claims. (Cl. 200—122.)

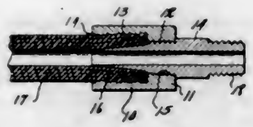


4. In an intermittent thermal switch, a thermo-motor element and a quick make and break contact comprising a buckle plate in the form of a toggle lever, a spring holder arranged to carry and hold the buckle plate under tension applied at its ends through trough and knife edge connections and tending to buckle said lever formed of two substantially rigid members hingedly joined through a trough and knife edge connection, and opposed engaging means arranged at opposite sides of said toggle to be alternately engaged by the same, in the movement of said motor element to move the center pivot of said lever past center against the force of said tension means whereby the lever is caused to move from one engaging member to the other with a snap movement.

1,684,710. WAX-MELTING APPARATUS. CARL METHFESSEL, Sulzbach-on-the-Murr, Germany. Filed Feb. 29, 1924, Serial No. 696,092, and in Germany Mar. 23, 1923. 1 Claim. (Cl. 87—19.)

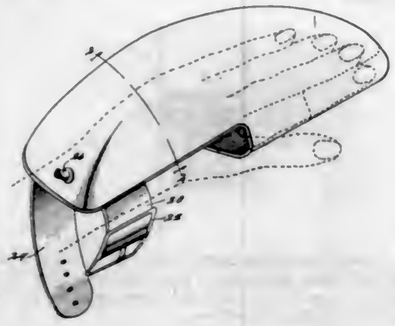
Wax melting apparatus for honeycombs including a boiler, a horizontally disposed steam kettle above said boiler having its lower portion up to about the horizontal median plane though extending into said boiler, having its wall in common with said boiler, said steam kettle being in communication with said boiler through perforations arranged in the sides of said common wall at points adjacent the line of junction of the side wall of the boiler with said steam kettle, a channel shaped member secured beneath the bottom of said steam kettle, subtending the lowermost portion thereof and inclining downwardly toward one end, terminating outside said boiler, the wall of said steam kettle being formed with perforations communicating with the channel defined by said channel shaped member, said steam kettle having a permanent wall at one end and a removable lid at the other, a bearing provided in said permanent wall and a perforated wax receiving drum having a trunnion at one end adapted to be received in said bearing, the other end of said drum resting rotatably against a wall of said steam kettle and being provided with a lid for supplying wax to said drum, said trunnion projecting beyond said bearing and a handle on said trunnion for imparting rotation to said drum.

1,684,711. COTTON CHOPPER. RICHARD S. MOORE, Snyder, Tex. Filed Sept. 29, 1926. Serial No. 138,538. 4 Claims. (Cl. 97—19.)



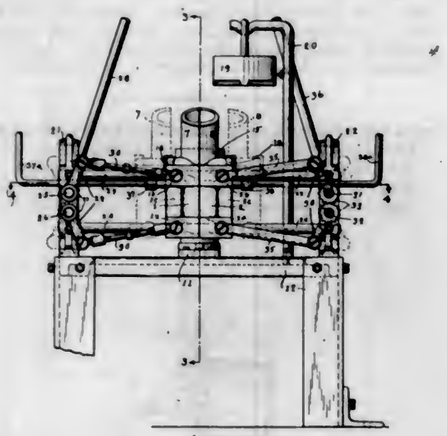
1. In a cotton chopping machine, a longitudinal support frame, an axle journaled transversely on the forward portion of the frame, a pair of runners secured to the rear portion of the frame, ground wheels secured to the outer ends of the axle a sprocket wheel secured to the intermediate portion of the axle, a transverse shaft adapted for rotatable movement in an elevated position on the frame, a sprocket wheel affixed on said transverse shaft, a chain trained over the sprocket wheels on the axle and the last mentioned shaft for a simultaneous operation thereof, a rocker bar mounted for rocking movement in an elevated position on the frame and operatively connected to said transverse shaft; an L-shaped chopper supporting rod mounted for swinging movement on the frame and secured to the rocker bar, a chopper mounted for reciprocating movement on the chopper rod, and mechanism for manually reciprocating the said chopper on the rod.

1,684,712. PROCESS FOR THE PRODUCTION OF FERTILIZERS. MAX PAUL NITSCHE, Dresden, Germany. Filed Sept. 25, 1926, Serial No. 137,816, and in Germany Oct. 8, 1925. 2 Claims. (Cl. 71—9.)



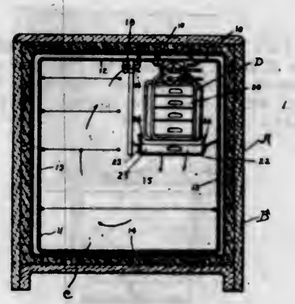
1. A method of producing a fertilizer from sulphite waste lye which is obtained in the manufacture of sulphite cellulose, consisting in adding an acid salt of sulphuric acid to the lye and subjecting the resulting liquor to evaporation, whereby the sulphurous acid is removed and a residue is obtained which constitutes the fertilizer.

1,684,713. HOSE CLAMP. CARL A. NORGREN, Denver, Colo. Filed May 29, 1926. Serial No. 112,620. 2 Claims. (Cl. 285—86.)



1. A coupling of the character described comprising a screw-threaded collar member having a hose receiving chamber and provided in the walls thereof with angular tapered grooves forming a series of annular ribs presenting front inclined faces and rear shoulders and adapted to grip and hold a hose, said chamber being provided at the front with a cylindrical wall in substantial alignment with the apexes of the annular ribs, an abutment shoulder at the inner end of the hose receiving chamber, and a compression-member screw-connected with the collar member and having a smooth faced tapering end portion arranged to be forced into the hose and cooperating with the said ribs of the compression chamber for compressing the hose within the said grooves.

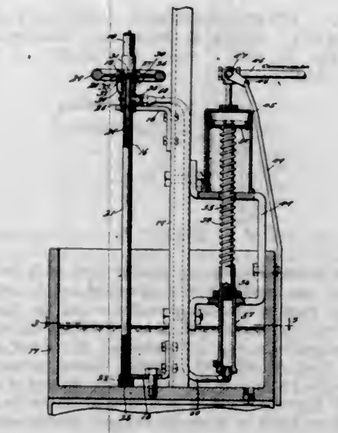
1,684,714. SWIMMING APPARATUS. IRA D. PERRY, Chicago, Ill. Filed Aug. 12, 1927. Serial No. 212,414. 4 Claims. (Cl. 9—21.)



1. A swimming device comprising an inflatable rubber bladder shaped substantially to conform to the outline of the hand and wrist of the user and adapted to fit upon the back of the hand and wrist or over the ankle and arch portion of the foot, means for securing said bladder to the wrist or ankle, and a pocket shaped to receive the fingers or toes and ball portion of the foot of the user and having one wall thereof in common with said bladder.

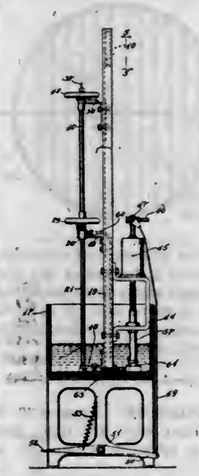
1,684,715. MOLD. DANIEL J. RYAN, Cleveland, Ohio, assignor to The Cleveland Trust Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 17, 1925. Serial No. 23,813. 6 Claims. (Cl. 22—126.)

3. In apparatus for forming cup-shape castings, the combination of a metal mold body having an open-topped cavity and a pouring gate leading into said cavity; and a core disposed in said cavity so as to form the cup shape matrix of the mold, said core comprising a body of green sand that forms the inner bottom and side walls and the annular top wall of said matrix and a metal reinforcing structure having a section embedded in the sand and circular core print section rigid with the embedded section and engaging the mold body adjacent the mouth of its cavity to sustain and position the core.



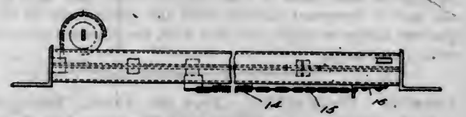
1,684,716. REFRIGERATOR. WALTER G. SEEGER and GUSTAVE R. SEEGER, St. Paul, Minn., assignors to Seeger Refrigerator Company, a Corporation of Minnesota. Filed Aug. 17, 1925. Serial No. 50,692. 10 Claims. (Cl. 62—95.)

5. A refrigerator including, an automatic refrigerating unit, a lining for said refrigerator, a partition suspended from the top of said lining and having apertures therein and right angular hooks seated in the top of said lining cooperating with said apertures.



9. A refrigerator including, an automatic refrigerating unit, an open shelf positioned below said unit in a manner to permit cold air from the unit to pass therethrough, and a receptacle moisture pan removably supported by said shelf closely to said unit.

1,684,717. NONEXPANSIBLE HOSE. MORTON ROLAND SHERBINO, Detroit, Mich., assignor to Hydraulic Brake Company, Los Angeles, Calif., a Corporation of California. Filed Dec. 13, 1923. Serial No. 680,294. 4 Claims. (Cl. 29—88.2.)

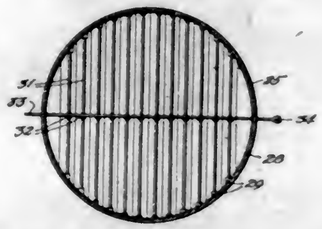


1. In an apparatus of the class described, the combination of a tubular receptacle, a plunger rod loosely supported within said receptacle and extending therebeyond, a hose, means for securing one end thereof to said receptacle about the projecting end of said plunger rod, and a stuffing box secured to the opposite end of said hose and slidably receiving said plunger rod.

1,684,718. METHOD OF MAKING NONEXPANSIBLE HOSE. MORTON ROLAND SHERBINO, Detroit, Mich., assignor to Hydraulic Brake Company, Los Angeles, Calif., a Corporation of California. Original application filed Dec. 13, 1923, Serial No. 680,294. Divided and this application filed Oct. 2, 1926. Serial No. 139,039. 6 Claims. (Cl. 29—88.2.)

1. The method of placing a flexible tube in the bore of a hose to maintain it permanently expanded, which consists in providing a piston for the tube and subjecting the interior of the bore of the hose and the face of the piston to a common fluid pressure simultaneously to expand the hose and drive the tube into the bore of the hose.

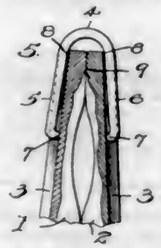
1,684,719. ELEVATOR DOOR. HAROLD W. SHONNARD, Upper Montclair, N. J., assignor to Elevator Supplies Company, a Corporation of New Jersey. Continuation of application Serial No. 31,783, filed May 21, 1925. This application filed Dec. 23, 1926. Serial No. 156,557. 4 Claims. (Cl. 39—86.)



1. In combination with an elevator car, a gate, mechanical means for operating the same, a spring operated fender on the gate and a spring having one end attached to the frame of the gate and the other end attached to the gate, said spring being adapted to counterbalance the tension of the fender spring so as to prevent disturbance of the action of the gate operating means.

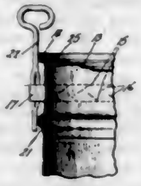
2. According to claim 1, the counterbalance spring comprising an extensible helical spring or springs, a chain attached to one end thereof, and a slotted bracket adapted to engage with one or another link of said chain to permit adjustment of the spring tension at will.

1,684,720. AUTOMOBILE HEADLIGHT. LAWSON L. WAGNER, Baltimore, Md. Filed Oct. 29, 1927. Serial No. 229,631. 9 Claims. (Cl. 240—45.2.)



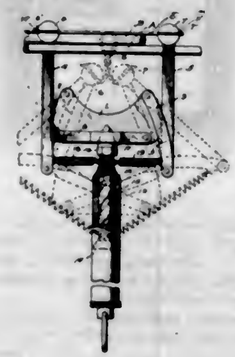
3. In a headlight, a headlight lens having a rear surface consisting of a series of vertically disposed triangular prismatic portions, a grid behind said lens and having

vertical bars equal in number to the prismatic portions, the width of each bar being substantially one-half the width of each prismatic portion, said bars being normally disposed directly to the rear of the apices of the prismatic portions, said bars being movable simultaneously to cover one side and the other of each prismatic portion selectively, gud-



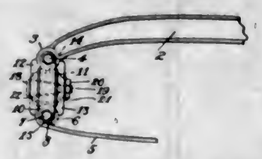
geons at the top and bottom front corners of said bars, journals supporting said gudgeons, a tie bar having pivotal connection with each of the first mentioned bars at its rear edge, and means to move said tie bar transversely of the headlight and thereby rock the first mentioned bars simultaneously to one side and the other.

1,684,721. CLOTHESPIN. ANDREW T. WOOD, San Francisco, Calif. Filed Sept. 11, 1926, Serial No. 134,857. Renewed Aug. 3, 1928. 2 Claims. (Cl. 24—137.)



2. The combination with a pair of duplicate jaws each having an outer grooved edge, of a U-shaped yoke astride the jaws and having resilient crimped bars frictionally engaging the side walls of said grooved edges said bars being out of frictional contact with the inner walls of the grooves except at their ends and with the opposite grooved ends of the jaws.

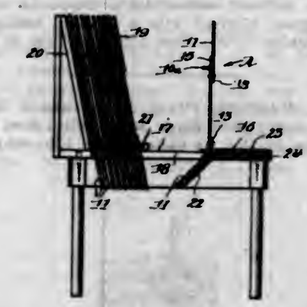
1,684,722. CONTAINER. JOHN M. YOUNG, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed May 22, 1922. Serial No. 562,902. 2 Claims. (Cl. 220—53.)



1. A can, comprising a body having a cover seamed thereto and provided beneath said cover with a strip set off by encircling score lines adapted to be torn away to remove the cover, said can having a bead beneath said score lines forming with the connection between the cover and body a circumferential track adapted to guide a key employed for removing the strip, and an internal band secured within said body and extending above said score lines to provide a means for receiving the torn-away top of the can, said band having its ends joined in a lock seam and being tightly secured within the can body, the outward projections of the cover seam and of the bead relative to the can wall being of the same extent so that the key is maintained at right angles to the strip during the tearing operation.

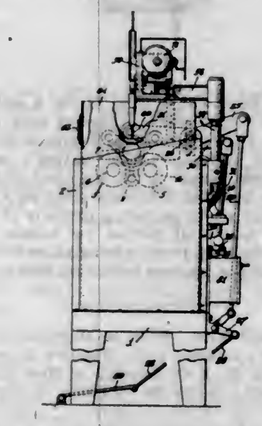
1,684,723. WIRE TYING OR TWISTING DEVICE. ARCHIE E. BASS, Baltimore, Md., assignor of forty-nine per cent to Ethel Strasmich, New York, N. Y. Filed Nov. 22, 1926. Serial No. 150,084. 13 Claims. (Cl. 140—119.)

1. A device of the character described, for binding one or more articles with wire and thereafter twisting the free ends of the said wire, comprising a supporting member carrying means for gripping said wire on both sides of said article, and instrumentalities carried by said member adapted for co-operation, when the member is moved to forcibly press the gripped wire against said article or articles, to first enclose the latter by the wire, and to thereafter twist the ends of the wire, the one around the other.



1,684,724. SPRING-SHACKLE ANTIRATTLE ATTACHMENT. HENRY E. BLOMGREN, Brooklyn, N. Y. Filed July 21, 1927. Serial No. 207,349. 7 Claims. (Cl. 7—54.)

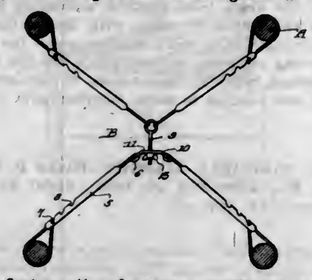
1. In a spring shackle, the combination with the spring sleeve and the bracket sleeve connected by the side links and a bolt passing through each sleeve and the links, of a pair of bearing blocks each grooved to engage one said sleeve respectively and channeled on the inner opposed faces, a block of resilient material located between said latter block faces, the resilient block having a conical bore, and a conical bolt in said bore arranged to distend the resilient block to press its engaged blocks outwardly.



1,684,725. METHOD OF CONSTRUCTING SHIPPING CASES. PAUL F. BOEYE, St. Paul, Minn., assignor to Waldorf Paper Products Company, a Corporation of Minnesota. Filed Nov. 8, 1926. Serial No. 146,872. 3 Claims. (Cl. 93—42.)

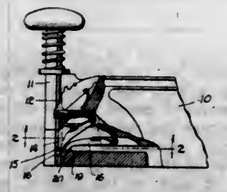
1. The method of constructing shipping cases having side and end walls formed from a plurality of blanks, at least one of said blanks having flanges along its opposite edges adapted to overlap the other blanks at the ends of the case, which method consists in first overlapping the several blanks along an edge of each and securing them together while flat, subsequently folding said flanges inward

simultaneously at the opposite edges of said blank, then folding the end walls to final position, then folding the side walls inward to bring said flanges into overlapping relation with the end walls and finally securing said flanges upon the margins of said end walls.



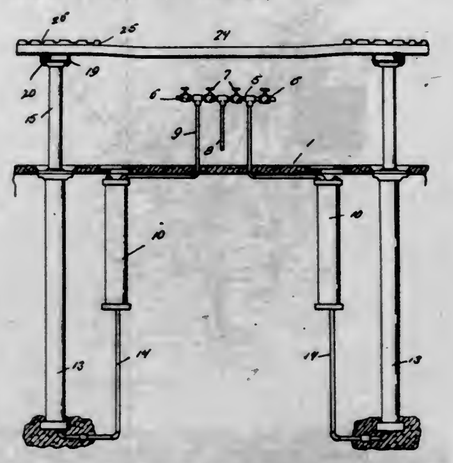
1,684,726. ARC WELDING MACHINE. CLAUDE A. BOWLUS, Birmingham, Mich. Filed Aug. 15, 1925. Serial No. 50,395. 8 Claims. (Cl. 219—8.)

1. A welding machine comprising a rotary support by which a piece of work is moved relative to a movable welding electrode, electrical driven means by which said piece of work and electrode are moved in synchronism, an electric circuit for said electrically driven means, switches in said circuit, manually actuated means for controlling one of said switches, means controlled by a welding cycle of operation adapted to actuate the other switch, and a shield for the welding electrode, said shield being operatively connected to one of said switches so that opening of said shield opens said switch and breaks said electric circuit causing a cessation in the operation of the machine.



1,684,727. CHAIR-LEG BRACE. JOHN CERNY, St. Anthony, Idaho, assignor of one-half to Edward Cerny, Spokane, Wash. Filed Dec. 28, 1926. Serial No. 157,517. 2 Claims. (Cl. 155—197.)

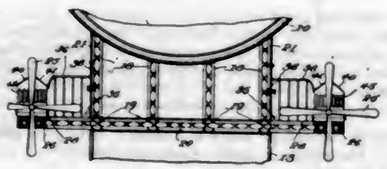
1. In a chair leg brace of the class described, a member complementary to each leg of the chair and consisting of a flat strip of metal, the outer end portion thereof being bent around the respective chair leg, means for adjustably and detachably securing the outer free end of each strip to the intermediate portion of the strip, and additional means for adjustably connecting the members together at their inner



ends, the first mentioned means comprising a hook formed on the outer free end of the strip, the intermediate portion of each strip being formed with a series of spaced notches in one edge thereof with which the hook is adapted to engage.

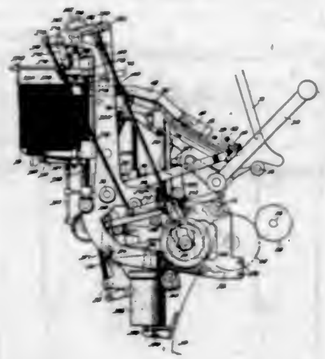
1,684,728. STAPLE. JOHN B. CROFOOT, Arlington Heights, Ill. Filed Apr. 4, 1927. Serial No. 180,767. 5 Claims. (Cl. 85—17.)

1. A staple strip having a mutilated staple at one end thereof and provided with means arranged to be engaged by the feed mechanism of a stapling machine, whereby said mutilated staple is automatically and positively ejected from said machine.



1,684,729. AUTOMOBILE ELEVATING APPARATUS. ROBERT J. DENIO, Oakland, Calif., assignor to Robert Denio, Modesto, Calif. Filed Feb. 1, 1926. Serial No. 85,315. 1 Claim. (Cl. 254—93.)

In an automobile elevating apparatus wherein a cradle is employed to rest under the axle portion of an automobile and is connected with means for elevating and per-

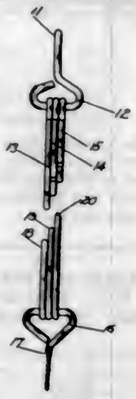


mitting of gravitation of the end portions of the cradle, means constituting one of the connections and comprising angle irons carried by one end portion of the cradle and having upwardly directed lower portions, anti-friction rollers having trunnions disposed under said horizontal portion of the angle iron, shackles straddling said trunnions and connecting the same with the horizontal portions of the angle irons, and a head on one of the elevating means, having confining means therein for the said anti-friction rollers, whereby said rollers in connection with the cradle are enabled to move longitudinally of the apparatus.

1,684,730. DIRIGIBLE AIRSHIP. RALPH P. FOX, Harrisburg, Pa. Filed Aug. 30, 1926. Serial No. 132,650. 3 Claims. (Cl. 244—6.)

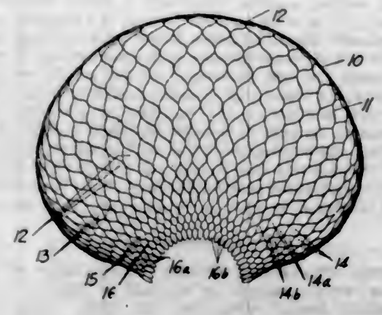
1. In a device of the class described, a main hull structure and a keel and gondola structure connected therewith, a series of spaced girders extending transversely of the structure last named and having their ends projecting laterally therefrom, motors mounted on said projecting ends of the girders, lateral extensions carried by the ends of each of the girders, motor supporting means carried by the ends of the girders and by the lateral extensions, and propellers driven by the motors.

1,684,731. PRINTING PRESS. WALTER O. HALL and WILLIAM C. BUCHANAN, Franklin, Mass. Filed Nov. 7, 1924. Serial No. 748,486. 32 Claims. (Cl. 101—287.)



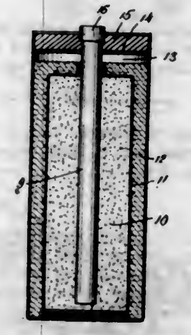
1. Sheet feeding and delivery mechanism for platen printing presses comprising in combination means for feeding sheets to the press, means for taking printed sheets therefrom, and means for rendering said last named means inoperative upon failure to feed a sheet.

1,684,732. MANUFACTURE OF CARBOHYDRATE DERIVATIVES. WILLIAM HARRISON, Manchester, England. Filed Nov. 3, 1927, Serial No. 230,919, and in Great Britain Oct. 30, 1926. 3 Claims. (Cl. 260—100.)



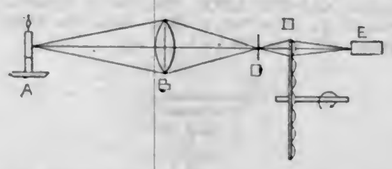
1. The manufacture of carbohydrate derivatives by subjecting to an oxidizing action in a substantially neutral medium a colloidal carbohydrate compound containing the CSS group admixed with a nitrogen hydrogen compound in which at least one hydrogen atom is free.

1,684,733. HARNESS HOOK FOR LOOMS. BENJAMIN HETHERINGTON, Fall River, Mass. Filed Nov. 25, 1927. Serial No. 235,608. 4 Claims. (Cl. 139—88.)



1. In combination with a loom having a series of harnesses, harness straps, jacks, a harness hook comprising in combination a wire member, said wire member having a shank portion, said wire member having a loop formed at one end thereof, means at the other end of said shank for attachment to either a harness strap or a jack, said loop having a horizontal portion, a plurality of individual hooks on said horizontal portion for holding said harnesses, said horizontal portion being of sufficient length to provide clearance for said individual hooks.

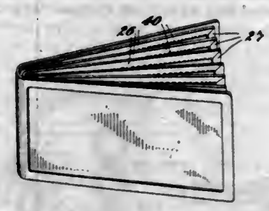
1,684,734. HAIR NET. PAUL E. HITZIGRATH, Rockville Center, N. Y., assignor to S. Glemby's Sons Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 10, 1923. Serial No. 624,151. 3 Claims. (Cl. 132—49.)



1. A hair net of interwoven strands, having a central portion of relatively large mesh, surrounded by a single row of mesh, a plurality of rows of mesh, another single row, and another plurality of rows of relatively small mesh at its periphery, each single row and set of plurality of rows gradually decreasing in size of mesh to the size of the said relatively small mesh.

1,684,735. DRY-CELL ELECTRODE. HOWARD D. HODGE, deceased, New York, N. Y., by Elvira Wells Hodge, administratrix, Bridgeport, Conn., assignor to Burgess Battery Company, Madison, Wis., a Corporation of Wisconsin. Original application filed Mar. 24, 1925, Serial No. 17,858, Patent No. 1,638,995, dated Aug. 16, 1927. Divided and this application filed July 17, 1926. Serial No. 123,236. 2 Claims. (Cl. 136—128.)

1. A dry cell having a seamless zinc cup with a bevelled surface formed at its upper edge on the inner wall whereby lessening of the effective diameter of the cup due to tumbling or rough handling is prevented without increasing the external diameter of the cup, and a relatively thin insulating washer snugly fitting in said cup below said bevelled edge.

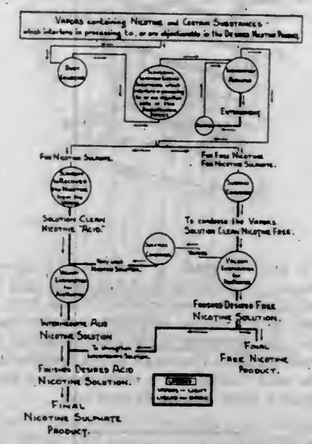


1,684,736. RADIO VISION STUDIO EQUIPMENT. CHARLES FRANCIS JENKINS, Washington, D. C. Filed Mar. 14, 1925. Serial No. 15,585. 1 Claim. (Cl. 178—7.)

In a picture transmission system, a lens for forming a stationary image of the subject whose image is to be transmitted, a light-sensitive cell, and a rotating carrier provided with lenses arranged to cause a succession of images of said stationary image to traverse the light-sensitive cell by adjacent parallel paths.

1,684,737. CARDCASE AND METHOD OF MAKING SAME. CHARLES L'ENFANT, New York, N. Y. Filed Feb. 23, 1927. Serial No. 170,759. 6 Claims. (Cl. 150—39.)

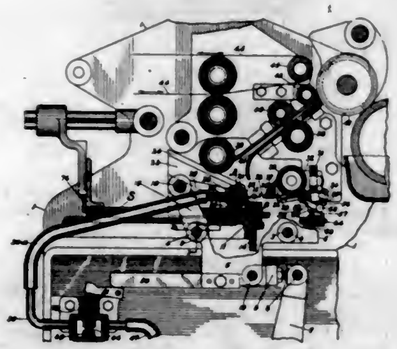
1. A card case including a unit of uniform thickness throughout its entire length comprising a single strip of material foldable intermediate its ends to form leaves, each leaf having an opening, a pair of transversely slotted strips of transparent material superimposed thereon and foldable therewith, and means to secure the parts together at their edges.



1,684,738. PROCESS FOR THE MANUFACTURE OF PERYLENE. CHARLES HENRI MARSCHALK, Paris, France. Filed Dec. 1, 1924, Serial No. 753,348, and in France Dec. 20, 1923. 4 Claims. (Cl. 260—168.)

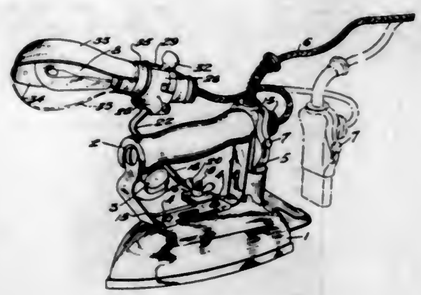
1. The manufacture of perylene by heating to distillation a phosphorus ester containing the beta dinaphthol radicle.

1,684,739. MANUFACTURE OF ZIRCON REFRACTORIES. LE ROY HIMES MINTON, Metuchen, N. J. Filed June 27, 1925. Serial No. 40,099. 7 Claims. (Cl. 25—156.)



1. The method of making zircon refractories which comprises finely grinding zircon in the presence of water containing an organic deflocculent, adding granular zircon and an organic binder, and shaping and firing the resultant product.

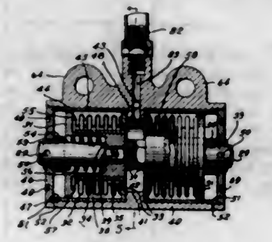
1,684,740. METHOD FOR CLEANSING NICOTINE VAPORS. ROBERT GRAHAM MEWBORNE, Clarksville, Tenn. Filed Feb. 19, 1924. Serial No. 693,948. 38 Claims. (Cl. 260—25.)



1. The process which comprises treating a stream of vapors containing nicotine and impurities to a stream of alkali solution, maintaining the temperature to prevent condensation of the nicotine and recovering nicotine from the vapors so treated.

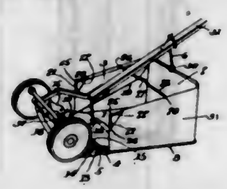
1,684,741. SHEET-FEEDING MECHANISM. CHARLES H. NITSCH and JOSEPH W. BAKER, Philadelphia, Pa., assignors to Stokes and Smith Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 19, 1925. Serial No. 3,316. 35 Claims. (Cl. 271—27.)

1. Apparatus for feeding sheets from a stack thereof comprising means engaging the top of the stack adjacent an edge thereof, suction means for picking a sheet from the top of the stack, and means for imparting movement to said suction means in a path inclined with respect to the top of the stack for withdrawing the sheet therefrom.



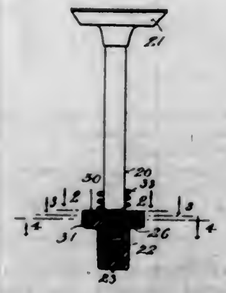
1,684,742. LAMP ATTACHMENT FOR SADIRONS. JAMES E. PICKLESIMER, Atlanta, Ga. Filed July 14, 1925. Serial No. 43,558. 5 Claims. (Cl. 240—2.)

1. In an electric iron, a handle, a lamp-supporting bracket, means for securing said handle to said iron, said bracket including a base attachable to said iron, said base being formed with a lateral extension constituting a clamp, said bracket also including a rod oscillatable in a substantially vertical plane and having a lateral portion adjustably securable in said clamp, and a lamp-receiving portion universally jointed with respect to said rod.



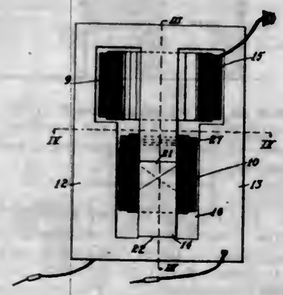
1,684,743. BRAKE SYSTEM. FRANK C. REILLY, New York, N. Y. Filed June 5, 1925. Serial No. 35,108. 13 Claims. (Cl. 188—152.)

1. In a brake system or the like, a power unit comprising opposed relatively movable pressure heads having opposed oversliding hub portions and a corrugate substantially uniformly extensible and contractible shell enclosing the oversliding hub portions and connected with the pressure heads, said hubs being of tubular structure



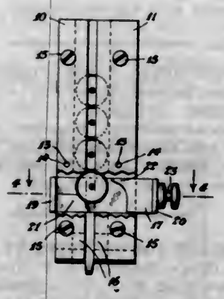
to form an enclosure, a spring within said enclosure, the inner tubular hub having a closed end wall and a power transmitting member connected with said closed end wall.

1,684,744. GRASS CATCHER. JOHN F. REYNOLDS, Pasadena, Calif. Filed Feb. 2, 1926. Serial No. 85,477. 1 Claim. (Cl. 56—200.)



A grass catcher for lawn mowers comprising a metal bottom with seams on the front and sides thereof, a U-shaped wire rigidly held in said seams and having eyes formed at the bends thereof for attachment to a mower, a metal apron hinged to said bottom rearwardly of the front edge thereof and extended forwardly therefrom, a frame comprising a U-shaped member and vertical members pivotally connected together, said vertical members pivotally connected to said U-shaped bottom member, and a fabric receptacle having seams at the margins thereof for receiving said U-shaped member and said vertical members.

1,684,745. ADJUSTABLE LOCKING DEVICE FOR VALVES AND THE LIKE. CHARLES W. ROBERTS, Jr., Nyack, N. Y. Filed Feb. 4, 1926. Serial No. 85,883. 7 Claims. (Cl. 251—134.)

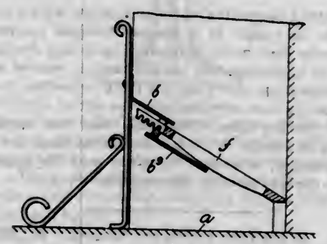


3. In an adjustable locking device for valve stems, a thimble adapted to have a screw threaded connection with the valve stem, teeth on said thimble, teeth engaging holding means adapted to slidably and nonrotatably engage the valve stem for holding the thimble against rotation on the stem and cap means for enclosing said holding means to hold together said holding means and thimble.

1,684,746. TOY TRANSFORMER. BENJAMIN H. SMITH, Swissvale, and ALFRED L. ATHERTON and EMIL H. GREIBACH, Pittsburgh, Pa. Filed Mar. 31, 1926. Serial No. 98,636. 11 Claims. (Cl. 171—119.)

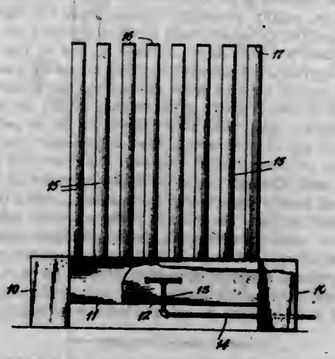
1. A toy transformer comprising a magnetizable member having a central leg and two side legs, a relatively wide air gap between one portion of the legs and a narrow air gap between another portion of the legs, a stationary winding in the wide air gap, a movable winding adapted to surround the central leg and to be slidably mounted thereon, and a magnetizable shunt member mounted on the movable winding and substantially closing the narrow air gap when the movable winding is removed from the stationary winding.

1,684,747. FEED MECHANISM. EDWIN B. STIMPSON, Brooklyn, N. Y., assignor to Edwin B. Stimpson Company, Brooklyn, N. Y. Filed July 8, 1927. Serial No. 204,166. 1 Claim. (Cl. 218—2.1.)



Rivet feeding mechanism comprising a nose piece having a continuous, open feed slot, the feed slot being adapted to receive headed fasteners with their shanks extending through the open slot, and a slide mounted transversely of the nose piece, said slide carrying a stop shoulder spaced downwardly from the upper edge of the slide, the stop shoulder being curved to conform to the shape of the head, and said slide carrying also a cut-off finger located near the top of the slide and spaced laterally from the shoulder, the under side of the cut-off finger being curved inwardly to permit free dropping of the lowermost rivet while the cut-off finger is holding back the next-to-lowest rivet.

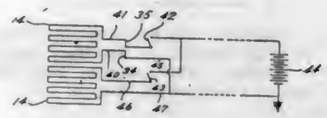
1,684,748. SURFACING DISK. HERBERT R. STRATFORD, Cleveland, Ohio, assignor to The Stratmore Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 31, 1927. Serial No. 244,052. 2 Claims. (Cl. 51—279.)



2. A surfacing element consisting of a sheet of cellulose material provided with a layer of abrasive grains adhesively secured to one surface of said sheet, and the latter having a tensile strength of not less than 170 pounds per square inch in one direction and of not less than 85 pounds per square inch in a direction at right angles to the first.

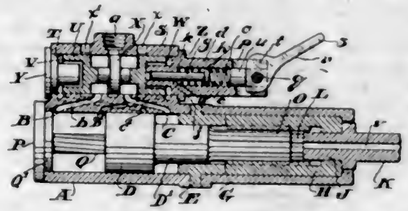
1,684,749. DOMESTIC FIREPLACE. REGINALD O'HALLORAN PRINGLE THEOBALDS, St. Mary Bourne, near Andover, England. Filed Dec. 2, 1925, Serial No. 72,684, and in Great Britain Dec. 4, 1924. 1 Claim. (Cl. 126—164.)

In an open fireplace, the combination with the fireplace side walls and hearth, of a grate including a fuel supporting imperforate front plate raised above the rear portion, said grate extending the width of the fireplace to the side walls thereof and being positioned in spaced relation to the hearth whereby an air supply passage to the rear portion of the grate is constituted by the hearth, fireplace side walls and underneath face of the front portion of the grate, said passage having an unrestricted opening permitting the air entering therethrough to impinge upon the said underneath face of the front portion of the grate.



1,684,750. HEATER. CHARLES H. THOMASSON, Richmond, Va. Filed June 10, 1926. Serial No. 115,084. 2 Claims. (Cl. 126—91.)

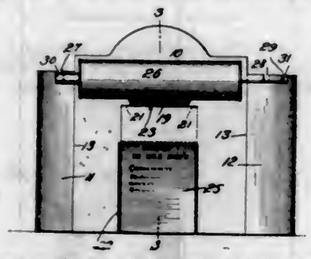
1. A heater of sheet-metal comprising an elongated hollow body of rectangular section merging into integral supports of similar shape, said body and supports having a flat top lying in a common plane and having an aperture midway of the under side of the body to receive a burner, said body also having a plurality of rectangular openings in its flat top extending approximately from one side of the top to the other, a set of parallel rectangular upright



extensions corresponding to said openings and permanently fixed to the body, and sheet-metal closures for the upper ends of said extensions covering the same and hinged along one edge thereof.

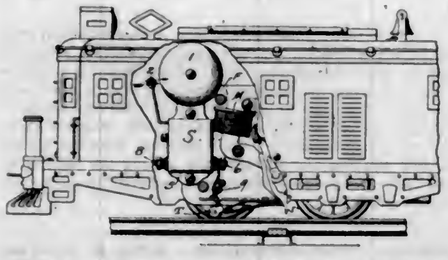
1,684,751. BAKING APPARATUS. ROBERT G. TUGENDHAT, Saginaw, Mich., assignor, by mesne assignments, to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed Dec. 18, 1923. Serial No. 681,329. 4 Claims. (Cl. 219—19.)

3. In baking apparatus, the combination with a plate for material to be baked, of a heating element comprising a strip of resistance metal extending back and forth across the plate in approximately parallel evenly spaced sections having connecting portions at their opposite ends, the strip extending over substantially the entire surface of the plate, and the portions of the strip near the edges of the plate being of smaller cross sectional area than the central portions thereof, whereby the plate may be heated uniformly by current flowing through the strip.



1,684,752. BLOWING DEVICE. RUSSELL H. WILHELM, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 29, 1927. Serial No. 164,478. 1 Claim. (Cl. 121—6.)

In a fluid actuated rock drill of the hammer type, the combination of a cylinder, a hammer piston in the cylinder having a reduced forward extension, a valve chest having a chamber, supply passages leading from the chamber to the ends of the cylinder, plugs forming closures for the ends of the chamber, a plunger slidable in one of the plugs, a pair of springs, one of said springs normally holding the plunger out of contact with the valve, the second spring normally in contact with said plunger, means for actuating the plunger to hold the valve immovable in the valve chest to permit an uninterrupted flow of pressure fluid from a source of supply through the said chamber and a supply passage and through one end of the cylinder to a hollow drill steel, said means comprising a cam, a lever attached to said cam, a plunger in contact with said cam, said second spring in contact with said second plunger, said second spring holding said second plunger in contact with said cam, said cam operable by means of said lever for forcing said second plunger into said plug and mechanically holding said first plunger in contact with said valve.

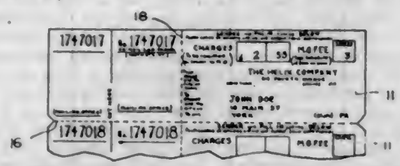


1,684,753. MERCHANDISE-DISPLAY DEVICE. WALTER ZAREKO, Natural Bridge, N. Y. Filed Jan. 30, 1926. Serial No. 84,966. 2 Claims. (Cl. 211—73.)

1. In a merchandise display device, a panel provided with an upwardly extending recess which opens through the lower edge of the panel, said recess adapted to receive a main article to be displayed and which article is independent of the device, a folding section formed integrally with the panel by a piece cut out to provide the recess, said panel having a transverse slit above its recess, and said folding section having an end tab which is inserted in and protrudes forwardly through said slit, said folding section being bent to provide, at the back of the panel, an

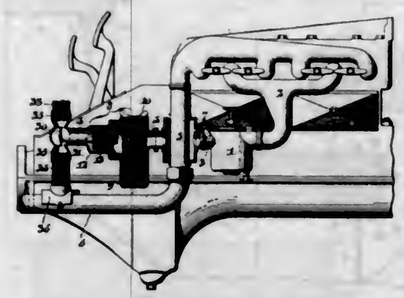
easel to rest on the top of said main article, and the forwardly protruding end of said tab providing a support located above the recess for supporting a secondary article to be displayed.

1,684,754. BELL-RINGING TOY LOCOMOTIVE. HARRY S. BECKER, River Forest, Ill., assignor to American Flyer Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 31, 1928. Serial No. 250,935. 3 Claims. (Cl. 246—72.)



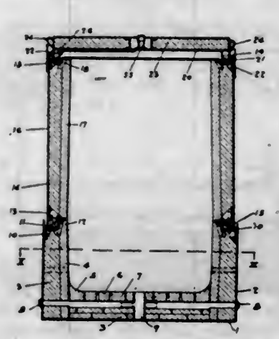
1. In a toy electric locomotive, the combination with the motor and motor frame and a trolley for supplying current to said motor, of an electrical sounding device attached to said motor frame and having one terminal thereof grounded to said frame, and the other terminal of the bell being electrically connected with the said trolley.

1,684,755. SYNTHETIC RESIN FIBER BOARD. ALBERT L. CLAPP, Danvers, Mass. Filed Dec. 22, 1922. Serial No. 608,580. 10 Claims. (Cl. 92—21.)



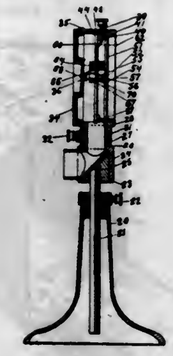
1. A process of producing fiberboard, which comprises incorporating into an aqueous cellulosic pulp, wood flour and pulverized synthetic resin, sheeting the pulp, and subjecting the sheet to heat and pressure.

1,684,756. MEANS FOR SHIPPING BY PARCEL POST. WILMOT S. CLOSE, Brooklyn, N. Y., assignor to Ad-Tape Co. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 18, 1926. Serial No. 89,012. 6 Claims. (Cl. 282—27.)



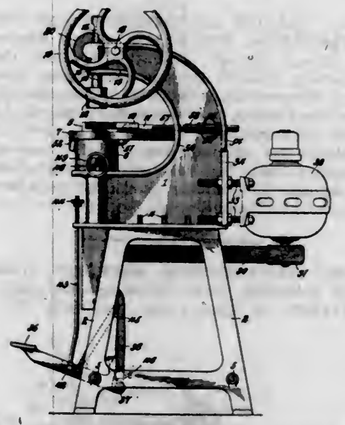
1. C. O. D. manifolding postal shipment forms comprising, in combination, a sheet divided into separable coupons each appropriately designated with indicia to constitute an address label for a C. O. D. postal package, another sheet also divided into separable coupons, each coupon of which is provided with parts appropriately designated with indicia to constitute complete labeling for both the money order and postman's receipt sections of a C. O. D. postal shipping tag, said tag labeling corresponding in form and indicia with a C. O. D. tag, such that said tag labeling may be pasted on said tag on both said sections, and a third sheet accordingly divided into sections each of which is appropriately designated with indicia to constitute a postal shipment receipt.

1,684,757. AUTOMATIC HUMIDIFYING DEVICE. WILLIAM B. COLEMAN, Philadelphia, Pa. Filed Aug. 25, 1921. Serial No. 495,391. 1 Claim. (Cl. 261—39.)



In an automatically regulated humidifying apparatus for the air supply of an internal combustion engine, a humidifier, an intake conduit for said humidifier having hot and cold air inlet branches, a valve inversely controlling said branches whereby to proportion the relative amounts of hot and cold air entering said conduit, a thermostat in said conduit and actuated by the temperature prevailing therein, a connection between said thermostat and said valve whereby to automatically maintain a predetermined temperature of air in said conduit, an outlet conduit for said humidifier, and a superheater in said outlet conduit whereby to maintain the air supply delivered therefrom at above the point of saturation.

1,684,758. CYANAMIDE OVEN. GEORGE E. COX, Niagara Falls, N. Y., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed June 17, 1925. Serial No. 37,695. 10 Claims. (Cl. 23—78.)

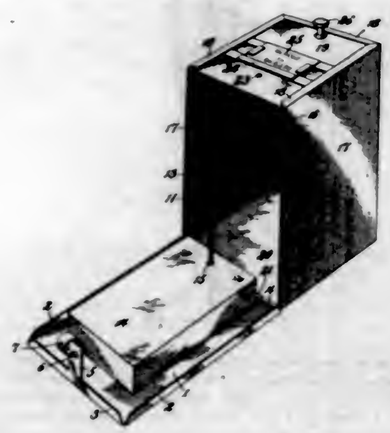


1. Apparatus for making a block of calcium cyanamide and other materials which comprises an oven base having a side wall section secured thereto an upper side wall section thereon and a sand seal at the junction of said sections.

1,684,759. DEVICE FOR THE REPRODUCTION OF WAVE MOTION. HERBERT GROVE DORSEY, Gloucester, Mass. Filed Sept. 21, 1923. Serial No. 664,087. 6 Claims. (Cl. 181—0.5.)

5. In an apparatus for showing wave motion, the combination of a diaphragm, a vibratable reflecting means associated therewith, a second reflecting means positioned to throw a beam of light on said first reflecting means and thence to a third rotating reflecting means having adjustable governed speed.

1,684,760. RING-JOINT MACHINE. WILLIAM LEWIS EVANS, Washington, Ind. Filed Nov. 10, 1926. Serial No. 147,529. 10 Claims. (Cl. 144—2.)

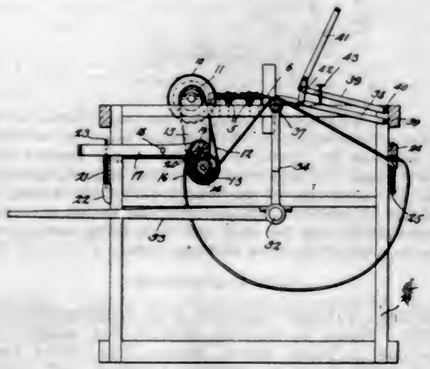


1. In a woodworking machine the combination of a frame; a table supported on the frame; means for holding the work on the table; a rotatable cutter beneath the table; means for projecting the cutter into engagement with the underside of the work; said table having a plurality of holes of different sizes corresponding to the cutters which may be used, the table being movable to align any one of the holes with the cutter.

1,684,761. FILING CABINET FOR PRESCRIPTIONS, ETC. JOSEPH F. BARTOSH, Weimar, Tex., assignor of one-half to Frank Kahlik, Weimar, Tex. Filed June 23, 1925. Serial No. 39,045. 3 Claims. (Cl. 129—23.)

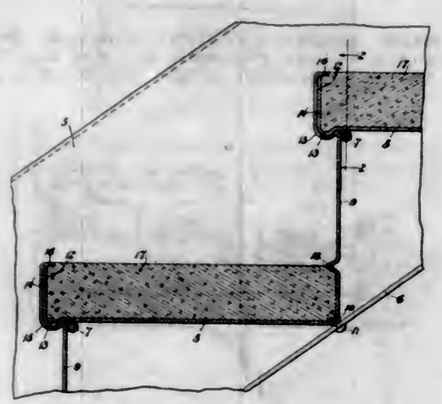
1. A filing cabinet comprising a flat base member having upstanding, marginal flanges along the front and side edges thereof, a locking tongue integral with one of said

flanges, an upstanding post mounted on the rear of the base for holding and alining prescriptions or the like, a box-like cover having a top wall and front, rear and side walls joined thereto, the rear wall being hinged along



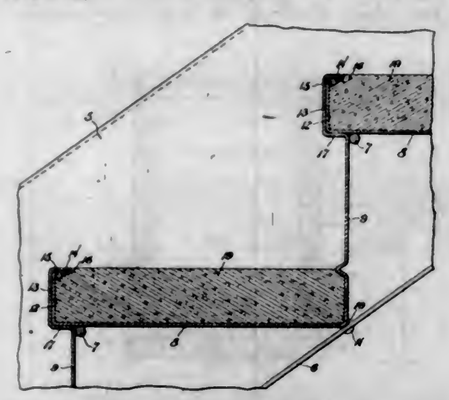
its free edge to the rear edge of the base, one of said walls presenting locking means cooperating with said locking tongue and the free edges of the front and side walls fitting within the said flanges when the cover is lowered.

1,684,762. YELLOW AZO DYESTUFF AND PROCESS OF PREPARING THE SAME. ERICH FISCHER and CARL ERICH MÜLLER, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 20, 1927, Serial No. 185,356, and in Germany May 3, 1926. 3 Claims. (Cl. 260—96.)



1. The process of preparing a yellow azo dyestuff, particularly suitable for dyeing and printing acetate silk, which consists in coupling diazotized para-nitraniline with 1-nitro-2.4-diaminobenzene.

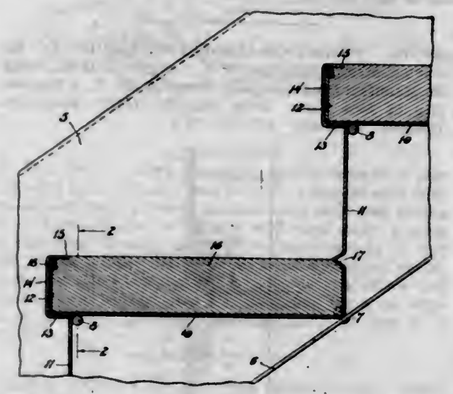
1,684,763. TIRE-SPLITTING MACHINE. WILFRED G. FRITTS, Lexington, N. C. Filed Apr. 18, 1927. Serial No. 184,667. 8 Claims. (Cl. 164—49.)



1. A machine for splitting tires including a knife, means for supporting an endless tire in position for engagement by the knife, means for pulling the tire while in engagement with the knife, means for reciprocating the knife transversely of the engaged portion of the tire, and means for gripping the tire to hold it taut during the pulling action.

1,684,764. STAIR CONSTRUCTION. ELMER HEDEEN, Mansfield, Ohio, assignor to The Hughes-Keenan Company, Mansfield, Ohio, a Corporation of Ohio. Filed July 18, 1927. Serial No. 206,601. 3 Claims. (Cl. 189—43.)

2. A stair construction comprising, in combination, a series of interlocked sheet metal step elements each providing a horizontal support for the tread of a step and the riser above said tread; each riser having a bead projecting over the tread below and also having an inturned flange projecting over the tread next above; and a tread placed upon each sheet metal step element and locked mechanically in position by engagement with the bead on the riser of the supporting step element and with the inturned flange of the step element immediately beneath.



1,684,765. STAIR CONSTRUCTION. ELMER HEDEEN, Mansfield, Ohio, assignor to The Hughes-Keenan Company, Mansfield, Ohio, a Corporation of Ohio. Filed Aug. 23, 1927. Serial No. 214,955. 2 Claims. (Cl. 189—43.)

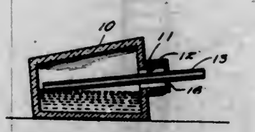
1. A sheet metal element for the construction of stairs, comprising a tread portion and a riser portion; an upstanding flange extending longitudinally along the outer

edge of the tread portion substantially at right angles thereto; an inturned flange provided at the upper end of the riser portion to project somewhat over the tread portion of the adjacent stair element; and a bead made fast underneath said inturned flange so spaced from the the vertical plane of the adjacent riser portion that there is sufficient room to receive the upstanding flange of the adjacent, higher stair element.

1,684,766. METALLIC STAIR. ELMER HEDEEN, Mansfield, Ohio, assignor to The Hughes-Keenan Company, Mansfield, Ohio, a Corporation of Ohio. Filed Nov. 10, 1927. Serial No. 232,414. 3 Claims. (Cl. 189—43.)

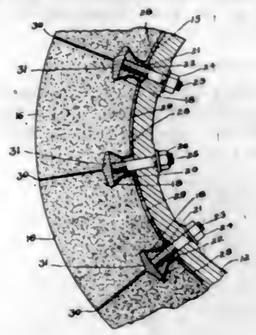
2. In a stair construction, in combination, a plurality of assembled and interlocking metal members each consisting of a tread portion and a riser portion; each tread portion having an upstanding flange; each riser portion having an upright offset portion against which the aforesaid flange may be abutted, and a flange projecting over the upper edge of the upstanding flange of the adjacent tread portion; the flange last named having projecting tangs struck out from the metal thereof and extending downwardly and spaced sufficiently far from the upright offset portion to receive the upstanding flange of the tread portion; the tangs preventing outward movement of each riser and inward movement of each tread.

1,684,767. ROTARY VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. GEORGE E. HOTTENSTEIN and GEORGE E. HOTTENSTEIN, Jr., Spokane, Wash. Filed Nov. 27, 1925. Serial No. 71,740. 2 Claims. (Cl. 123—59.)



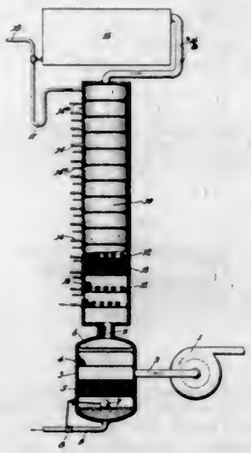
1. In a rotary valve for internal combustion engines, a casing having a bore tapering from end to end and having ports communicating with the cylinders of the engine, a valve within said casing and having ports for alignment with the ports communicating with the engine, means for rotating said valve and yieldably shifting the valve longitudinally toward the smaller end thereof, the larger end of said valve projecting from the bore and having attached thereto a driving element, a casing for the driving element including an adjustable plug coaxial with the valve and a spring engaged at one end with the plug and at its opposite end operatively engaging the valve and constituting said means for yieldably shifting the valve longitudinally toward the smaller end thereof.

1,684,768. LIVE-LINE-TESTING DEVICE. GEORGE ARTHUR ILER, Cleveland, Ohio. Filed Nov. 4, 1924, Serial No. 747,839. Renewed Feb. 14, 1928. 5 Claims. (Cl. 175—183.)



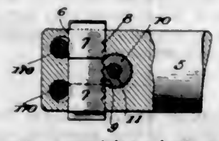
1. A testing device for electrical faults comprising a support carrying a metal contact element, and an electrical measuring device carried by said support and having an antenna terminal connected with said contact element, said device also including a triode vacuum tube, sources of electrical energy and a voltmeter, the device being free from a ground connection.

1,684,769. CONTAINER FOR TESTING DEVICES. LESTER P. JACKSON, El Paso, Tex. Filed Mar. 10, 1927. Serial No. 174,276. 1 Claim. (Cl. 215—79.)



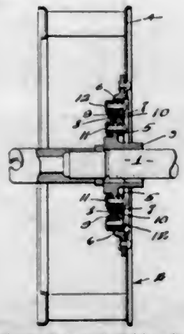
A tire valve tester comprising a transparent container designed to receive a liquid, said container being of inverted frusto-pyramidal design and closed at each end, a relatively small nipple extending from the center of the larger end of the container and communicating with the interior thereof, a cap removably engageable over said nipple, and a tube carried by said cap and extending axially of the interior of the container to a point adjacent the smaller or lower end thereof, said cap having an air outlet aperture therethrough in close proximity to the tube, the container being so constructed that when it is approximately half filled with a liquid and laid upon one side, the liquid will not enter the tube or pass through said aperture.

1,684,770. SEGMENTAL GRINDING WHEEL. THURE LARSSON, Worcester, Mass. Filed Oct. 24, 1924. Serial No. 745,713. 1 Claim. (Cl. 51—207.)



A grinding wheel comprising a rotatable drum having a cylindrical surface, abrasive segments which have dovetailed portions providing faces fitting on the drum and extensive angularly arranged plane clamping faces, a set of alternately arranged locating and clamping blocks on the drum positioned between adjacent pairs of segments, said blocks having extensive faces contacting with said clamping faces of the segments, means for holding the locating blocks fixedly in position to locate the segments therebetween and means for adjusting the positions of the clamping blocks to draw the segments securely against the locating blocks and fasten them securely on the drum.

1,684,771. PROCESS OF TREATING AND FRACTIONATING CRACKING-PLANT VAPORS. EUGENE H. LESLIE and EDWIN M. BAKER, Ann Arbor, Mich. Filed May 11, 1923. Serial No. 638,176. 1 Claim. (Cl. 196—72.)



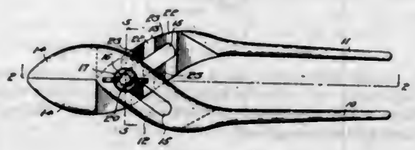
In a process of obtaining valuable products from mineral oil the steps which comprise conducting superheated hydrocarbon vapors from a vapor phase cracking plant into the lower part of a fractionating column and effecting countercurrent contacting between such vapors and a liquid condensate, and refluxing to the upper part of said column a substantial portion of the vapors leaving said column, thereby providing liquid condensate for said countercurrent contacting.

1,684,772. BORING BAR. HOWARD H. MANNING, Meadville, Pa., assignor to McCrosky Tool Corporation, Meadville, Pa. Filed Nov. 22, 1924. Serial No. 751,628. 8 Claims. (Cl. 77—58.)

6. A rotary cutter comprising a body, adjustable cutters associated with the body and having serrations, and an adjusting device having one face thereof provided with intersecting serrations defining facets engaging the serrations of said cutters.

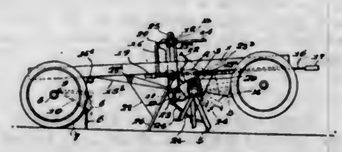
1,684,773. VIBRATION-ABSORBING ELEMENT. EDWARD S. MARKS, Syracuse, N. Y., assignor to H. H. Franklin Manufacturing Company, Syracuse, N. Y., a Corporation of New York. Filed May 12, 1926. Serial No. 108,503. 2 Claims. (Cl. 64—96.)

1. The combination of a rotatable shaft and rotatable wheel comprising a hub mounted on the shaft and having an outwardly extending annular flange, a rim having an inwardly extending annular flange lapping the former flanges, the lapping portions of the flanges being reduced in thickness so that the outer surfaces of the flanges are substantially flush, disks of fibrous material mounted on opposite sides of the flanges and the lapping portions thereof, fastening means extending through the flange on the hub and the disks, additional fastening means extending through the flange on the rim and the disks, the lapping portions of the flanges being located between said fastening means.



1,684,774. HAIR WAVER. HAZEL M. MONTEALEGRE, Iola, Kans. Filed Feb. 11, 1927. Serial No. 167,506. 3 Claims. (Cl. 132—43.)

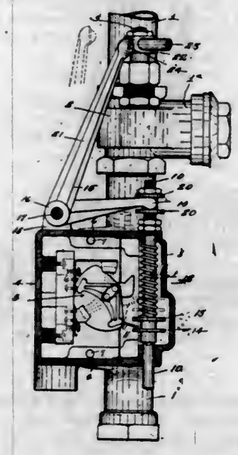
1. A hair waver comprising a length of wire bent into zigzag form and presenting rounded loop portions upon opposite sides, between which a wisp of hair is adapted to be



woven, said wire presenting an end portion about which the end of the wisp is adapted to be wound to produce a bob curl; an eye portion formed on said end; and an elastic band carried in said loop portion and adapted to be stretched over opposite sides of said zigzag portion to hold the woven wisp in place.

1,684,775. PLIERS. WALTER M. NEIKIRK, Paducah, Ky., assignor to Southern Textile Machinery Company, Paducah, Ky., a Corporation of Kentucky. Filed May 4, 1927. Serial No. 188,774. 5 Claims. (Cl. 294—44.)

1. In a pair of pliers convertible into a wrench, a pair of handles each having a body portion, a jaw on each body portion, said body portions crossing each other and having slots therein adapted to register with each other, a pivot pin extending through and slidable longitudinal movement of the pin in said slot when the tool is to be used as pliers, and means on said body portion for preventing the same turning on said pivot pin when the tool is to be used as a wrench.

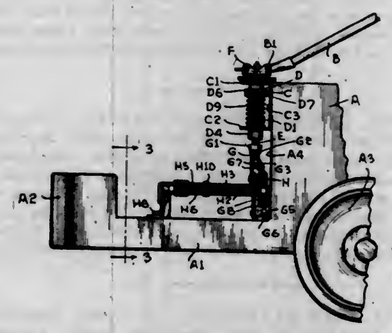


1,684,776. SAFETY DEVICE FOR MOTOR CARS. SHINKICHI NISHIDA and MINORU OTA, Tokyo, and GENSUKE INOSE, Takinogawa-Machi, near Tokyo, Japan, assignors to Goshikaisha Jidosha Kyujoki Seisakusho, Tokyo, Japan, a Company of Japan. Filed Mar. 14, 1925, Serial No. 15,626. Renewed Aug. 6, 1928. 4 Claims. (Cl. 180—83.)

1. A motor car having a supporting leg, said leg having a pivot mounted on the car for vertical movement, a spring pressing the pivot of said leg downwardly, a reel or drum connected by means of a cable to said leg, a handle operatively connected to said reel, a means for normally holding the reel in the required position the said leg to be held in raised position, a fender element, and means connected to said fender element for allowing the leg to fall when the fender bar strikes against any object.

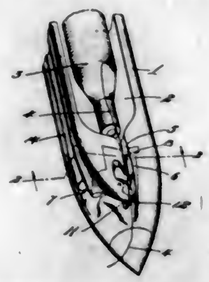
1,684,777. UNITARY CONDUIT AND SWITCH SUPPORT FOR GASOLINE-SERVING STATIONS. RAYMOND H. OLLEY, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed Dec. 4, 1923. Serial No. 678,550. 1 Claim. (Cl. 200—53.)

In a device of the class described, the combination of a conduit, a valve including a valve casing in the conduit, a switch housing mounted on the conduit and arranged at one side thereof so that the conduit is a by-pass around the housing, valve operating means carried by the valve casing, a switch, a cover for the switch housing carried by the switch housing, switch operating means carried by the cover and including a portion located in the cover and



removable as a unit therewith, each of said operating means including a part, one of which extends into the path of the other to be operated thereby.

1,684,778. MORDANT AZO DYESTUFFS AND PROCESS OF PREPARING THEM. ALFRED PHILIPS, Frankfort-on-the-Main, and MARTIN DABELOW, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 19, 1927, Serial No. 185,065, and in Germany Apr. 27, 1926. 6 Claims. (Cl. 260—95.)



1. The process of preparing mordant dyestuffs by combining the diazo compound of an ortho-aminohydroxy compound of the aromatic series with 2.6-dihydroxynaphthalene-3-carboxylic acid.

1,684,779. ELECTRIC LOCOMOTIVE. CHARLES O. BOWEN, Dora, Ala., assignor to Walter B. Miller, trustee, Wallins Creek, Ky. Filed May 22, 1926. Serial No. 111,060. 20 Claims. (Cl. 191—68.)

1. In an electric locomotive, the combination of a pivoted trolley pole, downward-acting elastic means constantly tending to tilt the pole to lift its free end, and operator-actuated means adapted to act upward in opposition to said elastic means to cause the tilting of said pole to lower its free end, substantially as described.

1,684,780. SELF-THREADING SHUTTLE. CHRISTY RICARD, Woonsocket, R. I. Filed Oct. 4, 1926. Serial No. 139,358. 7 Claims. (Cl. 139—223.)

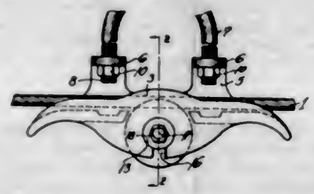
1. In a self-threading shuttle, a threading block having a longitudinal thread receiving passage, and positive locking means located at opposite ends of said block to prevent the removal of the thread from said passage.

1,684,781. SELF-THREADING SHUTTLE. CHRISTY RICARD, Woonsocket, R. I. Filed Sept. 9, 1927. Serial No. 218,409. 1 Claim. (Cl. 139—223.)

In a self-threading shuttle, a thread block having a longitudinal thread receiving passage provided adjacent to one end thereof with a transverse groove, a curved resilient thread lock located within the passage in said block adjacent to one end of said passage so positioned as to permit insertion of the thread beneath the curved thread lock by downward movement of the thread within the passage and having the end thereof lying within the groove formed in the wall of said passage, a portion of said thread block forming one wall of said thread receiving passage and provided with a depression located adjacent to the opposite end of said passage from the curved thread lock, and a downwardly inclined projection extending across said passage and having the end thereof located within the depression.

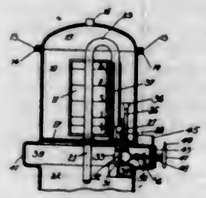
1,684,782. PROCESS FOR THE MANUFACTURE OF DOUBLE CARBONATE OF SODIUM AND MAGNESIUM. HANS RUBINSTEIN, Vienna, Austria. Filed Sept. 23, 1926. Serial No. 137,391. 9 Claims. (Cl. 23—61.)

1. A process for the manufacture of double carbonate of sodium and magnesium, which consists in treating magnesium carbonate in the presence of an alkali metal chloride under heat with an excess of soda in the form of a solution.



1,684,783. EAR ORNAMENT. ROY SPEAR, Titusville, Fla. Filed Nov. 20, 1925. Serial No. 70,347. 1 Claim. (Cl. 63—14.)

An ear ornament comprising a length of wire bent upon itself to provide a spring loop having the ends thereof obliquely disposed therefrom, shoulders inwardly offset from said ends above the loop, a U-shaped kink provided upon one of the shoulders adapted to receive the companion shoulder therein, arms projected from the extremities of the shoulders being oppositely converged to dispose the extremities thereof in juxtaposition, and the extremities

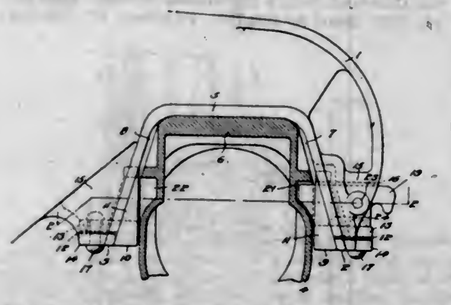


of the arms being bent upon themselves to provide loop portions upon the opposite sides thereof and within which portions of ear lobes may be held incident to the resiliency afforded by the spring loop.

1,684,784. WIRE CLAMP. CHARLES J. WELLER, Conlee, Wash. Filed Jan. 7, 1927. Serial No. 159,563. 4 Claims. (Cl. 175—376.)

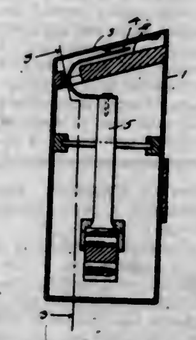
3. The combination with a bracket, a suspending yoke, and means for clamping a wire between the yoke and bracket, of a guide pulley supported in the bracket, removable bearings for said pulley, and means for clamping said bearings in the bracket.

1,684,785. LIQUID-MEASURING APPARATUS. ROY FREDERICK MAURICE WERKING, Bondi, near Sydney, New South Wales, Australia. Filed Feb. 21, 1921, Serial No. 446,800, and in Australia Mar. 25, 1920. 9 Claims. (Cl. 221—100.)



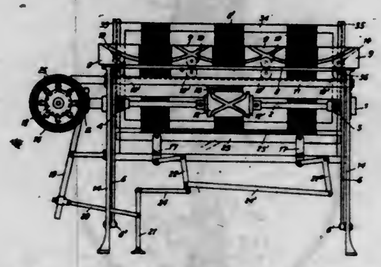
1. In a liquid supply apparatus, a measuring vessel having opposed windows, an inlet pipe and a delivery outlet for said vessel, a control cock for said outlet, arcually arranged overflow pipes extending into the said vessel, an independent control cock for each overflow pipe, a return pipe common to said overflow pipes, and controlling mechanism comprising an arcually traversable stem adapted to engage and operate in turn any one of all said cocks.

1,684,786. BUCKLE. HENRY P. BALTZER, Hamburg, N. Y. Filed Dec. 13, 1927. Serial No. 239,686. 11 Claims. (Cl. 24—163.)



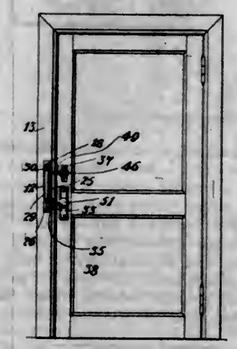
1. A buckle for connecting two spaced parts, comprising a fitting attached to one of said parts, a frame to which the other part may be detachably secured, and a member extending from said fitting and one which said frame is rotatably connected to turn transversely about the same to permit said part secured thereto to turn in a like manner relatively to said other part.

1,684,787. SIDE FRAME. DONALD S. BARROWS, Rochester, N. Y. Filed Mar. 10, 1927. Serial No. 174,287. 9 Claims. (Cl. 105—220.)



1. A side frame having jaws adapted to straddle a journal box and means adapted to be secured to the inner surface of one of said jaws, and formed with an outstanding flange adapted to be secured to a supporting web of said jaw, for exactly maintaining the desired effective distance between said jaws.

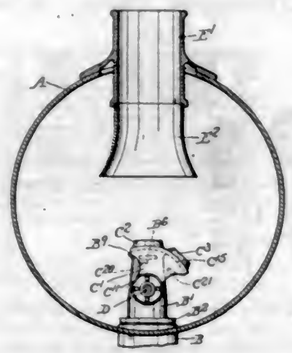
1,684,788. INCLINATION INDICATOR. JOHN W. BELL, Ogdensburg, N. Y. Filed Sept. 25, 1924. Serial No. 739,910. 1 Claim. (Cl. 33—215.)



A device of the class described comprising a casing, a pendulum journaled within the casing substantially midway of the ends thereof, an inclined wall adjacent the top of the casing provided with a scale, said wall having an opening therethrough nearer one side than the other side, a substantially horisontally disposed U-shaped pointer, the bridge of said pointer extending through said opening and the terminals being disposed on opposite sides of said wall, the lower terminal being attached to the top of said pendulum out of line with said opening, the other terminal extending over said inclined wall, the latter terminal being deflected away from the first terminal to accord with the inclination of the wall and a cover on said inclined wall covering said opening, said cover being provided with an opening disalined with the aforesaid opening through which the pointer may be observed.

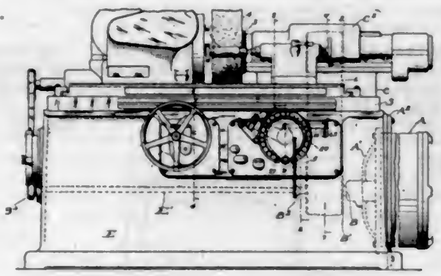
1,684,789. LOOM. CHARLES BILHARTZ, Strasbourg, France. Filed Sept. 23, 1925, Serial No. 58,149, and in Switzerland Dec. 22, 1924. 2 Claims. (Cl. 139—78.)

1. In a loom, a frame having vertical guide grooves, bars having their ends slidably mounted in said grooves, heddle frames slidably mounted in said grooves and each connected to and mounted on one of said bars, a pair of bell crank levers for each of said bars pivotally mounted on said frame, links connecting said bell crank levers to said bars, links connecting said bell crank levers together in pairs, an operating lever for each of said bars pivotally mounted at one end of the frame at a point intermediate its ends, a second lever associated with each of said operating levers and having a fixed pivot, connecting means between each of said operating levers and one of said second levers, a link connecting each of said second levers to one bell crank lever of each pair, a drum mounted for rotation, bars removably mounted on the periphery of the drum and rollers revolubly mounted on said removable bars, said rollers being arranged to engage and actuate said levers.



1,684,790. SAFETY DOOR FASTENER. CHARLES BRAND, White Plains, N. Y., assignor, by direct and mesne assignments, to Ajax-Brand Lock Corporation, New York, N. Y., a Corporation of New York. Filed July 23, 1927. Serial No. 207,889. 6 Claims. (Cl. 292—278.)

1. In a safety door-fastener, in combination, a frame-plate; an eye-shaped member extending from the frame-plate; a bolt having a longitudinal slot therein suspended from said eye; means for removably fastening the free end of the bolt of the frame-plate; a door-plate; a rigid pivotal latch carried by the door-plate, the free end of the latch



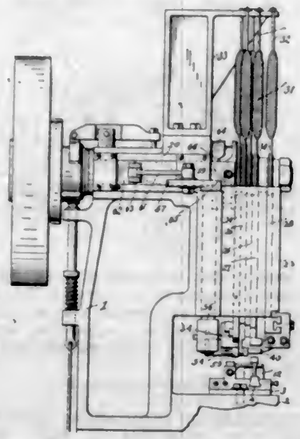
being slidably movable within said slot and removable therefrom only at the suspending end of the bolt when the bolt is moved away from said latch and means for fastening the latch at a predetermined position within the slot.

1,684,791. DUPLEX NOZZLE FOR LOCOMOTIVES. ROBERT R. BUSH and CHARLES W. DAKE, Chicago, Ill., assignors to Pyle-National Company, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 6, 1926. Serial No. 139,952. 6 Claims. (Cl. 230—100.)

1. The combination with a locomotive exhaust pipe of a multiple nozzle member pivoted thereto, a plurality of nozzles associated with said member, said member including web sections extending downwardly about the exhaust pipe and trunnioned to the exterior thereof.

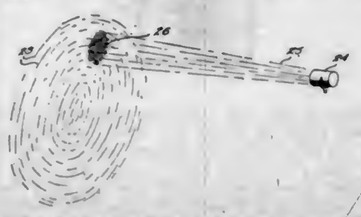
1,684,792. GRINDING MACHINE HAVING BALANCED SPINDLE. SOL EINSTEIN, Cincinnati, Ohio, assignor, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 1, 1924. Serial No. 696,196. 7 Claims. (Cl. 51—165.)

1. A grinding machine comprising a bed provided with a horizontal guideway; a head translatably supported on said guideway; a spindle journaled in said head; a grinding-wheel and a pulley spaced apart on said spindle; a belt-drive exercising a rearward pull on said pulley; and a feed-screw arranged substantially midway between said wheel and pulley and substantially in the horizontal and vertical planes of said guideway as to act as a fulcrum and balance the head against twisting under the pull of the belt and the pressure of the grinding-wheel on its work.



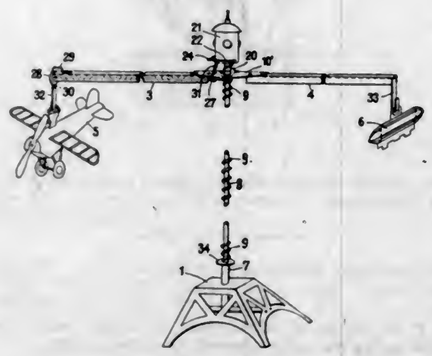
1,684,793. BAG CLOSURE. ALBERT B. FISHWICK, Cincinnati, Ohio. Filed Nov. 12, 1923. Serial No. 674,226 14 Claims. (Cl. 150—3.)

1. A bag closure for lined bags comprising in combination with a bag having flat parallel sides and open entirely across one end with a lining extending to the opening and folded inwardly on both sides to leave free flaps, metallic loops arranged along both edges of the opening, whereby when the edges are closed together, the loops will be



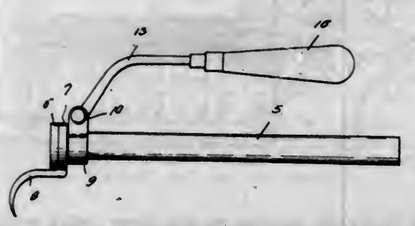
brought into line, and a linear member inserted through the loops to retain them in line, with the free flaps acting automatically as a seal.

1,684,794. METAL-BENDING MACHINE. SAMUEL H. GIBSON, Cleveland, Ohio, assignor to The Fanner Mfg. Co., Cleveland, Ohio, a Corporation of Ohio. Filed June 16, 1922. Serial No. 568,779. 7 Claims. (Cl. 153—13.)



6. In a machine of the class described, the combination with cooperating stationary and movable dies, of cutters adjustably mounted with respect to said dies to vary the size of the blank operated upon, and auxiliary transversely movable forming members cooperating with said dies, said stationary and movable dies being detachably mounted whereby they can be replaced with larger or smaller dies, and said auxiliary formers being adjustable bodily toward and from the axis of said dies to coact with larger or smaller dies.

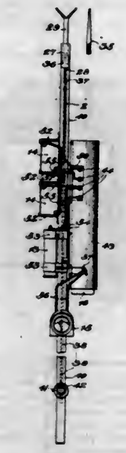
1,684,795. DISPLAY METHOD. ALFONSO GNUDI, Bologna, Italy. Filed Oct. 3, 1924. Serial No. 741,482. 2 Claims. (Cl. 88—24.)



1. The herein described method which comprises projecting a beam of light into the atmosphere and moving it rapidly and continuously over a given area in the same plane to create in effect a screen of light of substantial area, and projecting a set of light rays of another color against such screen at an angle thereto and at points where there is no abnormal presence of particles by which the paths of the light rays may be traced.

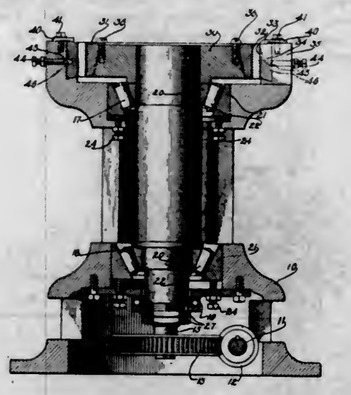
1,684,796. TOY ROUNDABOUT. GEORG HABICHT, Nuremberg, Germany, assignor to the Firm Bing-Werke, vorm. Gebr. Bing Aktiengesellschaft. Filed Aug. 15, 1927, Serial No. 212,997, and in Germany Dec. 31, 1926. 6 Claims. (Cl. 272—31.)

1. A toy roundabout comprising a stationary threaded spindle, a girder provided with thread-engaging means adapted to rotate bodily about said spindle, a model of an air craft comprising propelling means attached to said girder, a check on said spindle, and mechanism on said girder adapted to be operated by said check in a given relative position of said spindle and said girder so as to reverse the fore-and-aft position of said model.



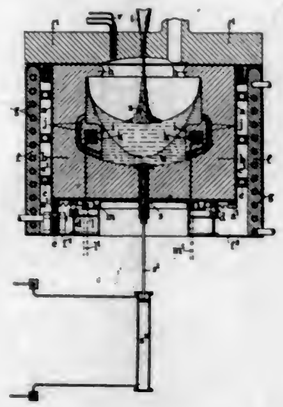
1,684,797. WIRE PULLER AND TWISTER FOR CONCRETE FRAMEWORK. THOMAS J. HOWSON, Marshfield, Oreg. Filed June 30, 1927. Serial No. 202,586. 3 Claims. (Cl. 140—123.5.)

1. In a wire pulling and twisting device of the character described, a hollow bar member, a forwardly projecting foot swivelly arranged upon the inner end of the bar to provide a fulcrum for the bar, a handle lever pivoted adjacent the forward end of the bar and a clamping foot associated with the lever and extending into the bar for clamping the ends of the wire within said bar.



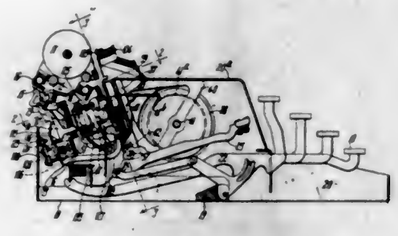
1,684,798. LIVE-LINE AND INSULATOR TESTING DEVICE. GEORGE A. ILER, Youngstown, Ohio. Filed Aug. 14, 1924. Serial No. 732,071. 7 Claims. (Cl. 175—183.)

1. A testing device for electrical faults comprising a portable support carrying a contact element, means including said contact element for forming a spark gap, means for adjusting said gap, a pick-up conductor adjacent said gap



and a detector circuit connected with said conductor and including means for indicating the presence of the spark at the spark gap.

1,684,799. THREAD-ROLLING MACHINE. FREDERIC S. KOCHENDORFER, River Forest, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 29, 1924. Serial No. 734,838. 4 Claims. (Cl. 80—7.)

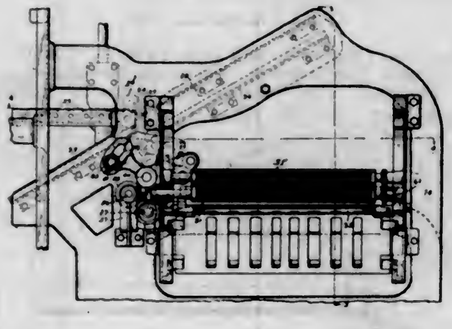


1. In a machine for forming screw threads or the like, a continuous circular die member having a tapered interior wall, a plurality of stationary arcuate dies positioned thereabout and co-operating therewith, a shaft, a circular head carried thereby and having a tapered exterior wall for engaging the tapered interior wall of and thereby supporting the circular die, means for rotating the shaft and thereby the circular die, means associated with the stationary dies for feeding blanks between the co-operating dies, and means carried by the circular die and co-operating with the feeding means to continually insure the simultaneous presence of three equi-distantly spaced blanks between the stationary and circular dies thereby relieving the shaft of unequal stresses.

1,684,800. CENTRIFUGAL LIQUID CRUCIBLE. JUVENAL MAXIMOFF and MARIA STELLA DE COSTA, née VINCENT, Huningue, France. Filed Oct. 23, 1926, Serial No. 143,682, and in France Dec. 24, 1925. 9 Claims. (Cl. 263—36.)

1. An apparatus for forming liquid crucibles, comprising a vessel provided with a refractory lining, said vessel being adapted to contain molten metal to form the crucible, an electrical conductor embedded in said lining, and means for rotating the vessel.

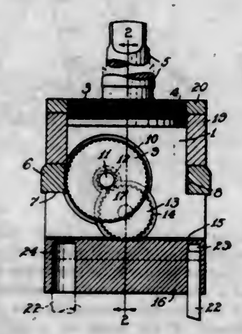
1,684,801. TYPEWRITING MACHINE. LOUIS A. NEMCOVSKY, New York, N. Y., assignor, by mesne assignments, to Sun Typewriter Company, New York, N. Y., a Corporation of New Jersey. Filed July 15, 1924. Serial No. 726,063. 12 Claims. (Cl. 197—97.)



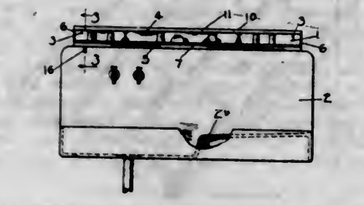
7. In a portable typewriting machine, the combination with a base-frame having a segment-plate secured thereto for pivotally supporting a series of type-bars and a case-shifting frame to support a platen-carriage and an escapement-mechanism for the carriage, of a universal bar curved about the stationary segment-plate to be operated by the type-bars and formed with extensions that project rearwardly at each side of the escapement-mechanism to provide a working clearance space between them for the rise and fall of said escapement-mechanism in case-shifting, and means for pivotally securing said universal bar as a unit to the rear of the stationary segment for a swinging parallel motion between the type-bars and the escapement-mechanism to uniformly actuate the latter at any case-shift position thereof.

1,684,802. FENCE POST. NED A. OCHILTREE, Omaha, Nebr., assignor to Concrete Engineering Company, Omaha, Nebr., a Corporation of Nebraska. Filed Jan. 30, 1928. Serial No. 250,368. 4 Claims. (Cl. 189—23.)

1. An article of manufacture, a tubular metal fence post having its top end formed into I-beam shape.



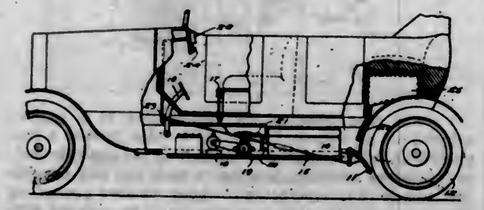
1,684,803. FOLDING MACHINE. ANDREW OLSON, Cleveland, and LESLEY R. TUFTS, East Cleveland, Ohio, assignors to The Cleveland Folding Machine Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 13, 1927. Serial No. 183,400. 21 Claims. (Cl. 270—68.)



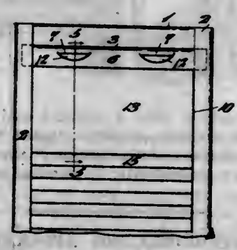
1. In a paper handling machine, sheet feeding means, a feed table at the delivery side of said means adapted to move the sheets at right angles to their direction of movement through said feeding means, and a stacker adapted to be removably mounted above said feed table.

1,684,804. COUNTERBORING HEAD. WILLIAM E. PABST, Anderson, Ind. Filed May 7, 1925. Serial No. 28,508. 4 Claims. (Cl. 77—58.)

1. In a device of the character described, the combination with a split head, of a tool carrier mounted on said head and transversely movable thereon, a gear train mounted between the sections of said head, one of the gears having operative connection with said tool carrier and having another of the gears extending to the periphery of said head, and an annular rack member surrounding said head in engagement with said second mentioned gear, and rotatably movable with respect to said head for driving said gear train whereby said tool carrier is transversely adjusted in the head.

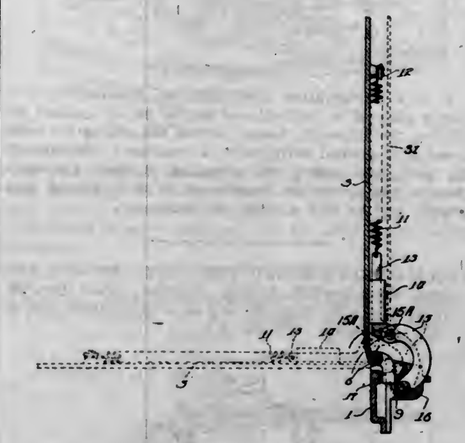


1,684,805. ATTACHMENT FOR SINKS. RIZIERO PANUNZI, Geneva, Ill. Filed Feb. 2, 1924. Serial No. 690,184. 2 Claims. (Cl. 141—11.)



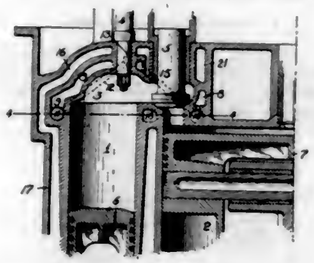
1. An attachment for sinks comprising a flat integral sheet metal piece bent to form a body portion having a back, a bottom and two ends, and a front portion of less height than the back so as to leave the top open laterally and vertically and a removable perforated piece separate from the body portion and located between the back and front portions and having bent ends parallel to the ends of the body portion, said bent ends resting on the bottom of the body portion, the top of the perforated piece being below the level of the front portion of said body portion so that articles placed thereon cannot slide laterally out of the body portion.

1,684,806. MOTOR-VEHICLE SURFACE SANDER. ARTHUR W. REED, Boston, Mass., assignor of one-half to Walter B. Tanner, Boston, Mass. Filed Sept. 18, 1924. Serial No. 738,470. 1 Claim. (Cl. 291—3.)



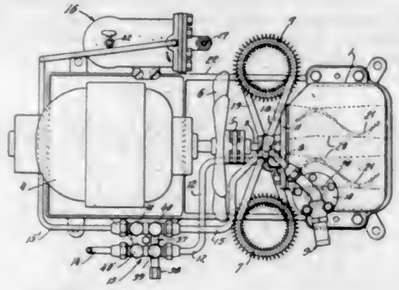
A sanding unit attachment for disposition on a motor vehicle, the attachment comprising a sand box, a discharge pipe leading therefrom, a valve operable to control the discharge through said pipe, means to operate said valve accessible by the vehicle driver while seated, an air compressor in communication with the box, and a motor independent of the motor of the vehicle to operate said air compressor and a control means for the motor accessible to the vehicle driver while seated.

1,684,807. VISIBLE INDEX-CARD SYSTEM. WILLIAM A. RINGLER, Philadelphia, Pa., assignor to Globe-Wernicke Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 19, 1924. Serial No. 693,781. 12 Claims. (Cl. 129—16.7.)



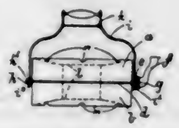
6. A card-holder comprising a foldable strip having one fold provided with a tongue which passes through the other fold, and a card having a holding portion of substantially the same width as the folds and through which said tongue passes.

1,684,808. OVEN DOOR. WALTER F. ROGERS, Chicago, Ill. Filed July 6, 1927. Serial No. 201,835. 4 Claims. (Cl. 126—191.)



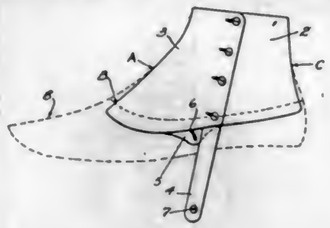
1. In an oven door and frame therefor, means to provide for the opening and closing movement of said door and spring tensioned means resisting the opening of said door comprising a spring secured at one of its ends to the door and at its other end to an arcuate link, said link being connected to said door-frame.

1,684,809. COOLING MEANS FOR INTERNAL-COMBUSTION ENGINES. ELMER A. SPERRY, Brooklyn, N. Y., assignor to Sperry Development Company, Dover Green, Del., a Corporation of Delaware. Filed July 20, 1921. Serial No. 486,182. 18 Claims. (Cl. 123—173.)



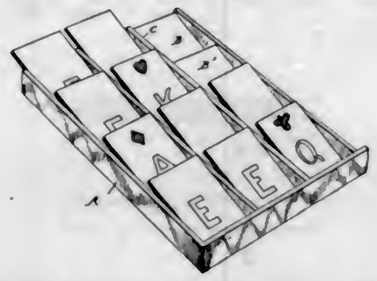
1. In combination with a cylinder and a combustion chamber of an internal combustion engine, fluid means for cooling said cylinder and fluid means of lower specific heat and lower heat conductivity for cooling said combustion chamber.

1,684,810. REFRIGERATING APPARATUS. ALFRED M. THOMSON, Newark, N. J., assignor to Joseph Mercadante, New York, N. Y. Filed Oct. 20, 1926. Serial No. 142,846. 10 Claims. (Cl. 62—115.)



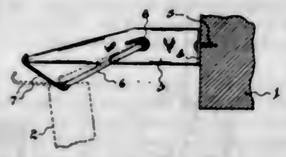
1. In a refrigerating apparatus, the combination of a casing adapted to hold oil and having an air conduit extending therethrough, means within the casing for compressing a gasified refrigerant, a condenser communicating with said casing and arranged in close proximity thereto, and means for causing air to flow through said conduit and to flow against the condenser.

1,684,811. KETTLE AND THE LIKE. MICHELE TOCCHIO, Hammersmith, London, England. Filed Dec. 28, 1927, Serial No. 243,186, and in Great Britain Jan. 4, 1927. 7 Claims. (Cl. 53—9.)



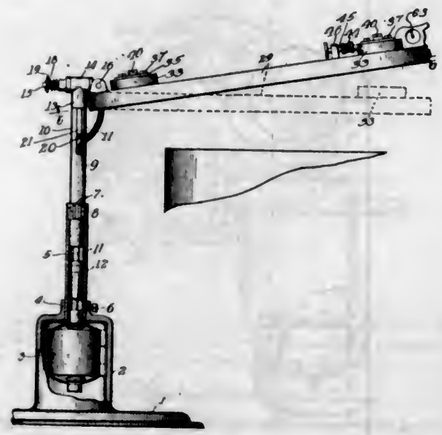
1. A kettle comprising a receptacle, two distinct heating surfaces provided thereon, means for securing a reversible spout to said receptacle, means for connecting a reversible handle, means for providing an air vent, and means for reversing said receptacle.

1,684,812. OVERGAITER. CHARLES TWEEDIE, Jefferson City, Mo. Filed July 11, 1927. Serial No. 204,767. 5 Claims. (Cl. 36—2.)



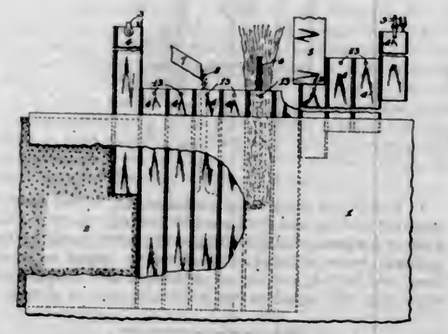
1. An overgaiter comprising an inner quarter, a button quarter secured to said inner quarter by a rear seam, a button hole quarter secured to the inner quarter by a front seam, and a strap permanently secured to the button quarter and detachably secured to the inner quarter at a point forward of its point of attachment to the button quarter.

1,684,813. GAME. WILLIS C. WARD, Orchard Lake, Mich. Filed Mar. 7, 1927. Serial No. 173,493. 5 Claims. (Cl. 273—148.)



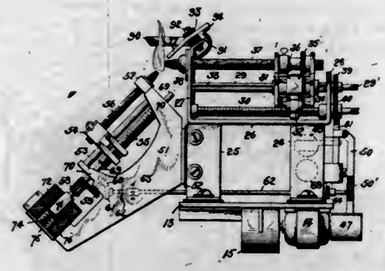
1. A game comprising a rack for holding a plurality of full decks of cards with separate compartments for the different cards of each deck adapted to receive all of the corresponding cards in the several decks the cards of the several decks being visually differentiated upon the faces and backs thereof from those of the other decks.

1,684,814. DOOR FASTENER. FREDERICK J. WATKINSON, Strathroy, Ontario, Canada, assignor of one-half to John N. Ratcliffe, Strathroy, Canada. Filed Nov. 26, 1927. Serial No. 235,889. 3 Claims. (Cl. 292—220.)



1. In a door fastener, the combination of a support adapted to be secured to a door or door frame; a link pivoted on said support a distance from the head thereof; spring means normally tending to rock the link towards the base of the support; and a hook member pivoted on the free end of the link, and adapted to be engaged with the head of the support, said link, when the hook member is so engaged, lying at an angle to the line of travel of the free side of the door and its free end spaced from said support.

1,684,815. BONE SAW. WILLIAM FRANKLIN WELLS, Chicago, Ill. Filed Mar. 29, 1926. Serial No. 98,168. 8 Claims. (Cl. 143—24.)

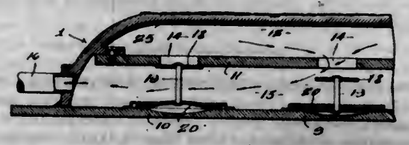


1. A portable cutter comprising a supporting member vertically adjustable in height and equipped in its lower end with a motor rigidly connected therewith, a saw-carrying frame pivotally connected with the upper end of said member, a band-saw operatively mounted in said frame, a flexible shaft operatively connecting said motor with said band-saw, and a telescopic device interposed between the motor shaft and the flexible shaft for permitting adjustment in height of the supporting member without interfering with the operative association of said flexible shaft with the motor shaft and the band-saw.

1,684,816. METHOD FOR BUILDING MONOLITHIC-CONCRETE UNDERGROUND STRUCTURES. HARRY B. ARDEN, New York, N. Y. Filed Oct. 17, 1927. Serial No. 226,679. 7 Claims. (Cl. 61—57.)

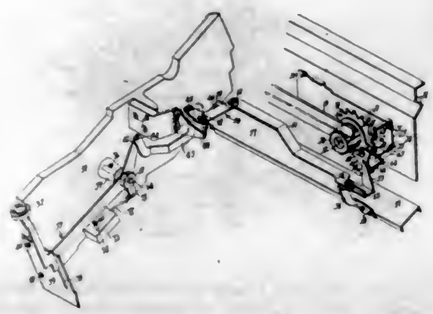
1. The method of forming a monolithic concrete structure within the ground which consists in sinking interlocked three walled forms which are closed by neighboring forms to produce a series of cells, filling the cells with concrete, withdrawing the forms progressively to open the sides of the adjacent forms thus causing the fluid concrete to flow and merge and thereby fill the space occupied by the forms before removal.

1,684,817. FEED-GOVERNING MEANS FOR ARC LAMPS. PRESTON R. BASSETT, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 25, 1920. Serial No. 419,228. 8 Claims. (Cl. 176—51.)



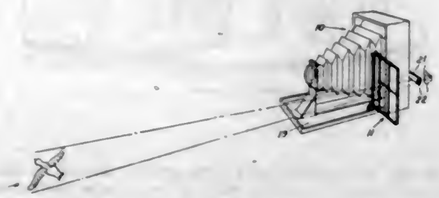
1. In an arc lamp, a pair of electrode holders for the electrodes, means including a member adjacent the arc flame and responsive to a predetermined position thereof for feeding one of said electrodes, and means including another member adjacent the arc flame and responsive to another position thereof for feeding the other of said electrodes.

1,684,818. RETRACTIBLE FLOAT FOR FLYING BOATS. VINCENT J. BURNELLI, New York, N. Y. Filed Dec. 31, 1927. Serial No. 243,871. 3 Claims. (Cl. 244—2.)



2. The combination with a flying boat having an airfoil, of a float in hinged relation at its rear portion to said airfoil, and means enclosed in the leading edge of said airfoil to move said float into extended and retracted positions.

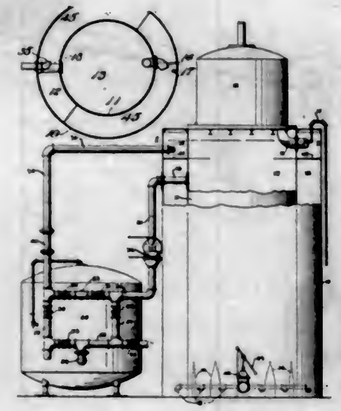
1,684,819. PRESSING-MACHINE ELEMENT. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Oct. 5, 1926. Serial No. 139,725. 11 Claims. (Cl. 68—9.)



11. A pressing element for pressing machines comprising a hollow metal body and thermostatic means within the body for distributing a heated medium throughout the pressing face of the body.

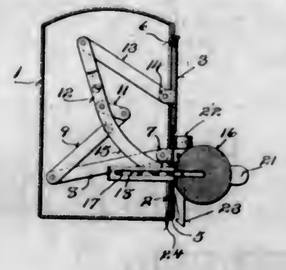
1,684,820. TYPEWRITING MACHINE. WILLIAM A. DOBSON, Bridgeport, Conn., assignor to The Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 20, 1925. Serial No. 63,605. 22 Claims. (Cl. 197—91.)

1. The combination with a typewriting machine having a carriage arranged for letter-space travel, a carriage-feeding mechanism therefor, and a pinion-and-rack arrangement for operatively connecting the carriage and the carriage-feeding mechanism, of means for back-spacing the carriage, said means including a depressible key near the keyboard of the machine, a carrier rotatably mounted upon the pinion, a normally-inoperative pawl mounted upon the carrier and arranged to first engage said pinion and then rotate with the pinion in a direction opposite to the letter-space rotation of the carriage, and means actuated by said key and operatively connecting said pawl.



1,684,821. VIEW FINDER FOR CAMERAS. THOMAS F. EASTMAN, Berkeley, Calif. Filed Dec. 23, 1925. Serial No. 77,343. 2 Claims. (Cl. 33—64.)

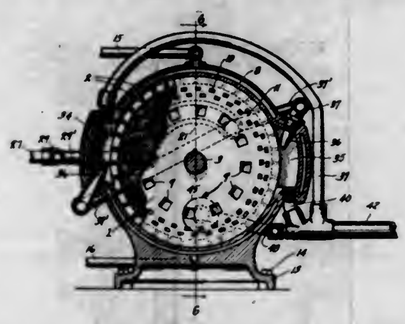
1. In combination with a camera having a hinged front cover, a frame, crossed wires in said frame, a joint pivotally connecting a corner of said frame to a free edge of said cover at the inner side thereof, a leaf member having a peep hole formed at one end thereof and pivoted at its other end to the camera; said leaf member and said frame being adapted to be swung into alignment positioning said hole and the intersection of said wires in a line parallel to the axis of the camera, or to be retracted to a protected position when not in use.



1,684,822. WATER-TREATMENT APPARATUS. WALTER H. GREEN, Chicago, Ill., assignor, by mesne assignments, to General Zeolite Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 4, 1919. Serial No. 342,349. 20 Claims. (Cl. 210—16.)

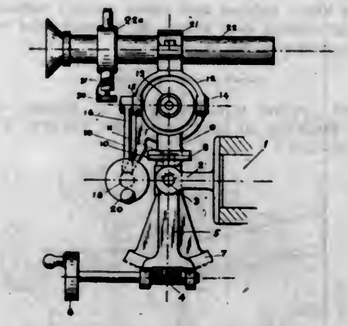
1. Water treatment apparatus comprising a settling tank having inlet and outlet chambers of substantially equal capacity and uniform cross section and in open communication at the lower ends thereof, means for introducing water to be clarified to the upper end of said inlet chamber, means for withdrawing said water when clarified from the upper end of said outlet chamber, a filter, means

for directing clarified water through said filter to the point of use, and means for directing clarified water through said filter in the reverse direction and returning the same to the upper end of the inlet chamber of said tank.



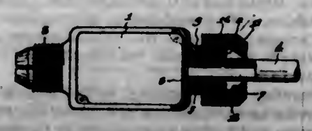
1,684,823. RURAL MAIL BOX. AUGUST H. HABIGHORST, Marinette, Wis. Filed June 6, 1927. Serial No. 196,851. 2 Claims. (Cl. 232—35.)

1. A mail box comprising a main casing, a door hingedly mounted thereon and spring urged towards closed position, a catch for temporarily holding said door in open position, a signal device adapted to be manually moved outwardly from said casing, and means connected with said door for retracting said signal device when said door is opened.



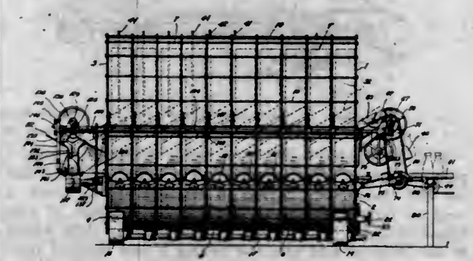
1,684,824. GAS TURBINE. JAMES M. HAWTHORN, Everett, Wash., assignor to The Duplex Gas Turbine Company, Inc., Everett, Wash. Filed Dec. 23, 1925. Serial No. 77,233. 3 Claims. (Cl. 60—41.)

1. A turbine of the character described, comprising a housing having inwardly opening gas supply and explosion chambers formed in oppositely disposed relation in its side walls and having exhaust pockets formed in said side walls, a rotor revoluble in the housing having peripheral vanes and a nozzle connected to receive gas from the said explosion chambers and to direct it against the vanes to drive the rotor; said rotor having outwardly opening



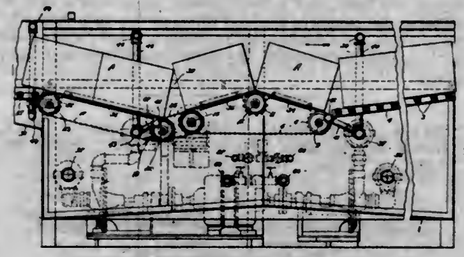
pockets in its opposite side walls adapted, as the rotor revolves, to pass in registration with the supply chambers, the explosion chambers and the exhaust pockets.

1,684,825. GUN SIGHT. JAMES BLACKLOCK HENDERSON, Lee, England. Filed June 23, 1920, Serial No. 391,188, and in Great Britain Sept. 19, 1919. 8 Claims. (Cl. 33—49.)



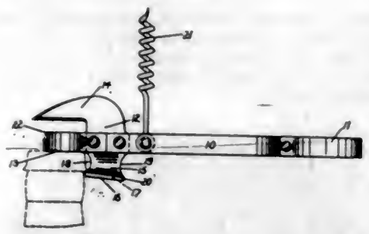
1. In a sighting apparatus for a gun mounted on an angularly moving platform, a sighting member adapted to bear a predetermined relation to a line between the gun and a distant object, a member connected to said sighting member and bearing a predetermined relation to the bore of the gun, and a continuously effective sighting member lying at a substantial angle to the first sighting member and connected to said members whereby they may be continuously maintained in a vertical plane as the platform moves to compensate for the effect of its angular movement.

1,684,826. CONDUIT CONNECTER. JOSEPH E. HILL, Detroit, Mich. Filed Jan. 31, 1927. Serial No. 164,792. 2 Claims. (Cl. 285—166.)



1. In combination with a hollow threaded member, a sleeve fitted in said member, a tapered head formed on one end of said sleeve and disposed outside said member, a nut threaded on said member and having a conical socket receiving said head, and an inwardly extending stop flange formed at the remaining end of said sleeve.

1,684,827. BOTTLE-WASHING APPARATUS. IRVING R. HIPPENMEYER, Waukegan, Ill., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed June 9, 1924. Serial No. 718,688. 12 Claims. (Cl. 141—7.)

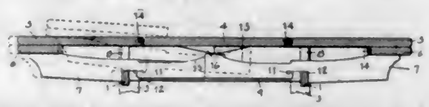


1. A machine of the class described, comprising a tank having a series of partitions forming compartments, a wheel in each of said compartments, said wheels being axially alined and synchronously rotatable, and a plurality of inclined bottle pockets carried by each of said wheels, the pockets of adjacent wheels being endwardly in register for the gravital passage of bottles from one to the other of said registering pockets, said partitions normally retaining the bottles in said pockets but having openings permitting their passage therefrom at intermittent intervals.

1,684,828. CASE-WASHING MACHINE. IRVING R. HIPPENMEYER, Waukegan, Ill., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed June 23, 1924. Serial No. 721,714. 3 Claims. (Cl. 141—1.)

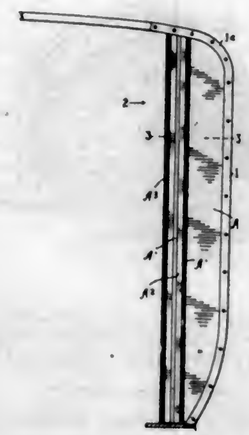
1. A case washing machine, comprising a tank adapted to contain washing fluid, a downwardly inclined gravity conveyor supported within and at one end of said tank and adapted for the movement of a series of cases into said tank, an endless conveyor belt operatively supported in the central portion of said tank having a doubly inclined carrying run adapted to receive cases from said gravity conveyor, said carrying run extending upwardly from adjacent the lower end of said gravity conveyor and downwardly toward the opposite end of said tank, a second endless conveyor belt operatively supported in said tank having an upwardly inclined carrying run positioned endwardly adjacent the downwardly inclined portion of said first conveyor belt and adapted to receive cases therefrom, and spraying devices positioned adjacent the lower ends of said conveyor carrying runs adapted to spray washing fluid upon the exposed ends of said cases passing in angularly tilted relation from the downwardly inclined to the upwardly inclined portions of said conveyors.

1,684,829. DOMESTIC HAND TOOL. JOHN JACOB HOELLE, Sydney, New South Wales, Australia. Filed Oct. 9, 1923, Serial No. 667,466, and in Australia Sept. 28, 1922. 2 Claims. (Cl. 65—46.)



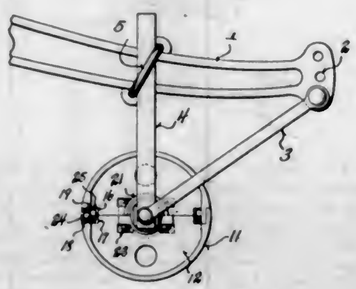
1. In a domestic hand tool, a frame forming a handle, a plate extending transversely through said frame adjacent one end thereof and having an arm one end of which is bent to form a flat plate disposed on one side of said frame, said flat plate extending in a plane at right angles to the plane of said arm and having a face inclined rearwardly with respect to an adjacent surface of said frame, said flat plate cooperating with the adjacent end of said frame in removing a bottle cap.

1,684,830. SAFETY-RAZOR-BLADE HOLDER. GEORGE F. HEFFELBOWER, Flint, Mich. Filed Sept. 10, 1925. Serial No. 55,449. 2 Claims. (Cl. 30—25.)



1. A safety razor blade holder having a bore formed therein and provided, adjacent one end, with a plurality of slits to form a spring chuck; a locking member mounted in a pair of diametrically opposite slits and extending across said bore; and a blade holder, comprising a pair of doubled-over members adapted for insertion into said slitted end and for straddling said locking member; and means for clamping said slitted end into engagement with said holder.

1,684,831. EXTENSION TABLE. LEONARD J. HILL, Grand Rapids, Mich. Filed Feb. 9, 1925. Serial No. 7,970. 5 Claims. (Cl. 45—112.)

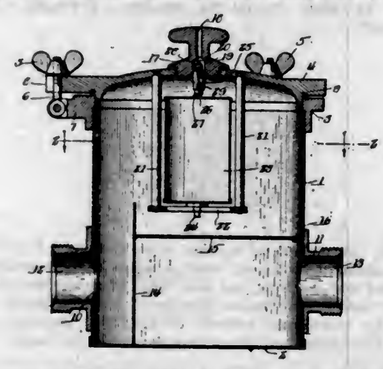


5. In an extension table, the combination of a bed comprising members having slide openings therein, a relatively fixed top member, a pair of adjustable top members adapted to telescope over said fixed top member or when extended to constitute extensions therefor, supplemental top members secured to the under sides of said adjustable top members and adapted to complement said fixed top member when the adjustable top members are collapsed over the same to collapse the table, cammed slides upon which said supplemental and adjustable top members are mounted arranged through said slide openings in said bed and having recesses in their under edges permitting the adjustable top members to drop to the plane of the fixed top member when the slides are extended, there being members on said fixed member coacting with the cams of said slides, and slideways having cam grooves therein operatively associated with said slides, said slides being provided with pins coacting with said grooves, for the purpose specified.

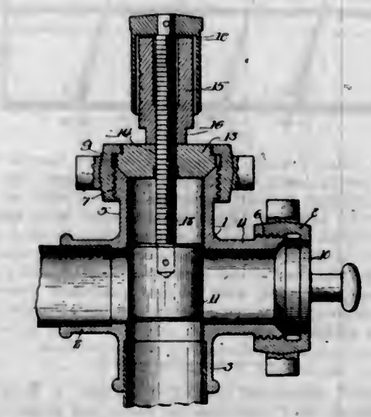
1,684,832. COMBINATION DOOR JAMB AND HANDHOLD. RALPH W. JENKINS, Daleville, Ind. Filed Aug. 11, 1927. Serial No. 212,343. 2 Claims. (Cl. 296—28.)

1. In combination with a pillar having integrally formed inturned hip, a vertical door frame member embodying an integrally formed door recess or channel, and an integrally formed rounded hand hold.

1,684,833. PLOW WHEEL. FRED E. KONELL, Wagner, Wis. Filed Oct. 10, 1927. Serial No. 225,227. 3 Claims. (Cl. 97—189.)



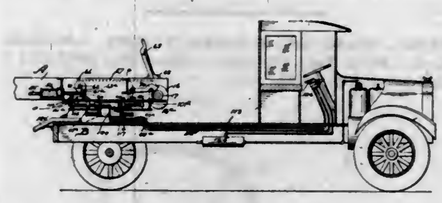
1. A plow wheel construction comprising a bushing, and a split wheel formed of two half sections bolted together and positioned around said bushing, said bushing having integral flanges at opposite sides engaging the side faces of the hub of the wheel.



1,684,834. DEAERATING APPARATUS. OLAF LARSEN, Fort Atkinson, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed July 9, 1926. Serial No. 121,292. 3 Claims. (Cl. 183—2.5.)

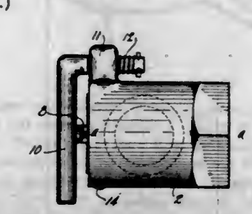
1. Apparatus for deaerating milk, comprising a container having an inlet opening and an outlet opening in its lower portion and having an air outlet in its upper portion, an imperforate partition in the lower portion of said container having an inlet opening and an outlet opening in its walls thereof and defining with said walls an upwardly opening space communicating with said inlet opening, and

a screen positioned intermediately of said container and extending laterally from said partition into contact with the side walls of said container to form therewith a chamber communicating with said outlet opening, said partition and said screen being freely removable through the upper portion of said container.



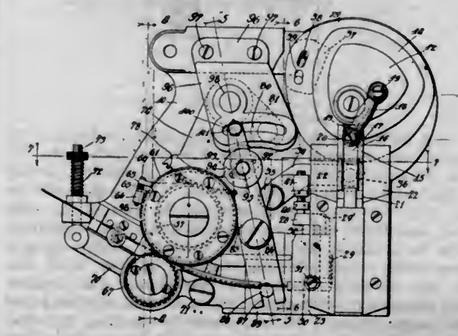
1,684,835. FLOW REGULATOR. OLAF LARSEN, Fort Atkinson, Wis., assignor to The Creamery Package Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed July 9, 1926. Serial No. 121,294. 2 Claims. (Cl. 251—77.)

1. A device of the class described, comprising a plunger adapted for operative association with a casing having a plurality of intercepting passages and to be positioned at the junction of said passages, said plunger being movable in one of said passages to control the flow of liquid between other of said passages at said junction, a screw supporting said plunger and adapted to extend endwardly outward of the passage in which said plunger is movable, a cap adapted to be stationarily supported at the end of said latter passage, said screw extending through said cap in threaded engagement therewith, a sleeve nut threaded on said screw, for outward abutment with said cap, and a ferrule fixed on said screw outwardly of said nut, said ferrule extending in overlying operative relation to said sleeve nut.



1,684,836. HYDRAULIC BRAKE AND COUPLING DEVICE FOR TRACTOR TRAILERS. CHARLES H. LAND, Detroit, Mich. Filed Apr. 24, 1926. Serial No. 104,333. 5 Claims. (Cl. 280—33.1.)

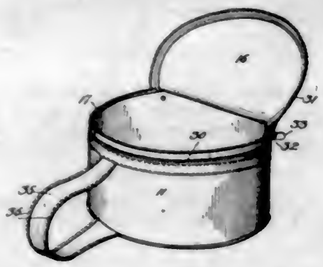
5. The combination of a tractor and trailer, a hydraulic braking system carried by the trailer, manually operable means also carried by the trailer for operating the hydraulic braking system, a compressed air actuating system carried by the tractor and co-ordinating with the hydraulic braking system of the trailer for operating said hydraulic system when the tractor and trailer are coupled,



and means carried by the tractor and arranged to automatically engage the manually operable means of the trailer for disconnecting the same from the hydraulic braking system when the trailer and tractor are coupled.

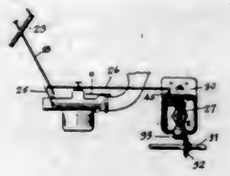
1,684,837. VALVE. SIMEON C. LAWLOR, Chicago, Ill. Filed Sept. 8, 1925. Serial No. 54,881. 2 Claims. (Cl. 251—135.)

1. In a valve, a cylindrical casing provided with an inlet port at one end and an outlet port on one side thereof, a valve seat formed in the casing adjacent the inlet port, a plunger carrying a gasket for engaging the valve seat to prevent flow of liquid from the inlet to the outlet port, said plunger movable endwise in the casing by fluid pressure past the outlet port to open the valve, and a pivoted clamping device, rotatable across the end of the casing opposite the inlet port in a plane parallel to the face of the plunger, which engages the plunger when the valve is closed and clamps the same in engagement with the valve seat, the movement of said plunger being limited by a pin and slot arrangement.



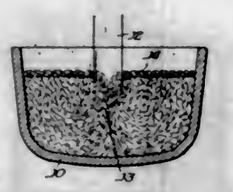
1,684,838. WIREWORKING DEVICE FOR STITCHING MACHINES. ERNEST LESCHHORN, Chicago, Ill., assignor to Latham Machinery Company, a Corporation of Illinois. Filed Jan. 28, 1924. Serial No. 688,908. 15 Claims. (Cl. 140—140.)

1. A wire working device for stitching machine comprising a frame, an adjustable wire feeding mechanism mounted on said frame, an adjustable wire cutting mechanism



mounted on said frame, and a lever pivoted to said frame and operatively related to said feeding and cutting mechanisms whereby said feeding and cutting mechanisms may be simultaneously adjusted.

1,684,839. HAND BAG. JOSEPH N. LOWE, New York, N. Y. Filed June 18, 1927. Serial No. 199,749. 3 Claims. (Cl. 206—8.)

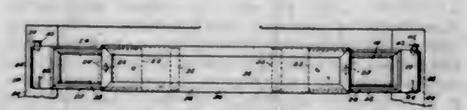


1. A hand bag, comprising a surrounding wall, opposite side walls, one of which is seamed around the bag to one edge of the surrounding wall and the other of which is secured to the wall for movement, so as to provide a mouth to the bag, fastening means for detachably securing the movable wall to the surrounding wall and closing the mouth, a flexible handle extending transversely of the surrounding wall and having one end secured at the edge of the said surrounding wall, and covering means for the other end of the handle, and between which covering means and the surrounding wall the said other end is applied to the said wall, said covering means adjoining the movable wall of the bag when the movable wall is closed.

1,684,840. CARBURETOR. MARION MALLORY, Toledo, Ohio. Filed Jan. 8, 1927. Serial No. 159,790. 1 Claim. (Cl. 123—106.)

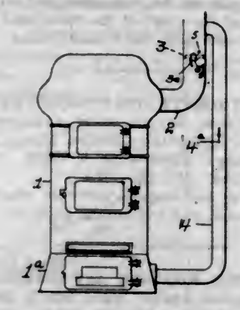
In a carburetor for an internal combustion engine, the carburetor having a passage-way communicating at one end with the intake of the engine, the carburetor having a fuel inlet communicating with the passage-way and an air inlet for said passage-way on the side of the fuel inlet opposite to the point of connection of the carburetor with the intake of the engine, a valve for closing the said passage-way and interposed between the air inlet and the fuel inlet, a second valve for closing the passage-way interposed between the fuel inlet and the intake of the engine, means for automatically opening the first named valve according to the speed of the engine, means for manually operating the second named valve, and means for manually operating the first named valve independently of the automatically operating means.

1,684,841. STEEL AND ITS MANUFACTURE. JOSEPH RUSSELL CORNELL MARSH, Arlington Heights, Ill., assignor to Francis Norwood Bard, Chicago, Ill. Filed Jan. 19, 1922. Serial No. 530,261. 6 Claims. (Cl. 75—27.)



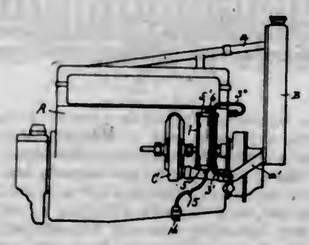
1. In the process of making steel, the steps which include adding a stream of moulten metal to loose graphitic material in flake form and in a state of subdivision to be highly mobile whereby the stream of moulten metal will form an intermixed current of graphitic material and metal to rapidly and completely carburize the metal.

1,684,842. FILING DRAWER. FRANK C. MORSE, Muskegon, Mich., assignor to Browne-Morse Company, Muskegon, Mich., a Corporation of Michigan. Filed Apr. 4, 1927. Serial No. 180,764. 2 Claims. (Cl. 129—16.)



1. A filing drawer having spaced-apart vertical sides and a bottom, each of said sides near its upper edge having a channel formed lengthwise thereof with an open inner side, and said bottom being formed with openings therethrough, a plurality of spacing plates located in the drawer extending between the sides thereof, tongues extending from the vertical edges of each plate and passing into said channels, and tongues extending below the lower edges of the spacing plates into the openings in the bottom of said drawer.

1,684,843. WINDOW CORNICE. AARON S. NEWMARK, Brooklyn, N. Y., assignor, by direct and mesne assignments, to Joseph Elsner and Joseph I. Lubin, New York, N. Y. Filed Oct. 31, 1927. Serial No. 230,148. 8 Claims. (Cl. 156—13.)

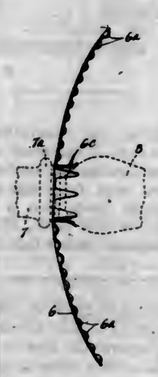


1. A window cornice, including an intermediate tubular section and channel-shaped end sections telescopically associated therewith and having longitudinally extending flange terminals, means carried by the intermediate section for clamping engagement with the flange terminals to retain the sections in relatively adjusted relation, the said end sections each having its free outer end directed rearwardly, brackets over which said ends are engaged, said brackets consisting of a base and forwardly projecting upper and lower arms, the former arm being slotted, and means carried by the rearwardly directed ends of the end sections for clamping the same to the slotted bracket arms.

1,684,844. HEATER AND DRAFT-GOVERNING MEANS THEREFOR. NELS OLSON, Superior, Wis. Filed Feb. 10, 1928. Serial No. 253,487. 5 Claims. (Cl. 196—293.)

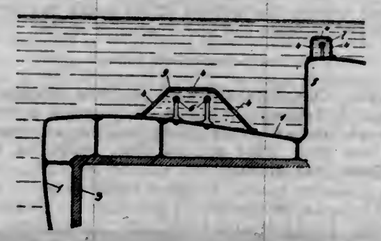
1. The combination with a heater, of a head flue, a base flue, an air supply valve in said head flue, a draft control valve in said base flue, and a flue common to said head and base flues, said common flue being positioned on the opposite side of said valve and damper from said heater.

1,684,845. ELECTRIC WATER HEATER FOR WATER-COOLED INTERNAL-COMBUSTION ENGINES. LEROY PARKER, Utica, and LOU E. MILLER, New Hartford, N. Y. Filed Mar. 3, 1925. Serial No. 12,915. 1 Claim. (Cl. 219—38.)



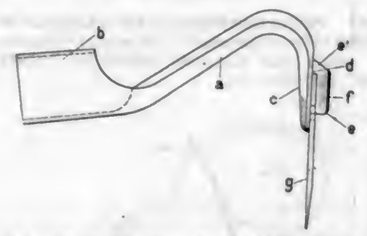
A device of the character described, comprising a double-walled shell having an air chamber between the walls thereof, a pipe coil within the shell and having its ends provided with means for attachment to the water circulating system of a water-cooled internal combustion engine, a hollow tie rod extending centrally through the shell and operatively connected to opposite ends thereof, an insulating support mounted on the tie rod and surrounded by the pipe coil and a heater coil, mounted on said support and having its ends extended into the tie rod and outwardly beyond one end thereof and provided with means for connection with a source of current supply.

1,684,846. POWER-DRIVEN SKIS. HERMAN E. PEARSON, Wayzata, Minn. Filed Apr. 14, 1924. Serial No. 706,334. 8 Claims. (Cl. 180—6.)



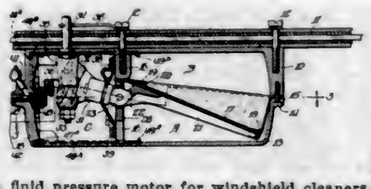
6. A ski comprising a pair of closely spaced runners, a platform connecting and bridging said runners and adapted to skim the snow, a steering blade upon said platform beneath the same arranged substantially centrally of the ski in both directions, means for operating the steering blade, and means engageable rearwardly of the ski for driving the same.

1,684,847. CHRISTMAS-TREE REFLECTOR WITH PROJECTIONS. LAMBERT L. RAYMOND, Minneapolis, Minn. Filed June 21, 1926. Serial No. 117,377. 3 Claims. (Cl. 240—103.)



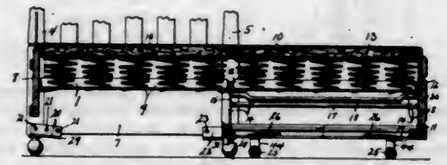
1. The combination with a lamp socket having a cylindrical front end with a shoulder thereon and a lamp bulb therein, of a reflector comprising a sheet metal member formed on a slight curve and having an aperture therein adapted to fit over said end of said lamp socket and abut said shoulder, said reflector having a plurality of spaced members projecting from its front surface about said aperture, the front portions of which are adapted to be engaged by said lamp bulb, whereby said reflector is pushed back against said shoulder and held firmly on said socket by said lamp bulb.

1,684,848. SUBMARINE DIRECTION FINDER. WILHELM RUDOLPH and GUSTAV WOLFF, Kiel, Germany, assignors to Signal Gesellschaft mit beschränkter Haftung, Kiel, Germany, a Firm. Filed Oct. 24, 1922, Serial No. 596,690, and in Germany Oct. 9, 1922. 3 Claims. (Cl. 181—26.)



2. In a submarine sound receiving plant associated with a ship and adapted to ascertain the direction of sound waves, a plurality of sound receivers, means for mounting said receivers at a fixed distance from the ship's body and rigidly connecting them thereto, a water-filled casing surrounding said receivers, said receivers being positioned so as to be freely accessible to the arriving sound waves from all directions.

1,684,849. DEVICE FOR FIRMLY ATTACHING EXCHANGEABLE BLADES TO HOES, MATTOCKS, OR THE LIKE. CARL EDUARD RÖGERBERG, Remscheid, Germany. Filed Mar. 9, 1928, Serial No. 260,402, and in Germany Jan. 4, 1927. 2 Claims. (Cl. 306—23.)

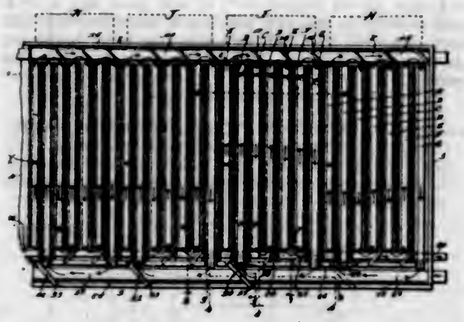


1. In a hoe or mattock, the combination of a neck, a broad flange with a flat face on the front end of said neck, a projection on the front surface of said flange dovetailed in cross-section toward said face and slightly tapered downwardly, a removable blade and a correspondingly tapered open-ended slot in said blade, the inner walls of said slot being perpendicular to the face of said blade.

1,684,850. WINDSHIELD CLEANER. STEPHEN G. SKINNER, Los Angeles, Calif., assignor, by mesne assignments, to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Filed July 2, 1924. Serial No. 723,614. 4 Claims. (Cl. 121—48.)

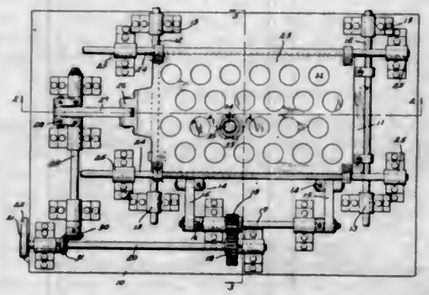
4. A fluid pressure motor for windshield cleaners, comprising a sectional housing, one section of which is provided with a transverse wall for dividing the same into two compartments, said wall having a slot opening through one edge and closed by the companion section, a bearing member disposed in the slot and held against displacement therefrom by said companion section, a lever pivoted in the bearing member and extending to opposite sides thereof into said compartments, a wiper operating member operable by one end of the lever, and a diaphragm dividing the compartment into which the opposite end of the lever extends, said diaphragm being connected to said opposite end of the lever, and said diaphragm having its marginal portions clamped between the sections of the casing and between said bearing member and said companion section.

1,684,851. CONVERTIBLE BED. LEOPOLD STICKLEY and GRANT I. TAYLOR, Syracuse, N. Y., assignors to Stickley Manufacturing Company, Eastwood, N. Y., a Corporation of New York. Filed Jan. 20, 1925. Serial No. 3,569. 1 Claim. (Cl. 5—21.)



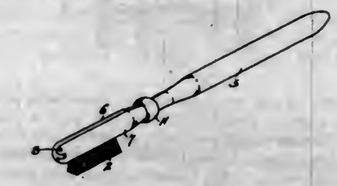
The combination with a single bed structure having a spring-supporting frame, of a collapsible single bed structure capable in collapsed condition of being moved underneath said spring-supporting frame, and inclined guides at the rear side of the single bed structure for elevating the rearside of the collapsible bed structure from contact with the floor, additional guides at the front of the single bed structure, and means on the collapsible bed structure for causing elevation of the front of the collapsible bed structure when moved over said last-named guides.

1,684,852. ELECTROLYTE FOR STORAGE BATTERIES. A. BENJAMIN WERBY, Newton, Mass., assignor to American Automotive Corporation, Boston, Mass., a Corporation of Delaware. Filed June 5, 1928. Serial No. 283,133. 7 Claims. (Cl. 136—154.)



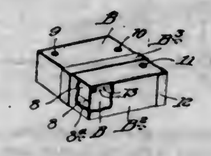
1. An electrolyte for storage batteries which includes sulphuric acid, water, and ammonium acetate.

1,684,853. MOTION STORAGE APPARATUS. EDWARD A. WHITE, Lewiston, Idaho. Filed Aug. 2, 1926. Serial No. 126,560. 12 Claims. (Cl. 198—19.)



3. In a motion storage apparatus, a motion storage table provided with a transfer belt, a plurality of bin belts travelling in opposite directions and terminating abreast of one side edge of said transfer belt whereby one bin belt will discharge onto and another bin belt will receive from said transfer belt, said bin belts including an egress and an ingress belt extending over said transfer belt, and a combination bin belt for receiving from said egress belt and delivering to said ingress belt.

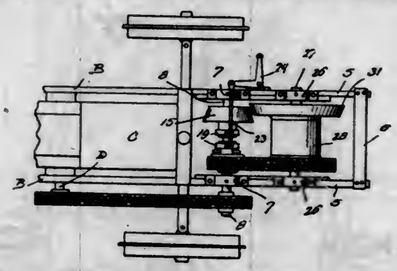
1,684,854. VALVE-SEAT-GRINDING MACHINE. JOHN A. YERKES and REES H. LEMMON, Long Beach, Calif. Filed Nov. 28, 1927. Serial No. 236,069. 6 Claims. (Cl. 51—29.)



1. A valve seat grinding machine comprising an oppositely faced plate and carriage, said plate and carriage being movable transversely of one another, means in said carriage for accommodating one of the members of a ball and seat or the like and whereby said member is urged toward said plate, said plate supporting the other member of said ball and seat, and means to move said carriage and plate relative to one another in recurring cycles.

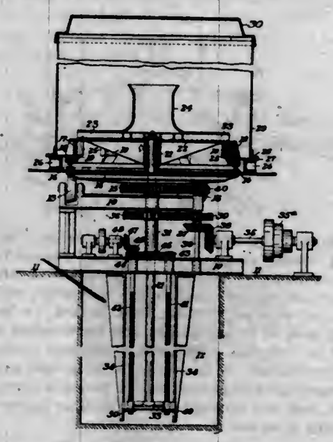
1,684,855. BRUSH STRUCTURE. JAMES M. ACHESON, Los Angeles, Calif. Filed Dec. 12, 1927. Serial No. 239,571. 2 Claims. (Cl. 15—195.)

1. A tooth brush including a handle having a shank part, a clamp member pivoted on said part and each being recessed to form a chamber with a convergent mouth between opposed longitudinal faces, and a brush body unit of strands; said unit being medially folded between the said clamping faces; the narrow mouth of the chamber closely compacting the strands above the fold.



1,684,856. DRY-BATTERY PACKAGE. HERMAN R. C. ANTHONY, Madison, Wis., assignor to French Battery Company, Madison, Wis., a Corporation of Wisconsin. Filed Oct. 15, 1926. Serial No. 141,762. 2 Claims. (Cl. 136—132.)

1. A battery package comprising a battery equipped with terminals and a carton consisting of telescopically nested cardboard bands secured together in nested condition by adhesive tape, a wall of said carton being spaced from the terminal-equipped wall of said battery and provided with perforations registering with said terminals and a spacing strip interposed between said walls.

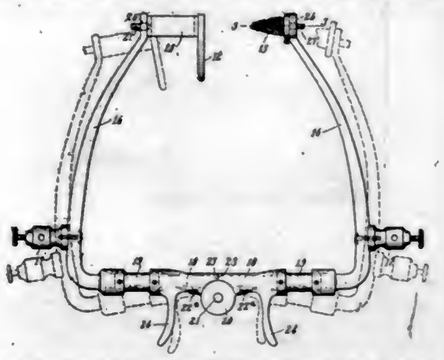


1,684,857. POWER WINCH FOR TRACTORS. CHARLES R. APPLEBY, Bolivar, N. Y. Filed Mar. 16, 1927. Serial No. 175,791. 1 Claim. (Cl. 254—166.)

In a power winch for tractors, a pair of longitudinally extending spaced frame bars rigidly secured to the forward end of the tractor, a U-shaped bar connecting at its ends to the respective frame bars and at the bottom sides thereof, the main power shaft journaled transversely of said frame bars, a driving connection between the shaft and the power take-off shaft of the tractor, a clutch upon said shaft including an internal clutch member having a sprocket upon its outer face and loose upon the shaft, and a clutch member splined upon the shaft and constructed for engagement with the first clutch member to cause the locking of said members to said shaft, a gear splined upon said shaft adjacent its opposite end, a shaft journaled upon said bars forwardly of the first-mentioned shaft, the cable drum operatively associated with said shaft, a sprocket upon one end of the drum in alinement with the sprocket upon the first-mentioned shaft, a chain connection between said sprockets, a gear upon the opposite end of the drum, and single means for causing the actuation of the movable member of the clutch and said gear upon the first mentioned shaft, whereby the drum may be rotated in reverse directions, said means consisting of a pair of levers having their lower ends pivotally connected in the U-shaped member, and in spaced relation to each other, one of said levers being operatively connected to the splined clutch member, the opposite lever being operatively connected to the gear, said levers being

connected at their upper ends, and a single throw lever operatively associated with one of said levers to cause the simultaneous parallel movement of the levers, when said throw lever is actuated.

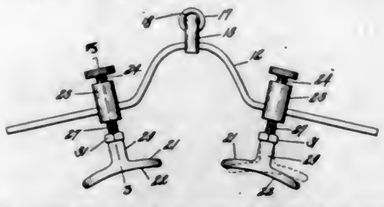
1,684,858. METHOD OF AND APPARATUS FOR FORMING CONCRETE PIPE. CHARLES F. BUENTE, Pittsburgh, Pa., assignor to Concrete Products Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 25, 1923. Serial No. 653,061. 13 Claims. (Cl. 25—30.)



1. The method of forming concrete articles having a circular inner surface, comprising feeding and placing plastic material into the interior of a rotating form and subjecting the material to centrifugal force within the form during the feeding thereof and before the material is influenced by the centrifugal force of the form, subjecting the placed material to further centrifugal force by the movement of the form, and troweling the interior of the article after the material has been placed, substantially as described.

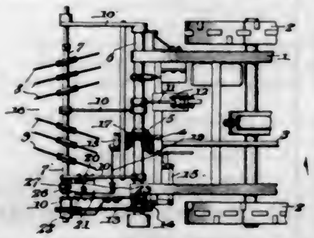
5. Apparatus for forming concrete articles including a mold, a rotatable feeder having a radially extending portion adapted for imparting centrifugal force to the material, said portion terminating in a discharge opening which lies substantially at the interior face of an article formed in the mold and means for rotating the feeder.

1,684,859. DIATHERMY AND GALVANIC EAR SET. DR FORREST B. CATLIN, Boston, Mass. Filed Aug. 11, 1926. Serial No. 128,613. 4 Claims. (Cl. 174—89.)



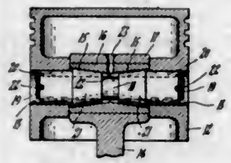
1. A diathermy ear set comprising a pair of electrodes formed to be engaged with and supported by the ears of a patient; a yoke connecting the electrodes and composed

of conducting arms contacting with the electrodes and having binding posts, and a neck connecting the arms and insulating them from each other, the neck including mem-



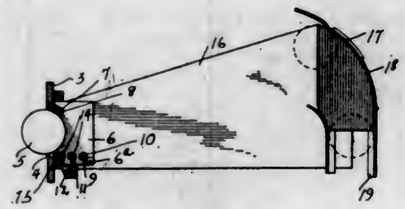
bers connected by a stop hinge and provided with a spring normally extending said members and maintaining the electrodes spaced a minimum distance apart.

1,684,860. EYE-TREATING APPARATUS. DE FOREST B. CATLIN, Boston, Mass. Filed Mar. 12, 1927, Serial No. 174,838. Renewed Feb. 9, 1928. 4 Claims. (Cl. 174—89.)



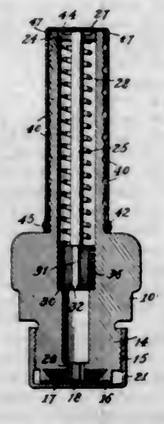
1. Eye-treating apparatus comprising an electrode-supporting conductor having means for connection with a source of remedial current, and a double electrode whose members are spaced apart on the conductor, each member having an annular contact face formed to bear on an annular area of closed eyelids, and surrounding an opening formed to coincide with eyeball portions containing the crystalline lenses of the eyes, the area and arrangement of the openings being such that the remedial current passes around, and not through, the crystalline lenses when the apparatus is in use.

1,684,861. AGRICULTURAL MACHINE. JACOB AUGUST DIRSCHAUER, Evansville, Ind. Filed Aug. 25, 1927. Serial No. 215,476. 2 Claims. (Cl. 97—40.)



2. In an agricultural machine, the combination with a gang of soil-treating discs mounted for rotation and for bodily shifting laterally as a unit, of a rocker and a crank and connecting rod constituting means for reciprocating said discs laterally as a unit, and means for driving said shifting means and for rotating the discs while they are being reciprocated.

1,684,862. JOINT FOR PISTONS AND CONNECTING RODS, ETC. ALFRED F. GAY, Brockton, Mass., assignor to Henry J. Lupien, Brockton, Mass. Filed Dec. 3, 1927. Serial No. 237,436. 8 Claims. (Cl. 74—108.)



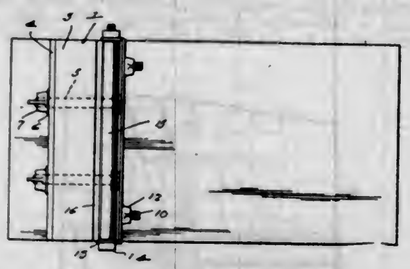
1. A joint of the character stated, comprising a tapered wrist-pin bearing in a connecting-rod, and a composite wrist-pin having cylindrical journals fitting the cylindrical wrist-pin bearings in a piston, and a tapered journal fitting the tapered bearing in the connecting-rod, said joint including manually operable means for longitudinally adjusting, and confining in any adjusted position, the tapered journal portion of the wrist-pin, to compensate for wear.

1,684,863. COIN-PROPELLING DEVICE FOR VENDING MACHINES. GARNET P. GRANT, New York, N. Y. Filed June 5, 1925. Serial No. 35,237. 3 Claims. (Cl. 194—97.)

3. A coin operating device comprising an insertion element, fixed friction reducing means and resiliently supported friction reducing means disposed adjacent the insertion element and a chute in alinement with and at a point removed from the insertion element.

1,684,864. CYLINDER AND TIRE GAUGE. HENRY P. GROHN, Chicago, Ill. Filed May 7, 1926. Serial No. 107,451. 2 Claims. (Cl. 73—111.)

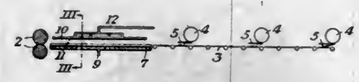
1. A gauge consisting of a body having a two-diameter bore, an inwardly extending gasket receiving flange at one end of the body, a hollow cylindrical grooved sleeve



extending from the body, a centrally perforated guide plug within said sleeve and closing the end thereof distant from the body, a piston in said body movable into said sleeve, a stem carried by said piston projecting thru said plug, a spring surrounding said stem and engaging the plug and piston, a cap surrounding said sleeve, and a ring held by said cap and engaging in order the grooves of the sleeve to prevent automatic return of the cap.

1,684,865. HAM-CURING DEVICE. BERTRAM HANSEN and PETER J. KAMION, Syracuse, N. Y. Filed Jan. 3, 1928. Serial No. 244,192. 5 Claims. (Cl. 99—2.)

5. In a meat curing device, a valve case having a valve chamber and co-axial ports leading to and from said chamber at right angles thereto, a plunger valve movable in said chamber and provided with a transverse passage movable into and out of registration with said ports as the plunger is reciprocated, yielding means normally holding the valve in its closed position, means operable at will for opening the valve, a handle secured to one side of the valve case and provided with a passage alined with said ports, a guide tube secured to the other side of the valve case in alinement with said ports, a delivery tube reciprocally movable endwise of and within the guide tube and having its distal end provided with a tapered entrant member and an outlet opening normally closed by said guide tube, yielding means for holding the guide tube in its normal position, and means actuated by the opening movement of the valve for shifting the delivery tube from its normal position to open the outlet.

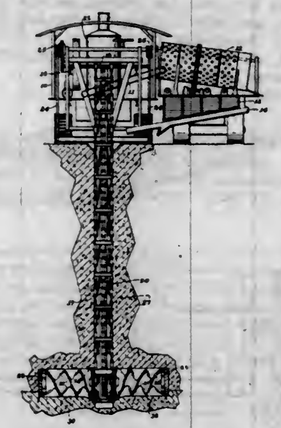


1,684,866. SHEARS SHARPENER. GRANT JARBOE, Findlay, Ohio. Filed Apr. 9, 1927. Serial No. 182,405. 4 Claims. (Cl. 76—82.)

4. As a new product of manufacture, a base, a blade clamping vise supported thereon and comprising a wooden backing block, blade clamping means on one side of the block, a file rest and manipulating roller on the opposite side of the block, and means for adjustably mounting said roller on said block.

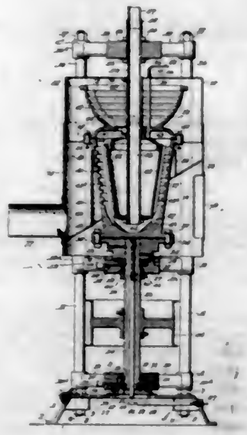
1,684,867. METHOD AND APPARATUS FOR HANDLING STRIPS. LANE JOHNSON, Ingram, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 26, 1924. Serial No. 758,026. 4 Claims. (Cl. 80—32.)

1. In a strip mill, a roll stand, a plurality of coiling devices cooperating with said roll stand but located at different distances therefrom, means for guiding strip from said roll stand but located at different distances therefrom, means for guiding strip from said roll stand to any of said coiling devices at will, and means insuring delivery



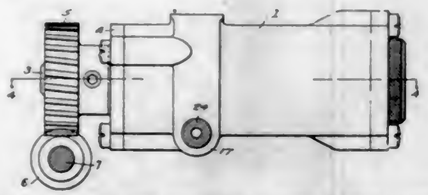
of said strip to all of said coiling devices at substantially the same temperature irrespective of their distance from the roll stand, substantially as described.

1,684,868. PRODUCTION OF RESINS. IRVIN H. JONES, Manhattan, Ill., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 2, 1924. Serial No. 723,830. 4 Claims. (Cl. 260—7.)



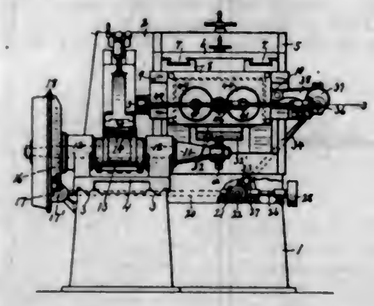
1. The process of making light colored coumarone resin from solvent naphtha, which comprises subjecting the solvent naphtha to a preliminary polymerizing treatment to polymerize resin-darkening bodies therein, distilling the naphtha to separate it from the polymerized resin-darkening bodies held in solution, carefully fractionating the naphtha to eliminate substantially all traces of its resin-darkening and resin-softening constituents having boiling points below about 145° C. and above about 205° C., and thereafter subjecting the naphtha so treated to a resin polymerizing treatment.

1,684,869. PLACER-MINING MACHINE. FERDINAND H. KRUEGER, Milwaukee, Wis. Filed Apr. 13, 1923. Serial No. 631,834. 6 Claims. (Cl. 37—87.)



1. A placer mining machine, comprising a vehicle, a downwardly extending trench frame provided with an endless chain and bucket trench digger swingingly carried by said vehicle for digging a vertical trench, and reversely threaded spiral excavators and conveyers carried by the lower end portion of the trench frame for digging laterally extending extension trenches on opposite sides of the vertical trench and removing the mineral bearing earth therefrom to a position to be engaged by the buckets of the vertical trench digger, the spiral portions of said excavators extending entirely around the excavators.

1,684,870. CENTRIFUGAL CONCENTRATING AND AMALGAMATING APPARATUS OF THE VERTICAL TYPE. FRANK D. LEWIS, Denver, Colo. Filed Oct. 17, 1927. Serial No. 226,711. 7 Claims. (Cl. 209—199.)

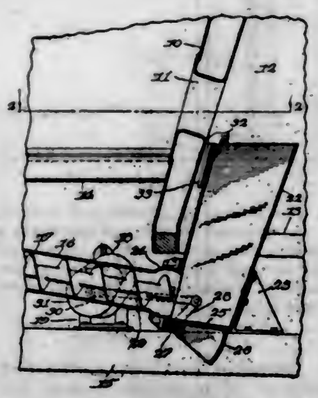


1. In an amalgamating and concentrating apparatus of the character described, the combination with a vertically disposed shaft and means for rotating the same; of a hollow tapered cylinder secured upon the top of said shaft the inner face of which is provided with spaced annular mercury-receiving grooves and terminates in a dome-like bottom, a bowl secured upon said cylinder having an opening in the bottom communicating with said cylinder, a stationary feed pipe extending through said opening and terminating near the bottom of said cylinder, a tapered element on said feed pipe for defining an annular space in said cylinder next the wall thereof, a disk on said feed pipe in relation to the opening in said bowl for controlling the outflow from the cylinder, said bowl having a plurality of annular grooves in its inner face.

1,684,871. SPINNING PUMP. CHARLES W. LAWSER, Bala, Pa., assignor to Wicaco Screw & Machine Works, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 29, 1926. Serial No. 157,764. 8 Claims. (Cl. 103—102.)

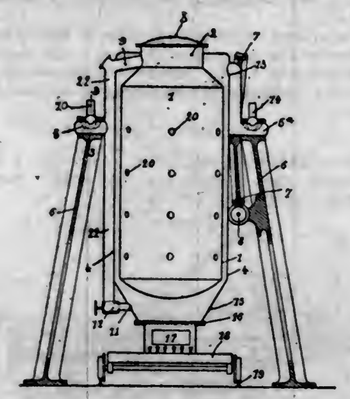
1. A spinning pump comprising a casing having a cylindrical chamber and a solid transverse portion offset laterally with respect to the axis of said chamber and having at opposite sides thereof ports communicating with the chamber, means for clamping the cylinder pivotally between elements respectively engaging the casing at said ports, said clamping elements having passages communicating with said ports whereby the connection between the ports and the passages is maintained regardless of the angular position of the casing with respect to the pivotal axis, a rotor mounted in the casing, means operatively associated with the rotor for drawing a fluid substance into the casing through one of said ports and the associated clamping element and for discharging it through the other port and clamping element, a cylindrical extension on the rotor projecting through an end of the casing, a gear on said projection, and power means operatively connected with said gear for rotating the rotor in the cylinder.

1,684,872. GEAR-LAPPING MACHINE. CHARLES H. LOGUE, Syracuse, N. Y. Filed July 3, 1925. Serial No. 41,298. 6 Claims. (Cl. 51—52.)



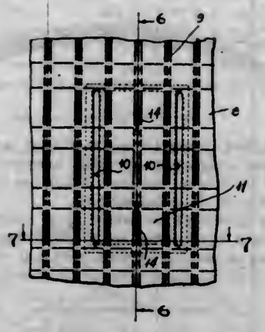
1. In a gear lapping machine, an abrasive element, a gear supporting element, means for rolling the gear with one face of one of its teeth against the abrasive element, and means for moving one of said elements lengthwise and transversely of the axis of the gear.

1,684,873. MELTABLE ADHESIVE. ERSKINE DANIEL LORD, Cambridge, Mass., assignor to McLaurin-Jones Co., Brookfield, Mass., a Corporation of Massachusetts. Filed July 11, 1924. Serial No. 725,392. 6 Claims. (Cl. 87—17.)



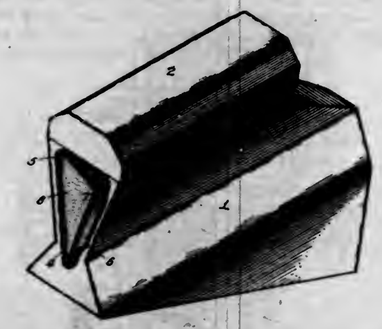
1. A meltable waterproof adhesive comprising a substantial percentage of fatty acid pitch, and a smaller percentage of wax.

1,684,874. LOCOMOTIVE STOKER. NATHAN M. LOWER, Pittsburgh, Pa., assignor to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed June 11, 1926. Serial No. 115,177. 4 Claims. (Cl. 110—101.)



1. A stoker for locomotives comprising a transfer conduit and a riser angular in cross-section receiving and leading upwardly from the conduit, means within the conduit for applying pressure to the fuel within the riser, and a swinging fuel lifter at the lower end of the riser.

1,684,875. APPARATUS FOR THE CARBONIZATION AND DISTILLATION OF WOOD. RAPHAËL MALBAY, Paris, France. Filed Apr. 21, 1925, Serial No. 24,887, and in France May 5, 1924. 4 Claims. (Cl. 202—3.)



1. An apparatus for the carbonization of wood comprising a fixed frame, an elongated retort having two spaced walls forming a substantially annular chamber, trunnions carried by the outer wall of said retort and rotatably supported by said frame, the axis of said trunnions being at right angle to the longitudinal axis of said retort, a distillation gas collecting conduit and a burnt gas exhaust conduit, said conduits opening respectively into the retort and into said annular chamber and having parts extending respectively through said trunnions, a branch pipe opening at one end into said collecting conduit and at the other end into said annular chamber, means for burning the gas delivered from said branch pipe into said annular chamber, and means for rotating said retort about said trunnions.

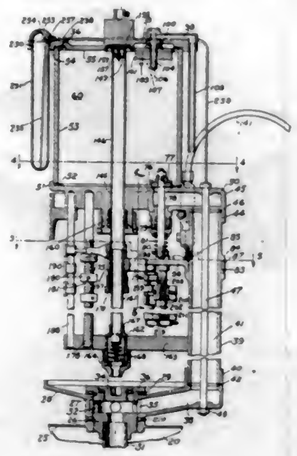
1,684,876. WEARING APPAREL. JOSEPH M. I. MABIN, Jersey City, N. J. Filed June 2, 1926. Serial No. 113,204. 1 Claim. (Cl. 2—120.)

As a new article of manufacture a shirt for men's wear comprising a bosom portion, a back and sleeves, the bosom portion formed with a plurality of pairs of longitudinal slits, said slits forming intervening tabs continuous of and integral with the shirt, and with backing plies stitched to the shirt bosom back of the slitted portion, the said bosom portion being provided with button holes between each pair of slits, for the reception of the buttons on the waist portions of trousers.

1,684,877. SANITARY DISPENSING DEVICE. ELMER C. MORRIS, Chicago, Ill., assignor, by mesne assignments, to Servo-Paper Corporation, a Corporation of Illinois. Filed Sept. 17, 1923. Serial No. 663,118. 13 Claims. (Cl. 312—61.)

1. A dispensing device for articles folded to form an acute angle between elongated sides, said device comprising an elongated container having a dispensing opening at one end and a base declined toward the end having the dispensing opening, said container having its opposite sides inwardly angled along an intermediate part to provide outwardly flared upper and lower guides, the upper guide being adapted to engage the elongated sides of the articles, a follower slidable along the container having a restricted intermediate part and flared upper and lower parts to travel respectively in the upper and lower guides of the container, and means for moving the follower along the container toward the end having the dispensing opening.

1,684,878. FOLDED-SHEET OBJECT AND METHOD OF FORMING SAME. ELMER C. MORRIS, Chicago, Ill., assignor, by mesne assignments, to Servo-Paper Corporation, a Corporation of Illinois. Filed Mar. 3, 1924. Serial No. 696,492. 5 Claims. (Cl. 206—57.)



1. As an element of a package to be dispensed through an opening in a dispensing cabinet, a paper napkin first folded in a rectangular form and then two diagonally opposite corner portions folded to form an elongated intermediate portion, with the folded corner portions in mutually overlapping relation and overlying the intermediate portion to provide free triangular tabs on the middle part of the intermediate portion.

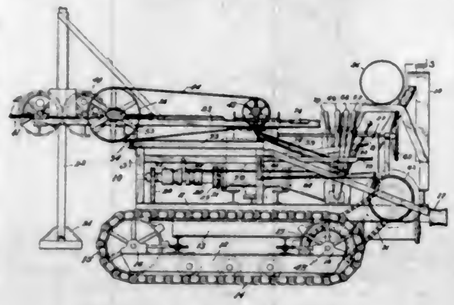
1,684,879. APPARATUS FOR DISPENSING LUBRICATING OIL. HENRY R. NEWMAN, Los Angeles, Calif., assignor to Boyle Manufacturing Company, Los Angeles, Calif., a Corporation of California. Filed Feb. 15, 1926. Serial No. 88,248. 14 Claims. (Cl. 221—103.)

6. A dispensing apparatus comprising: a service chamber; means for forcing a liquid into said service chamber; a vertical service tube extending into said service chamber, said service tube being vertically slidable so that it may be moved downwardly from zero position into different dispensing positions; a valve adapted to close said service tube when it is in zero position; means for placing a pressure on said liquid in said service chamber for dispensing

said liquid through said service tube when said service tube is in any dispensing position; means for preventing a flow of liquid through said service tube except when said

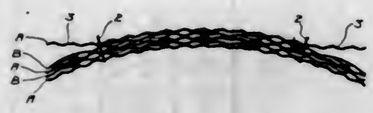
pressure is applied in said service chamber; and counter means for separately counting the different quantities of liquid dispensed.

1,684,880. PUMP. ARTHUR G. NORTON, Holley, N. Y., assignor to Alert Products, Inc., Holley, N. Y., a Corporation of New York. Filed Aug. 8, 1927. Serial No. 211,271. 2 Claims. (Cl. 4—255.)



1. A pump comprising a cylinder having an outwardly extending roll at one end and also having a uniform exterior diameter above said roll, and a sealing cup formed of rubber and having a sleeve at one end with a uniform interior diameter throughout and a shoulder at the inner end of the sleeve engaging behind the roll on the cylinder, the interior diameter of the sleeve when detached from the cylinder being less than the external diameter of the cylinder and the sleeve being held in a stretched condition in engagement with the external wall of the cylinder and behind such outwardly extending roll.

1,684,881. PROCESS OF DYEING FIBROUS MATERIALS. JOSEPH NÜSSLEIN, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Nov. 23, 1926, Serial No. 150,384, and in Germany Dec. 7, 1925. 4 Claims. (Cl. 8—6.)

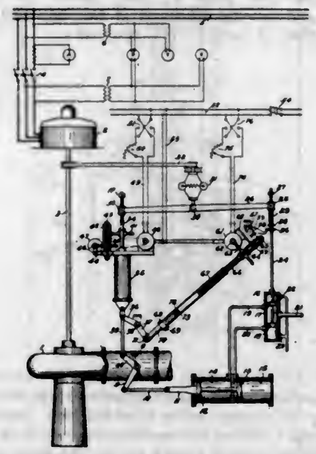


1. The process of producing dyeings on fibrous materials which consists in applying to the fibre a mixture comprising an aromatic amine, practically insoluble in water, water and a water-soluble emulsifying agent, and oxidizing the amine.

1,684,882. TAMPING MACHINE. AUGUSTUS J. PENOTE, Cleveland, Ohio. Filed Oct. 30, 1924. Serial No. 746,785. 15 Claims. (Cl. 94—40.)

9. A unitary, vehicular machine comprising a supporting frame, a tamper mechanism for tamping down material on the ground surface adjacent the path of the machine and actuating mechanism for operating a scraper device for movement horizontally and transverse of the path of the machine.

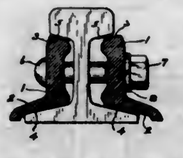
1,684,883. BRAKE SHOE AND METHOD OF MAKING THE SAME. CLIFTON D. PETTIS, New York, N. Y. Filed Dec. 16, 1926. Serial No. 155,176. 14 Claims. (Cl. 29—148.)



1. The method of preparing a multipart metal insert for placing within a casting mold, which consists in assembling the parts of the insert, and then deforming at least a part thereof to provide a spacing member.

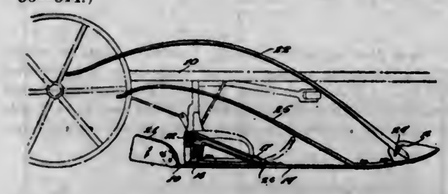
14. As an article of manufacture, a reenforcing insert for brake shoes constructed to be embedded therein, said insert having a portion thereof bent out of the normal plane to provide spacing means for the insert.

1,684,884. PRIME-MOVER-CONTROLLING MEANS. ARNOLD PFAU, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Sept. 11, 1924. Serial No. 737,021. 10 Claims. (Cl. 137—158.)



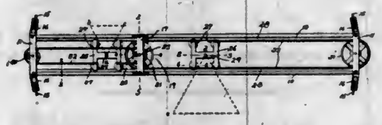
4. In a control system for a prime mover, a gate for controlling the admission of operating fluid to said prime mover, governing means for controlling said gate opening including means responsive to the speed of said prime mover for maintaining said speed at a selected value

under normal running conditions, means for robbing said governing means of its control of the maximum gate opening while still permitting operation of said prime mover,



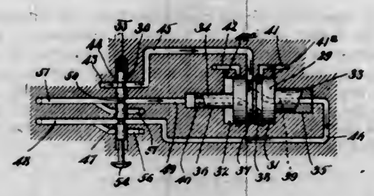
a motor for operating said control-robbing means, and means disposed at a desired distance from said motor for controlling the same.

1,684,885. RAIL-CONNECTING DEVICE. PLINY P. PIPES, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Dec. 23, 1926. Serial No. 156,537. 10 Claims. (Cl. 238—243.)



1. A rail joint comprising two alined and abutting rails, splice plates disposed on opposite sides of the rail between the head and base, a coating of metal having a higher specific conductivity than that of the rail applied to the surface of the plates and integrally united thereto and means to draw the plates into position relative to the rails and the said coatings into contact with the rail surface.

1,684,886. DIVIDER. ULDEGE A. RABIE, Yakima, Wash. Filed June 10, 1925. Serial No. 36,260. 1 Claim. (Cl. 56—314.)



A divider attachment for a mower of the type having a sickle bar and tail-piece, said divider comprising an elongated shoe extending perpendicularly to the sickle bar and detachably mounted on the tail-piece, the shoe being also adjustable on said tail-piece to cut grass of different heights at different times; said shoe being angularly twisted at its rear end to define a laterally inclined lug, a divider board attached to said twisted portion of said shoe to throw grass to the rear of the mower into a withdraw; an inwardly and upwardly turned plate formed from the end of the shoe, a dividing finger projecting through said plate and adjustably mounted thereon, and a second finger non-adjustably connected to the shoe, the angle of the upward and inward twist of the two fingers being approximately the same.

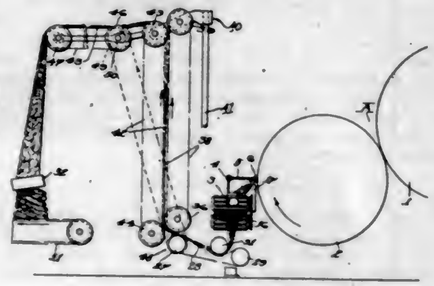
1,684,887. PANTOGRAPH. LAT RIDGWAY, Canon, Ga. Filed Aug. 4, 1927. Serial No. 210,642. 3 Claims. (Cl. 33—23.)

1. In a pantograph, the combination of an elongated frame having a longitudinal guideway, means for pivoting the frame at an intermediate point, a carriage mounted in each end of the frame to travel in the guideway with the carriages on opposite sides of the pivotal point of the frame, a stylus mounted in each carriage, a double-rimmed pulley mounted on the frame with its axis alined with the pivotal axis of the frame, the rims of the pulley having diameters in proportional relation to each other, and bands respectively connected with the opposite carriages and each band being looped around one of the rims of the double pulley so that the travel of one of the carriages is transmitted to the other carriage with the travel of the carriages in proportional relation.

1,684,888. DRILLING MECHANISM. THORE R. E. RUNDQVIST, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 13, 1924. Serial No. 699,111. 15 Claims. (Cl. 121—9.)

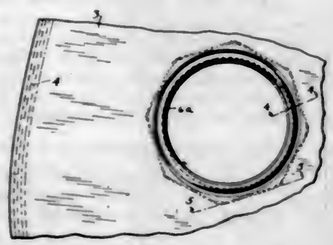
1. A drill mechanism comprising a tool actuating motor, feeding means therefor including relatively movable elements, means including a valve to subject one of said elements to opposing fluid pressure created forces for automatically maintaining said feeding means in a substantially balanced condition, said valve moving oppositely automatically in accordance with variations in said forces to control the supplies of finid which produce said forces, and means including a valve operable at the will of the operator for controlling said automatic means.

1,684,889. DOUBLE-ACTING DRAWER AND SLIDE THEREFOR. CHARLES L. RUSS, Little Rock, Ark. Filed Apr. 2, 1928. Serial No. 266,626. 7 Claims. (Cl. 45—77.)



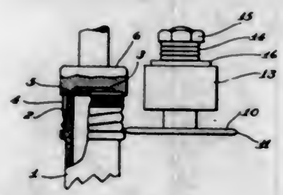
1. In combination, a fixed guide member, a double acting slide adapted to be moved in either direction with reference to the guide member, said double acting slide comprising relatively movable supporting and extension slide members, means for automatically locking the sup-

porting and extension slide members together when the two are telescoped, means for automatically releasing the slide members as the slides are moved upon the guide



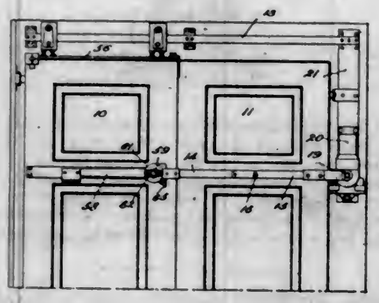
member, and frictional means for retarding the movement of the supporting slide with reference to the extension slide.

1,684,890. METHOD OF AND APPARATUS FOR TRANSFERRING CARDED MATERIAL. JOSEPH F. SCHIMEK, Worcester, Mass., assignor, by mesne assignments, to Whitin Machine Works, Whitinsville, Mass., a Corporation of Massachusetts. Filed Apr. 9, 1927. Serial No. 182,408. 6 Claims. (Cl. 19—155.)



1. In apparatus of the class described, the combination with the doffer cylinder of a carding machine, of a pair of converging and downwardly moving aprons, having a substantial gap therebetween, and spaced surfaces located in the gap beneath said aprons movable about axes parallel to the axis of the doffer cylinder, whereby to gather carded material into a ribbon, the width of which is determined by the gap between said aprons.

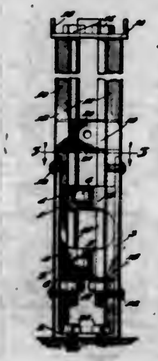
1,684,891. METAL CONTAINER. ANTHONY SCHROEDER, Cleveland, Ohio, assignor of one-half to James Merle Finney, Cleveland, Ohio. Filed May 19, 1925. Serial No. 31,305. 6 Claims. (Cl. 220—39.)



1. A bung ring comprising a neck and a body portion forming a seating base and having flat side walls disposed at angles to each other and a land on said seating base at each corner formed by said side walls.

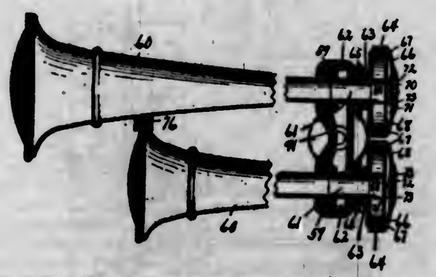
1,684,892. METHOD OF APPLYING CLOSURE CAPS TO CONTAINERS. JOHN E. SHARP, New Kensington, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Original application filed June 4, 1924, Serial No. 717,724. Divided and this application filed Jan. 29, 1927. Serial No. 164,580. 2 Claims. (Cl. 226—87.)

1. The method of applying a closure cap to a receptacle having an externally screw-threaded top, which comprises placing a skirted cap on the receptacle, and progressively spinning a screw thread on the cap skirt beginning the thread at the upper and completing it at the lower threaded portion of the receptacle.



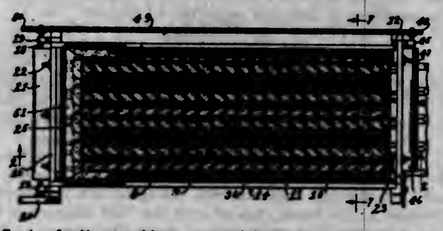
1,684,893. DOOR OPENING AND CLOSING MEANS. HAROLD W. SHONNARD, Montclair, N. J., assignor to Elevator Supplies Company, Inc., a Corporation of New Jersey. Filed Oct. 9, 1925. Serial No. 61,623. 4 Claims. (Cl. 268—55.)

1. In a door operating device, a unitary support adapted for attachment against a wall comprising a horizontal guide rail, a side plate fixed at right angles thereto near one end thereof and means near the lower end of said side plate adapted to afford a pivotal support to a toggle bar.



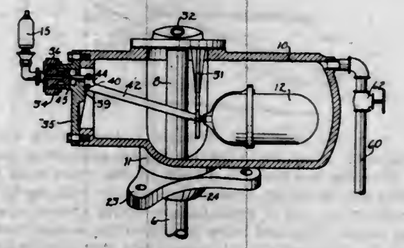
1,684,894. POST ANCHOR. SAMUEL SMILEY, Jr., Cincinnati, Ohio, assignor to The Globe-Wernicke Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 5, 1928. Serial No. 259,069. 4 Claims. (Cl. 189—39.)

2. A device for anchoring the base of a post to a floor, comprising, an element having a base flange of rectangular outline for attachment to the floor, side flanges extending upwardly from opposite sides of said base flange, said element providing uninterrupted outer surfaces for permitting the extension of post uprights to the floor line,



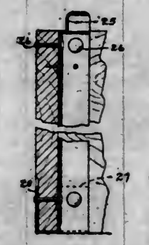
and means for securing the lower ends of post tie bolts, extending longitudinally of the post, to the anchor element.

1,684,895. SIGNALING DEVICE. WILLIAM SPARKS, THEODORE JOHNSON SCOFIELD, LLOYD ELMER JOHNSON, and FRED WILLIAM BILLIG, Jackson, Mich., assignors to The Sparks-Withington Company, Jackson, Mich., a Corporation of Ohio. Filed May 18, 1927. Serial No. 192,331. 4 Claims. (Cl. 116—142.)



1. A signaling device comprising a motor and a rotary compressor driven thereby and adapted for unitary support, a horn body in combination with a portion of a vehicle body having an opening therethrough, and means of communication between the compressor and the horn body including a tubular member which extends through the opening in the vehicle body and secures the horn body to the vehicle body.

1,684,896. FRUIT SCRUBBER. FRED STEBLER, Riverside, Calif. Filed Jan. 31, 1927. Serial No. 164,687. 7 Claims. (Cl. 146—202.)

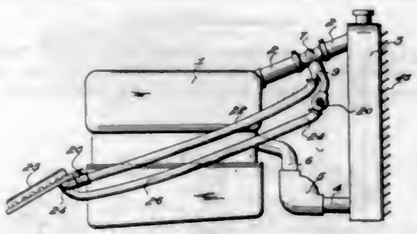


7. A fruit scrubber comprising rotatably mounted brushes positioned sufficiently close together to support the fruit, means to rotate the brushes, a roll rotatably mounted above said brushes in position to engage the fruit on the brushes, means to rotate the roll, and means to adjust the roll around the axis of one of the brushes toward and from the axis of the next adjacent brush.

1,684,897. LOW-WATER ALARM. HERMAN B. THURSTON, Cleveland Heights, Ohio. Filed July 16, 1926. Serial No. 122,916. 13 Claims. (Cl. 122—504.2.)

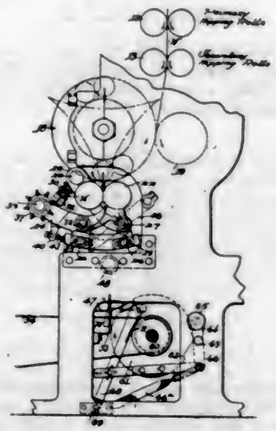
1. The combination of a boiler having a steam space and a water space, a low water alarm comprising a reservoir and a signal, means responsive to water level and independent of temperature disposed within the reservoir for controlling the actuation of the signal, said reservoir being disposed exteriorly of the boiler and above the water level thereof, means for filling the reservoir when the water level in the boiler rises above an established point and means for draining said reservoir at a given rate when the water level falls below said established point, whereby the alarm operates on successive occasions in response to a predetermined condition of low water.

1,684,898. BOTTLE CRATE. ERNEST TRAUTMAN, Lakewood, Ohio, assignor to The Republic Box Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 9, 1927. Serial No. 189,850. 3 Claims. (Cl. 217—69.)



1. The combination with a rectangular container open at the top and bottom end, of a reinforcing member within each corner of the container, each member comprising a metallic angular strip having a plurality of U-shaped portions at the bottom thereof, each portion engaging the bottom and outer surface of one of the container walls, and means for fastening the member to the container.

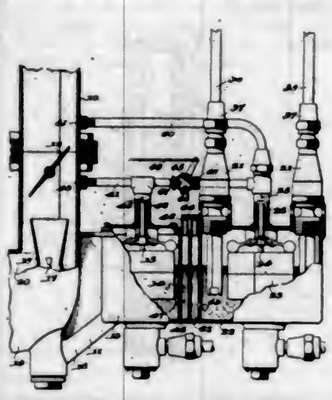
1,684,899. WALL-BOARD REENFORCEMENT. CURRY ORA WALPER, Detroit, Mich. Filed Dec. 16, 1927. Serial No. 240,570. 4 Claims. (Cl. 72—16.)



1. A reenforcing reticulated strip of a size suitable for application to a joint between composition boards, said strip having undulating edges.

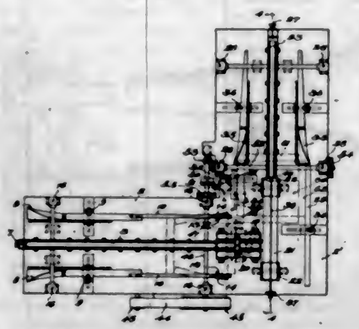
1,684,900. AUTOMOBILE CIRCULATION AND HEATING SYSTEM. CHARLES B. WATERS, Montclair, N. J. Filed Nov. 20, 1926. Serial No. 149,726. 6 Claims. (Cl. 237—12.3.)

1. In combination with a water cooling system for an automobile; a hot water heating system comprising means for diverting less than 20 percent of the water from said cooling system under circulating pressure built up by the velocity of the flow of water in said cooling system; a radiating member disposed below said diverting means through which the diverted water is passed in a thin wide sheet; a feed conduit connecting said diverting means with said radiating member; and a conduit connecting said radiating member and a point in said system above said member and adjacent said diverting means for returning the diverted portion of the water to the cooling system.



1,684,901. FOLDER. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Aug. 8, 1922, Serial No. 580,437. Renewed June 1, 1926. 13 Claims. (Cl. 270—65.)

1. In a folding machine, the combination with a rotary folder comprising a folding and a cutting cylinder for receiving the web, of a primary and a secondary pair of nipping rolls located at a distance apart for nipping the web and feeding it to the folder, and a pair of folding rolls for receiving the folded product from the folder, one of the folding rolls being mounted to yield in case of excessive strain in a substantially radial direction with respect to the folding cylinder.

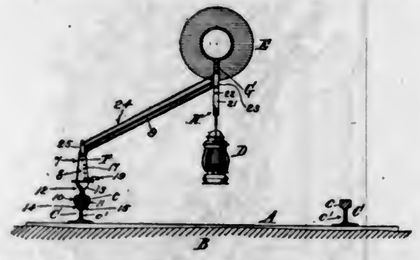


1,684,902. MIXTURE-FORMING MEANS FOR INTERNAL-COMBUSTION ENGINES. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 9, 1920. Serial No. 429,587. 9 Claims. (Cl. 261—41.)

7. In an internal combustion engine, the combination with the engine intake pipe, of mixture forming means comprising two float chambers, means connecting the upper part of one of said float chambers with said intake pipe below the throttle valve thereof, means connecting the upper

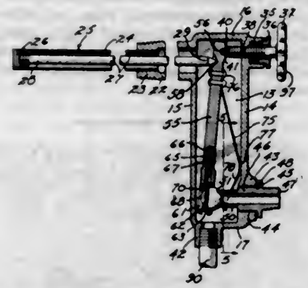
part of the other said float chamber with the intake pipe above the throttle valve thereof, and submerged vent means for each of said float chambers.

1,684,903. BLANK-BENDING MACHINE. ARTHUR L. YOUNG, Providence, R. I. Filed June 1, 1927. Serial No. 195,680. 9 Claims. (Cl. 93—52.)



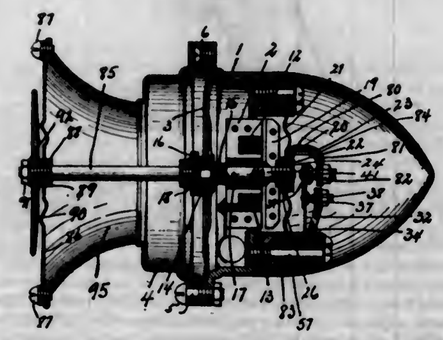
8. In a blank bending machine, a pair of conveyors having a substantially right angular relation, bending means associated with each conveyor whereby to initially bend two opposed side edges of the blank and subsequently the remaining side edges, means arranged to turn the initially bent edges about their lines of bend, a transfer conveyor between the pair of conveyors, and a horizontal guide element overlying the transfer conveyor and inclined toward the second conveyor of the pair of conveyors to bend the said initially bent side edges so as to engage same with the said second conveyor to be moved thereby.

1,684,904. SAFETY DANGER SIGNAL FOR RAILROAD TRACKS. GEORGE FRANCIS BAKER, Cincinnati, Ohio. Filed Aug. 19, 1927. Serial No. 214,108. 2 Claims. (Cl. 246—477.)



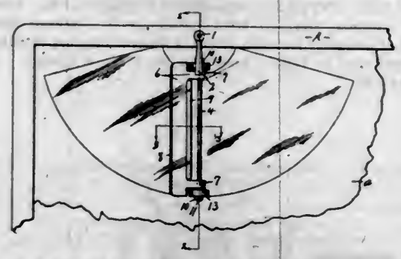
1. In a device of the character described, the combination of a pair of tapered upright bars or plates having a series of aligning holes therein, clamping-jaw formations provided at the lower ends of said bars and adapted to be closed or spread apart by pivotal connecting-means at the upper ends of said bars, a slidable lock-ring encompassing the said pair of assembled tapered bars or plates and a

suitable lock adapted to engage the said aligning holes in the assembled bars or plates for securing the latter in closed position together with the closed engagement of the said



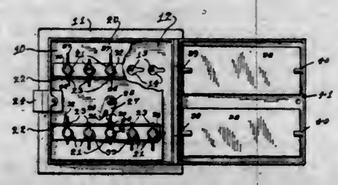
clamping-jaw formations on the head of a track-rail or other supporting object where warning of danger ahead is to be displayed, substantially as shown and described.

1,684,905. QUICK-THROW VALVE. WILLIAM B. BASTIAN, Los Angeles, Calif. Filed Apr. 27, 1927. Serial No. 187,045. 17 Claims. (Cl. 137—139.)



1. In a quick-throw valve, the combination of: a valve member adapted to be quickly thrown on a non-vertical axis; means for limiting movement of said member on said axis; constriction means surrounding said member and urging said member along said axis; and means yieldably urging said constriction means in a direction transverse to said axis to lift said member.

1,684,906. SIGNALING DEVICE. FRED W. BILLIG, Jackson, Mich., assignor to The Sparks-Withington Company, Jackson, Mich., a Corporation of Ohio. Filed June 16, 1925. Serial No. 37,458. 2 Claims. (Cl. 177—7.)



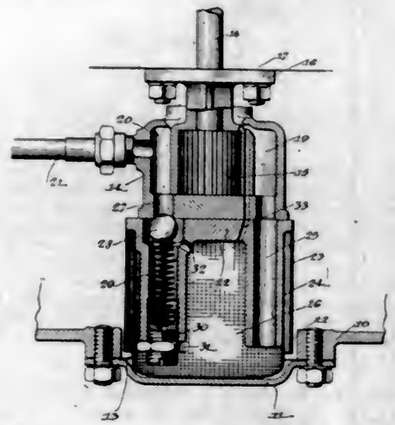
2. A born structure comprising a diaphragm, a projector extending forwardly from the diaphragm, a free edge vibratory member approaching in cross-sectional area the cross-sectional area of the front open end of the projector and disposed outside of and forwardly of the projector, and means connecting the said vibratory member to the diaphragm for simultaneous bodily movement therewith.

1,684,907. WINDSHIELD CLEANER. FRANCIS H. BLAKE, 2d, Clayton, N. Y. Filed July 15, 1927. Serial No. 205,988. 2 Claims. (Cl. 15—255.)

1. In a windshield cleaner, a frame-supporting arm, and means for moving said arm in reverse directions across the surface of the windshield, a frame having edges journaled on said arm for relatively angular movement and provided with a flat scraper along one edge, rollers secured to the frame co-axial with said arm for rolling engagement with the windshield glass to effect the angular movement of the frame as the arm is moved in reverse directions, and a flexible wiper secured to the frame across the inner edge of the scraper for engagement with said glass.

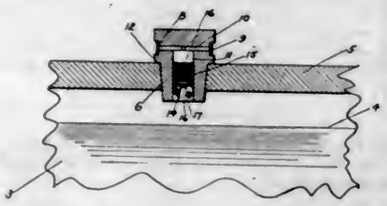
1,684,908. LOCK. FRANK O. BRUNELLE, Meriden, Conn. Filed Nov. 13, 1926. Serial No. 148,207. 8 Claims. (Cl. 70—54.)

1. In a combination lock, a casing, a locking plate slidable in said casing, said plate having a locking bolt for engaging a keeper, said plate carrying a spring-pressed slidable tumbler, said tumbler being normally in locking engagement with said casing, a slidable button on said casing for engaging said tumbler and forcing it out of locking engagement with said casing, and means for sliding said plate thereafter to withdraw said bolt from its keeper while holding the said tumbler in unlocked position.



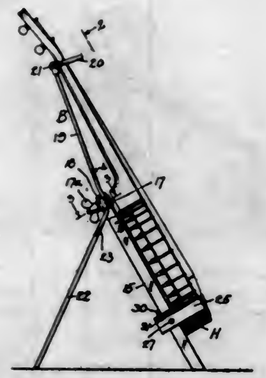
1,684,909. CROSS-CHAIN LINK. GEORGE B. CADY, Canastota, N. Y. Filed Apr. 2, 1926. Serial No. 99,271. 1 Claim. (Cl. 59—90.)

A tread link for cross chains of antiskid devices twisted so that its opposite sides cross each other in spaced relation substantially midway between its ends, two of the



diagonally opposite corners of said link forming relatively sharp angles, the other two corners being rounded longitudinally, the rounded corners being disposed at one side of the plane of crossing of the sides and the other two diagonal corners being disposed at the opposite side of said plane, the distance between the apexes of the rounded corners being less than the distance between the apexes of the other corners.

1,684,910. INTERNAL-COMBUSTION ENGINE. ERWIN C. COOPER, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 9, 1925. Serial No. 61,575. 6 Claims. (Cl. 184—6.)

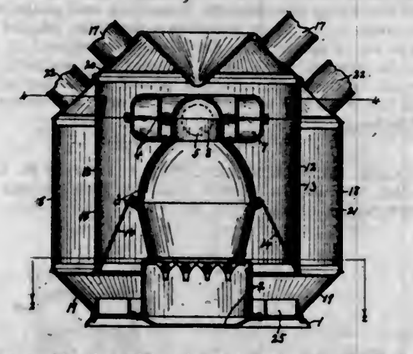


1. In an internal combustion engine, the combination with the crank case, of an oil pump mounted in the crank case and having a downwardly extending guard forming a chamber beneath the pump, the intake of the pump being near the lower part of said chamber, and means forming a relatively small passage from the upper part of said chamber to the intake side of the pump.

1,684,911. SAFETY PLUG. WILLIAM DAVIS, St. Louis, Mo., assignor of one-half to Italian-Swiss Colony, San Francisco, Calif., a Corporation of California. Filed July 26, 1926. Serial No. 124,800. 2 Claims. (Cl. 217—101.)

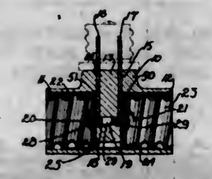
1. A safety device comprising a plug adapted to be inserted into the opening of a container and extend thereabove, said plug having an opening therethrough communicating at one end with the interior of said container and at its other end with the periphery of said plug at a point above said container, means in said opening of the plug to obstruct the flow of liquid therethrough, a screen intermediate said last-mentioned means and the exterior end of said opening of the plug, and means exteriorly only of the exterior end of said passage and normally sealing said passage thereat to prevent flow of gas therethrough except when the pressure of said gas exceeds a predetermined amount.

1,684,912. MUSICAL-INSTRUMENT STAND. CASPER THEODORE DUNKLAU, Los Angeles, Calif. Filed Nov. 22, 1924. Serial No. 751,587. 7 Claims. (Cl. 248—41.)



2. A stand of the character described comprising a tripod, a bracket extending upwardly from and adjustable on the tripod, brackets pivoted on two of and extending laterally from the legs of the tripod, and a flexible hammock connected at its ends to said brackets so as to be disposed to one side of said legs.

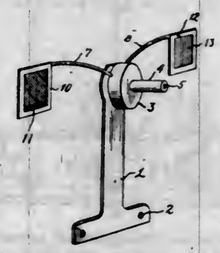
1,684,913. COMMODITY CABINET. JOHN L. FLANNERY, Chicago, Ill., assignor to The Boye Needle Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 14, 1925. Serial No. 2,311. 3 Claims. (Cl. 312—123.)



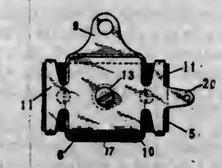
1. A commodity cabinet comprising a housing provided with a base, side-walls, and a top-wall, a front glass plate and a rear sheet-metal plate having their edge portions received in grooves with which the walls of the said housing are provided, said sheet-metal plate having openings therein arranged in horizontal rows and vertical rows, sheet-metal receptacles arranged in vertical tiers and disposed adjacent the inner surfaces of the walls intervening between the openings, said receptacles having rearwardly offset back-extensions normally closing said openings, and pivotal connections between said sheet-metal plate and said receptacles adjacent the offsets of the back-extensions.

1,684,914. WARM-AIR FURNACE. HARRY W. FRENCH, Syracuse, N. Y. Filed Oct. 4, 1927. Serial No. 223,910. 1 Claim. (Cl. 126—117.)

The combination with a furnace having a base, an ash-box mounted on the base, a fire-pot mounted on the ash-box and a warm air casing mounted upon and surrounding the firepot in spaced relation thereto, and having its lower end open and terminating in a plane some distance above the base, of a cold air jacket comprising an upright portion surrounding the casing in spaced relation thereto beyond the marginal edge of the base and having its lower end terminating in substantially the same plane as the lower end of said casing and its upper end terminating some distance below the level of the upper end of the casing, said jacket having a downwardly tapered bottom portion extending from the lower end of the upright portion to the marginal edge of the base, and an upwardly tapered top portion extending from the upper edge of the upright portion to the upper end of the casing and provided with a cold air inlet, and a top wall for the casing having its outer marginal portion tapered upwardly and united to the tapered top portion of the jacket to form a continuation thereof and provided with warm air outlets.



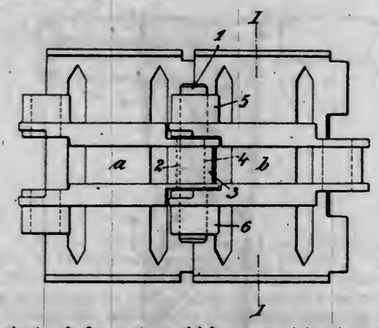
1,684,915. MULTIPLE-SOCKET ELECTRIC PLUG. ISAAC F. GILES, Malone, and JACK A. ROBERTS, Bronxville, N. Y., assignors to Ilelte Electric Manufacturing Corporation, Tuckahoe, N. Y., a Corporation of New York. Filed Apr. 18, 1925. Serial No. 24,086. 1 Claim. (Cl. 173—336.)



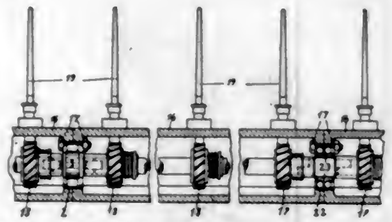
In a device of the character described, the combination of a barrel having a pair of aligned pockets, a pair of contact blades extending laterally through the wall of the barrel into the interior adjacent the base of the pockets, metallic screw shells in the pockets respectively, central metallic contacts connected to the blades respectively and operating through insulation to hold the shells in place, and a metallic strip lying along the inner surface of the barrel and contacting with the two shells whereby the sockets are connected together in series with the two contact blades.

1,684,916. DIRECTION INDICATOR FOR AUTOMOBILES. ENRIQUE GUERRERO and JOHN A. GREY, Quito, Ecuador. Filed Mar. 12, 1927, Serial No. 174,951, and in Ecuador Apr. 20, 1926. 2 Claims. (Cl. 116—51.)

1. An automobile signal comprising a bracket with provisions for attaching it to the dash board of an automobile, said bracket carrying a cylindrical portion with right and left hand colored glasses attached thereto, a handle having at its end a cup-shaped portion to fit over said cylindrical portion, and means to hold the handle rotatably over the cylindrical portion, said handle having rigidly attached thereto a signal comprising an arm with a cylindrical portion on its face, and a bulb socket rigidly held in front of the arm, the signal having a hole therethrough, a cap, the cylindrical portion being adapted to receive the lower end of the cap to enclose the bulb.



1,684,917. ADJUSTABLE CONDENSER. LLOYD A. HAMMARLUND, Rockville Center, N. Y., assignor to The Hammarlund Manufacturing Company, Incorporated, a Corporation of New York. Filed Feb. 9, 1927. Serial No. 167,003. 13 Claims. (Cl. 175—41.5.)

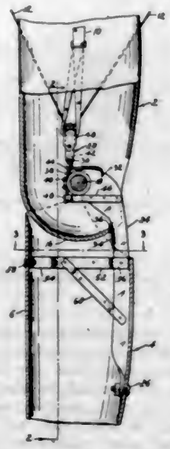


1. A variable condenser comprising an insulating base, a stationary flat plate having lugs secured to the base, an arched plate having spring wings embracing the edges of the base, a screw for drawing the two plates toward each other and changing the shape of the arched plate and a dielectric interposed between said plates.

1,684,918. CHAIN TRACK FOR MOTOR VEHICLES. VIKTOR JERECZEK, Weissensee, near Berlin, Germany, assignor to Stock Motorpflug Aktiengesellschaft, Berlin, Germany, a Corporation of Germany. Filed Feb. 25, 1927, Serial No. 171,023, and in Germany Dec. 17, 1925. 1 Claim. (Cl. 305—10.)

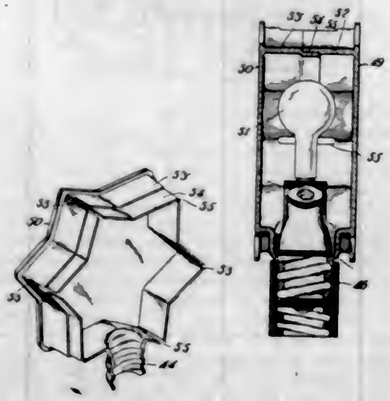
Chain track for motor vehicles, comprising in combination, chain links having pin holes, pins arranged in said holes and connecting said links, one of said pin holes of each of said links being wider in diameter than the pin, and each pin having a flat surface, and a corresponding flat surface provided in said hole, said two surfaces being adapted to prevent rotary movement of said pin within said hole, the other of said holes of each link having a diameter adapted to allow only a rotary movement of two adjoining chain links.

1,684,919. SPINNING SHAFTING. JOHANN JACOB KEYSER, Aarau, Switzerland. Filed July 6, 1927, Serial No. 203,852, and in Germany July 12, 1926. 4 Claims. (Cl. 64—29.)



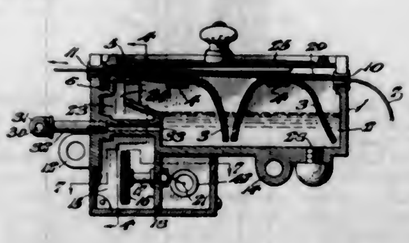
1. Sectional shafting construction comprising bearings supported in spaced relation, stub journals mounted in said bearings, shaft sections between said stub journals and in alignment therewith, the opposite ends of said shaft sections and stub journals being formed with interengageable coupling portions, said interengaging portions being all of identical shape to provide for universal interchangeability of said parts, and means for securing said stub journals and shaft sections in coupled relation, said interengaging ends being formed to permit transverse removal of said shaft sections when said securing means have been released.

1,684,920. WATER-SOLUBLE ORGANIC COMPOUND OF ANTIMONY AND PROCESS OF PRODUCING IT. MORRIS S. KHARASCH, College Park, Md., assignor to Eli Lilly and Company, Indianapolis, Ind., a Corporation of Indiana. Filed Jan. 24, 1928. Serial No. 249,196. 24 Claims. (Cl. 260—11.)



1. The step in the method of producing water-soluble compounds of organic stibinous compounds, which comprises treating, in a solvent, a stibinous compound in which at least one valence bond of the antimony is attached to an inorganic radical of other than the sulphur family (sulphur, selenium, and tellurium) and at least one valence bond of the antimony is directly attached to a carbon atom of an organic radical, with an organic compound containing both an acid radical and a sulfhydryl group and having the sulfhydryl group directly attached to a carbon atom.

1,684,921. ARTIFICIAL LEG. LESLIE J. LAMB, Oakland, Calif. Filed Nov. 18, 1926. Serial No. 149,094. 4 Claims. (Cl. 3—2.)

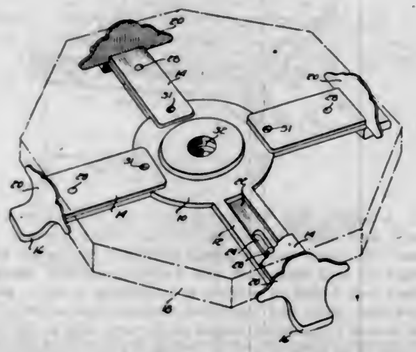


1. In combination with an artificial leg comprising a tubular upper limb portion, a harness strap from said upper limb portion adapted to attach the artificial leg to the wearer's stump, a tubular lower leg, a hinge pivotally connecting the lower leg to said upper portion, a pivotal arm connecting the hinge pin to the rear wall of the tubular lower leg, a brace connecting the front wall of the lower leg to said arm, a flexible support secured to said arm in front of, immediately adjacent, and partially concentric, to the hinge axis, and pivotal means connecting said support to said harness strap to control the inclination of the lower leg.

1,684,922. ORNAMENTAL LIGHT. LAWRENCE W. MAMMEN, Chicago, Ill. Filed June 11, 1926. Serial No. 115,211. 5 Claims. (Cl. 40—126.)

1. An ornamental light of the character described comprising two complementary side wall members formed in simulation of a star, the perimeters of the side walls being disposed toward each other and arranged in interengaging relation, the perimeters of the walls at predetermined points being formed to permit outward passage of light-rays, each side wall being provided with a semi-cylindrical hub adapted to provide a bulb-holding socket, and a member encircling the hub portions of both wall members.

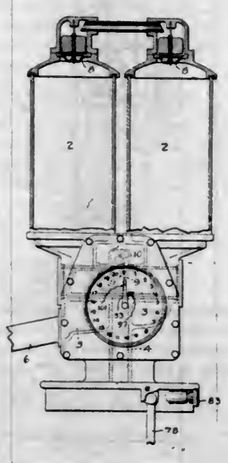
1,684,923. APPARATUS FOR SOFTENING SILK, YARN, AND THE LIKE. HERMAN MAYER, Philadelphia, Pa. Filed Mar. 3, 1928. Serial No. 258,792. 6 Claims. (Cl. 91—38.)



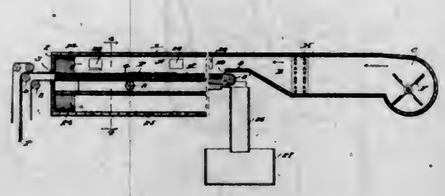
1. In a device of the character stated, a moistening receptacle having a chamber adapted to contain a liquid, a bar in the upper portion thereof, a wick supported on said bar and having its ends submerged in said liquid, front and rear guiding devices for the threads to be moistened, a heating chamber in said receptacle and below the liquid chamber therein arranged isolated from the latter at all times, and a heating element for said chamber also isolated from said liquid.

1,684,924. RAILWAY HIGHWAY CROSSING. HENRY E. MUCHNIC, Atchison, Kans., assignor to The Locomotive Finished Material Company, Atchison, Kans., a Corporation of Kansas. Filed May 6, 1927. Serial No. 189,195. 10 Claims. (Cl. 238—8.)

1. A railroad highway crossing comprising a plurality of parallelly disposed T-shaped members arranged to present a flat upper surface, spacing members intermediate of the vertically disposed sides of adjacent T-shaped members, and fastening means disposed transversely through the T-shaped members and the spacing members.



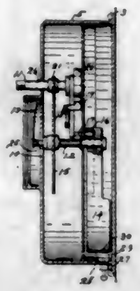
1,684,925. ADJUSTABLE BASE. HENRY A. PEALMUTTER, Brooklyn, N. Y., assignor to Artistic Brass & Bronze Works, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 14, 1927. Serial No. 175,151. 2 Claims. (Cl. 248—41.)



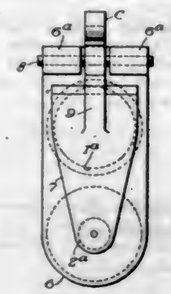
1. A base frame of the class described, comprising a central plate provided with radially extending arms having longitudinally extending grooves at their upper sides and provided with elongated slots extending therethrough at the base of said grooves, and a plurality of leg members having tongues on their under sides to engage said grooves, and fastening means extending through said elongated slots to engage said legs and clamp same in adjusted relation with respect to said arms.

1,684,926. PREDETERMINER AND INDICATOR. EDWARD M. PIERCE and WILLIAM M. CARROLL, Dayton, Ohio, assignors to Augustine Davis, Jr., Cincinnati, Ohio. Filed Dec. 14, 1926. Serial No. 154,693. 35 Claims. (Cl. 221—101.)

29. In a measuring dispenser having a master element for rendering the dispenser inoperable when a predetermined quantity has been delivered, a predetermining and indicating mechanism comprising the combination of a primary toothed gear wheel which is operated with the operation of the dispenser, a predeterminer having a gear wheel, said predeterminer controlling said master element, an indicator having a gear wheel, an intermediate gear wheel device meshing on the one hand with said primary wheel and on the other hand with the gear wheels of the predeterminer and the indicator, means for shifting said intermediate gear wheel device out of mesh and for locking said primary wheel, and a stationary pin for locking the intermediate gear wheel member when so shifted.



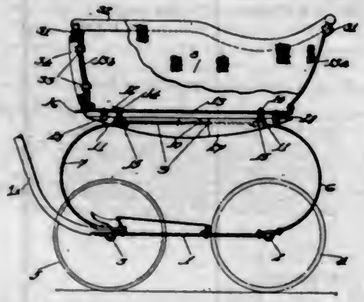
1,684,927. APPARATUS FOR DRYING FUR PELTS. ATTILIO PIERINI, Springfield Gardens, N. Y.; ARTHUR T. HOPKINS, Cambridge, and HARRY M. HAVEN, Winchester, Mass. Filed Feb. 3, 1927. Serial No. 165,655. 6 Claims. (Cl. 34—12.)



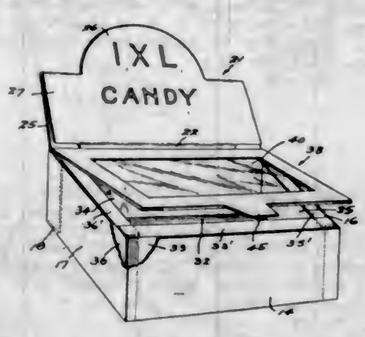
1. A drying apparatus comprising an elongated conduit having an entrance at one end and an air inlet at the other end from which an air current is introduced into the conduit, a conveyer in said conduit to move the material to be dried from said entrance to a material discharge opening intermediate the length of said conduit, and a heating element interposed between said point of discharge in the conduit and said air inlet opening, and air return means connected to the forward and rear end portions of said conduit whereby said air currents may be recirculated through said conduit, controlled means in said return means for discharging a portion of the air therefrom and other controlled means in said return conduit for admitting fresh air thereto, and means for circulating said air.

1,684,928. ODOMETER. ROBERT M. SIMPSON, Jr., Chicago, Ill. Filed June 15, 1927. Serial No. 198,911. 3 Claims. (Cl. 235—103.)

1. An odometer comprising an indicator shaft, a rotatable weight, an eccentric mounting for said weight, a cam track in the weight, a cam follower for said cam track, a cam follower arm, a pawl on said arm, a pinion and shaft provided with a ratchet for said pawl, and a main shaft and indicator provided with a gear interconnected with the pinion.



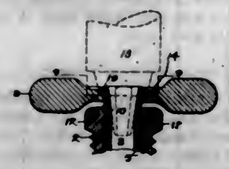
1,684,929. MAGNETIC APPARATUS. CLARENCE S. SNAVELY, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 24, 1923. Serial No. 670,446. 3 Claims. (Cl. 175—337.)



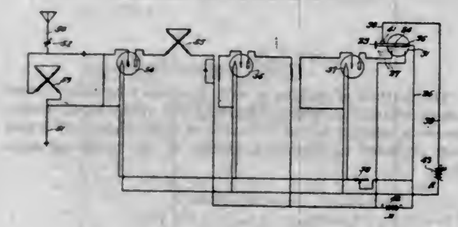
1. Magnetic apparatus comprising two pole faces of different areas, and a tapered armature having a larger area adjacent the larger pole face and a smaller area adjacent the smaller pole face.

1,684,930. BABY CARRIAGE. RICHARD STINSON, Gardner, Mass., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 8, 1925. Serial No. 21,583. 2 Claims. (Cl. 296—35.)

1. In a vehicle of the class described, the combination with a running gear assembly and a carriage body assembly, of oppositely facing hooks carried by said running gear assembly, transverse members carried by said carriage body assembly, downwardly depending portions formed in said transverse members to engage said hooks, one of said transverse members being pivotally mounted, operating means to swing said pivotally mounted transverse member to disengage said carriage body from said running gear assembly, and spring means to return said transverse member to original position.

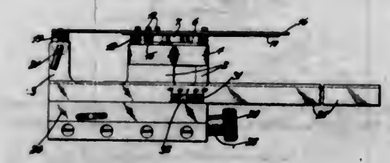


1,684,931. FOLDING BOX. FRANK E. WARNER, Seattle, Wash. Filed Oct. 27, 1924. Serial No. 745,959. 3 Claims. (Cl. 206—44.)



1. A folding box comprising an inner member which is scored and folded to provide the box cover, bottom, and inner side, front and back wall elements, said cover being hinged to said back wall, and an outer member which is scored and folded to provide a continuous band to afford outer side, front and back wall elements, and a cover, the last named cover being hinged at its rear edge to the back of said outer member and having at its front a protruding tucking flap, said members being secured together by uniting to afford therebetween an interstice to receive said tucking flap.

1,684,932. METHOD OF UNITING METAL PARTS TOGETHER. ALBERT J. WEATHERHEAD, Jr., Cleveland, Ohio. Filed Apr. 13, 1925. Serial No. 22,732. 9 Claims. (Cl. 29—157.)

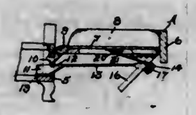


1. A method of uniting metal parts together, consisting in producing in one part an opening bordered with axially-extending angular teeth and interspaces, and in inserting a second part into said toothed opening and expanding the wall thereof on flaring lines opposite said axially extending teeth and interspaces until said parts are interlocked together.

1,684,933. RADIO ATTACHMENT FOR TALKING MACHINES. EUGENE A. WIDMANN, Brooklyn, N. Y., and FRANK D. LEWIS, West Orange, N. J., assignors, by mesne assignments, to Pathe Phonograph & Radio Corporation, a Corporation of New York. Filed June 6, 1922. Serial No. 566,224. 5 Claims. (Cl. 179—100.1.)

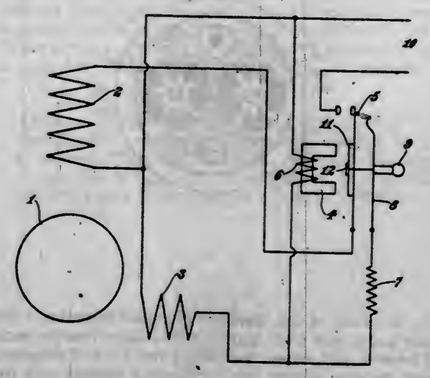
1. The combination of a radio receiving apparatus comprising a telephone receiver; a tone arm provided with a stylus holder and movable into and out of a position in which the stylus in said holder is engaged with the diaphragm of the telephone receiver; an amplifier with which the tone arm is connected; and means for completing the circuit through the receiving apparatus and also for controlling access of the stylus to the diaphragm of said receiver.

1,684,934. CUTTING DIE. ROY V. WOODWORTH, St. Louis, Mo., assignor to Western Supplies Co., St. Louis, Mo., a Corporation of Missouri. Filed Sept. 23, 1927. Serial No. 221,496. 7 Claims. (Cl. 164—29.)



1. A die comprising a base, a cutter extending upwardly from said base, a plate having an opening above and larger than said cutter, a series of guide pins for guiding said plate in its movements, springs encircling said pins and supporting said plate above the plane of the upper edge of said cutter, a series of abutments extending upwardly through and movable independently of said plate, springs for supporting said abutments, and parts on said abutment pins engaging against said plate and limiting upward movement of said guide pins.

1,684,935. PROCESS FOR EXTRACTION OF SALTS FROM AQUEOUS SOLUTIONS. DEMETRIUS GEORGE ZALOCOSTAS, deceased, Bondi, near Sydney, New South Wales, Australia, by Andrianne Zalocostas, executrix, Bondi, near Sydney, and John Velissaropulos, executor, Bellevue Hill, near Sydney, Australia, assignors to The Salt Production Syndicate Limited, Sydney, New South Wales, Australia, an Incorporated Company of New South Wales. Filed Mar. 28, 1925, Serial No. 19,009, and in Australia Apr. 10, 1924. 3 Claims. (Cl. 23—44.)



1. A process for the extraction of salts from sea water which consists in conducting the evaporation at high temperature until a concentration point is reached below that at which calcium sulphate is precipitated, transferring the concentrated brine to another closed chamber having the temperature of its heating surfaces maintained at about 38° C. and under vacuum sufficient to procure rapid evaporation at that temperature, thereby to procure the precipitation of the calcium sulphate as a mud, then transferring the strong brine to another evaporator and continuing evaporation therein for the precipitation of sodium chloride, and finally removing the residual liquor containing the bitterns.

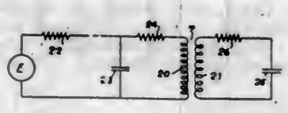
1,684,936. ARTICLE OF FURNITURE. HENRY ALLEMEIER, Toledo, Ohio, assignor to The Woodcraft Company, Toledo, Ohio, a Corporation of Ohio. Filed May 3, 1926. Serial No. 106,183. 3 Claims. (Cl. 5—21.)

3. The combination of a frame, a support movable in and out of said frame, an arm carried by said support and engageable with said frame to limit outward movement thereof, and leg means pivoted to said support and at an intermediate portion to said arm and arranged to be grasped for outward swinging movement to elevate said support.

1,684,937. MOTOR-STARTING DEVICE. EDWIN C. BALLMAN, St. Louis, Mo., assignor to Valley Electric Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 22, 1921. Serial No. 517,024. 13 Claims. (Cl. 172—120.)

1. In combination with an induction motor having main and starting windings, a switch adapted to connect said windings to a source of supply, and an electro-magnet connected in circuit with and controlled by current traversing the starting winding adapted to hold said switch to maintain connection with the source of supply.

1,684,938. CONTAINER FOR FOOD PRODUCTS. FREDERICK E. BICKFORD, Rochester, N. Y. Filed June 30, 1926. Serial No. 119,653. 12 Claims. (Cl. 215—40.)

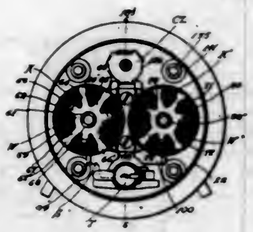


1. A vessel or container open at its upper end and formed with a pitcher spout opening, and having below

said spout opening an exterior circumferential sealing surface, the spout portion of the container being substantially

entirely within the vertical extension of said sealing surface, and a handle opposite said spout and below said sealing surface.

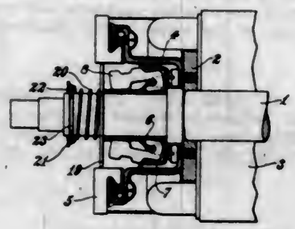
1,684,939. RADIOFREQUENCY AMPLIFIER AND METHOD OF MAKING AND OPERATING THE SAME. ALBERT S. BLATTERMAN, Asbury Park, N. J., assignor to Ware Radio, Inc., a Corporation of Delaware. Filed July 14, 1922. Serial No. 574,881. 1 Claim. (Cl. 179—171.)



The method of making a radio frequency amplifier transformer which consists in adjusting the values of its inductances in relation to the constants of the circuits with which it is intended to operate according to the following equation:

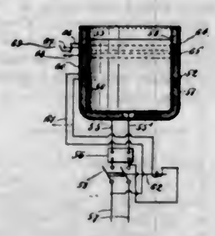
$$\frac{V_2}{V_1}=\frac{\mu}{\omega C_2\sqrt{\left(\frac{L_1L_2C_2(1-K^2)\omega^2L_1^2}{\omega K\sqrt{L_1L_2C_2}}\right)+\frac{R\omega^2}{\omega^4C_2^2K^2L_1L_2}\left(1-\omega^2(L_1C_1+L_2C_2)^2+\omega^4L_1C_1L_2C_2(1-K^2)\right)}}$$

to produce a maximum ratio of V_2 to V_1 therein over the range of frequencies throughout which it is desired to operate.



1,684,940. LIGHTING AND IGNITION SWITCH. ERNEST A. BOHLMAN, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 26, 1924. Serial No. 752,296. 29 Claims. (Cl. 200—14.)

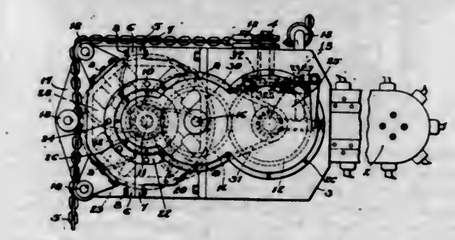
1. A switch of the character described including a front plate and a back plate, a pair of rotatable elements mounted between said plates, operating levers for said elements, a shaft for each of said levers extending through said front plate, said elements and said back plate, said shafts each having a pair of lugs, and means intermediate of the ends of said shafts including cup-shaped members adapted to engage said pair of lugs for detachably locking said shafts against longitudinal movement.



1,684,941. SHORT-CIRCUITING DEVICE. FRANCIS J. BULLIVANT, St. Louis, Mo., assignor to Valley Electric Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 5, 1925. Serial No. 67,111. 9 Claims. (Cl. 172—279.)

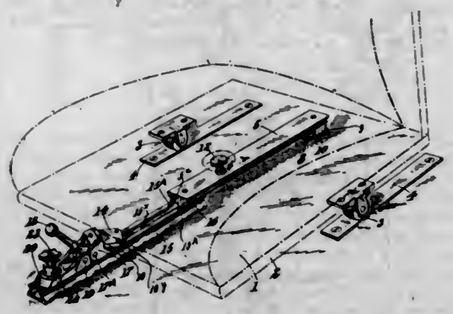
1. A commutator short-circuiting device, comprising, a support, a series of centrifugally operable contactors thereon, a part on said support adapted to provide a moving pivot bearing for said contactors, a retainer movable on said support and engaging said contactors to retain the same in

inoperative position, means for tensioning said retainer, and means for interlocking said retainer with said support.



1,684,942. ELECTRICAL HEATING APPARATUS. ROBERT A. CARLETON, Newton, Mass. Filed Feb. 21, 1927. Serial No. 169,698. 17 Claims. (Cl. 219—44.)

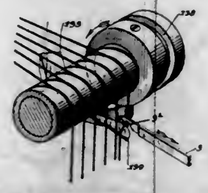
1. In an electric heating apparatus, the combination comprising a comparatively high resistance heating element, a comparatively low resistance conductor element



through which electric current is supplied to the high resistance element to pass through said high resistance element for heating it, said elements being so arranged that the current flowing in one element will always be in an opposite direction to that flowing in the other element whereby the magnetic field due to the currents will be substantially neutralized, and means for supplying electric current to said elements.

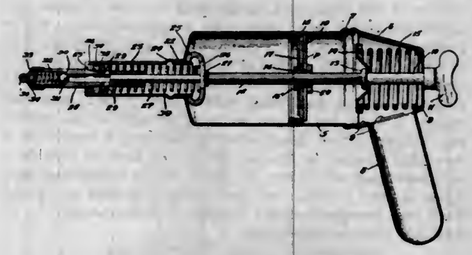
1,684,943. MINING MACHINE. FRANK CARTLIDGE, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 21, 1918, Serial No. 241,205. Renewed July 19, 1923. 90 Claims. (Cl. 262—30.)

1. In a mining machine, a frame, cutting mechanism thereon including a cutter bar, a vertical motor operatively connected to said cutting mechanism, and means whereby the motor armature may be removed laterally.



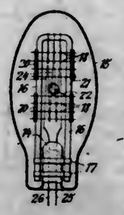
1,684,944. SLIDABLE SEAT FOR VEHICLES AND THE LIKE. ARTHUR WILLIAM CHAPMAN, London, England. Filed July 31, 1926, Serial No. 126,191, and in Great Britain July 15, 1925. 25 Claims. (Cl. 155—14.)

1. A device of the character described comprising a guiding member, an anchoring member slidably mounted thereon to permit of the adjustment of the device for leg length, manually operable means carried by said anchoring member for securing the same in predetermined adjusted positions on said guiding member, a seat member movable along the line of travel of said anchoring member, and manually operable means for securing said seat member to said anchoring member in each position thereof and for releasing said seat to permit of the movement thereof relative to said anchoring member.



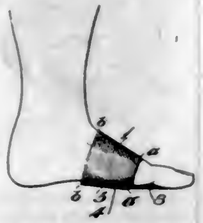
1,684,945. THREAD-HANDLING MECHANISM. HOWARD D. COLMAN, Rockford, Ill., assignor to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois. Filed Sept. 26, 1924. Serial No. 740,013. 7 Claims. (Cl. 28—44.)

1. A thread-handling mechanism having, in combination, a rotary thread-selecting worm, a hooked drawing needle movable into position alongside a thread selected by said worm, a cam connected to rotate with said worm, a pivoted bracket, a deflector mounted on said bracket and arranged



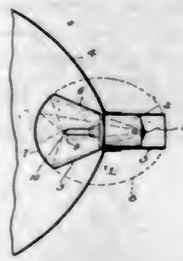
to be moved by said cam to bend said thread across the needle whereby upon retraction of the needle the deflected thread springs into the hook, and a spring for yieldingly holding said bracket in operative position.

1,684,946. LUBRICANT COMPRESSOR. ERNEST W. DAVIS, Oak Park, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed May 3, 1924. Serial No. 710,775. 13 Claims. (Cl. 221—47.4.)



5. A lubricant compressor, comprising a barrel, spring means in said barrel for placing the lubricant therein under pressure, a sleeve communicating with said barrel, a cylinder reciprocably mounted in said sleeve and communicating therewith, a piston carried by said cylinder and subjected to the pressure of the lubricant in said sleeve, and a plunger for expelling the lubricant from said cylinder.

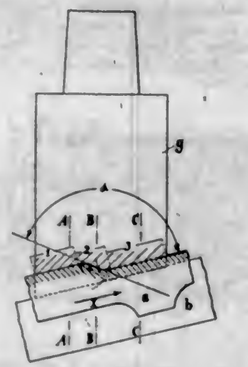
1,684,947. VACUUM DISCHARGE APPARATUS. WILHELM DAUMANN, Hamburg, Germany, assignor to C. H. F. Müller, Röntgenröhrenfabrik, Hamburg, Germany, a Corporation of Germany. Filed June 15, 1923, Serial No. 645,483, and in Germany June 23, 1922. 3 Claims. (Cl. 250—27.5.)



1. A vacuum discharge apparatus comprising an evacuated receptacle, a cathode adapted to be heated to incandescence, and an anode surrounding said cathode and comprising spaced perforated end plates extending transversely to said cathode at different points of its length, and additional perforated plates located between said end plates and spaced from each other and from the end plates, said additional plates likewise extending transversely to said cathode at different points of its length, and adjoining plates being connected with each other conductively.

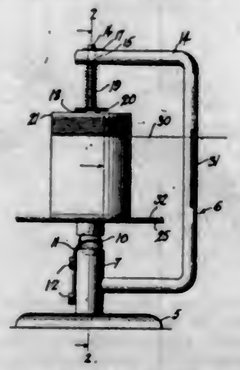
1,684,948. METATARSAL PAD. ALEXANDER DEGLING, Philadelphia, Pa. Filed Mar. 3, 1927. Serial No. 172,256. 1 Claim. (Cl. 36—71.)

A metatarsal pad comprising an elastic band of one piece of material for fitting over the middle cuneiform of the human foot, which band at its bottom is formed upon an arc of a circle considered in cross section, with the meeting edges of the arch so formed arranged centrally of the band, a pliable elongated strip stitched upon the arch top and covering the said meeting edges of the arch to provide a reinforcing member, a flat pliable member stitched to the underside of said band at the juncture of the arch ends with the main part of the band to form a pocket immediately below said arch and elongated strip, which pocket is of gradually decreasing height as it nears the rear of the band, which pocket extends beneath the major portion of the scaphoid of the human foot, and a removable elliptical shaped pad fitted within said pocket, said pad having a convexed upper surface throughout its extent and which surface longitudinally considered tapers to a very thin portion at the pad front and back to provide a reversible pad which may be fitted to the contracted rear space of said pocket, said pad being arranged to extend from the sesamoid of the human foot rearwardly to at least the internal cuneiform.



1,684,949. INCANDESCENT LAMP BULB. HAROLD B. DONLEY, Columbus, Ohio, assignor of one-third to W. Herbert Bretzlaff, Indianapolis, Ind. Filed May 1, 1926. Serial No. 106,096. 1 Claim. (Cl. 176—34.)

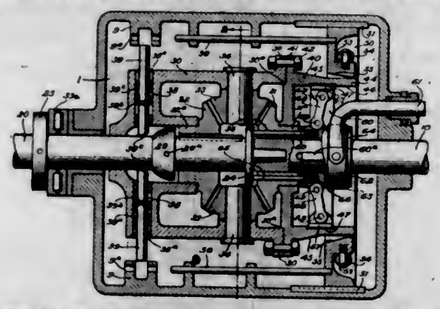
In a lamp, a base, a glass bulb projecting forwardly from said base and including a conoidal body portion and a substantially elliptical front wall, the body portion and the said wall being of uniform thickness throughout, an unobstructed filament positioned within said bulb and so placed with respect to the elliptical front wall thereof that the internally reflected light rays from said wall are thrown back into the area of the lamp base.



1,684,950. MANUFACTURE OF SKATE BLADES WITH THICKENED EDGES. HUGO DORNSEIF, Radevormwald, Germany. Filed Oct. 2, 1925. Serial No. 60,116, and in Germany Oct. 2, 1924. 10 Claims. (Cl. 78—81.)

1. In a machine for cold swaging a skate blank for the production thereon of a runner edge of widened cross-section with respect to the thickness of the blank body, a support for the blank, a die of a length for swaging a comparatively small portion of the edge of the blank compared with its length on each swaging action, said die having a channeled swaging face provided with an inclined central swaging surface, a shallow front portion to embrace and hold the unswaged edge of the blank in advance of the swaging point from lateral deflection, and a relatively deeper and flaring rear portion to embrace and hold the

swaged portion of the blank in rear of the swaging point from lateral deflection, means for reciprocating said die to act on successive short portions of the blank as presented thereto by intermittent relative movements between the blank and die, and means for shifting the support and blank relative to the die to present new portions of the blank to the action of the die successively from end to end of the blank.

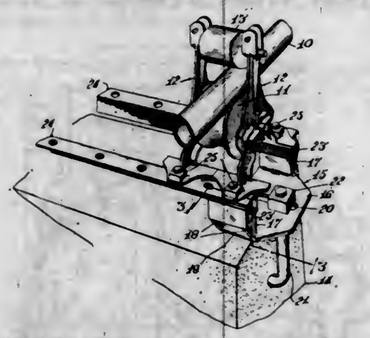


1,684,951. SPOOL-HOLDING DEVICE. JAMES T. DOWDALL, Glen Morris, N. Y. Filed June 16, 1927. Serial No. 199,152. 3 Claims. (Cl. 242—134.)

1. In a spool holding device, a support having a cavity, a ball within the cavity, a ball retaining bifurcated member on the support, a spool supporting base, a bearing stud in the base upon which the spool is adapted to be frictionally mounted to rotate therewith upon the ball, a frame on the support, and a spool guiding bearing mounted in the frame in line with the bearing stud in the base.

1,684,952. TRANSMISSION DEVICE FOR MARINE MOTORS. WILLIAM C. ESLECK, Whitestone, N. Y. Filed Aug. 11, 1926. Serial No. 128,619. 11 Claims. (Cl. 74—34.)

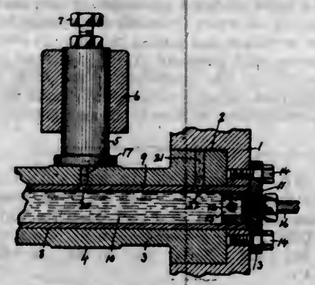
1. In a power transmission device with differential reverse gears, a case operably mounted within, an actuating shaft entering said case and having pinned thereto one of said gears; a propeller shaft having one end slidably entering said case in axial alignment with said actuating shaft and having another of said gears splined thereon; a clutch having a longitudinally movable hub splined upon said actuating shaft and a divided band expansively supported thereon and adapted to be actuated into frictional contact



with said case by sliding the clutch in the direction thereof; pins in said hub parallel to said actuating shaft and extending beyond the end thereof when said hub has been carried in the direction thereof; orifices disposed in the end of said propeller shaft and adapted to receive said pins when the propeller thrusts its said shaft in the direction thereof.

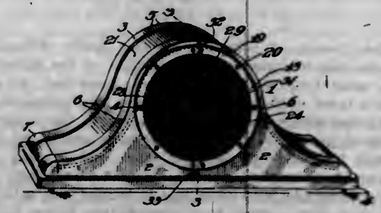
1,684,953. SUPPORTING BRACKET FOR RAILWAY SIGNALS. EDWARD A. EVERETT, New York, N. Y. Filed Mar. 26, 1926. Serial No. 97,514. 1 Claim. (Cl. 248—20.)

A support for a railway signal device as described, comprising a clamping part and a bracket arm for supporting the device, said clamping part comprising a casting for clamping against the signal mast and having a vertical disc face parallel with the longitudinal center of and close to the mast and centered on the longitudinal centre line of the mast, said bracket arm terminating in a disc face off-set upward from the line of the arm, said disc face matching the disc face of the clamp to which it is pivotally secured through the centre of the discs and in line with the longitudinal centre of the mast, said disc faces being machined smooth to form an abutting bearing having uniform tension in any adjusted position and the free end of said arm terminating in a horizontal disc to match a corresponding disc on the signal device and to which it is pivotally secured.



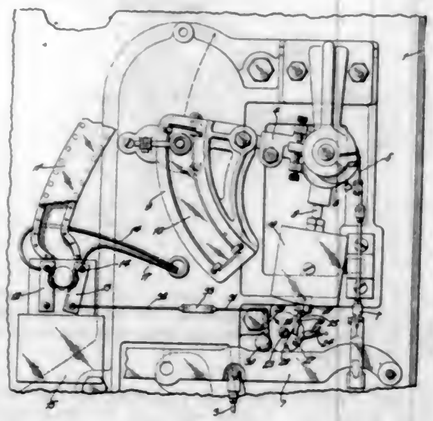
1,684,954. SWITCH AND SIGNAL-ROD-CARRIER SUPPORT. OTTO S. FLATH, Chicago, Ill. Filed Feb. 25, 1924. Serial No. 694,833. 1 Claim. (Cl. 249—30.)

In a carrier support, the combination of a pedestal consisting of a substantially flat body portion of greater width intermediate of its ends and slotted transversely, the bottom of said portion being provided with transversely disposed reenforcing and bearing ribs, the ends of the body portion being disposed upwardly and increasing in thickness to provide head portions having flat upper surfaces, said head portions being each provided with a transversely disposed inverted T-shape slot open at opposite sides of the head portion, connecting webs on the outer ends of the pedestal between the body portion and the head portions, angle bars supported on said head portions with one side of each angle bar in lapping relation with a side of the respective head portion while the other side of the angle bar rests on the upper face of the respective head por-



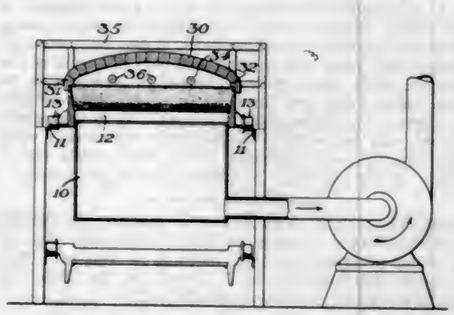
tion transversely of the slot therein, with bolts for securing the angle bars on the pedestal, the heads of the bolts being inverted in said T-shaped slots, said bolts also securing the carrier in place.

1,684,955. POPPET-VALVE ACTUATING DEVICE. WILLIAM M. GOODWIN, Central Square, N. Y. Filed May 3, 1927. Serial No. 188,471. 2 Claims. (Cl. 184—7.)



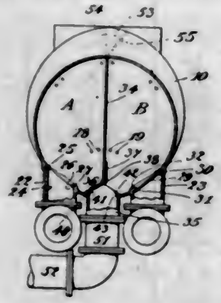
1. In a poppet-valve actuating device, a non-rotatable oil containing member having a peripheral oil outlet passage relatively narrow circumferentially, a cam-shaft rotatable around and upon said member and provided with a cam surface, and a valve operating tappet in contact with the cam surface, said cam shaft having an oil outlet relatively narrow circumferentially and extending to the surface of the cam for registration with the first-named outlet once during each revolution of the shaft when the oil outlet in the cam shaft is registered with the tappet.

1,684,956. LOUD SPEAKER FOR RADIO RECEIVING APPARATUS. ALFRED H. HAAG, Baltimore, Md., assignor of fifteen one-hundredths to E. Hayward Fairbanks, Merchantville, N. J. Filed Jan. 26, 1925. Serial No. 4,708. 8 Claims. (Cl. 181—27.)



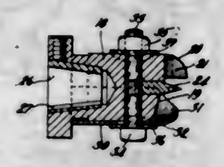
1. In a device of the character stated, an amplifier for sound reproducing mechanism having a clock face formed on the front of the vibratory portion thereof and movable clock hands coacting with said clock face.

1,684,957. SCALE. FRED B. HAMBLIN, St. Louis, Mo., assignor to The Weightograph Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 30, 1926. Serial No. 138,608. 8 Claims. (Cl. 194—6.)



1. In a scale having a pendulum, a coin seat including members, one of which is relatively movable in respect of the other to engage and release the coin, an electric circuit closed across said members by the coin, and an actuator under control of the pendulum of the scale for moving one of said coin-engaging members to release the coin when the scale mechanism returns to normal position.

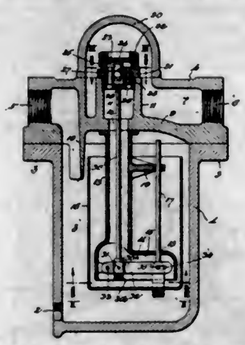
1,684,958. PROCESS OF TREATING FINES OF EARTHY MINERALS. REED W. HYDE, Summit, N. J., assignor to Dwight & Lloyd Metallurgical Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 30, 1925. Serial No. 26,924. 8 Claims. (Cl. 222—4.)



1. The process of calcining alkaline earth carbonates, which consists in mixing small particles of the carbonate with a small proportion of solid fuel, spreading the mixture in a layer uniform as to thickness and permeability, exposing the entire surface of the layer to the action of the heated gases of combustion from a source of heat supported independently of said layer and causing said gases to pass through the entire layer at a relatively constant rate whereby said solid fuel is burned and said carbonate is rapidly heated to a temperature below the incipient fusion point and above the decomposition temperature of the carbonate and maintaining the layer within the said temperature range by continued passage of said gases until the carbonate is converted into oxide.

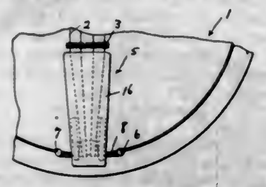
1,684,959. CONDENSER. EINAR A. JOHNSEN, Mountain Lakes, N. J., assignor to Engineering Development Company, New Brunswick, N. J., a Corporation of New Jersey. Filed Jan. 7, 1927. Serial No. 159,517. 9 Claims. (Cl. 257—43.)

1. In a two pass surface condenser, a shell, banks of tubes therein, a water box at one end of the shell, means shiftable within the water box for directing the flow of a circulating medium to a predetermined bank of tubes, and means also shiftable in the water box for controlling the discharge of the circulating medium therefrom whereby the circulating medium may be directed to pass in one direction through one bank of tubes and in another direction through another bank of tubes and by shifting the position of the said means the circulating medium may be directed to flow in the opposite direction through the last aforesaid bank of tubes and in the opposite direction through the first aforesaid bank of tubes.



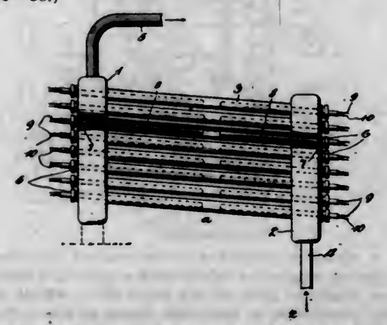
1,684,960. LAST-ENGAGING DOG FOR LAST LATHES. WILLIAM H. KAY, Lynn, Mass. Filed Aug. 31, 1926. Serial No. 132,836. 2 Claims. (Cl. 142—55.)

1. A last dog comprising a body having means at one end whereby it may be coupled to the live spindle of a last lathe, so that the body is coaxial with the spindle, and provided at its opposite end with a spur coaxial with the body and formed to engage the midlength portion of the heel-end face of a last, and with fixed non-adjustable centering ears projecting from the body at one side of the spur, and formed to engage the upper end portion of said end face, a slide movable on the body in a direction parallel with the axis thereof, and provided with centering ears projecting from the body at the opposite side of the spur, and spaced therefrom to engage the lower end portion of the heel-end face of the last, and means for releasably clamping the slide to the body, so that the centering ears of the slide may project variably from the body, the arrangement being such that the adjustable centering ears cooperate with the spur and the fixed centering ears in engaging the heel-end face of the last at a plurality of points above the heel-seat face thereof, and positively maintaining the last at various inclinations relative to the spur.



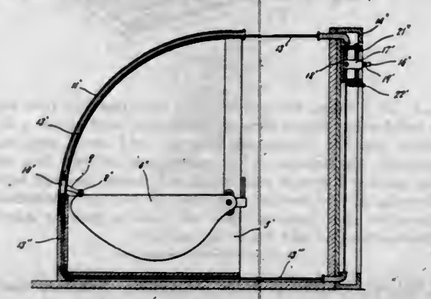
1,684,961. STEAM TRAP. WILFRED H. KUHN, Detroit, Mich. Filed June 29, 1925. Serial No. 40,243. 4 Claims. (Cl. 137—103.)

1. A device of the character described comprising a casing forming a chamber for water of condensation, a valve to control the flow of water from said chamber, a tubular member depending into said chamber and forming a passage for the outflowing water, a lateral extension at the lower end of the tubular member, a bucket within the chamber surrounding the tubular member, with the tubular member extending into the bucket to near the bot-



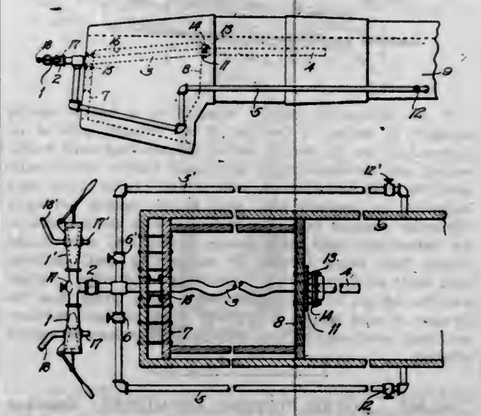
tom thereof, and means carried by the tubular member and operated by the bucket for operating said valve, said lateral extension having an air inlet in its upper side opened by the fall of water in the bucket upon outflow of water therefrom, through said tubular member.

1,684,962. BANJO HAND REST. JOHN LATERRA and FRANK JOY, Paterson, N. J. Filed Dec. 21, 1926. Serial No. 156,151. 2 Claims. (Cl. 84—328.)



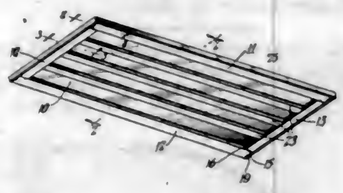
1. As a new product of manufacture, a banjo hand rest and string anchoring device comprising a pair of attaching bolts having retaining hooks at one end, retaining means for the opposite ends of said bolts, a connecting strip for said bolts, the intermediate portion of said strip being provided with string anchoring fingers, a pair of spaced retaining members connected with and extending forwardly from said strip, and a hand rest plate removably mounted upon said members.

1,684,963. HEATER FOR LIQUID-HEAT-TRANSMISSION SYSTEMS. DANIEL M. LUEHRS, Cleveland, Ohio. Filed Oct. 6, 1924. Serial No. 742,017. 2 Claims. (Cl. 219—38.)



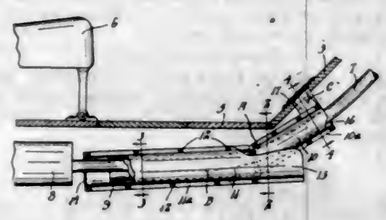
1. An oil heater comprising two opposing sets of superposed headers, tubes extending between and communicating with the interiors of the opposing headers, hand holes in the opposing headers in line with the tubes, plugs fitting in the hand holes and electric heating rods projecting into the tubes from their opposite ends, each rod supported in one of the plugs and extending through a header and part way, only, through a tube, said rods being spaced from the inner walls of the tubes.

1,684,964. VARIABLE CONDENSER. JAMES LYONS, Jr., New York, N. Y., assignor to self and Leo H. Schwabacher, trustees, New York, N. Y. Filed May 18, 1925. Serial No. 31,056. 27 Claims. (Cl. 175—41.5.)



1. In variable condensers, the combination of a stationary element and an element movable relative thereto, flexible means for moving the movable element, and means sustained by the flexible means for indicating the extent of movement of the movable element.

1,684,965. FEED-WATER-HEATING SYSTEM. BENJAMIN F. MADISON and ELBERT C. KRUME, Council Bluffs, Iowa. Filed July 6, 1926. Serial No. 120,845. 3 Claims. (Cl. 122—414.)

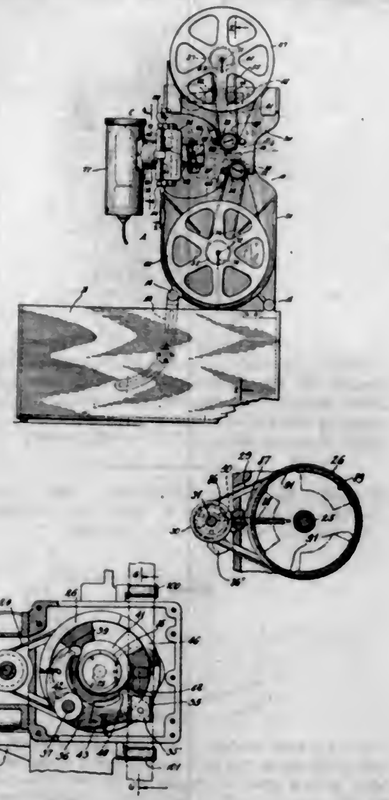


1. The combination with a locomotive boiler having a fire box, of a longitudinal supply pipe having a portion extending forwardly and upwardly through the fire box at a point beneath the crown sheet of the same and passing through the tube sheet into the boiler and extending forwardly in the barrel of the boiler to a point intermediate of the ends of the same, a pair of longitudinally disposed exteriorly arranged pipes located at opposite sides of the boiler and connected at their front ends to the boiler at the lower portion of the same and above the bottom thereof and extending horizontally to points adjacent the fire box and provided thereat with transversely disposed rear portions connected to the supply pipe in rear of the fire box, a pair of transversely disposed injectors connected to the supply pipe in rear of the said transverse portions of the exterior pipes, and independent means for controlling the flow of water through the supply pipe and the exterior pipes.

1,684,966. METAL TABLE. CORNELIUS C. O'CONOR, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed Aug. 13, 1923. Serial No. 657,068. 6 Claims. (Cl. 45—31.)

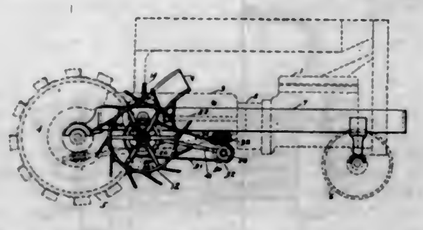
1. In a table, the combination of a metallic face sheet, a reinforcing frame member inderlying said sheet, a deadening member interposed between said sheet and frame member, and means on the under side of said face sheet for uniting together said sheet and frame member beyond the edge of said deadening member to prevent separation of the sheet and frame member, and also to prevent sidewise displacement of said deadening member.

1,684,967. AUTOMOBILE HEATER. NELS A. OLUND, Cambridge, Minn. Filed June 19, 1926. Serial No. 117,164. 5 Claims. (Cl. 257—241.)



5. An automobile heater comprising a heater casing adapted to enclose a portion of the exhaust pipe of an automobile, an air intake casing surrounding said heater casing and communicating with said heater casing adjacent the rear end thereof, said intake casing being open adjacent its forward end, said heater casing having a discharge passage that communicates with the interior of an automobile body, said heater casing and said intake casing both being formed of cooperating shell sections, said shell sections having registering longitudinal flanges and the flanges of said heater casing being wider than the flanges of said intake casing and being clamped between said last mentioned flanges to hold said casings in spaced relation.

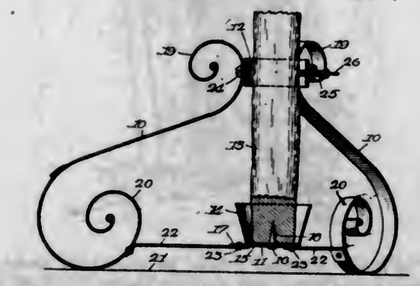
1,684,968. MOTION-PICTURE APPARATUS. FREEMAN H. OWENS, New York, N. Y. Filed Apr. 11, 1924. Serial No. 705,804. 14 Claims. (Cl. 88—18.4.)



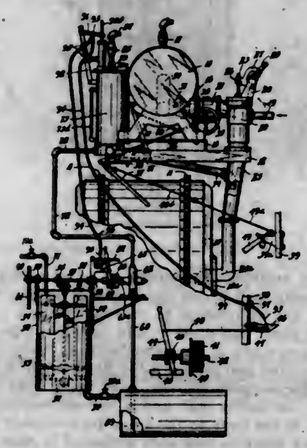
1. A motion picture apparatus comprising a frame, a shutter shaft journalled therein, and intermittent film moving mechanism operated from said shutter shaft, said mechanism including a film grip element, a cam fixed to said shutter shaft and a cam lever oscillatably mounted on said frame, the said lever carrying the film grip element and operated by said cam.

4. A portable motion picture apparatus comprising a casing, a motion picture machine pivotally carried by said casing for movement from horizontal encased to erect operating positions, and means for adjustably locking the machine on the casing operative to permit projection at an angle to the horizontal.

8. A motion picture apparatus comprising a frame, a shutter and shutter shaft journalled therein, a motor for directly driving said shutter, and mechanism for stopping said shutter in open or projection position when the said motor is stopped, the said mechanism comprising a shutter locking member, means for normally holding the said member in inoperative or unlocking position and means for operating the said member to shutter locking position when the said motor is stopped.

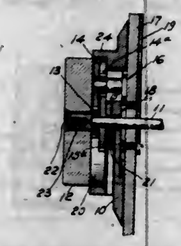


1,684,969. SECONDARY-TRACTOR-PROPELLING DEVICE. FRANK PRASZKEWIZ, Detroit, Mich. Filed July 27, 1925. Serial No. 46,263. 3 Claims. (Cl. 180—15.)



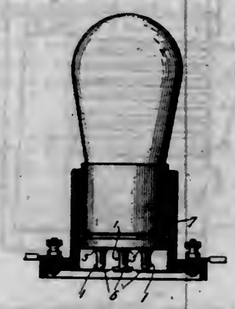
1. A secondary propelling device adapted for attaching to a tractor engine for substituting a pair of special propelling wheels in place of the heavy drive wheels of the tractor, comprising a rigid side frame attached to each side of the tractor body, an adjustable sliding bar movably mounted on each of said side frames positioned ahead of the rear drive wheels of the tractor, a special driving wheel mounted on the lower end of each of said sliding bars, a threaded lifting screw attached to the lower end of each of said slides and connected to the tractor frame by a threaded power gear mounted on said screw, geared means connected to said power gear for rotating same, said geared means being connected directly with the engine transmission and operated thereby, geared means attached to each of said wheels and connected to the tractor engine for propelling said wheels directly by power of the tractor engine.

1,684,970. CHRISTMAS-TREE STAND. HAROLD G. RICE, Chicago, Ill. Filed Sept. 17, 1926. Serial No. 136,040. 3 Claims. (Cl. 248—38.)



1. In a device for maintaining a Christmas tree in vertical position, the combination of a water cup provided with means for positioning the bottom of the tree against lateral movement and plurality of folding leg members having lower inner extensions hingedly connected to the periphery of said cup and having upper extensions for bracing an upper portion of said stem, said hinges comprising axially vertical pivots.

1,684,971. MEASURING APPARATUS FOR PAVING MACHINES. THORMAN W. ROSHOLT and HAROLD CEDERSTROM, Minneapolis, Minn., assignors to Thorman W. Rosholt Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 31, 1927. Serial No. 230,061. 15 Claims. (Cl. 88—73.)



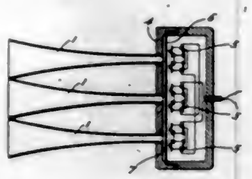
1. The combination with a concrete mixer comprising a mixing member, a water supply means and means for charging water and aggregate materials thereinto, of a control means for said last mentioned means, a supply means for a chemical solution, a measuring device for apportioning a definite quantity of said solution, means connected to said control means for actuating the same when said quantity of said solution has been apportioned, and means for discharging said quantity of the solution from said device into said member.

1,684,972. VARIOMETER DIAL. HARRY R. RUSSON, Akron, Ohio, assignor of one-half to William C. McCoy, Cleveland, Ohio. Filed Aug. 21, 1922. Serial No. 583,252. 14 Claims. (Cl. 74—7.)

1. An apparatus comprising a panel, a dial rotatably mounted thereon, a bracket mounted on said panel and extending through an aperture in said dial, an idler gear wheel mounted on said bracket, a gear wheel rigidly mounted on said dial and adapted to mesh with said idler gear, and a knob rotatably mounted on the dial and having a gear wheel adapted to mesh with said idler gear.

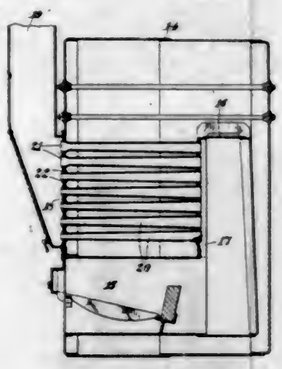
1,684,973. CONTACT-PROTECTING MEANS FOR VACUUM TUBES. STERLING G. SEARS, Brooklyn, N. Y., assignor, by mesne assignments, to Naylor Radio Corporation, New York, N. Y. Filed Sept. 12, 1925. Serial No. 55,939. 3 Claims. (Cl. 250—27.5.)

1. In a contact protecting means for vacuum tubes having pins of oxidizing metal, contact caps formed of spring metal and having contact surfaces coated with a non-oxidizing metal.



1,684,974. SPIDER FOR SUCKER RODS AND THE LIKE. ERNEST J. SHAFFER, Tulsa, Okla. Filed Aug. 28, 1926. Serial No. 132,227. 3 Claims. (Cl. 24—263.)

1. A device of the character set forth comprising a body having a bore, a pair of slips for engagement within said bore, a pair of tongs comprised of members that are piv-

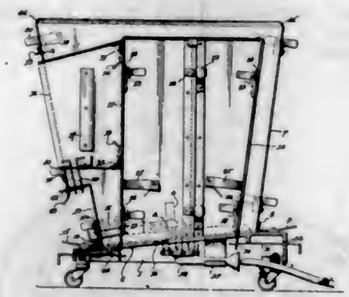


otally connected together intermediate their jaws and handles and to the jaws of which are connected the aforesaid slips, and a spring interposed between the slips and located laterally of the axis of the slips toward the pivotal connection between the members of the tongs.

1,684,975. SOUND-GENERATING DEVICE. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 16, 1926. Serial No. 116,251. 7 Claims. (Cl. 181—27.)

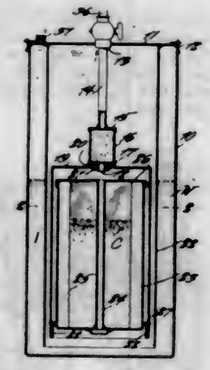
1. In a sound-producing device, a plurality of exponentially curved horns having a combined mouth opening of an area comparable to the square of one half the wave-length of the lowest frequency it is desired to produce.

1,684,976. STEAM GENERATOR AND THE LIKE. JOHN TAIT, Port Chalmers, New Zealand. Filed May 3, 1927, Serial No. 188,572, and in Great Britain June 4, 1926. 4 Claims. (Cl. 122—149.)



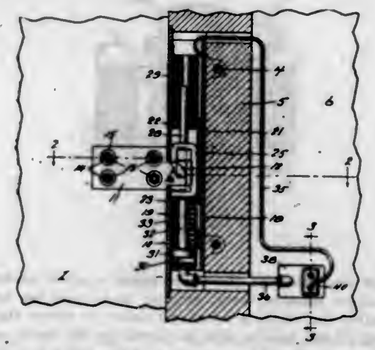
1. In a multi-tubular flame-tube boiler the combination of tapered flame-tubes which at their smaller ends are provided with enlargements the diameter of which is greater than that of the larger ends of the flame-tubes and a tube-plate into which the said enlargements are fitted, substantially as and for the purpose set forth.

1,684,977. LINK STRAP. CHARLES R. TOAST, Centerdale, R. I., assignor to The Hadley Company, Providence, R. I., a Corporation of Rhode Island. Filed June 9, 1927. Serial No. 197,658. 6 Claims. (Cl. 59—80.)



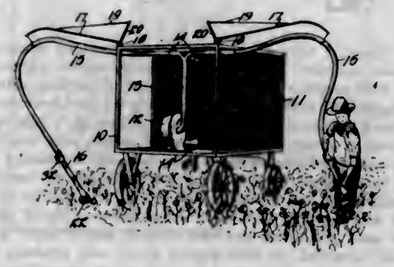
3. A link strap comprising outer links having transverse inturned flanges at their juxtaposed ends, inner links having end flanges hooking over said flanges to interconnect the outer links, the outer links substantially meeting throughout substantially the width of the strap and the inner links being substantially concealed by the outer links when viewed from the outside of the strap.

1,684,978. MOLD. JOSEPH P. URBAN, Detroit, Mich., assignor to Detroit Concrete Receptacle Company, Detroit, Mich., a Corporation of Michigan. Filed May 14, 1927. Serial No. 191,490. 7 Claims. (Cl. 25—130.)



2. A mold comprising a base, an outer wall mounted thereon, a core within said wall and spaced therefrom, an outlet-forming core between said first named core and outer wall, said first named core having apertures leading to said second core, and a heating element effective in said first core.

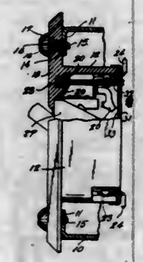
1,684,979. ACETYLENE-GAS GENERATOR. AUGUST VALENTOUR, McDonald, Pa. Filed May 10, 1927. Serial No. 190,290. 4 Claims. (Cl. 48—19.)



1. In an acetylene generator, an outer casing having a cover, a shell fixed to the cover and depending within the casing in spaced relation to its side walls, a valve body having its lower end fixed in said casing, a pipe depending from the lower end of the valve body, an inner bell spaced within the shell and having a top fixed to the lower end of the pipe for support thereby, said valve body having an inlet port, an outlet port and a by-pass leading from the lower end of the body to the space between said ports, and a three way valve in said body arranged to close the outlet port, place both the inlet port and by-pass in communication with the outlet port and the by-pass alone in communication with the outlet port with the outlet port selectively, and a carbide holder within the inner bell and having an opening in its lower wall for the admission of water and an outlet in its top wall for the passage of generated gas into the inner bell.

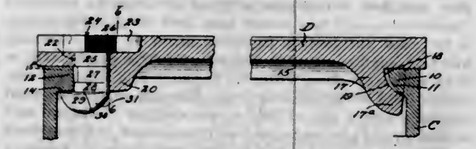
1,684,980. CAR-DOOR LOCK. JOHN P. WARD, Cleveland, and ROBERT E. HYDE, Cleveland Heights, Ohio, assignors of one-third to Harry J. Green, Cleveland, Ohio. Filed Apr. 4, 1927. Serial No. 180,657. 7 Claims. (Cl. 70—50.)

1. A lock of the class set forth comprising a casing having an opening in its side, a locking head of material length having a sliding fit within the casing and restricted thereby to a vertical movement, a latch member adapted to be projected through said opening into the casing for interlocking engagement with the locking head, a stem on said locking head, and a solenoid whose core is constituted of said stem mounted within the casing.



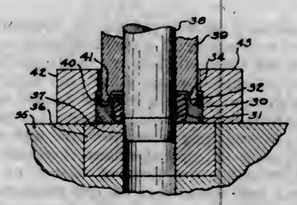
1,684,981. COTTON PICKER. PAUL H. WHITE, Indianapolis, Ind. Filed Apr. 5, 1926. Serial No. 99,919. 7 Claims. (Cl. 56—32.)

1. A cotton picking device comprising a head, parallel shafts mounted within the head, a set of thin flexible disks on each shaft, a plurality of rigid disks on each shaft alternating with the flexible disks, the said flexible disks on one shaft having their peripheral edges in overlapping engagement with the peripheral edges of the said rigid disks on the other shaft, means for rotating the said parallel shafts in opposite directions, and means for creating a suction through the spaces between said disks, substantially as set forth.



1,684,982. ELECTRIC SWITCH. TONJES A. BOTH, Stratford, Conn., assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 19, 1924. Serial No. 756,902. 11 Claims. (Cl. 200—168.)

1. In combination, a cover plate of molded insulating material adapted to cover the open side of a wall outlet box, a box portion comprising walls of insulating material extending rearwardly from the back of said plate and molded in one piece with said cover plate on the rear side thereof,

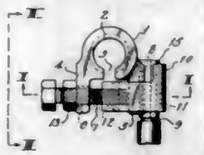


switch mechanism mounted in said box, and switch operating means projecting through said plate to the front thereof.

1,684,983. BOX OR CASING COVER WITH FASTENER. HORACE W. CLARK, Mattoon, Ill. Filed Nov. 26, 1927. Serial No. 235,931. 9 Claims. (Cl. 137—13.)

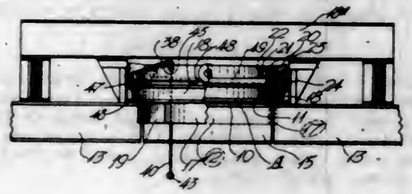
1. A cover for a protective casing, the cover having an upstanding neck formed at one side with an inwardly projecting lug and at its other side with a ledge, a lid fitting upon the neck and having a recessed portion defining a hook engaging upon said lug and cooperating therewith to constitute a hinge connection, and a bolt rotatably engaged through the lid and having a hook at its lower end engageable beneath said ledge, an intermediate portion of the bolt being formed with a cam engageable with said ledge for the purpose of cleaning contact surfaces in its operation.

1,684,984. SELF-ALIGNING BEARING STRUCTURE AND METHOD OF MAKING SAME. CARL CLAUS, Plainfield, N. J., assignor to Bound Brook Oil-Less Bearing Company, Boundbrook, N. J., a Corporation of New Jersey. Filed May 19, 1926. Serial No. 110,117. 4 Claims. (Cl. 29—149.5.)



3. The method of producing an annular bearing-member having a cylindrical bore and a transversely curved periphery, which consists in die pressing the bearing material into annular form with a convexed periphery having a flat zone extending around it, and then again die-pressing the material to eliminate said flat zone and form the periphery with a spherical curve struck from the center of the annular form by oppositely disposed and reciprocating dies.

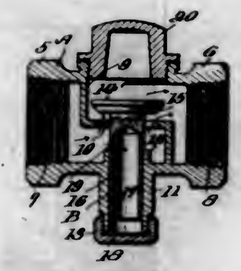
4. In a self-aligning bearing structure, an annular bearing-member having a cylindrical bore and a transversely



arched periphery, said member being formed from a mixture of different finely divided metals compressed into a firm consolidated mass under pressure exerted from opposite ends of the member.

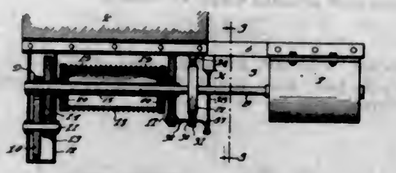
1,684,985. BATTERY TERMINAL AND CABLE CLAMP. SAMUEL R. GARNER, Sr., Cleveland, Ohio. Filed Sept. 4, 1925. Serial No. 54,500. 3 Claims. (Cl. 173—259.)

1. A battery terminal and cable clamp comprising a split sleeve having arms extending outwardly, one on each side of the split, one of said arms being adapted to form an abutment for an electrical conductor, the other of said arms having an unthreaded aperture adapted to loosely receive the shank of a clamping screw, a cable clamp loosely fitting over said first named arm adapted to clamp an electrical conductor to said first named arm, said cable clamp having a threaded aperture, a clamping screw in said threaded aperture adapted to abut against said first named arm to draw said cable clamp toward it to clamp said electrical conductor, said screw passing freely through said unthreaded aperture, and a nut on said screw adapted to engage said second named arm and co-act with said screw and said cable clamp to draw said arms toward each other to contract said sleeve.



1,684,986. OVERHEAD RUNWAY TURNTABLE. MATTHEW CHALMERS GILLIES, Walkerville, Ontario, Canada. Filed Feb. 2, 1927. Serial No. 165,279½. 5 Claims. (Cl. 104—99.)

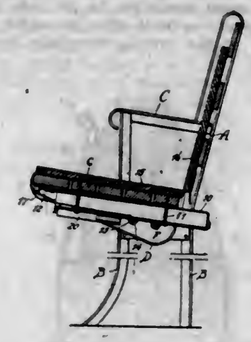
1. In an overhead runway system, the combination with runway joists intersecting at a common point and a supporting frame for the said joists of a turntable adapted to rotate about the said common point, the said turntable comprising a circular plate; a channel formed into a circular ring with its flanges turned inwardly fastened to the said plates; a tapered ring mounted on the said supporting frame; a plurality of tapered rollers revolubly mounted on the said turntable and adapted to roll on the said tapered ring; a joist mounted on the said turntable adapted to be aligned with one of the said runway joists; and means for releasably locking the said turntable in any desired alignment.



1,684,987. CHECK VALVE. GEORGE EDGAR HAZARD, Rochester, N. Y., assignor to Kellogg Manufacturing Co., Rochester, N. Y. Filed Nov. 3, 1927. Serial No. 230,911. 2 Claims. (Cl. 251—128.)

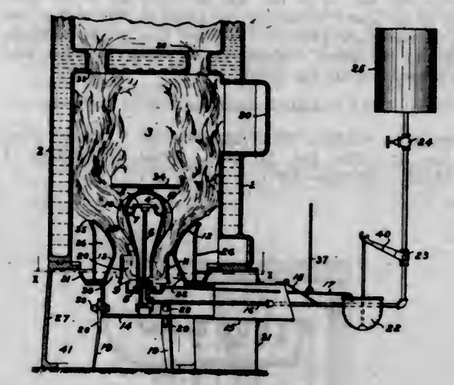
1. A valve constructed as hereinafter defined comprising a housing that has an intermediate longitudinally extending wall with a valve seat, a valve seating on the said wall, a cylindrical dash pot extending laterally from the said housing and having a closed outer end, and a hollow stem secured to the said valve and movably fitting within the said dash pot, said hollow member having an opening which is normally closed when the valve is on

its seat and whereby the valve opens against suction in the hollow member, said opening being also so located that after the valve is open and before it closes the said opening in the hollow stem is closed by the inner end of the dash pot whereby hammering of the valve is obviated.



1,684,988. HOIST. CLAYTON H. HOMAN, Cleveland, Ohio, assignor to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Sept. 20, 1923. Serial No. 663,731. 1 Claim. (Cl. 254—186.)

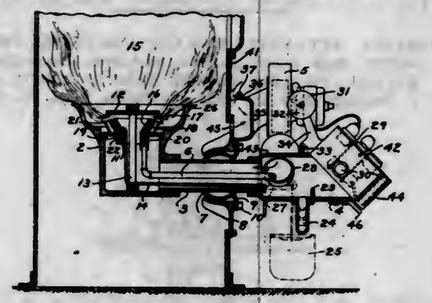
A hoisting unit of the character described comprising a base member, a reversible electric motor carried by said base member and having a shaft projecting outwardly therefrom, said shaft having a pinion on its outer end, a sleeve surrounding said shaft and having a gear keyed thereon, a drum surrounding said sleeve and non-rotatably connected therewith, a gear housing depending from said base member and forming a bearing for the outer end of said shaft and sleeve, a pinion shaft journaled in said gear housing and having a gear thereon which meshes with said pinion on the end of said motor shaft and a pinion mounted on said pinion shaft and meshing with the gear on said sleeve, a bearing block depending from said base member and forming a bearing for the opposite end of said sleeve and through which said motor shaft extends, a brake device depending from said base member and engaging said motor shaft, said brake device being arranged to be mechanically set and electrically released, electromagnetic means for releasing said brake device when the motor is running in either direction and remote control means for controlling the operation of said motor and brake devices.



1,684,989. CHAIR CUSHION. JACQUE E. HORN, New York, N. Y., assignor, by direct and mesne assignments, to Eze Cushion Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 15, 1927. Serial No. 219,581. 5 Claims. (Cl. 155—182.)

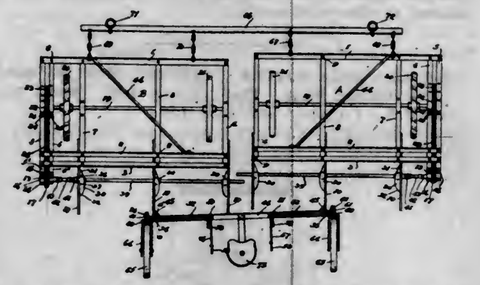
1. The combination with a chair, of a box secured flatwise to the under side of the seat of the chair and having an opening at its front end, a pair of cushions hinged together, and a flexible band secured within the box and attached to one of the cushions and of sufficient length to permit the placing of the cushions on the back

and seat of the chair with the band extending about the front edge of the chair seat and the insertion of the cushions in folded condition in the box.



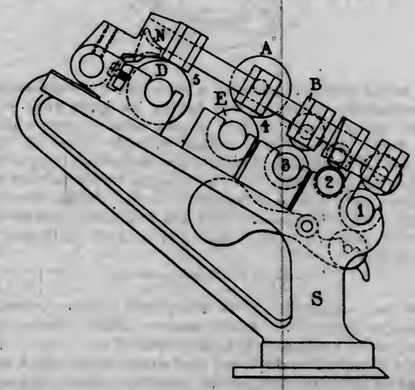
1,684,990. OIL BURNER. BRUCE K. INGLIS, Milwaukee, Wis., assignor of one-half to Clement W. Inglis, Milwaukee, Wis. Filed Aug. 15, 1924. Serial No. 732,170. 3 Claims. (Cl. 158—64.)

1. In an oil burner, a casing forming an imperforate dome having a constricted open lower end, means forming an annular trough exposed to the upper enlarged interior of said dome, means for feeding liquid fuel into said trough, an inner wall forming an annular passage surrounding the lower open end of said casing and directed upwardly toward the outer surface of said dome, an outer wall surrounding said inner wall and forming an annular passage surrounding said casing and having a constriction adjacent to the upper end of said inner wall, and means for conducting air to the open lower ends of said walls.



1,684,991. OIL BURNER. BRUCE K. INGLIS, Milwaukee, Wis., assignor of one-half to Clement W. Inglis, Milwaukee, Wis. Filed June 14, 1926. Serial No. 115,764. 4 Claims. (Cl. 158—92.)

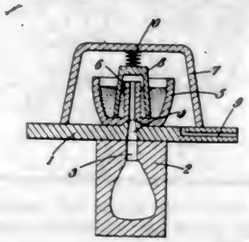
1. In combination, a burner comprising a fuel distributing cup, a member forming a conduit, said cup being supported upon an end of said member, and a universally adjustable support for said member, said support being formed for attachment to a furnace wall and being



adjustable to enable both lateral and longitudinal shifting of said cup within the combustion chamber of the supporting furnace.

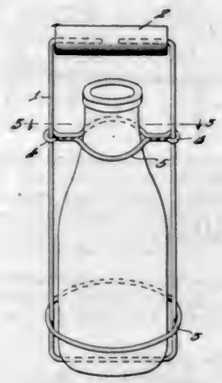
1,684,992. ROTARY ROD WEEDER. NELSON JACKSON, Saskatoon, Saskatchewan, Canada, assignor of one-fourth to Arthur Duncan, Saskatoon, Canada. Filed Nov. 5, 1926. Serial No. 146,466. 5 Claims. (Cl. 97—42.)

1. A multi-section rod weeder having the rod of each section independently driven and the frames thereof flexibly connected and spaced and each separately supported by three wheels arranged in a substantially V-shaped formation.



1,684,993. DRAWING OR DRAFTING MECHANISM. JAMES JOLLY, Bolton, England. Filed July 18, 1927. Serial No. 206,694. 4 Claims. (Cl. 19—130.)

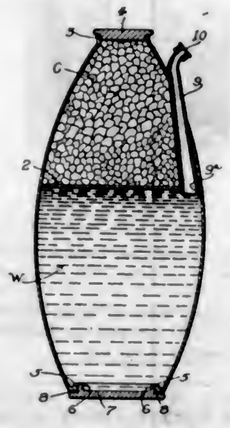
1. The combination with a three-roller draft frame, of two additional lines of rollers added thereto and in such a manner that the material being drafted is passed to



and fro, over and around these additional lines of rollers, the rollers in one of the additional lines being provided with grooves of varying diameters.

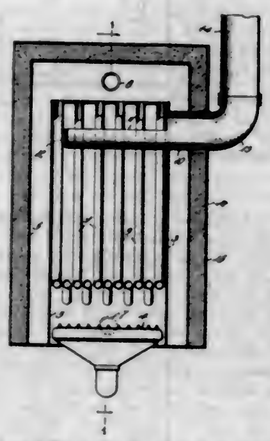
1,684,994. APPARATUS FOR CASTING UNDER PRESSURE. ERIK JORGEN-JENSEN, Edgbaston, Birmingham, England. Filed Nov. 21, 1927, Serial No. 234,772, and in Denmark Mar. 22, 1927. 5 Claims. (Cl. 22—68.)

1. Apparatus for casting under pressure, comprising a crucible adapted to contain molten metal, an outlet from said crucible, means for causing the molten metal to flow through said outlet by combined air pressure and syphonic action, and a compressed air bell surrounding said crucible suchwise that the walls of the crucible are not exposed to differential pressure.



1,684,995. MILK-BOTTLE CARRIER. ROY W. KENNARD, Harper, Wash. Filed July 18, 1927. Serial No. 206,710. 1 Claim. (Cl. 215—100.)

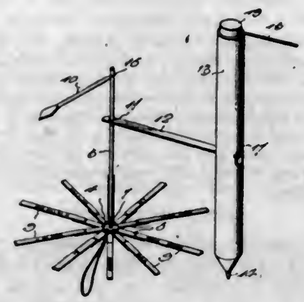
A bottle holder comprising a wire frame of substantially rectangular formation and having its upper arms split to provide a handle portion, a ring member surrounding the frame adjacent the bottom thereof, a second ring member of a less area than the first mentioned ring member having arm extensions which merge into eyes that are slidable upon the side members of the frame, and by virtue if such engagement with the said side members the said clamp tends to hold the split ends of the frame in parallelism.



1,684,996. WATER AND CARBIDE CAN. ANDREW KOZAK, Lilly, Pa. Filed May 25, 1926. Serial No. 111,604. 1 Claim. (Cl. 220—20.)

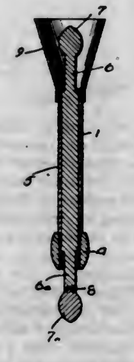
In a combined carbide can and water receptacle, a container of cylindrical formation tapering toward each end, a cross-partition intermediate the ends thereof dividing the same into an upper carbide can and a lower water receptacle, the opposite ends of the container having filling openings, a disk stopper threaded into each opening, a water tight connection between the disk stopper and water receptacle, with the peripheral edge of the last named stopper extending outwardly of the side wall of the receptacle and forming a base seat for the receptacle, and a pouring spout supported by the side wall of the container and partition wall with its major length disposed inwardly of the carbide receptacle and with the

outlet end of the spout terminating adjacent the filling opening for the carbide can and exteriorly thereof, that part of the spout within the carbide can lying juxtaposed to the side wall of the can, and the outer side of the inner end of the spout contacting the adjacent side wall of the water receptacle adjacent the lower face of the partition whereby the entire contents of the water receptacle may be drawn through the spout.



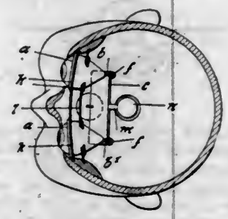
1,684,997. WATER HEATER. WALTER V. KRAFT, Clinton, Ill. Filed Feb. 17, 1927. Serial No. 169,003. 1 Claim. (Cl. 122—166.)

In a water heater, a chamber to contain flame-producing means, a water-containing shell spaced around said chamber, water tubes in said chamber communicating with the interior of said shell, said tubes having vertical upper portions disposed in two spaced parallel rows within the chamber, the lower portions of one row of tubes being curved outwardly in one direction toward one side of said



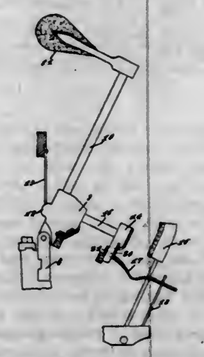
chamber and the lower portions of the other row being curved outwardly in the opposite direction from and between the curved lower portions of the first mentioned row, and an outlet pipe for the products of combustion extending horizontally across the upper end of said chamber and disposed between said rows of vertical tube portions, said pipe having an imperforate lower portion to deflect the products of combustion outwardly against said vertical tube portions, the upper portion of said pipe having means for admitting the products of combustion.

1,684,998. FORTUNE-TELLING DEVICE. NIKITAS LAPPAS, Peabody, Mass. Filed Dec. 5, 1927. Serial No. 237,840. 4 Claims. (Cl. 273—161.)



1. A fortune telling device comprising a lower bearing, a vertical shaft resting on said bearing, a pointer projecting laterally from said shaft, spaced legends co-operable with said pointer, and a manually movable upper bearing for said shaft operable to tilt the latter in any direction to cause said pointer to act by gravity and turn the shaft.

1,684,999. MEDICINE ADMINISTERING DEVICE. SYDNEY LEVY, Jr., Suva, Fiji Islands. Filed Nov. 27, 1926. Serial No. 151,186. 5 Claims. (Cl. 128—265.)

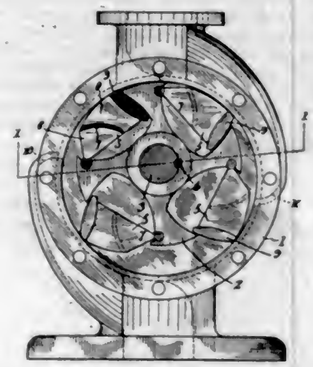


1. A medical appliance of the class described, comprising a tube, a piston slidably arranged therein and having a reduced part adjacent one end which forms a chamber with the walls of the tube when the piston is in retracted position, and a hopper detachably connected with the tube for enabling material to be drawn into said chamber when the piston is retracted after being projected.

1,685,000. DEVICE FOR MOVING THE EYES OF DOLLS. OSKAR RESCH, Neustadt, near Coburg, Germany. Filed Mar. 16, 1927, Serial No. 175,759½, and in Germany Dec. 20, 1926. 1 Claim. (Cl. 46—40.)

A device for moving the eyes of dolls in all directions, comprising in combination eye balls having horizontal pins bent to form vertical projections; an oscillating bridge member consisting of two parts adapted to slide in each other; overlapping projections provided on the lower and the upper edge of one of the said two parts, beneath which the other is slidably received; loops arranged on the one end of each of the said two parts and engaged with the said vertical projections; two guiding blades extending rearwardly from the front wall of the doll head and provided with eye apertures aligned with the eye sockets; eye balls mounted movably in said apertures and sockets; vaulted rims provided on the peripheries of said apertures register with the roundness of the eye balls and weights arranged on said bridge member.

1,685,001. PIANO-BRIDLE-STRAP FASTENER. THOMAS JEFFERSON MALCOLM, Natchez, Miss. Filed Mar. 21, 1925. Serial No. 17,297. 1 Claim. (Cl. 84—24.3.)

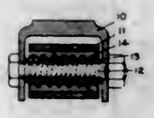


The combination with the hammer check of a piano action, said check formed with an opening having its wall tapered from end to end, of a removable bridle strap having its rear terminal portion extending through and projecting from said opening, said strap having a part of its rear terminal portion seating directly upon the lower portion of the wall of said opening, and a tapered, one-piece, solid, compressible plug extending through and projecting forwardly and rearwardly of said opening, and having the lower part of its periphery secured to the upper face of said rear terminal portion, said rear terminal portion having its free end flush with the reduced end of said plug, and said plug wedging the rear terminal portion of said strap against the lower portion of the wall of said opening and further wedging against the remaining part of the wall of said opening whereby the strap will be secured to the check.

1,685,002. WEATHERPROOF HINGE. VINCENT J. MATRANGA, Elizabeth, N. J. Filed Sept. 29, 1927. Serial No. 222,923. 5 Claims. (Cl. 16—135.)

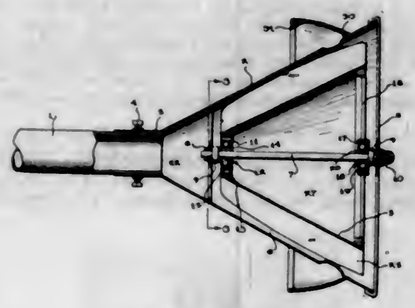
1. A weatherproof construction comprising a pair of cooperating members so formed as to provide a pintle roll, and channel portions which serve to cover said pintle roll; and a weather strip on one member engageable with the other member to provide a tight joint between the members at the outside line of separation.

1,685,003. BUCKET FOR ROTARY PUMPS. WILLIAM W. MCELRATH, Louisville, Ky. Filed Nov. 25, 1924. Serial No. 752,257. 1 Claim. (Cl. 103—140.)



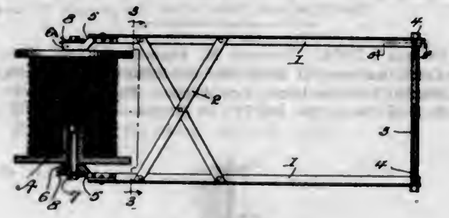
In a rotary pump, a stationary casing, a rotatable member mounted in the casing and having peripheral pockets therein opening toward the wall of the casing, and a bucket hinged at one side in each of said pockets, each of said buckets comprising a pair of side walls provided intermediate their ends with a curved loading blade extending generally in the direction toward the center of the rotary member and having between said side walls and at the outer ends thereof a follower blade spaced from the loading blade and having its inner surface curved in divergent relation to the curvature of the loading blade, said loading blade providing an intake opening at its inner side and an outer opening between the loading and following blades, said following blade adapted to receive impact of fluid in the outer opening and adapted for contact with the peripheral wall of the casing.

1,685,004. METHOD FOR INCREASING THE USEFULNESS OF FODDER AND FOOD. EUGEN MISLIN, Prague-Vrsovice, Czechoslovakia, assignor to Joseph Franz Daubek and Georg Daubek, Brnence, Czechoslovakia. Filed Apr. 7, 1925. Serial No. 21,421. 3 Claims. (Cl. 99—11.)



3. A method for increasing the nutrient value of fodder and foodstuffs consisting in simultaneously cultivating various species of yeasts in common with bacteria on pentosans without the addition of hexoses, allowing the resulting mass to act on the fodder and foodstuffs, and gradually heating the said mass and fodder and foodstuffs to about 50 degrees Celsius.

1,685,005. ATTACHMENT OF MOTOR-VEHICLE ROAD SPRINGS. DOUGLAS ROBERTSON, Nuriootpa, South Australia, Australia. Original application filed Jan. 6, 1926, Serial No. 79,621. Divided and this application filed May 6, 1927. Serial No. 189,340. 2 Claims. (Cl. 267—54.)

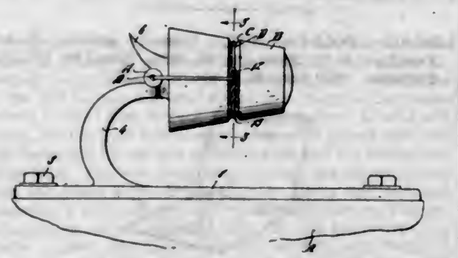


1. In an attachment for the road-spring of a motor vehicle, the combination with a hinge bolt, of a bush encircling the bolt and fitted to said bolt, a second bush cylindrical in shape and adapted to receive the first-mentioned bush, said bushes having spiral threads, the threads of the first-mentioned bush being complementary to that of the second-mentioned bush, and an eye receiving the second-mentioned bush and holding said bush in position on the first-mentioned bush.

1,685,006. ENGINE EXHAUST. GEORGE W. SCHULTZ, Bowers, Pa. Filed Nov. 10, 1925. Serial No. 68,105. 7 Claims. (Cl. 137—160.)

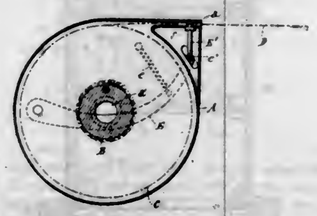
1. A device for use with engine exhausts comprising an outer casing having a small end connectible with the engine exhaust and enlarging from its small end to a large open end providing an outlet, an inner casing smaller than the outer casing and corresponding in form thereto, means for mounting the inner casing for free rotary movement within and in spaced relation to the outer casing, said inner casing co-acting with the outer casing to define an expansion chamber gradually enlarging to the outlet chamber, and exhaust gas operable vanes carried by the inner casing and extending spirally thereof and operating within the expansion chamber, said vanes being of slight cross section and of a width to extend from the outer periphery of the inner casing to the inner periphery of the outer casing and of a length to extend from one end of the inner casing to the other, the vanes being spaced a substantial distance from each other and occupying only a small portion of the total area of the exhaust chamber, whereby they serve to set up a suction in the expansion chamber and to whirl the exhaust gases around in the enlarging expansion chamber to secure gradual and thorough expansion of the same prior to their discharge to the atmosphere.

1,685,007. WIRE REEL. ALBERT SCHWINDENHAMMER, Peoria, Ill. Filed July 16, 1926. Serial No. 122,941. 1 Claim. (Cl. 242—94.)



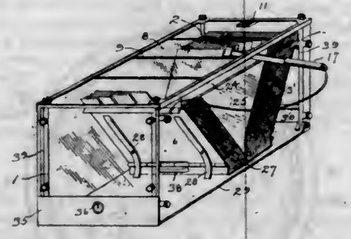
A device of the class described comprising a pair of side bars, a handle connecting one end of each bar with an end of the opposite bar, a casting fastened to the other end of each bar and having an inwardly extending offset portion having a hole therein, said castings forming extensions of the side bars, a shaft passing through the holes in the two castings, the length of the shaft being less than the width between the outer sides of the side bars, pins passing through the ends if the shaft for holding the shaft in place, a reel rotatably mounted on a shaft and braces connecting the side bars together.

1,685,008. PROCESS OF TREATING SLACK WAX. BENJAMIN L. SOUTHER, Pittsburgh, and WILLIAM A. GRUSE, Wilkinsburg, Pa., assignors to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Feb. 17, 1926. Serial No. 88,906. 4 Claims. (Cl. 196—20.)



1. In the treatment of slack wax, the process which comprises, comminuting a magma of solid slack wax containing oil to a fluent consistency, and mechanically separating the liquid and solids of the comminuted material.

1,685,009. WIRE CLAMP AND INSULATOR HOLDER. SEABORN JONES SPEIR, Austin, Tex., assignor of one-half to Ferdinand W. Menking, Fayetteville, Tex. Filed July 2, 1927. Serial No. 203,282. 5 Claims. (Cl. 173—321.)

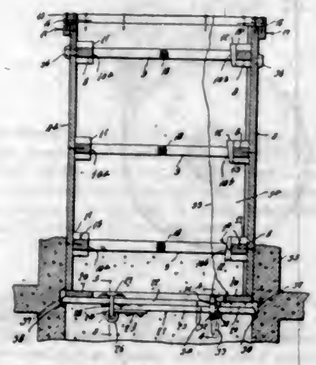


1. A device of the character described comprising a curved arm, means for securing said arm to a supporting means, a threaded shank formed with said arm, a projection extending from said shank and providing a recess at the juncture thereof with said arm, an insulator threaded on said shank and having a circumferential groove therein, means arranged in said groove and extending rearwardly of said insulator, means secured to the rearward portion of said means and received in said recess to cooperate with the first mentioned means to prevent longitudinal movement of said insulator, and means for securing a conductor to said first mentioned means and in said groove.

1,685,010. SPOOL CASE FOR CAMERAS AND FOR CINEMATOGRAPH AND SIMILAR PROJECTION APPARATUS. JOHN EDWARD THORNTON, West Hampstead, London, England. Filed Feb. 1, 1927, Serial No. 165,231, and in Great Britain Dec. 11, 1925. 5 Claims. (Cl. 242—71.)

1. A spool case and film carrier for continuous ribbons for use in projectors for the exhibition of pictures or in cameras, comprising a casing to contain a spool of film having a blank leader strip affixed to the free end of the film, said casing having means for locking the blank leader strip against withdrawal from the casing, said casing also having means operable by the insertion of the spoolcase into a projector or camera for releasing said leader strip locking means.

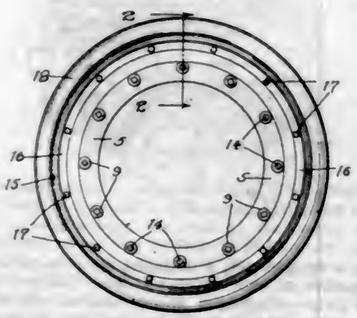
1,685,011. FILING CABINET. RODNEY J. WOOD, Dayton, Ohio. Filed Feb. 15, 1924. Serial No. 698,057. 31 Claims. (Cl. 129—16.)



1. In a filing device, a container for a series of vertically positioned data sheets, a cover therefor, having therein a slot extending in parallel relation with the data sheets, means for effecting the separation of the series of sheets in proximity to said slot to permit the deposit of an additional data sheet through said slot in predetermined relation with previously filed data sheets.

14. In a protected file for a series of data sheets, a housing having a transparent panel through which the data sheets may be observed and an opening, means operable from the exterior of the housing through said opening for separating the data sheets for observation, a follower member for said data sheets, and a pull cord attached to the follower, for returning the separated data sheets preparatory to the next selective operation.

21. In a protected file a series of data sheets, a housing comprising transparent top, side and end walls, and a bottom section in relation with which the housing unit comprising the top side and end walls is relatively movable.

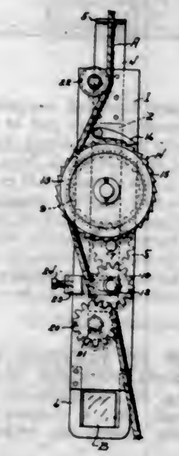


29. In a file for a series of data sheets, a mounting for the data sheets including an oscillatory follower, a retainer rod transfixing the series of sheets and a locking member for said rod in the path of disengagement of which the oscillatory follower normally extends to prevent the disengagement of the locking member until the follower is oscillated to an abnormal position.

1,685,012. COLLAPSIBLE AND PORTABLE CORE FORM. HARVEY J. YAGER, Seattle, Wash. Filed Apr. 29, 1926, Serial No. 105,431. Renewed Feb. 23, 1928. 5 Claims. (Cl. 25—128.)

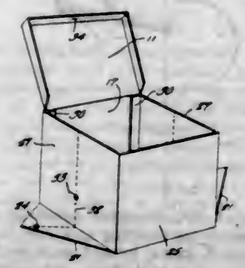
1. A core form comprising separable sides, wale pieces carried by certain of said sides, other wale pieces carried by the other sides and having recesses for the reception of the ends of the first named wale pieces, and wedges positioned between certain ends of the wale pieces.

1,685,013. AUTOMOBILE TIRE. PETER ABRECHCINSKI, Buffalo, N. Y. Filed Aug. 18, 1927. Serial No. 213,901. 3 Claims. (Cl. 152—8.)



1. In an automobile tire of the type described, a rim band, side rim members mounted on the band, a flexible band at the outer edges of the rim members, a cushion tire carried by the flexible band, and means for spacing the rim members to transversely stretch the flexible band.

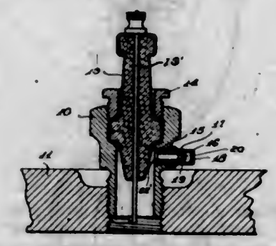
1,685,014. AIRCRAFT. ABRAM A. ANDERSON, New York, N. Y. Filed Apr. 14, 1927. Serial No. 183,782. 1 Claim. (Cl. 244—12.)



In combination with an airplane, of extensions on the ends of the airplane, means for moving the extensions inwardly, ports depending from the extensions, rods longitudinally positioned under the wings, collars mounted on the rods, members connecting the collars with the outer portions of the extensions and engaging the posts at their intermediate portions, and means for limiting the outward movement of the collars.

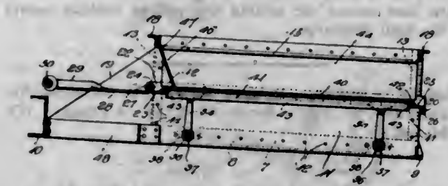
1,685,015. JACK. FRANCIS M. AYCOCK, Soldiers Home, Calif., assignor of forty-nine one-hundredths to James Marsh, Soldiers Home, Los Angeles, Calif. Filed Oct. 3, 1927. Serial No. 223,767. 3 Claims. (Cl. 254—176.)

1. A scaffold jack of the character described comprising a body plate having a right angle bent upper end formed with an opening, a frame secured to said body plate, shafts journaled in said body plate and frame, a crank handle secured to one of said shafts, gears secured to said shafts and being arranged in constant mesh, a pulley secured to one of said shafts and receiving a cable of the scaffold, ratchet means included in said pulley, a guide pulley receiving said cable and together with the opening of the upper end of the body plate provide guiding means for said cable, and cable tensioning means carried by said body plate.



1,685,016. FOLDING BOX. ISABELLE BRENDA BLAKE, New York, N. Y. Filed Apr. 28, 1926. Serial No. 105,251. 2 Claims. (Cl. 229—41.)

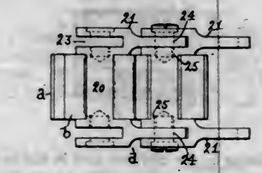
1. A collapsible refoldable box comprising a body constituting outwardly foldable side walls, an outwardly foldable bottom wall, front and rear walls movable toward each other upon the outward foding of said side and bottom walls whereby said body may be collapsed to a flat condition, pointed flaps co-extensive with said bottom wall and foldable against said side walls when in a set-up condition, a fold line extending from the point of one flap across said bottom wall to the point of the other flap, a cover hinged



to said rear wall for closing the open top of said body, said side walls and flaps having registering openings therein, and means passing through said registering openings and over said cover for holding said body in a set-up position and for keeping said cover down over said body.

1,685,017. VALVED SPARK PLUG. JOHN G. BOWMAN, Kansas City, Mo., assignor of one-half to William C. Haseltine, Kansas City, Mo. Filed July 25, 1927. Serial No. 208,205. 3 Claims. (Cl. 123—169.)

1. In a structure of the character set forth, a cylindrical valve case having a closed end, an open end and a lateral port spaced from said closed end, a valve of similar form snugly slidable in the case having its closed end next the closed end of the case, means to limit movement of the valve toward the open end of the case, said valve having a lateral port constructed and arranged to communicate with the port of the case when adjacent the outer limit of its movement in the case.

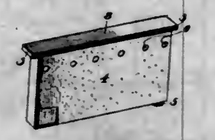


1,685,018. SCREENING MACHINE. JOHN OSCAR BOWMASTER, Orbisonia, Pa. Filed Nov. 24, 1926. Serial No. 150,479. 2 Claims. (Cl. 209—363.)

1. A screening machine comprising a rectangular base frame, a pair of parallel vertically disposed side plates extending longitudinally of and secured at their lower edges to the side bars of said base frame, a rectangular top frame having its side bars secured to the upper edges of said side plates, said bottom frame being of greater length than the top frame and at one end projecting beyond the latter, longitudinally disposed aggregate-guiding plates connected with the upper portions of said side plates and declining inwardly, a similarly declined transversely disposed aggregate-guiding plate connected with the end bar of the top frame nearest said projecting end of the base frame, a screen movably mounted between said side plates under said aggregate guiding plates, and vibrating means for said frame including a shaft mounted on said projecting end of the base frame.

1,685,019. GEAR CHAIN. EDWARD I. BRADDOCK, Cleveland, Ohio; Robert H. Montgomery executor of said Edward I. Braddock, deceased. Original application filed May 22, 1920, Serial No. 383,460. Divided and this application filed June 29, 1923. Serial No. 648,489. 1 Claim. (Cl. 74—32.)

As an improved article of manufacture, a gear chain composed of links having solid teeth and provided with arms extended from the opposite sides of said teeth and rigidly secured thereto and provided at their front end with offset portions forming slots with the end of said solid teeth, and having the rear ends of the arms of one link extended into said slots in the arms of an adjacent link, pivot pins connecting adjacent links substantially on the pitch line of the

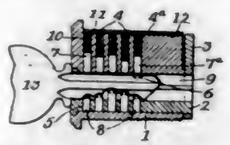


tooth of said adjacent link and having smooth portions extended through the offset portions of the arms of one link and thrugh the rear ends of the arms of the adjacent link and upon which said links turn.

1,685,020. LINGERIE CLASP. EMMA BRYAN BREEN, Houston, Tex. Filed Nov. 9, 1927. Serial No. 232,117. 1 Claim. (Cl. 24—73.)

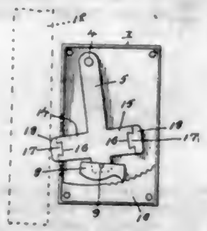
A lingerie clasp comprising a body portion formed of a single strip of material whose ends are arched over the body and merge into rounded portions which provide barrels, one of said barrels being centrally notched, a pin received in the notch, said pin having a lateral trunnion which is journaled in the said barrel, the second barrel having a transverse opening on the inner face thereof, an angle passage communicating with said opening and the upper wall at the terminal of the said passage being formed with a notch and the pin being of a length whereby its pointed end will be received through the opening and through the passage and rest in the notch.

1,685,021. HONEY RICK. SAMUEL G. BROYLES, Battle Mountain, Nev. Filed May 13, 1927. Serial No. 191,138. 9 Claims. (Cl. 6—10.)



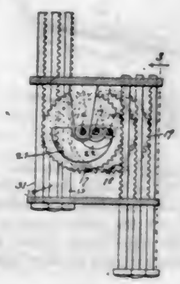
6. A honey depositing rick for bee-hive supers comprising a container having a honey drain opening in its base provided with a closure member, and having a plurality of inwardly extending cell-like tubes inserted adjacent to its top and having their inner ends closed and with honey-draining slots in their bottoms at such ends.

1,685,022. PIN-TUMBLER LOCK. GEORGE E. CLEAVER, Reading, Pa., assignor to Penn Hardware Company, Inc., Reading, Pa., a Corporation of Pennsylvania. Filed June 11, 1927. Serial No. 198,170. 2 Claims. (Cl. 70—47.)



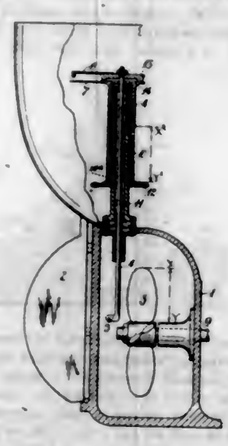
1. In a pin tumbler lock, the combination with a casing having a pinway comprising a plurality of tumbler chambers, of a plug rotatably mounted in the casing and having a plurality of tumbler cavities corresponding and adapted to register with the chambers of said casing, said plug having at least one eccentric peripheral recess in circumfer-

ential alignment with a tumbler cavity and the corresponding casing chamber, and a key-receiving slot intersecting the said cavities and intersected by said peripheral



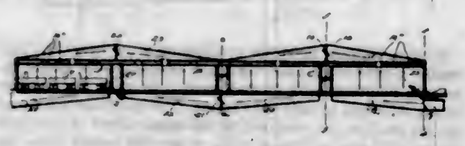
recess, and tumblers in the cavities and in the casing chambers including a section adapted to enter the eccentric recess of the plug when the latter is turned.

1,685,023. DOORCHECK. FRANK COWAN, Rochester, Minn. Filed June 10, 1927. Serial No. 197,917. 4 Claims. (Cl. 16—83.)



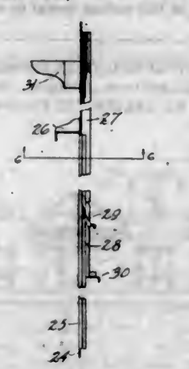
1. A door check of the character described comprising a casing having an opening formed therein, a hanger pivotally secured in said casing, means formed with said hanger and normally arranged through said opening to be arranged in the path of a door, notched means arranged in said casing and means pivotally secured to the hanger and cooperating with the notched means.

1,685,024. MUSIC-LEAF TURNER. ROBERT W. DE REIOS, Santa Barbara, Calif. Filed Aug. 13, 1927. Serial No. 212,716. 1 Claim. (Cl. 84—504.)



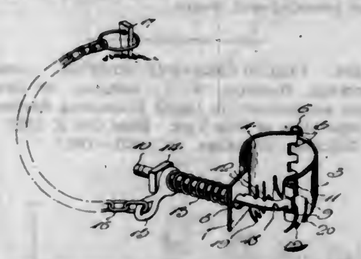
In a music leaf turner, a box-like structure, a backing secured to said box-like structure, a plurality of parallel spaced shafts supported in said box-like structure, a gear secured to each of said shafts, certain of said gears having semi-circular openings therein, certain of said shafts extending through said openings, a rack engaging each of said gears, a push button secured to each of said racks at a point outside of said box-like structure, an arm secured to each of said shafts at its upper extremity, and a clip secured to each of said arms for the purpose specified.

1,685,025. APPARATUS FOR INDICATING THE DIRECTION OR ANGLE OF STREAM LINES IN FLUIDS PARTICULARLY APPLICABLE FOR USE IN DESIGNING COUNTERPROPELLER DEVICES. MARY GERTRUDE HOLDSACH, Portsmouth, England. Filed Jan. 12, 1926, Serial No. 80,830, and in Great Britain Jan. 29, 1925. 3 Claims. (Cl. 73—55.)



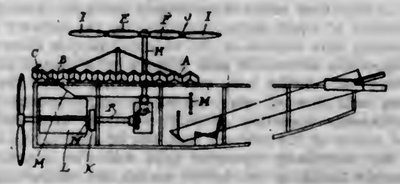
1. Apparatus for indicating the natural angle of flow of stream lines at different points of a fluid discharge for determining the angles of the blades of a counter propeller for marine or aerial vessels, comprising a support, a vane capable of angular displacement on said support, a rod on said support to which said vane is fixed, a dial plate, a pointer carried by said rod co-operating with said dial plate, and means for sliding the rod to various points of the fluid discharge.

1,685,026. DRIER. EUGENE A. HULTS, Saltville, Va. Filed Jan. 27, 1925. Serial No. 5,138. 3 Claims. (Cl. 34—46.)



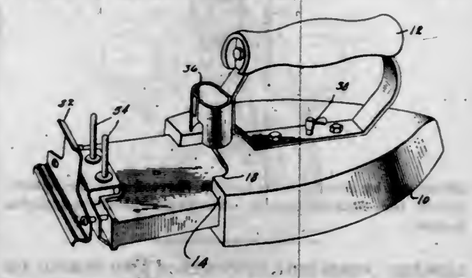
1. A drier comprising a series of compartments connected by a plurality of flues arranged to conduct heated air through the bottom of one compartment, thence upwardly through the same to the top of the next compartment in the series, thence downwardly through the same to the bottom of the next compartment in the series, and finally to the last compartment constituting the entrance compartment of the drier, the series of compartments having a plurality of tracks extending side by side therethrough and a separate flue for each of the plurality of tracks, the separate flues communicating with a single flue with means therein to force air through the plurality of flues and compartments, the compartments being separated one from the other by doors forming part of the permanent structure of the drier and through which the material to be dried may be passed from one compartment to the other, but which when closed will separate each of the compartments one from the other whereby air may be forced through a plurality of flues communicating with each compartment and with a common entrance flue.

1,685,027. WINDOW SCREEN. ANTONI JAROCH, Yorkville, Ohio. Filed July 19, 1927. Serial No. 206,995. 2 Claims. (Cl. 156—38.)



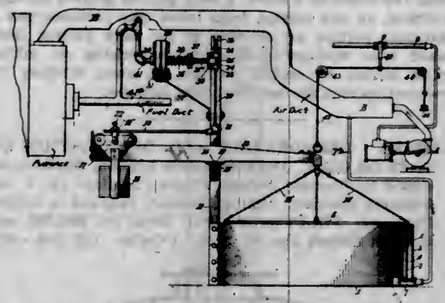
1. In a structure of the character described, wherein a window frame has a sliding sash therein, and a screen adapted to fit in said frame between the sash and an end of said frame; a bar consisting of a pair of telescopically connected sections, a hook member on one of the sections adapted to engage over the end of the sash remote from the screen, said screen having a socket to receive the end of the hook, means on the other section of said bar engaging the frame end remote from the screen, and a latch adapted to hook the bar sections releasably in adjusted position.

1,685,028. ANIMAL TRAP. FELIX G. JOHNSON, Clarinda, Iowa. Filed Jan. 23, 1928. Serial No. 248,802. 6 Claims. (Cl. 43—90.)



1. A trap comprising two arcuate jaws pivoted together at one end, the other end of one jaw being provided with an eye, a rod pivotally connected to the other end of the other jaw and passing slidably through said eye, said rod having means to engage said eye and hold the jaws open, and spring means for closing said jaws upon release of said holding means.

1,685,029. AIRCRAFT. THOMAS DANIEL KELLY, London, England. Filed Nov. 1, 1926, Serial No. 145,598, and in Great Britain Nov. 2, 1925. 2 Claims. (Cl. 244—15.)

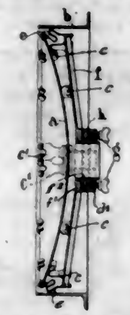


2. An aircraft having stationary wings provided with recesses and set at a dihedral angle to each other with a gap in the center of the front edge thereof, a helicopter surmounting the wings and comprising a horizontal propeller having fixed blades, a ring surrounding the fixed blades, a plurality of flexible blades surrounding and attached to the ring, a motor, and a one-way clutch connecting the helicopter with the motor.

1,685,030. COMBINED SADIRON AND HEATER. JOSEPH LAVOIE, Detroit, Mich., assignor to Ezra H. Frye, trustee, Detroit, Mich. Filed Mar. 8, 1926. Serial No. 93,123. 2 Claims. (Cl. 219—25.)

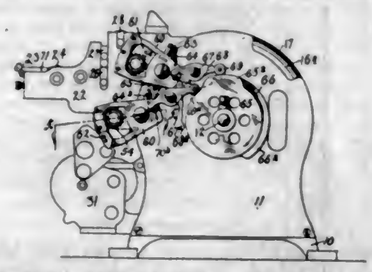
1. In a sad iron, a hollow generally triangular shell open at the broad end, a heating element shaped to fit within said shell and being bodily insertable and removable therefrom by sliding the same through the broad open end of the shell, said heating element comprising a metal frame of generally triangular shape having a top and sides and provided with a handle at its broad end, a core of refractory insulation disposed within said frame exposed on the bottom, a refractory non-heat conducting plate positioned between said core and the top of the frame, resistance wiring upon said core exposed at the bottom of the element, and a connection with said wiring extending upwardly from the frame at the broad end thereof, and means extending through the top of the shell engaging said element to releasably hold the same in place within the shell.

1,685,031. AIR-REGULATING MEANS FOR LIQUID-FUEL FURNACES. BARTON H. NOLAND, Brooklyn, N. Y. Filed Feb. 6, 1923. Serial No. 617,421. 5 Claims. (Cl. 158—1.)



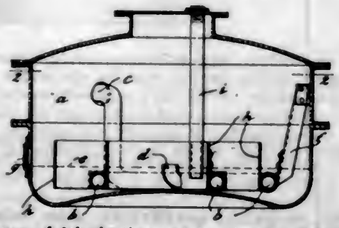
1. In combination with a furnace having separate pressure delivery means for fuel and for air, means for controlling the delivery of air and a balanced mechanism controlled by both the pressure of the fuel and the pressure of the air for maintaining a substantially constant ratio between the quantities of fuel and air delivered to the furnace.

1,685,032. MIRROR, REFLECTOR, AND THE LIKE. CHARLES ALGERNON PARSONS, Newcastle-on-Tyne, England. Filed Dec. 27, 1923, Serial No. 683,018, and in Great Britain Jan. 27, 1923. 7 Claims. (Cl. 88—1.)



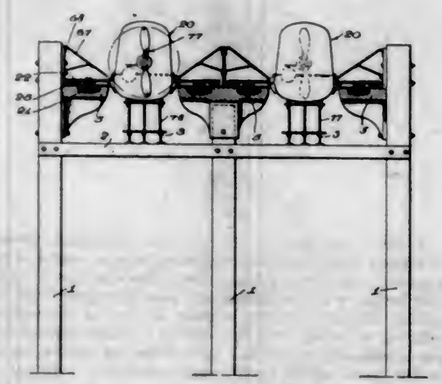
1. The combination of a searchlight projector mirror; means contacting with said mirror for applying opposite

forces to points thereof concentrated at about the ends of two diameters of said mirror mutually at right angles differentially to alter the curvature of said mirror along said



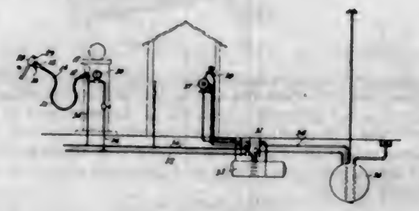
diameters by elastic deformation thereof and mechanical means for simultaneously actuating said force-applying means.

1,685,033. FORM-ROLLER CONTROL AND TIMING DEVICE. ROSWELL COVERT PICKETT, Warrenville, and HARRY WARD THOMPSON, Chicago, Ill., assignors to Advertisers Service Bureau, Chicago, Ill. Filed Nov. 8, 1926. Serial No. 147,108. 8 Claims. (Cl. 101—175.)



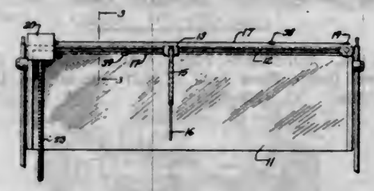
1. In a printing machine, a rotary element, having a plurality of printing forms thereon, means for printing from the forms on a sheet, a body portion printed through a ribbon, an end portion from inked type surfaces, and a marginal portion at the side of the body portion from inked type surfaces and means comprising an inking roller having its central portion cut away whereby its end portion inks the marginal type surfaces.

1,685,034. DEHYDRATION AND DISTILLATION OF TARS OR OILS. DOUGLAS RIDER, London, England, assignor to Thermal Industrial and Chemical (T. I. C.) Research Company Limited, London, England, a British Company. Filed Feb. 28, 1924, Serial No. 695,765, and in Great Britain Apr. 10, 1923. 1 Claim. (Cl. 196—92.)



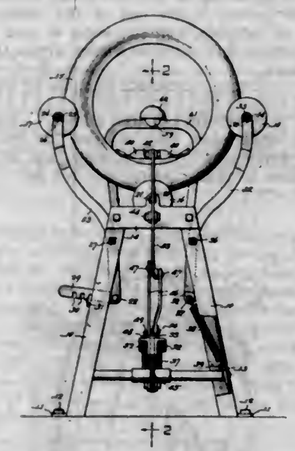
A process of dehydrating and fractionally distilling tars or oils, which consists in passing the liquid to be treated through a duct immersed in a bath of molten metal, maintaining the temperature of the molten metal at a point which exceeds by a few degrees only the boiling point of the fraction which it is desired to vaporize, and causing the liquid to issue from the said duct above the surface of the molten metal in such a manner that the liquid spreads over the surface of the molten metal in an even layer.

1,685,035. HIGH-SPEED-TRANSPORTATION SYSTEM. WILLIAM E. ROBERTSON, Reading, Pa. Filed June 3, 1927. Serial No. 196,276. 13 Claims. (Cl. 104—134.)



1. In a transportation system, a supporting structure, a lubricated guide and track carried thereby, an electric motor driven air propelled car having runners mounted to slide freely on said track, automatically operated air brakes on said car and an electric safety device for applying and releasing said brakes.

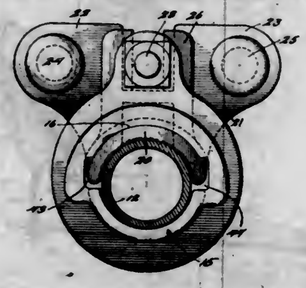
1,685,036. LIQUID-DELIVERY SYSTEM. GEORGE W. STEDWELL, Brooklyn, N. Y., assignor, by direct and mesne assignments, to Liquid Dispensing Systems, Inc., a Corporation of New York. Filed Oct. 1, 1927. Serial No. 223,255. 12 Claims. (Cl. 221—100.)



11. In liquid delivery apparatus, the combination with a liquid delivery line and a delivery hose at the end of the same, a valve controlling admission from the delivery line to said hose and a more remote valve for controlling admission of liquid under pressure into the delivery line, a Bowden wire control on the hose and flexible therewith, an operating device for said Bowden wire control at the delivery end of the hose and connecting means for enabling said Bowden wire control to effect substantially simultaneous operation of said relatively near and remote valves of the delivery line, one of said valves being of the electrically operated type and the connections aforesaid including an electric switch for controlling the electrically operated valve, the other valve being of the mechanically operated type and the connections for operating the same being of a mechanical nature.

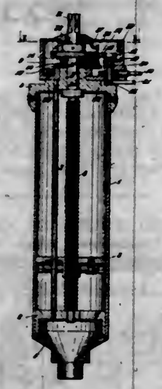
1,685,037. WINDSHIELD WIPER. STEPHEN G. VAN DERBECK, Hackensack, N. J. Filed Feb. 8, 1926. Serial No. 86,854. 8 Claims. (Cl. 74—14.)

1. Operating means for a windshield wiper comprising a carriage adapted to traverse the windshield in opposite directions, an endless flexible actuating member for moving said carriage adapted to run substantially transversely and parallel to the surface of the windshield and having a run fixed to said carriage, power actuated means for driving said member adapted to have its direction of drive reversed, mechanism connected to said power means adapted to be set in different positions for causing said power means to reverse its direction of drive, and means fastened separately to each run of said member adapted successively to engage said mechanism for setting it in said different positions.



1,685,038. DEVICE FOR INSPECTING TIRES. MAURICE TEICH, Peekskill, N. Y. Filed Mar. 15, 1927. Serial No. 175,583. 2 Claims. (Cl. 154—9.)

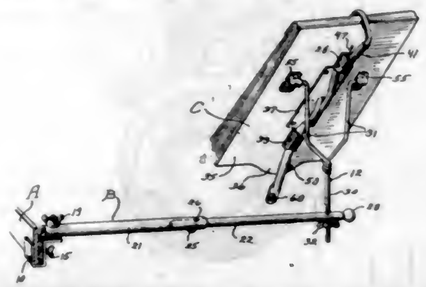
1. A device of the character described comprising an upright support, arms pivotally connected respectively with portions of said support, an arrangement of rollers, one roller being on said support and one roller on each of said arms, means acting in conjunction with said arms for changing the relative disposition of said rollers, said means consisting of a spring connected between one of said arms and said support, and a latch for holding the other arm in different adjusted position.



1,685,039. PIPE-HANGER ANCHOR AND THE LIKE. WILLIAM WAIGHT, Chicago, Ill., assignor to Midway Railway Equipment Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 16, 1928. Serial No. 247,187. 4 Claims. (Cl. 248—31.)

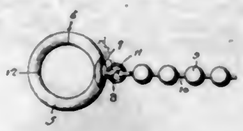
1. As a new article of manufacture, a pipe hanger and anchor for the purpose specified comprising in combination a collar member adapted to encircle and support a pipe element, and having substantially one half of its circular arc formed on a cylinder of radius substantially the same as that of the pipe element, and having its other and opposing portion formed of a larger size than the radius of pipe element, said larger sized portion tapering in size lengthwise of the collar member to thereby establish a semi-circular wedge shaped slotted opening between the collar member and the pipe element, the size of said opening tapering from a larger to a smaller dimension from one end of the collar member towards the other, a semi-circular wedge of tapered thickness having its concave surface substantially cylindrical and of substantially the same radius as the pipe element and adapted to seat

squarely against the pipe element, and having its convex surface adapted to seat and wedge against the inner surface of the collar at the position of the tapered wedge shaped slotted opening aforesaid, there being longitudinally extending grooves or relieves at the lines of joinder of the slotted opening with the collar section of smaller radius, for the purpose specified, companion lugs extending outwardly from the collar and the wedge shaped element at the wedge ends of maximum dimension, and means for drawing said lug elements together to thereby forcefully wedge the wedge element into the tapered slotted opening, substantially as described.



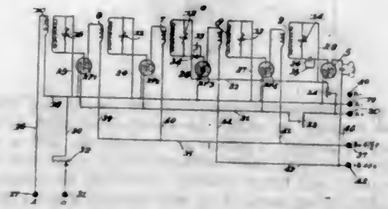
1,685,040. LUBRICATING APPARATUS FOR FLANGED WHEELS. ERNST ZBINDEN, Bern, Switzerland, assignor to Hasler A.-G. vormals Telegraphenwerkstätte von G. Hasler, Bern, Switzerland, a Swiss Corporation. Filed June 6, 1927, Serial No. 196,904, and in Switzerland June 10, 1926. 2 Claims. (Cl. 184—37.)

1. In a lubricating apparatus for the flanged rims of wheels running on rails, the combination with a sleeve containing grease, a piston in said sleeve, and a screw spindle adapted to move said piston, of a ratchet device for turning said screw spindle, comprising in combination a ratchet wheel fastened to said spindle, a pawl to turn said ratchet wheel, a pinion adapted to be revolved by said ratchet wheel, a spur-wheel fastened to said sleeve into which said pinion engages, a second spur-wheel into which said pinion also engages and arranged to rotate



concentric to said first spur-wheel and having a somewhat different number of teeth, a scale connected with said second spur-wheel to show the position of said piston, and means connected with said second spur-wheel to lift said pawl out of engagement with said ratchet wheel when said piston is at the end of its outward stroke, substantially as set forth.

1,685,041. COPYHOLDER. HERMAN CHRISTIAN BINKELE, Tigard, Oreg. Filed Feb. 4, 1926. Serial No. 86,044. 4 Claims. (Cl. 120—28.)

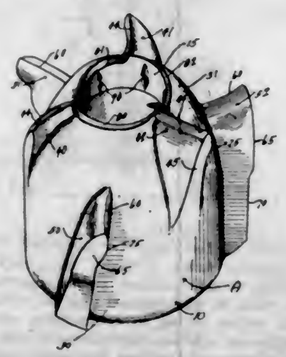


1. A copy holder comprising in combination, a swing beam embodying horizontally disposed inner and outer telescoping sections, said sections each being provided adjacent their outer ends with vertically aligning threaded bores of like diameter, a stand arm embodying a threaded shank portion for threaded engagement in either of the aligning bores, and a holder proper carried by the upper end of the stand arm for rotation therewith upon turning of the threaded shank portion into either of said bores.

1,685,042. JUMP-RING COUPLING. WALDO G. BRYANT, Bridgeport, Conn., assignor to The Bead Chain Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 25, 1927. Serial No. 201,537. 1 Claim. (Cl. 59—93.)

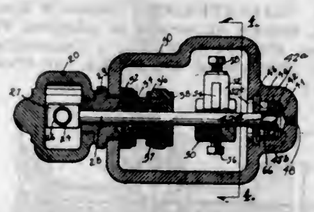
A split jump ring having at a point spaced from the split in the ring a peripheral projection swedged from the body of the ring, said projection being of less thickness than the ring and having a head adapted for engagement by the split end ball of a bead chain.

1,685,043. RADIO RECEIVING CIRCUIT. JAMES M. CARTWRIGHT, Clarksdale, Miss. Filed Nov. 5, 1924. Serial No. 747,961. 2 Claims. (Cl. 250—20.)



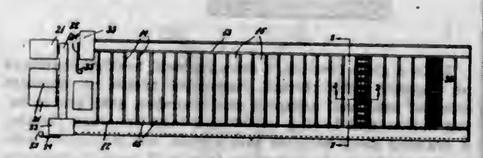
1. In a radio receiving system including a plurality of tuned radio frequency amplifying stages arranged in cascade relation, and each stage including a three electrode tube, a detector tube coupled for rectifying the output of the amplifying stages, and an adjustable grid leak arranged in the grid-filament circuit of a tube previous to the last radio frequency amplifying stage.

1,685,044. FOUNTAIN PEN. SAM CENTOFANTI, Youngstown, Ohio. Filed June 2, 1927. Serial No. 196,094. 1 Claim. (Cl. 120—46.)



In a fountain pen, a barrel having opposed longitudinal slots, a hollow plunger slidable within the barrel and having a fluid-tight connection at its lower end with the interior of the barrel, and a transverse pin carried by the plunger and operating in said slots, and utilized to move the plunger toward either end of the barrel, heads on both ends of said pin, and the edges of said slots being beveled, whereby said heads lie wholly within the diameter of the barrel.

1,685,045. CORE-DRILLING HEAD. CLEMENT S. CLARKE, Shreveport, La., assignor to Oil City Iron Works, Shreveport, La., a Corporation of Louisiana. Filed June 8, 1927. Serial No. 197,445. 10 Claims. (Cl. 255—72.)

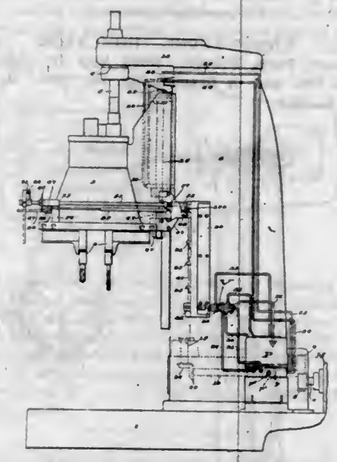


1. In a core drill head a hollow inverted truncated conoidal body, and a plurality of laterally extending cutting blades on the body having their cutting edges in the same plane at the lowermost end of the body, the body having a passageway therethrough, and the body about said passageway having its lower end margin continuously receding from the trailing side of each of the blades to a location immediately at the leading side of the next adjacent blade and with said end marginal edges all located above the cutting plane of said blades, so as to permit the core to be formed entirely by the cutting blades independent of the lower edge of the body about said passageway.

1,685,046. BEARING CONSTRUCTION FOR FLOAT-ARM SHAFTS. JACOB ETOR, Marshalltown, Iowa, assignor to The Fisher Governor Company, Inc., Marshalltown, Iowa. Filed Dec. 12, 1927. Serial No. 239,450. 8 Claims. (Cl. 137—104.)

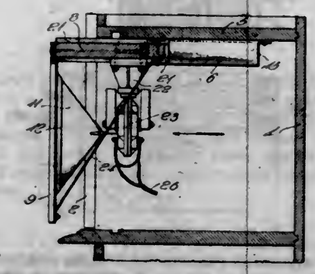
1. In a structure of the class described, a float casing, a journal formed at the side of said casing, a shaft rotatably extended through said journal and adapted to be connected with a float arm at its inner end, a frame mounted on said journal having at its end opposite said journal a ball bearing, said shaft having a reduced spindle journaled in said ball bearing, and a shoulder adjacent to said ball bearing.

1,685,047. OPEN-TOP DRIER. CLAUD E. FULLER, New York, N. Y., assignor to New York Brick Handling Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 19, 1927. Serial No. 227,232. 1 Claim. (Cl. 34—19.)



In an open top drier of the kind described, the combination of a base, a plurality of parallelly arranged compartments formed on the top thereof, an air inlet chamber arranged at one end of each of the compartments and being connected to each of said compartments, an air outlet chamber arranged along the other end of said compartments and being connected to each of said compartments, a heating coil arranged in the bottom of each compartment, said compartments being adapted to be filled with a plurality of containers, which containers form a top for the drier.

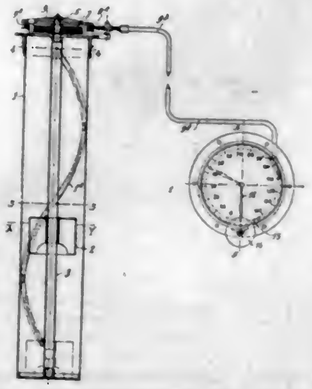
1,685,048. COUPLING FOR BEAD CHAINS. WILLIAM J. GAGNON, Bridgeport, Conn., assignor to The Bead Chain Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 25, 1927. Serial No. 201,538. 5 Claims. (Cl. 59—93.)



3. A coupling device for bead chains, comprising a plate apertured to afford a hole of sufficient diameter to accommodate the end ball of the chain, said hole merging into a slot of less width than the diameter of the ball, but adapted to accommodate a chain link connected to the ball, said slot extending to a point adjacent a margin of the plate, and said margin of the plate at the end of said slot being offset to form a restraining lip.

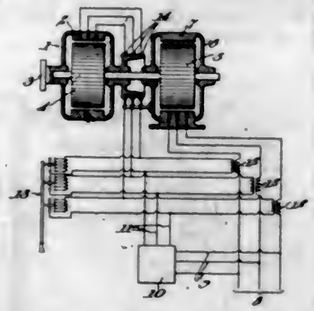
1,685,049. OIL-GEAR CONTROL FOR MACHINE TOOLS. ROBERT M. GALLOWAY, Richmond, Ind., assignor to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed May 4, 1926. Serial No. 106,781. 29 Claims. (Cl. 77—32.)

1. A drilling machine combining a translatable drill head; a hydraulic transmission to effect translation of said drill head, said transmission comprising a cylinder, a piston movable in the cylinder and operatively connected with said drill head; a variable displacement pump; pipes connecting said pump with said cylinder at opposite sides of said piston; hydraulic means, including a fluid pressure line, exteriorly of said pump, connected to said pump, and a controlling valve independent of and remote from said pump and effective in said pressure line to determine the action of said pump and thereby the rate and path of flow of fluid from said pump into said cylinder, to translate said drill head in either direction and at a plurality of rates in one direction; and mechanical means, automatically controlled in the different positions of said head, to actuate said valve to effect a predetermined cycle of movement of said drill head.



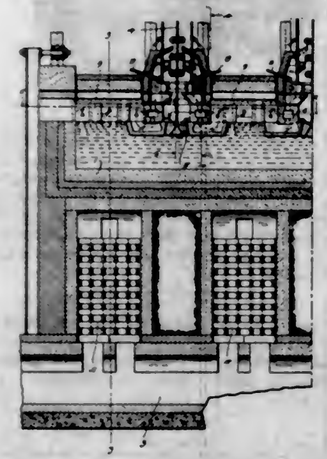
1,685,050. ELECTROMAGNETIC SOUND REPRODUCER. WILLIAM H. GEANS, East Orange, N. J., assignor to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed Mar. 12, 1927. Serial No. 174,869. 13 Claims. (Cl. 179—179.)

2. A radio cabinet comprising a laterally extending shelf member, a pair of bracket members mounted beneath said laterally extending shelf member and adjacent op-



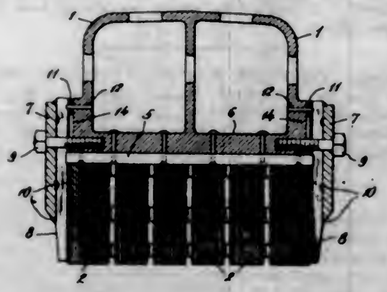
posite ends thereof, a frame member arranged to be slidably mounted within said bracket members and an electromagnetic driver carried by said frame member for actuating a sound reproducing diaphragm positioned within said radio cabinet and supported by said frame member.

1,685,051. LIQUID-LEVEL INDICATOR. JACQUES GIRARDET, Paris, France. Filed May 19, 1925, Serial No. 31,299, and in France Apr. 14, 1925. 4 Claims. (Cl. 73—82.)



1. A level indicating apparatus for receptacles containing liquids, comprising a perforated cylinder having the same height as the said receptacle, a rotatable upright coaxial with said cylinder, a float slidable on the said upright, a helical ramp disposed within the said cylinder, a tappet secured to the said float and adapted to enter into contact with said ramp when the said upright is rotated, a pulley for rotating the said upright, an indicating dial, a pointer cooperating therewith, a pulley for operating the pointer, a Bowden power transmission device interposed between the two pulleys, and manually operated means for rotating the pointer operating pulley.

1,685,052. AUTOMATIC ELECTRIC CONTROL SYSTEM. BENJAMIN H. GREENE, Canton, Ohio. Filed Aug. 3, 1926. Serial No. 126,882. 3 Claims. (Cl. 172—237.)

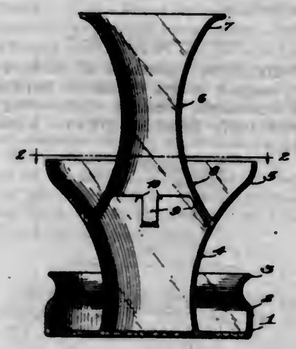


1. In a system of regenerative braking and control, the combination with a source of alternating current, an induction motor having electric connections from said source to the primary thereof, means to rotate said primary by the machine to be controlled, an electric generator driven by the secondary of the induction motor, connections from said generator to said source whereby current is fed back to the source, and means for varying the current delivered to the primary of the motor inversely to the current delivered by the generator.

1,685,053. GLASS FURNACE. THOMAS B. HART, Libow, W. Va., assignor of one-half to Adamston Flat Glass Company, Clarksburg, W. Va., a Corporation. Filed June 5, 1926. Serial No. 113,924. 10 Claims. (Cl. 49—17.)

1. In a glass furnace, a drawing well, heating chambers on opposite sides thereof, suspended arches on opposite sides of said well adjacent said chamber, said arches being hollow and having outlet and inlet openings therein, a drawing block between said arches, and means for conveying products of combustion from said heating chambers to said hollow arches.

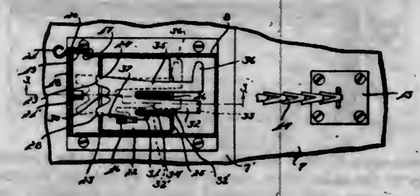
1,685,054. DYNAMO-ELECTRIC MACHINE. CHARLES TRUMAN HIBBARD, Minneapolis, Minn., assignor to Electric Machinery Mfg. Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Nov. 24, 1926. Serial No. 150,421. 24 Claims. (Cl. 171—252.)



5. In a dynamo-electric machine the combination of a frame, a laminated core associated with said frame, said core having a plurality of teeth on its periphery, and a plurality of supports arranged on opposite sides of the core and extending along said teeth, said supports being fulcrumed at their outer ends on said frame and bearing at their inner ends against the core body and the core teeth.

1,685,055. SEPARABLE FASTENER. GUSTAV JOHNSON, West Roxbury, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Dec. 20, 1924. Serial No. 757,152. 1 Claim. (Cl. 24—216.)

A one-piece socket secured to a support and presenting a pre-formed continuous cap member at one side of the support a plurality of relatively long, narrow, attaching fingers pressed directly against and extending over a substantial portion of the opposite side of the support and being in contact with the support throughout the entire length of the attaching portions of said fingers and a plurality of neck-engaging jaws provided by said fingers between the attaching portions thereof and the cap, said jaws and said attaching fingers being expansible to permit passage of the head of a stud between said neck-engaging jaws.

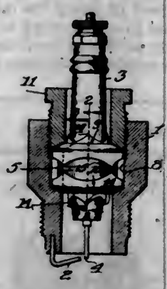


1,685,056. FLOWER HOLDER. FRANK J. QUICK, Arlington, R. I., assignor of forty per cent to MAX L. KRAMER, Cranston, R. I. Filed July 19, 1927. Serial No. 206,850. 1 Claim. (Cl. 47—41.)

A holder for cut flowers including a supporting base, a hollow body secured at its bottom to the bottom of the base, and a head having spaced parts on its lower end secured to the interior of the body at points below the top of the body, the lower end portion of the head being laterally spaced from the upper end of the body to form an annular water-receiving channel, the upper end of the head extending for a distance above the upper end of the body and forming an extension of the body whereby to support the heads of flower stems at a distance above the top of the body thereby to enable water to be poured into the channel without interference from the flower stems, the head having each of its ends open so as to receive the cut flower stems therethrough and to enable the lower or cut ends of the stems to seat on the bottom of the base.

1,685,057. AUTOMATIC SAFETY LATCH. FRED M. SCHULTZ, Detroit, Mich. Filed Nov. 25, 1927. Serial No. 235,473. 5 Claims. (Cl. 116—11.)

1. In a lock of the class described, a housing having a pair of spaced enlarged openings formed in one side thereof and provided with an elongated slot extending into each of said openings; a plunger slidably mounted in said housing; a spring engaging said plunger and normally pressing the same toward one side of said housing, said plunger having a notch formed therein; means in said housing for engaging in said notch and locking the same against movement in response to the pressure of said spring; a separable member insertable into said housing; a boss on said separable member for supporting an explosive cap in the path

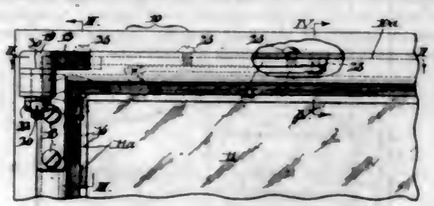


of said plunger; a separable member for engaging in said slots and sliding therein, said member while sliding in one of said slots releasing said plunger for movement in response to said spring and a laterally turned portion on one end of said plunger, said separable member while sliding in the other of said slots engaging said laterally turned member and serving to retract said plunger against the pressure of said spring.

1,685,058. PROCESS OF TREATING SLACK WAX. BENJAMIN L. SOUTHER, Pittsburgh, and WILLIAM A. GRUSE, Wilkinsburg, Pa., assignors to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Aug. 30, 1926. Serial No. 132,652. 12 Claims. (Cl. 196—20.)

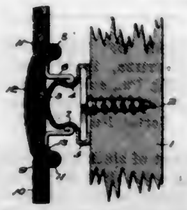
1. In the treatment of slack wax, the process which comprises comminuting solid slack wax to a fluent consistency, adding a solvent liquid having preferential solvent action on the oil and mechanically separating the solid components from the liquid components.

1,685,059. SPARK-PLUG GASKET. CLAUDE B. BAILEY, Wyandotte, Mich. Filed Aug. 25, 1926. Serial No. 131,409. 8 Claims. (Cl. 123—169.)



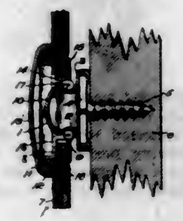
1. A spark plug gasket made of sheet metal and having an annular pressure receiving portion and a plurality of resilient prongs connected with and spaced apart about said pressure receiving portion, said prongs projecting axially of the gasket on opposite sides thereof from the inner and outer edges, respectively, of said pressure receiving portion.

1,685,060. WINDOW. JOAH BROGDEN, Melrose Park, Pa., assignor to David Lupton's Sons Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 10, 1927. Serial No. 174,319. 2 Claims. (Cl. 189—66.)



1. A sash mounting for pivoted windows including interpivoted members, each of which comprises an apertured ear with an offset attaching flange, and bearing boss with a

pivot pintle and dovetailed extension confined to sliding movement along parallel rails in the window frame, projector links connecting the frame and the sash to determine sliding of the pivot members incidentally to swinging

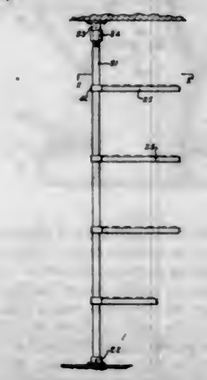


of the sash, friction elements at each side of the apertured ears in the sash pivots, and a spring washer for maintaining pressure upon said friction elements to yieldingly resist swinging movement of the sash.

1,685,061. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Dec. 20, 1924. Serial No. 757,160. 3 Claims. (Cl. 24—216.)

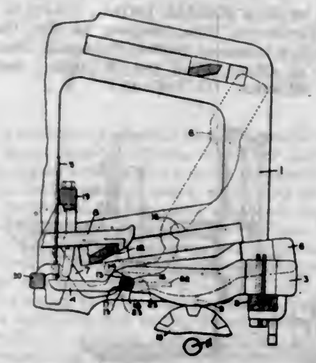
1. A fastener socket comprising a one-piece body portion having at its outer periphery prong-receiving and clenching means and a plurality of contractible and expansible stud-engaging portions extending in one direction only, that direction being away from said body portion and an attaching plate located at the outer face of a flexible socket-carrying medium, said plate presenting a plurality of attaching prongs adapted to pierce the carrying medium for engagement with said prong-receiving and clenching means presented by the body portion at the inner face of the carrying medium, thereby to secure the socket to the socket-carrying medium.

1,685,062. SEPARABLE FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Dec. 20, 1924. Serial No. 757,161. 4 Claims. (Cl. 24—216.)



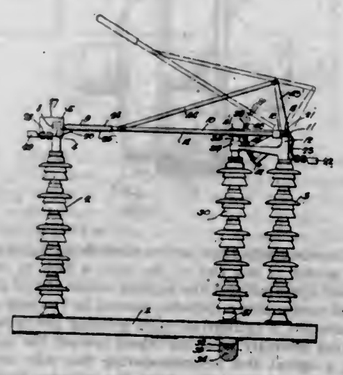
1. A fastener socket installation comprising, in combination, a carrying medium, a stud-receiving part having a flange seated against the outer face of the carrying medium, a tubular portion extending from said flange through an aperture in said carrying medium and turning and clenching means formed integral with said flange, said turning and clenching means being presented at said outer face of the carrying medium, and means presenting a plurality of attaching prongs, said means seated on the inner face of the carrying medium, said prongs piercing the carrying medium and engaging the turning and clenching means to secure said stud-receiving part in position.

1,685,063. FASTENER. FRED S. CARR, Newton, Mass., assignor to Carr Fastener Company, Cambridge, Mass., a Corporation of Maine. Filed Feb. 26, 1925. Serial No. 11,693. 6 Claims. (Cl. 24—216.)



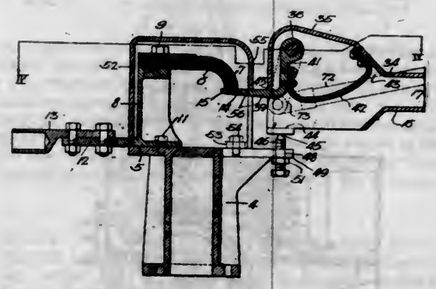
1. A fastener socket installation including a cap part, a carrying medium and a casing part, said casing part presenting a plurality of parallel concentrically arranged walls of substantially uniform height, some of said walls being divided by a plurality of slits to provide laterally yieldable stud-engaging means arranged about a stud-receiving aperture, the cap part being located on one side of the carrying medium and the casing part on the other, and cooperating attaching means in the form of prongs and prong-clenching means for securing said parts together, the said walls and the said cap part presenting surfaces toward the carrying medium which permit the carrying medium between them to lie in substantially the same plane as the remainder of the carrying medium.

1,685,064. SHELVING. RUDOLPH A. FRITZ, Jr., Cincinnati, Ohio, assignor to The Cincinnati Butchers' Supply Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 6, 1927. Serial No. 217,761. 5 Claims. (Cl. 211—136.)



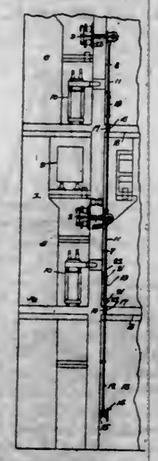
1. In knock-down shelving, a post, a corner-support having a head about said post and provided with an upper surface and a flange extending from said head in the angle of the corner throughout substantially a right angle about said post and lower than said upper surface and forming a rabbet in said corner-support about said post in said angle throughout substantially said right angle, said flange forming wings extending from said head at substantially right angles to each other and at diagonally opposite sides of said post, said wings having end faces at right angles to each other, and a shelf comprising a corner-piece located in said rabbet and a pair of angle-bars fixed in right-angular relation to said corner-piece, said angle-bars respectively comprising depending wings, said depending wings depending below said corner-piece, and the inside faces of said depending wings coacting with said right angular end faces of said first-named wings for resisting relative turning between said shelf and said corner-support.

1,685,065. LOOM DOBBY. NATHAN HEARD, Newton, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 30, 1928. Serial No. 250,355. 6 Claims. (Cl. 139—331.)



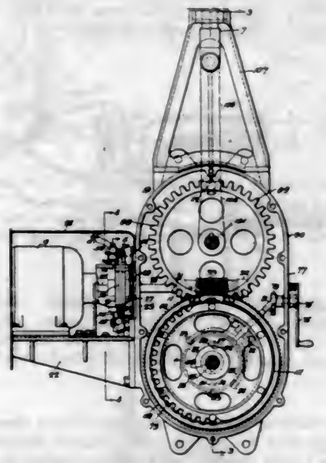
1. In a loom dobby the combination of a frame, a fulcrum shaft journalled in the frame sides and having therebetween a portion of segmental cross section, and a series of indicating fingers fulcrumed on the shaft and each having a circular bearing aperture of a diameter to fit the shaft with an opening through the bottom edge, one wall of said opening being tangent with the aperture and the other wall being spaced therefrom a distance corresponding to the shorter diameter of said segmental portion whereby, when the flat surface of the shaft is at the bottom, the fingers rock on the arcuate surface and are locked against removal and, when the shaft is rotated substantially ninety degrees, any finger may be lifted off the shaft and replaced without disturbing the remainder.

1,685,066. HIGH-VOLTAGE SWITCH. WILLIAM R. HUTTINGER, Philadelphia, Pa. Filed Jan. 29, 1924. Serial No. 689,256. 33 Claims. (Cl. 200—48.)



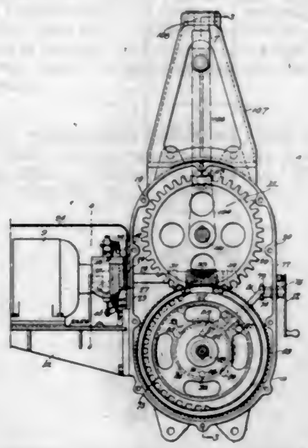
1. In a switch, the combination with a stationary contact member, of an elongated movable contact member having a main portion and a contact portion movable longitudinally of said main portion, and worm-and-wheel means for successively actuating said contact portion and said movable contact member as a whole in timed relation.

1,685,067. HIGH-VOLTAGE SWITCH. WILLIAM R. HUTTINGER, Philadelphia, Pa. Filed June 25, 1924. Serial No. 722,281. 22 Claims. (Cl. 200—48.)



3. In an electric switch, a movable contact element, a housing supported by said movable contact element and constituting a part thereof, and a contact portion pivotally mounted in said housing and movable from said housing into an effective position.

1,685,068. SWITCH MECHANISM. WILLIAM R. HUTTINGER, Philadelphia, Pa. Filed June 26, 1925. Serial No. 39,790. 21 Claims. (Cl. 200—18.)

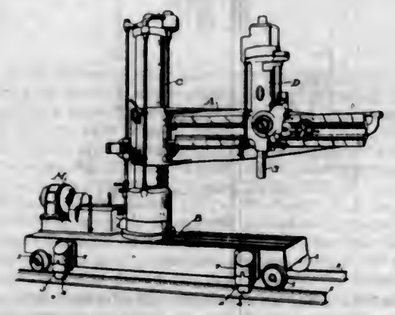


18. In a multiphase electrical system, the combination with a plurality of switches for said system, of an operating member, means for operatively associating said switches and said operating member including a plurality of worm elements mounted on said operating member, and means tending to prevent the thrust of said worm elements from being transferred to said operating member.

1,685,069. SWITCH-OPERATING MECHANISM. JOHN H. DILKS, Philadelphia, Pa., assignor to Electric Power Equipment Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 12, 1924. Serial No. 719,677. 6 Claims. (Cl. 200—92.)

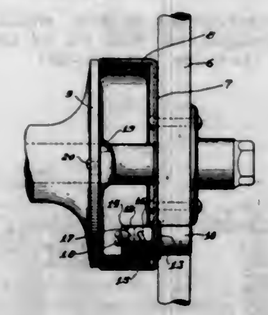
5. The combination with a high voltage switch to be actuated, of a driving motor, and means for operatively associating said motor and said switch comprising a worm-gear drive and intermittent gear-wheel mechanism connected to be actuated by said drive.

1,685,070. SWITCH APPARATUS. JOHN H. DILKS, Philadelphia, Pa. Filed Aug. 16, 1927. Serial No. 213,313. 8 Claims. (Cl. 200—92.)



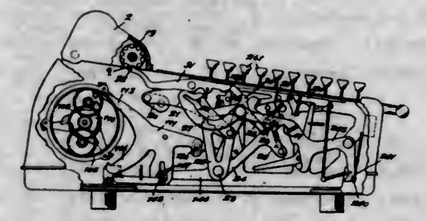
1. The combination with driving means, a switch to be actuated and mechanism for operatively associating said driving means and said switch, of a limit switch and intermittent gearing for operatively associating said limit switch and said mechanism, whereby said limit switch may control the operation of said driving means.

1,685,071. AMINODIARYLSULPHONPYRAZOLONE AZODYESTUFFS. HUGO SCHWEITZER, Wiesdorf, near Cologne, and WILHELM NEELMEIER, Leverkusen, near Cologne, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 5, 1926, Serial No. 79,476, and in Germany Jan. 8, 1925. 12 Claims. (Cl. 260—87.)



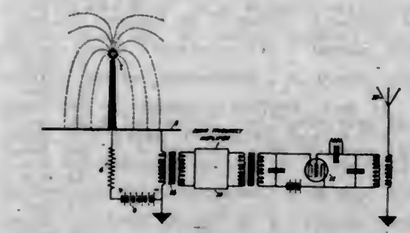
3. As a new product the azo dyestuff consisting of the product obtainable by coupling an aromatic diazo compound with a pyrazolone of a sulphonated aminodiarylsulphone.

1,685,072. MOBILE RADIAL DRILL. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 8, 1924. Serial No. 742,376. 8 Claims. (Cl. 188—43.)



1. In combination with a machine-tool; a base; a support for said base; means permitting said base to be moved on its support; a plurality of sets of locking devices adapted to secure said base against movement; power means for actuating said locking devices; an equalizing device between said power means and each set of locking devices; and equalizing means between the locking devices in each set.

1,685,073. AUTOMOBILE ALARM. HERBERT L. HONOHAN, Chicago, Ill., assignor to William D. Honoban, Chicago, Ill. Filed June 21, 1927. Serial No. 200,415. 4 Claims. (Cl. 116—33.)

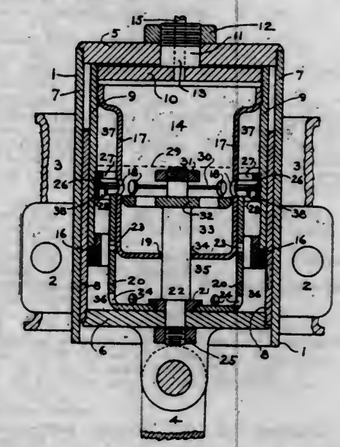


1. An automobile theft alarm comprising a gong carried by the spider at one end of the axle, a lock in the brake drum and operated by a key applied externally of the wheel said lock comprising a cylinder rotated by the lock and having a side pin, a cylindrical shell housing the cylinder and projecting laterally from the wheel toward the spider and having a spiral slot accommodating the side pin, and a striking element extending from the cylinder through the shell and adapted to sound said gong when the brake drum rotates with the cylinder in advanced position in the path of said gong.

1,685,074. MULTIPLIER MECHANISM FOR CALCULATING MACHINES. GEORGE C. CHASE, South Orange, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a Corporation of Delaware. Filed Mar. 15, 1926. Serial No. 94,968. 17 Claims. (Cl. 235—62.)

1. In a calculating machine having numeral wheels, actuating means therefor, driving means for said actuating means including a motor, and a clutch between said driving means and said actuating means, a plurality of multiplier keys of differing numerical value, a control member movable upon depression of any multiplier key and held thereby in position to effect the clutch and to determine additive registration upon said numeral wheels, a member progressively advanced in the operation of said actuating means and acting to release said control member from the depressed multiplier key on the determination of a number of cycles of operation corresponding to the value of said depressed key, cooperating mechanism operable to release the clutch and bring the actuating means to rest upon release of said control member, and a key depressible to effect the clutch and to determine subtractive registration upon said numeral wheels, said cooperating means being operable upon manual release of said last named key to release the clutch and bring the actuating means to rest, and said control member acting to lock the subtract key in raised position while a multiplier key is depressed and to lock the multiplier keys in raised position while the subtractive key is depressed.

1,685,075. INTERTRANSPOSITION OF SOUND AND ELECTRICAL ENERGY. NILS E. LINDENBLAD, Shorenam, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Aug. 17, 1927. Serial No. 213,567. 12 Claims. (Cl. 179—113.)



1. The method of intertransposing sound and electrical energy which includes producing a corona discharge in the air medium which is to carry the sound, and utilising the relation between air pressure, the heating effect of the corona discharge, and the electrical energy producing it, to obtain intertransposition of sound and electrical energy.

1,685,076. GAME. MARION MILEWSKI, Lebanon, Pa. Filed Apr. 19, 1920, Serial No. 375,001. Renewed Feb. 13, 1928. 9 Claims. (Cl. 273—119.)

1. A game apparatus comprising a race way having diverging upstanding side walls, a missile projecting device at the restricted ends of the walls, a plurality of upstanding spaced partitions arranged across the race way and extending longitudinally thereof, said partitions being arranged on opposite sides of the longitudinal center of the race way, the partitions on each side of the center being arranged parallel to its nearest side wall of the race way.

1,685,077. AIR SPRING WITH NONELASTIC FLUID SHOCK ABSORBER. JOHN HUGH O'NEILL, Springfield, Mo. Filed Jan. 15, 1925, Serial No. 2,658. Renewed Feb. 24, 1928. 3 Claims. (Cl. 267—64.)

1. In an air spring with non-elastic fluid shock absorbers, a vertically disposed, telescoping pair of tubes forming a fluid pressure chamber of variable volumetric capacity, liquid and gaseous fluids within said fluid pressure chamber, the upper tube of said telescoping pair of tubes being provided with a piston containing an automatic valve opening with an upward and closing with a downward flow of fluid, and an upper cup-shaped member depending bottom downward, said upper cup-shaped member being provided with an annular row of orifices in the side wall thereof the lower tube of said telescoping pair of tubes being provided with a piston containing an automatic valve opening with an upward and closing with a downward flow of fluid, and a lower cup-shaped member, said lower cup-shaped member being provided with an annular row of orifices adjacent to the bottom of the side wall thereof.

Heater for water-cooled internal-combustion engines, Electric water. L. Parker and L. E. Miller. 1,684,845; Sept. 18.
Heating apparatus, Electrical. R. A. Carleton. 1,684,942; Sept. 18.
Heating device, Liquid-. A. J. Lambert. 1,684,630; Sept. 18.
Heating element, Thermostatically-controlled. L. H. Lamont. 1,684,544; Sept. 18.
Heating system, Feed-water. B. F. Madison and E. C. Krume. 1,684,965; Sept. 18.
High-voltage switch. W. R. Huttinger. 1,685,066–7; Sept. 18.
Hinge, Weatherproof. V. J. Matranga. 1,685,002; Sept. 18.
Hoe weeder. A. J. Hayden. 1,684,444; Sept. 18.
Hoist. C. H. Homan. 1,684,988; Sept. 18.
Hoist. E. A. Thielen. 1,684,606–7; Sept. 18.
Holder, Flower. F. J. Quick. 1,685,056; Sept. 18.
Holder, Map. H. W. Prettyman. 1,684,682; Sept. 18.
Holder, Paper-napkin. H. L. Samson. 1,684,517; Sept. 18.
Holder, Safety-razor-blade. G. F. Heffelbower. 1,684,830; Sept. 18.
Holder, Shingle. C. R. Eckert. 1,684,479; Sept. 18.
Holder, Wire clamp and insulator. S. J. Speir. 1,685,009; Sept. 18.
Honey rick. S. G. Broyles. 1,685,021; Sept. 18.
Hose clamp. C. A. Norgren. 1,684,713; Sept. 18.
Hose, Making nonexpansible. M. R. Sherbino. 1,684,718; Sept. 18.
Hose, Nonexpansible. M. R. Sherbino. 1,684,717; Sept. 18.
Humidifying device, Automatic. W. B. Coleman. 1,684,757; Sept. 18.
Inclination indicator. J. W. Bell. 1,684,788; Sept. 18.
Increasing the usefulness of fodder and food. E. Mislin. 1,685,004; Sept. 18.
Index, Card. S. L. Forbes. 1,684,620; Sept. 18.
Index-card system, Visible. W. A. Ringler. 1,684,807; Sept. 18.
Indicating the direction or angle of stream lines in fluids particularly applicable for use in designing counter-propeller devices, Apparatus for. M. G. Holbeach. 1,685,025; Sept. 18.
Indicator: *See*—
Inclination indicator. Liquid-level indicator.
Insulator, High-tension. M. F. H. Gouverneur. 1,684,441; Sept. 18.
Intermittent thermal switch. H. F. Löwenstein. 1,684,709; Sept. 18.
Internal-combustion engine. E. C. Cooper. 1,684,910; Sept. 18.
Internal-combustion engine. D. A. Davison. 1,684,434–5; Sept. 18.
Internal-combustion engine. E. Nibbs. 1,684,407; Sept. 18.
Ion concentration control. I. B. Smith and E. A. Keeler. 1,684,645; Sept. 18.
Ironer. R. Hilgedick. 1,684,584; Sept. 18.
Ironing board. C. L. Ackerman. 1,684,378; Sept. 18.
Jack. F. M. Aycock. 1,685,015; Sept. 18.
Joint for extension rules. H. Gasstrom. 1,684,483; Sept. 18.
Joint for pistons and connecting rods, etc. A. F. Gay. 1,684,862; Sept. 18.
Joint machine, Ring-. W. L. Evans. 1,684,760; Sept. 18.
Jump-ring coupling. W. G. Bryant. 1,685,042; Sept. 18.
Kettle and the like. M. Tocchio. 1,684,811; Sept. 18.
Kitchen utensil, Combination. F. P. Harker. 1,684,622; Sept. 18.
Knitting machine, Spring-board-. K. Howie. 1,684,583; Sept. 18.
Knob lock. L. Huffman. Re17,084; Sept. 18.
Lamp. M. A. Buchwalter. Des. 76,340; Sept. 18.

Radiocabinet or similar article. J. J. Heyman. Des. 76,346; Sept. 18.
Radio dial escutcheon plate. C. P. Hansen. Des. 76,345; Sept. 18.
Radiofrequency amplifier and making and operating the same. A. S. Blatterman. 1,684,939; Sept. 18.
Radio receiving circuit. J. M. Cartwright. 1,685,043; Sept. 18.
Radio vision studio equipment. C. F. Jenkins. 1,684,736; Sept. 18.
Rail-connecting device. P. P. Pipes. 1,684,885; Sept. 18.
Rail-joint spring. L. E. Endsley. 1,684,619; Sept. 18.
Receptacle, Molded-glass. J. E. Marsden. 1,684,498; Sept. 18.
Rectal, vaginal and surgical uses, Apparatus for. J. M. Fulton. 1,684,621; Sept. 18.
Reel: *See*—
Wire reel.
Reflector with projections, Christmas-tree. L. L. Raymond. 1,684,847; Sept. 18.
Refrigerating apparatus. A. M. Thomson. 1,684,810; Sept. 18.
Refrigeration, Process and apparatus for. G. T. Voorhees. 1,684,423; Sept. 18.
Refrigerator. W. G. and G. R. Seeger. 1,684,716; Sept. 18.
Refrigerator. E. Swedman. 1,684,563; Sept. 18.
Refrigerator construction. C. E. Lucke. 1,684,549; Sept. 18.
Refrigerntor freezing device. T. J. Litle, jr. 1,684,590; Sept. 18.
Register: *See*—
Autographic register. Furnace register.
Regulator: *See*—
Flow regulator.
Reproducer, Electromagnetic sound. F. A. Kolster and S. A. Sollie. Re17,086; Sept. 18.
Resilient wheel. H. M. Patch. 1,684,596; Sept. 18.
Resins, Production of. I. H. Jones. 1,684,868; Sept. 18.
Ribbon-control device for time recorders, Multicolored. C. E. Larrabee. 1,684,400; Sept. 18.
Rock drill, Percussive. E. Penberthy. 1,684,638; Sept. 18.
Roof, Insulated. H. S. Ashenhurst. 1,684,527; Sept. 18.
Roost. H. F. Thumann. 1,684,608; Sept. 18.
Sadiron and heater, Combined. J. Lavoie. 1,685,030; Sept. 18.
Sadirons, Lamp attachment for. J. E. Picklesimer. 1,684,742; Sept. 18.
Salts from aqueous solutions, Extraction of. D. G. Zalocostas. 1,684,935; Sept. 18.
Sanding machine. E. R. Young. 1,684,464; Sept. 18.
Saw, Bone. W. F. Wells. 1,684,815; Sept. 18.
Scale. F. B. Hamblin. 1,684,957; Sept. 18.
Scarf, Table. J. Derk. Des. 76,342; Sept. 18.
Scooter, Toy sea. E. V. Babbitt. Des. 76,339; Sept. 18.
Screen: *See*—
Window screen.
Screening machine. J. O. Bowmaster. 1,685,018; Sept. 18.
Screw or nut driving device for portable power-driven rotary tools. A. Levedahl. 1,684,633; Sept. 18.
Sealing casing head. W. L. McLaine and W. L. Borough. 1,684,678; Sept. 18.
Seat for vehicles and the like, Slidable. A. W. Chapman. 1,684,944; Sept. 18.
Sectional wheel. A. Meldrum. 1,684,552; Sept. 18.
Shackle antirattle attachment, Spring-. H. E. Blomgren. 1,684,724; Sept. 18.
Shade, Glare. W. A. Simmons. 1,684,418; Sept. 18.
Shafting, Spinning. J. J. Keyser. 1,684,919; Sept. 18.
Sharpener, Shears. G. Jarboe. 1,684,866; Sept. 18.
Shears: *See*—
Flying shears.
Sheath for flexible shafts, Protective. G. Riefenstahl. 1,684,554; Sept. 18.
Sheet-drawing apparatus. E. T. Ferngren. 1,684,437; Sept. 18.
Sheet-forming machine. C. E. Dellenbarger. 1,684,436; Sept. 18.
Shelving. R. A. Fritz, jr. 1,685,064; Sept. 18.
Shelving. R. A. Ostram and C. E. Frykdahl. 1,684,410; Sept. 18.
Shield for vehicles, Antiglare. A. Steger. 1,684,690; Sept. 18.
Shield, Long-wall mining. E. Ramsay. 1,684,597; Sept. 18.
Shim drift. J. D. and E. M. Tucker. 1,684,526; Sept. 18.
Shipping by parcel post. W. S. Close. 1,684,756; Sept. 18.
Shock-absorbing mechanism, Friction. S. B. Haseltine. 1,684,538–9; Sept. 18.
Shock-absorbing mechanism, Friction. J. F. O'Connor. 1,684,510; Sept. 18.
Shoe. G. W. Blair. 1,684,660; Sept. 18.
Shoe. T. Roberts. Des. 76,355; Sept. 18.
Shoe, Turn. R. Kaminsky. 1,684,543; Sept. 18.
Short-circuiting device. F. J. Bullivant. 1,684,941; Sept. 18.
Shower receptor. G. A. Nilson. 1,684,502–3; Sept. 18.
Shuttle, Self-threading. C. Ricard. 1,684,780–1; Sept. 18.
Sickle-bar section. F. J. Bleck. 1,684,780–1; Sept. 18.
Side frame. D. S. Barrows. 1,684,787; Sept. 18.
Sign. G. P. Butler. 1,684,470; Sept. 18.
Sign controller. M. Haase. 1,684,304; Sept. 18.
Signal for railroad tracks, Safety danger. G. F. Baker. 1,684,904; Sept. 18.
Signaling device. A. O. Beckman. 1,684,659; Sept. 18.
Signaling device. F. W. Billig. 1,684,906; Sept. 18.
Signaling device. W. Sparks, T. J. Scofield, L. E. Johnson, and F. W. Billig. 1,684,895; Sept. 18.
Signaling, Multiplex carrier-current. H. Nyquist. 1,684,455; Sept. 18.
Signaling, Railway. R. S. Blair. 1,684,386; Sept. 18.
Signaling system. R. K. Honaman. 1,684,445; Sept. 18.
Sink attachment. R. Panunzi. 1,684,805; Sept. 18.
Skate blades with thickened edges, Manufacture of. H. Dornself. 1,684,950; Sept. 18.
Skis, Power-driven. H. E. Pearson. 1,684,846; Sept. 18.
Skylight. W. Schwartz. 1,684,641; Sept. 18.
Smoking stand. O. C. Kirts. 1,684,589; Sept. 18.
Snowplow. H. F. Flowers. 1,684,439; Sept. 18.
Softening silk yarn, and the like, Apparatus for. H. Mayer. 1,684,923; Sept. 18.
Soil-working implement. H. Olsen. 1,684,594; Sept. 18.
Sole clamp. A. Yosgatt. 1,684,427; Sept. 18.
Sole construction for rubber boots. L. Lorenzi and A. Colombo. 1,684,676; Sept. 18.
Sound and electrical energy, Intertransposition of. N. E. Lindenblad. 1,685,075; Sept. 18.
Sound-generating device. J. Slepian. 1,684,975; Sept. 18.
Sound reproducer. Electromagnetic. W. H. Gerns. 1,685,050; Sept. 18.
Spark intensifier. W. F. Lautenschlager. 1,684,496; Sept. 18.
Spark plug, Valved. J. G. Bowman. 1,685,017; Sept. 18.
Speed mechanism, Variable-. W. G. Humphreys. 1,684,705; Sept. 18.
Speedometer and indicator. W. J. Radke. 1,684,683; Sept. 18.
Spider for sucker rods and the like. E. J. Shaffer. 1,684,974; Sept. 18.
Spool-holding device. J. T. Dowdall. 1,684,951; Sept. 18.
Spraying device. C. Brown. 1,684,661; Sept. 18.
Spring: *See*—
Rail-joint spring.
Spring suspension for motor vehicles. J. F. Adye. 1,684,692; Sept. 18.

Springs, Attachment of motor-vehicle road. D. Robertson. 1,685,005; Sept. 18.
Squeegee and the mounting thereof. J. Demand. 1,684,477; Sept. 18.
Stair construction. E. Hedeen. 1,684,764–5; Sept. 18.
Stair, Metallic. E. Hedeen. 1,684,766; Sept. 18.
Stand: *See*—
Christmas-tree stand. Smoking stand.
Musical-instrument stand.
Stand. N. R. Inglis. 1,684,446; Sept. 18.
Staple. J. B. Crofoot. 1,684,728; Sept. 18.
Steam trap. W. H. Kuhn. 1,684,961; Sept. 18.
Steel and its manufacture. J. R. C. Marsh. 1,684,841; Sept. 18.
Steering mechanism for automobiles, Safety. G. E. Beal. 1,684,657; Sept. 18.
Step plate, Automobile. O. C. Ritz Woller. 1,684,613; Sept. 18.
Stocking. B. D. Gordon. Des. 76,343; Sept. 18.
Stoker, Locomotive. N. M. Lower. 1,684,874; Sept. 18.
Storage apparatus, Motion. E. A. White. 1,684,853; Sept. 18.
Store fixtures for vending merchandise, Self-service. J. T. Myers and J. H. Carroll. 1,684,637; Sept. 18.
Strain equalizer. G. J. Renle. 1,684,687; Sept. 18.
Strand-twisting apparatus. G. A. Bouvier. 1,684,533; Sept. 18.
Strand-twisting apparatus. T. E. O'Donnell. 1,684,511; Sept. 18.
Stranded articles, Method of and apparatus for forming. G. A. Bouvier. 1,684,532; Sept. 18.
Stream motor. P. Buda. 1,684,409; Sept. 18.
Submarine direction finder. W. Rudolph and G. Wolff. 1,684,848; Sept. 18.
Support, Merchandise. C. La Hatte. 1,684,707; Sept. 18.
Support, Switch and signal-rod carrier. O. S. Flath. 1,684,954; Sept. 18.
Surface sander, Motor-vehicle. A. W. Reed. 1,684,806; Sept. 18.
Swimming apparatus. I. D. Perry. 1,684,714; Sept. 18.
Switch: *See*—
Electric switch. Lighting and ignition switch.
High-voltage switch.
Intermittent thermal switch.
Switch apparatus. J. H. Dilks. 1,685,070; Sept. 18.
Switch mechanism. W. R. Huttinger. 1,685,068; Sept. 18.
Switch-operating mechanism. J. H. Dilks. 1,685,069; Sept. 18.
Switch system, Safety. W. C. Davis, jr. 1,684,618; Sept. 18.
Table: *See*—
Extension table. Tension and physiotherapy table.
Foldable table.
Metal table.
Tamping machine. A. J. Penote. 1,684,882; Sept. 18.
Tank attachment, Fuel-. J. H. Collier and E. D. Chisum. 1,684,475; Sept. 18.
Tap changer. G. H. Tuttle. 1,684,650; Sept. 18.
Tapper and protector for toe-dancing shoes. W. J. Haney. 1,684,442; Sept. 18.
Tennis racket. J. L. Kleinman. 1,684,449; Sept. 18.
Tension and physiotherapy table. O. P. Spilman. 1,684,459; Sept. 18.
Terminal, Electric. J. Amon. 1,684,383; Sept. 18.
Tester, Eye. B. D. Ritholz. 1,684,555; Sept. 18.
Testing device, Live-line-. G. A. Iler. 1,684,768; Sept. 18.
Testing device, Live-line and insulator. G. A. Iler. 1,684,798; Sept. 18.
Testing system and method, Electrical. W. P. Mason. 1,684,403; Sept. 18.
Thermal-cut-out construction. J. F. Sloan. 1,684,522; Sept. 18.
Thread cutter for sewing machines. H. L. Willis. 1,684,612; Sept. 18.
Thread-handling mechanism. H. D. Colman. 1,684,945; Sept. 18.
Thread-rolling machine. F. S. Kochendorfer. 1,684,799; Sept. 18.
Tire, Automobile. P. Abrechcinski. 1,685,013; Sept. 18.
Tire carrier and tool kit. F. M. Harsin. 1,684,699; Sept. 18.
Tire-splitting machine. W. G. Fritts. 1,684,763; Sept. 18.
Tires, Device for inspecting. M. Teich. 1,685,038; Sept. 18.
Toilet-powder applicator. A. W. Smith. 1,684,644; Sept. 18.
Tone post. C. Hultgren. 1,684,492; Sept. 18.
Tool, Domestic hand. J. J. Hoelle. 1,684,829; Sept. 18.
Tool, Radius. H. E. Frenette. 1,684,667; Sept. 18.
Tooth, Artificial. L. H. Sprinkle. 1,684,523; Sept. 18.
Torch. S. Stanczyk. 1,684,524; Sept. 18.
Torch, Rotary acetylene. F. J. Cullen, P. E. Binder, and C. C. Harshman. 1,684,476; Sept. 18.
Toy game device. A. Spitzer. 1,684,602; Sept. 18.
Toy locomotive, Bell-ringing. H. S. Becker. 1,684,754; Sept. 18.
Toy roundabout. G. Habicht. 1,684,796; Sept. 18.
Toy transformer. B. H. Smith, A. L. Atherton, and E. H. Greibach. 1,684,746; Sept. 18.
Tracks of street railways, Construction of. G. Oess. 1,684,680; Sept. 18.
Tractor-propelling device, Secondary-. F. Praszkewiz. 1,684,969; Sept. 18.
Transferring carded material, Method of and apparatus for. J. F. Schimek. 1,684,890; Sept. 18.
Transmission device for marine motors. W. C. Esleck. 1,684,952; Sept. 18.
Transportation system, High-speed. W. E. Robertson. 1,685,035; Sept. 18.
Trap: *See*—
Animal trap. Steam trap.
Treating and fractionating cracking-plant vapors. E. H. Leslie and E. M. Baker. 1,684,771; Sept. 18.
Treating fines of earthly minerals. R. W. Hyde. 1,684,958; Sept. 18.
Treating garbage and the like. R. P. Kinkel. 1,684,448; Sept. 18.
Treating petroleum products. E. R. Wiles. 1,684,426; Sept. 18.
Treating slack wax. B. L. Souther and W. A. Gruse. 1,685,008; Sept. 18.
Treating slack wax. B. L. Souther and W. A. Gruse. 1,685,058; Sept. 18.
Truck. T. C. Holtnagel. 1,684,673; Sept. 18.
Turbine, Gas. J. M. Hawthorn. 1,684,824; Sept. 18.
Turntable, Overhead runway. M. C. Gillies. 1,684,986; Sept. 18.
Typewriting machine. W. A. Dobson. 1,684,820; Sept. 18.
Typewriting machine. L. A. Nemcovsky. 1,684,801; Sept. 18.
Umbrella. O. Jensen. 1,684,628; Sept. 18.
Universal bar. J. H. Barr. 1,684,430; Sept. 18.
Vacuum discharge apparatus. W. Daumann. 1,684,947; Sept. 18.
Vacuum tubes, Contact-protecting means for. S. G. Sears. 1,684,973; Sept. 18.
Valve. S. C. Lawlor. 1,684,837; Sept. 18.
Valve. H. L. Stephenson. 1,684,603; Sept. 18.
Valve. C. A. G. Wayman and A. F. Gartz, jr. 1,684,651; Sept. 18.
Valve-actuating device, Poppet-. W. M. Goodwin. 1,684,955; Sept. 18.
Valve, Check. G. E. Hazard. 1,684,987; Sept. 18.
Valve mechanism. W. B. S. Whaley, C. A. Muller, and C. M. Tursky. 1,684,424; Sept. 18.
Valve mechanism for internal-combustion engines, Rotary. G. E. Hottenstein and G. E. Hottenstein, jr. 1,684,767; Sept. 18.
Valve, Quick-throw. W. B. Bastian. 1,684,905; Sept. 18.
Valves and the like, Adjustable locking device for. C. W. Roberts, jr. 1,684,745; Sept. 18.
Vanity case. H. W. Noyes. 1,684,454; Sept. 18.
Vehicle alarm. A. V. Locke. 1,684,591; Sept. 18.
Vehicle heater, Motor-. D. Hill. 1,684,672; Sept. 18.
Vehicle heater, Motor-. E. Ryder. 1,684,599; Sept. 18.
Vending machine. M. G. O'Neil. 1,684,409; Sept. 18.
Vibration-absorbing element. E. S. Marks. 1,684,773; Sept. 18.
Wall-board reenforcement. C. O. Walper. 1,684,899; Sept. 18.
Wall-form tie structure. W. E. Baumberger. 1,684,382; Sept. 18.
Warm-air furnace. H. W. French. 1,684,914; Sept. 18.
Water and carbide can. A. Kozak. 1,684,996; Sept. 18.
Water heater. W. V. Kraft. 1,684,997; Sept. 18.
Water-treatment apparatus. W. H. Green. 1,684,822; Sept. 18.
Water-tube boiler. L. Steinmüller. 1,684,691; Sept. 18.
Wave lengths for wireless receivers, Apparatus for automatic regulation of different. F. W. M. L. Scheerbarth. 1,684,519; Sept. 18.
Wave motion, Device for the production of. H. G. Dorsey. 1,684,759; Sept. 18.
Wax-melting apparatus. C. Methfessel. 1,684,710; Sept. 18.
Weather strip. F. B. Snavely. 1,684,646; Sept. 18.
Weeder, Rotary rod. N. Jackson. 1,684,992; Sept. 18.
Weel made of netting. F. W. H. Toppe. 1,684,564; Sept. 18.
Welding machine, Arc. C. A. Bowlus. 1,684,726; Sept. 18.
Wheel: *See*—
Disk wheel. Resilient wheel.
Grinding wheel. Sectional wheel.
Plow wheel.
Winch for tractors, Power. C. R. Appleby. 1,684,857; Sept. 18.
Window. J. Brogden. 1,685,060; Sept. 18.
Window cornice. A. S. Newmark. 1,684,843; Sept. 18.
Window screen. A. Jaroch. 1,685,027; Sept. 18.
Windshield cleaner. F. H. Blake, 2d. 1,684,907; Sept. 18.
Windshield cleaner. S. G. Skinner. 1,684,850; Sept. 18.
Wiper. N. S. Hillyard. 1,684,625; Sept. 18.
Wiper, Windshield. S. G. Van Derbeck. 1,685,037; Sept. 18.
Wire clamp. C. J. Weller. 1,684,784; Sept. 18.
Wire puller and twister for concrete framework. T. J. Howson. 1,684,797; Sept. 18.
Wire reel. A. Schwindenhammer. 1,685,007; Sept. 18.
Wire tying or twisting device. A. E. Bass. 1,684,723; Sept. 18.
Wireworking device for stitching machines. E. Leschhorn. 1,684,838; Sept. 18.
Wood, Apparatus for drying. J. F. and J. T. Hope. 1,684,627; Sept. 18.
Wood-chipping machine. J. Rae. 1,684,411; Sept. 18.
Zircon refractories, Manufacture of. L. H. Minton. 1,684,739; Sept. 18.

CLASSIFICATION OF PATENTS

ISSUED SEPTEMBER 18, 1928.

NOTE.—First number—class, second number—subclass, third number—patent number.

1— 18: 1,684,390
2— 120: 1,684,876
176: 1,684,670
190: 1,684,610
3— 2: 1,684,921
4— 145: 1,684,502
1,684,503
255: 1,684,880
5— 21: 1,684,851
1,684,936
6— 10: 1,685,021
7— 1: 1,684,622
8— 6: 1,684,401
1,684,881
9— 21: 1,684,714
12— 38: 1,684,427
15— 120: 1,684,460
195: 1,684,835
198: 1,684,481
206: 1,684,631
229: 1,684,379
245: 1,684,625
246: 1,684,604
1,684,698
255: 1,684,477
1,684,907
16— 83: 1,685,023
85: 1,684,662
93: 1,684,706
135: 1,685,002
18— 61: 1,684,525
19— 130: 1,684,993
155: 1,684,890
20— 1.12: 1,684,387
65: 1,684,646
22— 65: 1,684,419
68: 1,684,994
126: 1,684,715
200: 1,684,565
1,684,700
23— 5: 1,684,587
44: 1,684,935
61: 1,684,782
78: 1,684,758
119: 1,684,448
230: 1,684,645
260: 1,684,494
24— 19: 1,684,666
72.5: 1,684,443
73: 1,685,020
137: 1,684,721
163: 1,684,786
216: 1,685,055
1,685,061
1,685,062
1,685,063
237: 1,684,580
263: 1,684,974
25— 30: 1,684,858
128: 1,684,497
1,685,012
130: 1,684,978
131: 1,684,382
154: 1,684,624
156: 1,684,739
28— 44: 1,684,945
29— 88.2: 1,684,717
148: 1,684,883
149.5: 1,684,984
157: 1,684,932
30— 3: 1,684,414
1,684,447

Patents Nos. 1,685,078 to 1,685,769.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 374—No. 4. TUESDAY, SEPTEMBER 25, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Changes in Classification.

Order No. 3,060, September 7, 1928, directs:

In *class 29, Metal Working* (Division 14), establish the following subclasses and definitions, the patents contained in these subclasses having been taken for the most part from various subclasses in class 29:

Blanks and processes
- Carriage irons
  - 153.1 Axle housings,
- Fluid motors
  - Pistons and pitmen
    - Packing rings
      - 156.61 Forging,
      - 156.62 Severing,
      - 156.63 Surface cutting,
- Gas and water
  - 157.1 Valves,
  - 157.3 Radiators,
- Pulleys and wheels
  - 159.1 Tires and rims,
  - 159.2 Gears,
  - 159.3 Hubs.

153.1. BLANKS AND PROCESSES, CARRIAGE IRONS, AXLE HOUSINGS. Blanks and processes for making axle housings.

156.61. BLANKS AND PROCESSES, FLUID MOTORS, PISTONS AND PITMEN, PACKING RINGS, FORGING. Blanks and processes for making piston rings in which the metal is compacted or set by forging.

156.62. BLANKS AND PROCESSES, FLUID MOTORS, PISTONS AND PITMEN, PACKING RINGS, SEVERING. Blanks and processes for making piston rings by severing the ring.

156.63. BLANKS AND PROCESSES, FLUID MOTORS, PISTONS AND PITMEN, PACKING RINGS, SURFACE CUTTING. Blanks and processes for making piston rings characterized by forming or setting the rings by cutting the surfaces.

157.1. BLANKS AND PROCESSES, GAS AND WATER, VALVES. Blanks and processes for making valves for gas or liquid control.

157.3. BLANKS AND PROCESSES, GAS AND WATER, RADIATORS. Blanks and processes especially adapted for making radiators.

Search Class
113—SHEET-METAL WARE, MAKING, subclass 118, Processes, Radiators.

159.1. BLANKS AND PROCESSES, PULLEYS AND WHEELS, TIRES AND RIMS. Blanks and processes for forming tires and rims, except those for railway-car wheels.

159.2. BLANKS AND PROCESSES, PULLEYS AND WHEELS, GEARS. Blanks and processes especially adapted for making gears.

159.3. BLANKS AND PROCESSES, PULLEYS AND WHEELS, HUBS. Blanks and processes especially adapted for making wheel hubs.

In *class 29, Metal Working* (Division 14), change the title of subclass 157.4, Blanks and processes, Gas and water, Boilers, radiators, headers, and tubes, to read:

Blanks and processes
Gas and water
157.4 Boilers, headers, and tubes,

and cancel the word "radiators" in the first line of the definition; change the title of subclass 159, Blanks and processes, Gears, pulleys, tires, and wheels, to read:

Blanks and processes
159 Pulleys and wheels,

and in subclass 148.4, Blanks and processes, Balls, rolls, and cages, add to the definition the following note:

Note.—See class 112, SHEET-METAL WARE, MAKING, subclass 117, Processes, Bearing cages.

In *class 113, Sheet-Metal Ware, Making* (Division 14), establish the following subclasses and definitions, the patents contained in these subclasses having been taken for the most part from class 113, subclass 116, Processes:

Processes
117 Bearing cages,
118 Radiators.

117. PROCESSES, BEARING CAGES. Processes coming under subclass 116 for making bearing cages from sheet metal.

Search Class
29—METAL WORKING, subclass 148.4, Blanks and processes, Balls, rolls, and cages.

118. PROCESSES, RADIATORS. Processes coming under subclass 116 for making radiators from sheet metal.

Search Class
29—METAL WORKING, subclass 157.3, Blanks and processes, Gas and water, Radiators.

In *class 211, Supports, Racks* (Division 8), in the definition of subclass 133, Tray or receptacle type, Stands, cancel the existing note and establish in lieu thereof, the following:

Note.—For stands combined with ash trays and tobacco-users' appliances see class 131, TOBACCO, subclass 51, Cigar supports and stands.

Condition of Applications Under Examination at Close of Business September 14, 1928.

(Total number of applications awaiting action, exclusive Trade-Mark Division, 113,085; Trade-Mark Division, 1,940. Oldest new case, Nov. 15, 1927; oldest amended, Nov. 15, 1927. The dates given are 1927 except where † indicates 1928.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application awaiting office action. New.	Amended.	No. of applications awaiting action.
112	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Tillage; Scattering Unloaders; Handling and Hoist Line Implements.	†Jan. 27	†Jan. 30	1,568
126	2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tobacco	†Jan. 25	†Feb. 4	1,703
331	3. LINDSEY, A., Heating; Metal Founding; Metallurgy; Metal Treatment	Dec. 21	†Jan. 16	1,568
234	4. MERRITT, A. D., Conveyers; Hoists; Handling Apparatus; Excavating	Nov. 22	Nov. 28	1,625
108*	5. MACNAB, J. F., Harvesters; Music; Acoustics; Sound Recording; Knotters	Dec. 6	Dec. 8	1,565
318	6. LEWERS, A. M., Carbon Chemistry; Dyeing; Explosives; Sugar and Starch	Dec. 16	Dec. 27	2,552
106	7. JARBOE, C. G., Optics; Photography	Dec. 1	Dec. 1	2,013
133	8. HENRY, C. C., Beds; Chairs; Kitchen and Table Articles; Racks and Cabinets	†Feb. 9	†Feb. 27	1,686
221	9. ADAMS, R. E., Pumps; Fluid and Fluid-Current Motors	†Mar. 15	†Mar. 12	1,761
118	10. HUNTER, O. F., Land Vehicles—Animal Draft Appliances, Bodies and Tops	Dec. 27	†Jan. 14	1,556
148*	11. ARMSTRONG, H. C., Boots, Shoes, and Leggings; Button, Eyelet, and Rivet Setting; Harness; Leather Manufactures; Nailing and Stapling; Whip Apparatus.	†Feb. 24	†Feb. 1	983
380	12. PIERCE, P. P., Machine Elements	†Jan. 28	†Jan. 9	2,017
154*	13. CLIFT, J. W., Gear Cutting, Milling, and Planing; Metal Drawing; Metal Forging and Welding; Metal Rolling; Metal Working; Needle and Pin Making; Turning; Boring and Drilling.	†Jan. 13	Dec. 14	1,495
102*	14. BRUMBAUGH, N. J., Farriery; Metal Bending; Metal Tools and Implements, Making; Sheet-Metal Ware, Making; Wire Fabrics; Wire Working; Metal Working, Assembling, and Blanks and Processes.	Dec. 16	Dec. 17	1,248
329	15. WORRELL, L. W., Glass; Plastic Block and Earthenware Apparatus; Plastics	Dec. 22	†Jan. 5	2,494
242*	16. SPENCER, C. J., Telegraphy; Telephony	†Feb. 21	†Jan. 23	1,162
307	17. RAFTER, G. S., Label Pasting and Paper Hanging; Ornamentation; Paper Manufactures; Printing; Type Casting; Sheet-Material Associating or Folding; Sheet or Web Feeding; Type Setting.	Dec. 8	†Feb. 3	1,537
229	18. PORTER, M. E., Motors, Expansible-Chamber Type; Power Plants; Speed-Responsive Devices	Dec. 12	Dec. 19	1,644
236	19. GLASCOCK, E. S., Furnaces; Heating Systems; Liquid and Gaseous Fuel Burners; Stoves and Furnaces.	†Jan. 6	†Jan. 3	1,908
179	20. GROVE, S. D., Miscellaneous Hardware; Closure Fasteners; Locks and Latches; Safes; Undertaking.	†Mar. 23	†Mar. 17	1,492
212	21. THURBUR, W. L., Textiles; Cloth Finishing	Dec. 22	†Feb. 4	1,090
244*	22. COLWELL, J. H., Aeronautics; Firearms, Ordnance, and Explosive Devices; Air Guns, Catapults, and Targets; Boats and Buoys; Ships; Marine Propulsion.	Dec. 8	Dec. 19	1,635
217	23. GROESBECK, W. D., Coin Handling; Recorders; Registers	Nov. 19	Nov. 29	1,132
147*	24. DURAS, C. O., Apparel; Apparel Apparatus; Garment Supporters; Sewing Machines	Dec. 7	Dec. 13	1,539
202*	25. LIGHTFOOT, J. H., Agitating; Butchering; Classifying Solids; Centrifugal-Bowl Separators; Mills; Threshing; Vegetable and Meat Cutters and Comminutors.	†Feb. 6	†Feb. 25	1,714
228*	26. HODGES, J. S., Electricity, Generation; Motive Power	†Jan. 6	†Jan. 7	1,210
214	27. ANDERSON, L. S., Brush, Broom, and Mop Making; Brushing, Scrubbing, and General Cleaning; Laundry; Washing Apparatus.	†Feb. 2	†Feb. 3	1,455
225	28. BENSON, A. R., Internal-Combustion Engines	Dec. 8	Dec. 14	2,005
160*	29. MORRIS, B. N., Woodworking; Tools; Compound Tools	†Jan. 20	†Jan. 11	1,197
248	30. SHIPMAN, J. L., Automatic Temperature and Humidity Regulation; Illuminating Burners; Illumination; Thermostats and Humidostats.	†Jan. 11	†Mar. 6	1,458
312	31. HOLMES, W. N., Ammonia, Water, and Wood Distillation; Charcoal and Coke; Gas, Heating and Illuminating; Mineral Oils.	†Jan. 5	†Jan. 6	2,164

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

IN RE VISSERING.

No. 2,006. Decided March 5, 1928.

PATENTABILITY—INVENTION—SELECTION OF VARIOUS FEATURES FROM PRIOR ART NOT.

A claim for a brake step *Held* unpatentable since applicant had done nothing more than select various features from patents of the prior art and unite them in a single structure possessing no new or improved function as a result of such assemblage.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. H. H. Benjamin and *Mr. J. T. Bassecches* for Vissering.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

VAN ORSDEL, *J.*:

This appeal is from the Commissioner of Patents rejecting appellant's application for a patent for a car-brake step described in the following claim:

1. A brake step adapted to be secured to a car body and having a shelf portion adapted to act as a rest for the foot and provided with an abutment portion comprising a plurality of continuous spaced pressed portions.

The step is Z-shaped in cross section, and supported by V-shaped brackets. It is made of pressed sheet metal provided with corrugations on the upper surface to prevent the user from slipping.

In the opinions of the tribunals of the Patent Office, the construction upon which the patent is sought is clearly pointed out in three references relied upon, and from an examination of the prior art we agree with the Commissioner—

that applicant has done no more than pick out one feature from one patent, another from another, and so on, and unite them in a single structure. The step possesses no new or improved function as a result of such assemblage of old features.

The decision of the Commissioner is affirmed.

Court of Appeals of the District of Columbia.

IN RE ERICKSON.

No. 2,009. Decided March 5, 1928.

PATENTABILITY—INVENTION.

Claims for an elbow pad for use with a desk telephone *Held* unpatentable, since no invention exists in so using a cushion for an elbow rest in view of the universal use of cushions for various analogous purposes.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. J. F. Williamson and *Mr. O. C. Reif* for Erickson.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, VAN ORSDEL, Associate Justice, and SMITH, Judge of the U. S. Court of Customs Appeals.

VAN ORSDEL, *J.*:

This appeal is from the decision of the Commissioner of Patents denying the application of appellant for a patent for a telephone elbow rest.

The application discloses an elbow pad for use in connection with a desk telephone. The pad is connected to the telephone by an elastic band provided with snap button fasteners for securing the end of the band around the telephone standard. The patent was rejected upon two references. But without stopping to consider these references, we are of opinion that the application should be rejected on the broader ground that no invention exists in the using of a cushion for an elbow rest in connection with a telephone, as is disclosed in this case, for the reason that the universal use of cushions for various purposes, analogous to the use here suggested, is lacking in inventive initiative.

The decision of the Commissioner is affirmed.

Court of Appeals of the District of Columbia.

F. HOFFMAN & SONS, INC., *v.* H. B. HUNTER COMPANY, INC.

No. 2,016. Decided March 5, 1928.

TRADE-MARKS—SIMILARITY—"C-HOC-O," AND "CHOCO-SIP."

The term "C-hoc-O," used as a trade-mark for nonalcoholic carbonated beverages, *Held* deceptively similar to the term "Choco-Sip," used as a trade-mark for the same goods.

APPEAL from the Commissioner of Patents. Reversed.

Mr. Donald U. Rich and *Mr. Chas. R. Allen* for F. Hoffman & Sons, Inc.

Mr. Wm. L. Symons for H. B. Hunter Co., Inc.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice and SMITH, Judge U. S. Court of Customs Appeals

VAN ORSDEL, *J.*:

This is a trade-mark cancellation proceeding brought by appellant company, to secure the cancellation of the registration of the word "C-hoc-O" as a trade-mark for nonalcoholic, maltless, carbonated beverages, sold as soft drinks. The petitioner claims that it is damaged by use of the mark through confusion with its registered trade-mark "Choco-Sip."

Priority is conceded petitioner in the use of its mark. It is not denied that the goods of the respective parties are substantially identical. The only question for determination is whether or not the trade-marks are confusingly similar, within the meaning of the statute.

The Examiner of Interferences found that the marks were so similar as to be likely to lead to confusion; and directed the cancellation of appellee company's registration. This decision was reversed by the Commissioner of Patents, and from his decision this appeal was taken.

We find little difficulty in sustaining the decision of the Examiner. The suffix "Sip" indicates a beverage, and the prefix "Choco" indicates the quality of beverage. The evidence discloses that "Choco-Sip" is frequently ordered by the name choco. We are not impressed with the contention that the

hyphen marks in "C-hoc-O" distinguish the word either in pronunciation or appearance to the extent of removing the probability of confusion. The manner in which the word is written leaves the hyphens obscure and unimportant factors in the make up of the mark. As said by the Examiner:

Especially is this true when it is considered that the letter spacing in respondent's trade-mark is not substantially different from that of a word in which no hyphens appear.

In view of the evidence as to probable confusion, and also from the close similarity of the marks, we are convinced that the conclusion reached by the Commissioner is erroneous.

The decision of the Commissioner is reversed.

Court of Appeals of the District of Columbia.

LOVEJOY *v.* SHULTZ.

No. 2,037. Decided May 7, 1928.

INTERFERENCE—PRIORITY—RIGHT TO MAKE THE CLAIMS. Priority *Held* properly awarded to S. over an objection that his structure was inoperative and utterly lacking in usefulness since, while a certain result was not primarily contemplated by him, "it was nevertheless inherent in his disclosure, and required only mechanical skill to make the device effective for that purpose."

APPEAL from the Commissioner of Patents. Affirmed.

Mr. F. A. Tennant and *Mr. C. E. Riordon* for Lovejoy.

Mr. John S. Powers for Shultz.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

MARTIN, *C. J.*:

Shultz is the senior party. Lovejoy, the junior party, denies that Shultz is entitled to make the counts of the interference, claiming that the Shultz structure as disclosed in the application is inoperative and utterly lacking in usefulness.

The issue is stated in four counts of which count 1 is illustrative, reading as follows, to wit:

1. A shock absorber adapted to be arranged between two relatively movable members, comprising a cylinder adapted to be connected with one of said members, a piston arranged in said cylinder and adapted to be connected with the other member, and a liquid reservoir, said piston having a port and said cylinder having a port leading to said reservoir, said ports being adapted to register and place said cylinder and reservoir in communication with each other during the central part of the stroke of said piston in the cylinder but to cut off communication through these ports between the cylinder and reservoir when the piston is at either end of its stroke.

It thus appears that the invention relates to an improvement in automobile shock absorbers of the hydraulic reciprocating piston type. Such a shock absorber consists of a casing containing a cylinder and a fluid reservoir, separated from one another by a partition, but intercommunicating at the top. A piston with a downward skirt moves in the cylinder, and its action is in some measure regulated or controlled by two valve-equipped ports located between the cylinder and the fluid reservoir. One of the ports freely permits the flow of the fluid from the reservoir into the cylinder, but automatically prevents a reverse flow of the fluid; whereas the other by means of a spring-regulated valve permits the fluid to flow from the cylinder to the reservoir. The piston is attached by a projecting arm to the axle of the car, and the casing is attached to the car's body; accordingly, the regulation of the relative movements of the piston and casing serves to absorb the shocks produced by sharp depressions or elevations in the roadway.

Shultz sought to improve upon this construction by providing an open port in the skirt of the piston and a similar port in the partition between the cylinder and oil reservoir, the two ports being so located as to register when the piston is at a normal position. Shultz stated in his application that the ports were—

so designed that the same offers practically no resistance while the relatively moving parts of the car are in their neutral position and thus permits the springs of the car to carry the load easily and freely and without interference from the shock absorber.

At first the diameter of each port was $\frac{1}{4}$th of an inch, but later it was reduced to $\frac{1}{8}$th.

Lovejoy contends that this device is inoperative for any satisfactory purpose because the ports as disclosed are too large to offer any resistance to the movement of the piston when they are in registration. Lovejoy claims that the flow of the fluid through the registering ports would be so little impeded as to offer substantially no resistance to the downward movement of the piston, and consequently would not function to absorb shocks but would prove to be an actual disadvantage. The application filed by Lovejoy is based upon ports essentially similar to those of Shultz, except that they are smaller in size. Lovejoy claims that the ports provided by him will absorb such shocks as occur when the springs are only slightly flexed, leaving the greater shocks to be absorbed as otherwise provided for.

The tribunals of the Patent Office however have unanimously held that the Shultz improvement actually results to a useful extent in reducing or absorbing the minor shocks incident to slight irregularities in the traveled roadway; and that it is not inoperative. Priority of invention, therefore, has been awarded to Shultz by their concurrent decisions. A review of the record convinces us that while this result was not primarily contemplated by Shultz, it was nevertheless inherent in his disclosure, and required only mechnical skill to make the device effective for that purpose. We therefore agree with the conclusions of the Patent Office that the Shultz improvement is not inoperative.

The decision of the Commissioner of Patents is affirmed.

Patent Suits.

Interference Notice.

U. S. PATENT OFFICE, *Washington, Sept. 13, 1928.*

Alice L. Lynch, her assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of John L. Lombardo, 59–61 Broadway, Buffalo, N. Y., for registration of a trade-mark and trade-mark registered July 3, 1923, No. 169,843, to Alice L. Lynch, of 442 West Forty-Third Street, New York, N. Y., and a notice of such declaration sent by registered mail to the said Alice L. Lynch at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Alice L. Lynch, her assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. J. MOORE,
First Assistant Commissioner.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,508,989, G. A. Roth, Luggage carrier, decided August 1, 1928, claims 17 and 18.

Pat. 1,577,981, W. Otto, Resistance element, decided August 3, 1928, claims 1, 13, 14, and 15.

Pat. 1,585,244, W. H. Hoffman, Short-wave-length transmitter, decided August 13, 1928, claim 4.

Pat. 1,644,084, E. A. Reinke, Designation device, decided August 18, 1928, claims 1 to 7, inclusive.

Pat. 1,661,762, H. Kreidel, Direction indicator for vehicles, decided August 6, 1928, claims 1 and 2.

Final decision in interference has been rendered against the following trade-mark:

T. M. 152,921, Wheat flour, The Oklahoma Mill Co., Kingfisher, Okla. Registered March 7, 1922. Decided August 3, 1928.

Disclaimers.

1,380,348.—*Ray M. Brown*, Yonkers, N. Y. CONTROLLING MECHANISM FOR BOOSTER MOTORS. Patent dated June 7, 1921. Disclaimer filed August 29, 1928 by the assignees, *Howard L. Ingersoll*, the *Locomotive Booster Company*, and *Franklin Railway Supply Company* (assignees not recorded).

Hereby enter this disclaimer to that part of the claims in said specification which are in the following words, to wit:

"3. In combination with a locomotive having a propelling gear wheel, a booster motor, a gear wheel driven thereby, a pinion intermediate said gear wheels, a rocking member on one end of which said pinion is mounted, and means for rocking said member to entrain the pinion with said first named gear wheel.

"4. In combination with a locomotive having a propelling gear wheel, a booster motor, a gear wheel driven thereby, a pinion intermediate said gear wheels, a rocking member on one end of which said pinion is mounted, and means for rocking said member to entrain the pinion with said first named gear wheel; the rocking member and pinion being constructed and arranged so that gravity tends to move the pinion out of mesh with said first named gear wheel."

1,395,362.—*Charles F. Rubsam*, Cleveland, Ohio. VEHICLE WHEEL. Patent dated November 1, 1921. Disclaimer filed August 23, 1928 by the assignee, *Rubsam Corporation*.

Hereby enters this disclaimer, to wit:

(1) To the combination of claim 1, except where in such combination, there are circumferentially-extending clearances or spaces between the rim and the wheel body at the points necessary to permit the inner side of the rim to clear the outer side of the wheel body when the rim is swung transversely onto the wheel body and to permit the rim, when it has been placed on the body, to be concentrically spaced around the body, by the bearing members.

(2) To the combination of claim 2, except where in such combination, there are circumferentially-extending clearances or spaces between the rim and the wheel body at the points necessary to permit the inner side of the rim to clear the outer side of the wheel body when the rim is swung transversely onto the wheel body and to permit the rim, when it has been placed on the body, to be concentrically spaced around the body, by the bearing members.

(3) To the combination of claim 3, except where in such combination, there are circumferentially-extending clearances or spaces between the rim and the wheel body at the points necessary to permit the inner side of the rim to clear the outer side of the wheel body when the rim is swung transversely onto the wheel body and to permit the rim, when it has been placed on the body, to be concentrically spaced around the body, by the bearing members.

(4) To the combination of claim 4, except where in such combination, there are circumferentially-extending clearances or spaces between the rim and the wheel body at the points necessary to permit the inner side of the rim to clear the outer side of the wheel body when the rim is swung transversely onto the wheel body and to permit the rim, when it has been placed on the body, to be concentrically spaced around the body, by the bearing members.

(5) To the combination of claim 5, except where in such combination, there are circumferentially-extending clearances or spaces between the rim and the wheel body at the points necessary to permit the inner side of the rim to clear the outer side of the wheel body when the rim is swung transversely onto the wheel body and to permit the rim, when it has been placed on the body, to be concentrically spaced around the body, by the bearing members.

(6) To the combination of claim 6, except where in such combination, there are circumferentially-extending clearances or spaces between the rim and the wheel body at the points necessary to permit the inner side of the rim to clear the outer side of the wheel body when the rim is swung transversely onto the wheel body and to permit the rim, when it has been placed on the body, to be concentrically spaced around the body, by the bearing members.

1,547,155.—*Howard L. Ingersoll*, White Plains, N. Y. BOOSTER MOTOR FOR LOCOMOTIVES. Patent dated July 21, 1925. Disclaimer filed August 29, 1928, by the patentee and assignees (not recorded), *Locomotive Booster Company* and *Franklin Railway Supply Company*.

Hereby enter this disclaimer to that part of the claims in said specification which are in the following words, to wit:

"1. The combination with a locomotive having main driving wheels and means for driving the same, of normally idle wheels carrying part of the weight of the locomotive, a booster motor adapted to drive said last named wheels in starting and at low speeds of the locomotive, and steam actuated mechanism for controlling the operation of the booster."

"3. In combination with the main driving means of a locomotive, a booster motor for aiding said main driving means in starting the locomotive and propelling it at low speeds and a steam actuated mechanism for controlling the operation of the booster."

as not patentable in view of the disclosure and claims in said patentee's prior Patent No. 1,339,395; and to that part of the claims in said specification which are in the following words, to wit:

"31. The method of aiding a locomotive engine in the propulsion of a train, which consists in utilizing the steam supply of the main engine of the locomotive for operating an auxiliary propulsion unit and directly effecting an operative driving connection between said auxiliary propulsion unit and a load bearing axle of the train through the medium of the pressure influence of the steam."

as covering a method which is nothing more than the statement of a result which may be accomplished by steam actuation of the mechanical devices which are disclosed as being capable of performing it.

Adjudicated Patents.

(D. C. N. Y.) The Van Meter patent, No. 1,102,479, for expansion device for parachute apparatus, claim 2 *Held* valid and infringed. *Van Meter* v. *Irving Air Chute Co.*, 27 F. (2d) 170.

(C. C. A. Ohio.) The Wagenhorst patent, No. 1,509,382, for demountable rim for automobile wheels, *Held* invalid. *Wagenhorst* v. *Hydraulic Steel Co.*, 27 F. (2d) 27.

(C. C. A. S. C.) The Lindsay and Hemphill reissue patent, No. 15,895, on air-agitating tube for refrigerating systems, *Held* valid and infringed. *Frick Co.* v. *Lindsay*, 27 F. (2d) 59.

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 25, 1928.

[VOL. 374. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

Ser. No. 257,257. THE SOUTHERN COAL & COKE COMPANY, Cincinnati, Ohio. Filed Nov. 8, 1927.

EMERALD GEM

For Coal.
Claims use since November, 1917.

Ser. No. 265,901. THE GOVERNOR AND COMPANY OF ADVENTURERS OF ENGLAND TRADING INTO HUDSON'S BAY, London, England. Filed May 4, 1928.

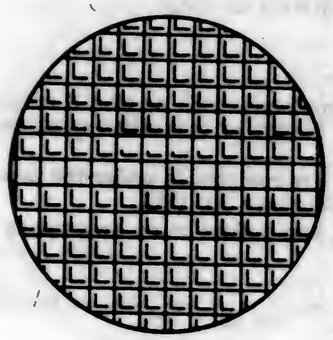
BAYVEL

For Furs Not Made Up for Wear.
Claims use since Aug. 29, 1927.

Ser. No. 269,083. CAPE ANN ISINGLASS COMPANY, Boston, Mass. Filed July 5, 1928.

For Unprepared Isinglass Not Used for Food Purposes.
Claims use since 1872.

Ser. No. 269,798. JAMES H. RHODES & COMPANY, Chicago, Ill. Filed July 18, 1928.



For Lump Pumice Stone.
Claims use since July 22, 1924.

CLASS 2.

Receptacles.

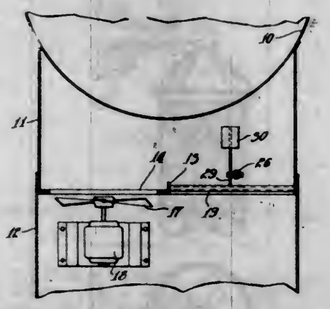
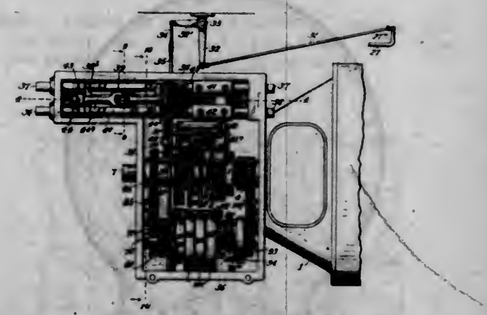
17,087. SAWING DEVICE. PERCY LEON BILLINGSLEY, Orlando, Fla., assignor to The P. L. Billingsley Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Dec. 28, 1926. Serial No. 157,600. Original No. 1,529,294, dated Mar. 10, 1925, Serial No. 482,380, filed July 5, 1921. 12 Claims. (Cl. 143—43.)



1. A device of the kind described comprising a base slidable in one direction on a board or other object to be operated on, two members, one of said members being adjustably mounted on the base and the other being adjustably carried by the first-named member, and a rotary implement carried by the last-named member mounted for rotation about an axis extending at right angles to the direction of movement of the slidable base, said implement extending below the base to cut the object underneath the base, one of said members being pivotally supported for adjustment to different angles transversely with reference to said direction to bring the axis of the implement to different angles with reference to the base and the object transversely of such direction so as to obtain square and miter cuts, and the other member being adjustable toward and away from the base and object to raise and lower the implement and adjust the depth of the cut made, said adjustments maintaining the implement, in any of its adjustments relatively to the base, in a plane parallel to said direction of movement and constraining the implement from being positioned at an angle to such direction of movement.

17,088. FIRE BOX FOR BOILERS. ROBERT MARVIN SPENCER, Waycross, Ga. Filed Mar. 22, 1928. Serial No. 263,822. Original No. 1,622,356, dated Mar. 29, 1927, Serial No. 128,708, filed July 20, 1926. 1 Claim. (Cl. 110—87.)



In combination with a boiler fire box, longitudinally extending arch pipes between the fire containing portion of the fire box and the fire flues thereof, a plurality of arch sections of hollow construction mounted on said arch pipes, each section including a plurality of hollow blocks, the intermediate blocks being open ended, and the front block having one open end adjacent the next intermediate block and an open bottom, and the other end block having open ends one of which is beveled.

17,089. HOT-AIR HEATING AND VENTILATING APPARATUS. JAMES C. MILES, Cleveland, Ohio. Filed June 7, 1928. Serial No. 283,673. Original No. 1,600,508, dated Sept. 21, 1926, Serial No. 650,249, filed July 9, 1923. 14 Claims. (Cl. 126—110.)

1. In a heating apparatus, the combination with a heating chamber of a fan for forcing air into said chamber, a normally open damper associated with the fan for controlling an inlet to the chamber, and means associated with the damper and operatively connected with the fan, whereby upon operation of the fan a positive automatic closure of said damper is effected, and whereby the damper is maintained closed so long as the fan is in operation.

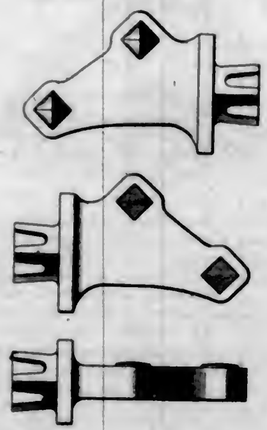
17,090. AUTOMATIC GEAR-SHIFTING MECHANISM FOR SLIDING-GEAR TRANSMISSIONS. EARL A. THOMPSON, Portland, Oreg. Filed Jan. 3, 1924. Serial No. 684,174. Original No. 1,435,430, dated Nov. 14, 1922, Serial No. 221,412, filed Mar. 9, 1918. 64 Claims. (Cl. 74—58.)

1. In a power transmission having a clutch, a clutch operating element, and transmission gears, means for successively releasing the clutch, shifting the gears and synchronizing the speed of the gears during movement of the operating element from its normal position, and means for successively shifting the gears and engaging the clutch during the movement of the operating element in returning to its normal position.

DESIGNS

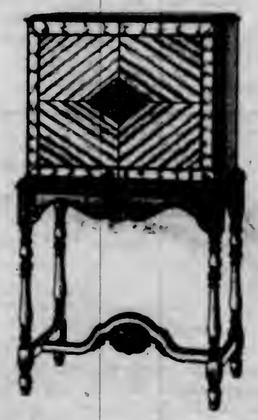
SEPTEMBER 25, 1928.

76,367. COMBINED PORCH LANTERN AND SUPPORTING BRACKET. ROBERT SAYER ASPINWALL, Detroit, Mich. Filed July 7, 1928. Serial No. 27,414. Term of patent 7 years.



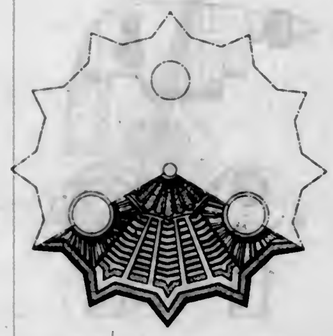
The ornamental design for a combined porch lantern and supporting bracket, as shown.

76,368. STREET-LIGHT GLOBE. SYLVESTER A. BAKER, San Francisco, Calif. Filed Apr. 16, 1928. Serial No. 26,337. Term of patent 14 years.



The ornamental design for a street light globe substantially as shown.

76,369. TOWEL-BAR BRACKET. JOHN H. BALMER, Maplewood, N. J. Filed July 9, 1928. Serial No. 27,419. Term of patent 14 years.



The ornamental design for a towel bar bracket substantially as shown.

76,370. CABINET FOR A SOUND-REPRODUCING INSTRUMENT OR THE LIKE. NATHAN P. BLOOM, Louisville, Ky. Filed May 5, 1928. Serial No. 26,577. Term of patent 3½ years.

The ornamental design for a cabinet for a sound reproducing instrument or the like as shown.

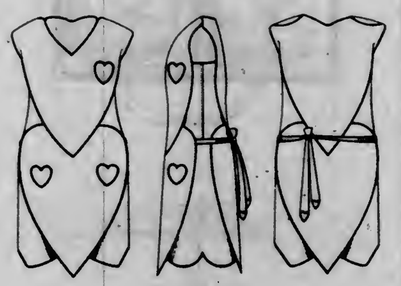
76,371. CEILING PLATE FOR LIGHTING FIXTURES OR SIMILAR ARTICLES. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed July 20, 1928. Serial No. 27,542. Term of patent 3½ years.

The ornamental design for a ceiling plate for lighting fixtures or similar articles, as shown.

76,372. GOBLET. EDGAR M. BOTTOME, Moundsville, W. Va., assignor to Fostoria Glass Company, Moundsville, W. Va., a Corporation of West Virginia. Filed July 2, 1928. Serial No. 27,350. Term of patent 14 years.

The ornamental design for a goblet, as shown.

76,373. GOBLET. EDGAR M. BOTTOME, Moundsville, W. Va., assignor to Fostoria Glass Company, Moundsville, W. Va., a Corporation of West Virginia. Filed July 2, 1928. Serial No. 27,351. Term of patent 14 years.

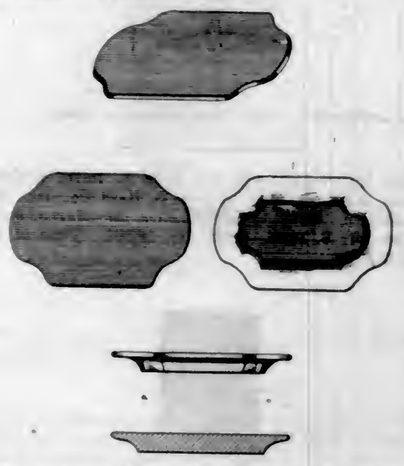


The ornamental design for a goblet, as shown.

76,374. TEXTILE FABRIC. JOHN S. BOYD, Williamstown, Mass., assignor to John S. Boyd Co., Inc., Williamstown, Mass., a Corporation of Massachusetts. Filed July 6, 1926. Serial No. 18,262. Term of patent 7 years.

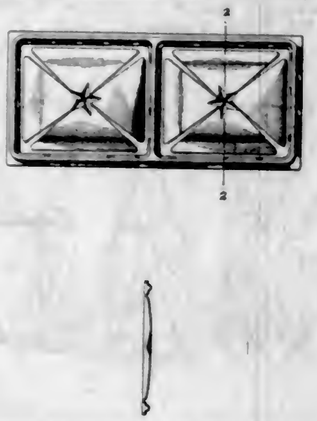
The ornamental design for a textile fabric, as shown.

76,375. DRESS OR SIMILAR ARTICLE. ESTELLA MORTON BOYES, New York, N. Y. Filed Jan. 7, 1928. Serial No. 24,781. Term of patent 3½ years.



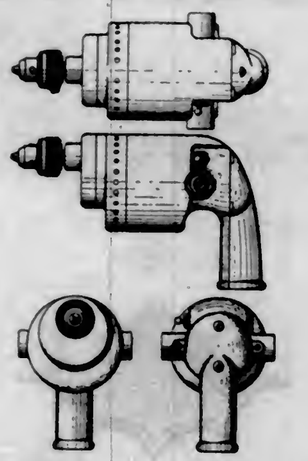
The ornamental design for a dress or similar article, substantially as shown.

76,376. KNITTED FABRIC. MILLARD D. BROWN, Philadelphia, Pa., assignor to Continental Mills, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 24, 1927. Serial No. 21,307. Term of patent 7 years.



The ornamental design for a knitted fabric, substantially as shown and described.

76,377. DISH HOLDER. GEORGE H. CARTER, Boston, Mass. Filed Feb. 10, 1928. Serial No. 25,352. Term of patent 3½ years.



The ornamental design for a dish holder, as shown.

76,378. DRIP PAN. GEORGE PRENTICE CHILDERS, San Francisco, Calif. Filed Jan. 13, 1926. Serial No. 16,046. Term of patent 14 years.

The ornamental design for a drip pan, as shown.

76,379. ELECTRIC DRILL. EDWIN L. CONNELL, Cleveland, Ohio, assignor to The Van Dorn Electric Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 13, 1928. Serial No. 25,423. Term of patent 14 years.

The ornamental design for an electric drill, as shown.

76,380. BELT BUCKLE. FRANK P. DAUGHADAY, Norton, Mass. Filed Feb. 13, 1926. Serial No. 16,512. Term of patent 3½ years.

The ornamental design for a belt buckle, as shown.

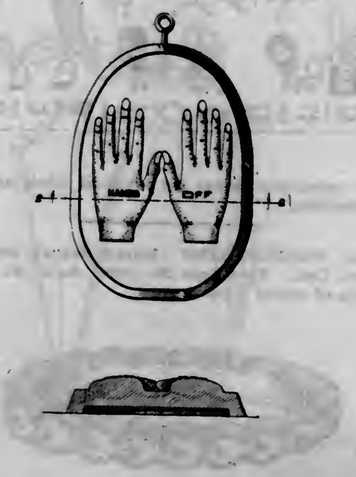
76,381. DISPLAY STAND. JOHN H. DE WEESE, Dayton, Ohio. Filed July 5, 1928. Serial No. 27,389. Term of patent 7 years.

The ornamental design for a display stand, as shown.

76,382. GUITAR. JOHN DOPYERA, Los Angeles, Calif. Filed Mar. 12, 1928. Serial No. 25,816. Term of patent 7 years.

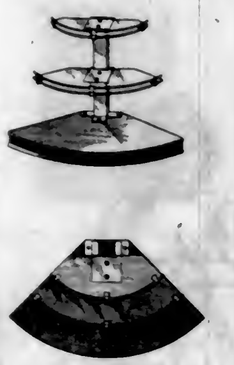
The ornamental design for a guitar, as shown.

76,383. AUTOMOBILE RADIATOR ORNAMENT. FREDERICK W. EHRLICH, Newark, N. J. Filed May 2, 1927. Serial No. 21,816. Term of patent 3½ years.



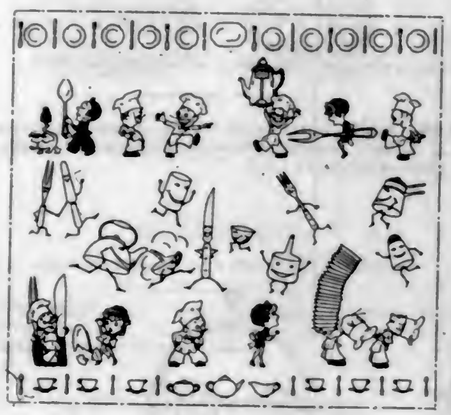
The ornamental design for an automobile radiator ornament, as shown.

76,384. GARMENT BAG. HERMAN B. FERGUSON, Philadelphia, Pa. Filed Apr. 10, 1928. Serial No. 26,214. Term of patent 3½ years.



The ornamental design for a garment bag as shown.

76,385. SIGN. JAMES FRANK FISHER, Honolulu, Territory of Hawaii. Filed Apr. 19, 1928. Serial No. 26,381. Term of patent 14 years.

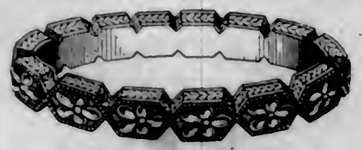


The ornamental design for a sign, as shown.

76,386. DISPLAY FIXTURE OR THE LIKE. MATTHEW M. FRIEDEMANN, New York, N. Y. Filed May 29, 1928. Serial No. 26,903. Term of patent 14 years.

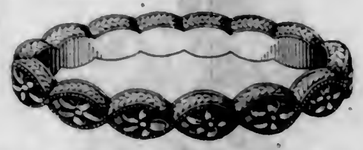
The ornamental design for a display fixture or the like as shown.

76,387. PRINTED FABRIC. JAMES H. GARDNER, Boston, Mass. Filed May 31, 1928. Serial No. 26,937. Term of patent 3½ years.



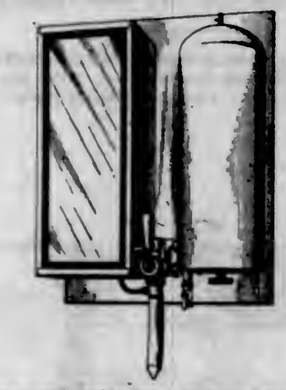
The ornamental design for a printed fabric as shown and described.

76,388. WEDDING RING. JOSEPH GRANAT, San Francisco, Calif. Filed June 28, 1928. Serial No. 27,309. Term of patent 7 years.



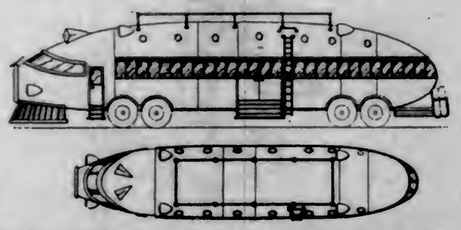
The ornamental design for a wedding ring substantially as shown.

76,389. WEDDING RING. JOSEPH GRANAT, San Francisco, Calif. Filed June 28, 1928. Serial No. 27,310. Term of patent 7 years.



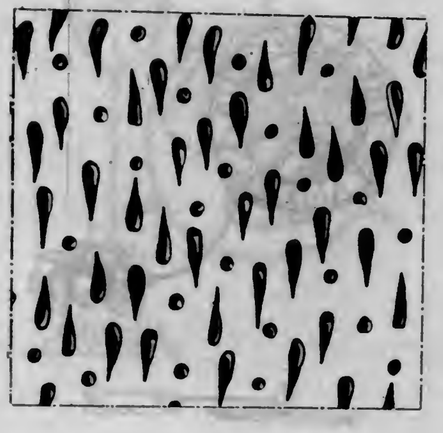
The ornamental design for a wedding ring substantially as shown.

76,390. WEDDING RING. JOSEPH GRANAT, San Francisco, Calif. Filed June 28, 1928. Serial No. 27,311. Term of patent 7 years.



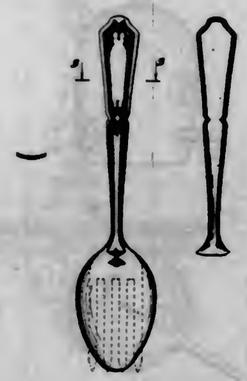
The ornamental design for a wedding ring substantially as shown.

76,391. MOUNTING FOR WATER-PURIFYING APPARATUS. IRWIN D. GROAK, Chicago, Ill. Filed Jan. 24, 1928. Serial No. 25,009. Term of patent 3½ years.



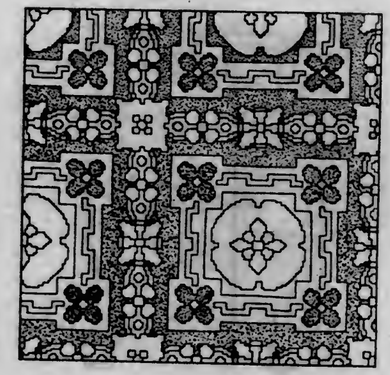
The ornamental design for a mounting for water purifying apparatus as shown.

76,392. AUTOMOBILE BODY. ERNEST T. HALLOWAY, Milwaukee, Wis. Filed Nov. 11, 1927. Serial No. 24,085. Term of patent 7 years.



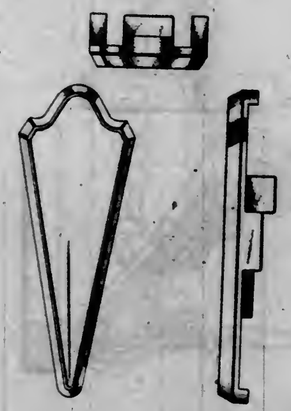
The ornamental design for an automobile body as shown.

76,393. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. ALFRED J. HEINEB, Towaco, N. J., assignor to H. R. Mallinson & Co., Inc., New York, N. Y., a Corporation of Delaware. Filed May 28, 1928. Serial No. 26,874. Term of patent 3½ years.



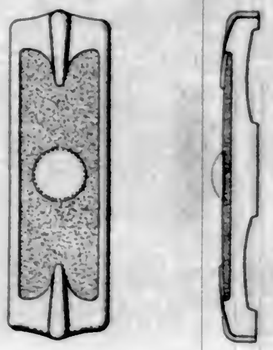
The ornamental design for a textile fabric or similar article of manufacture, substantially as shown and described.

76,394. SPOON OR SIMILAR ARTICLE. ARTHUR K. HOBSON, Danbury, Conn., assignor to The Hobson and Botts Company, Danbury, Conn., a Corporation of Connecticut. Filed June 29, 1928. Serial No. 27,823. Term of patent 7 years.



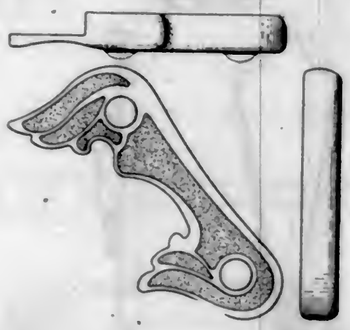
The ornamental design for a spoon or similar article substantially as shown.

76,395. LINOLEUM OR SIMILAR HARD-SURFACED FLOOR COVERING. ERIC J. HUMPHREYS, Lancaster, Pa., assignor to Armstrong Cork Company, a Corporation of Pennsylvania. Filed Dec. 30, 1927. Serial No. 24,696. Term of patent 7 years.



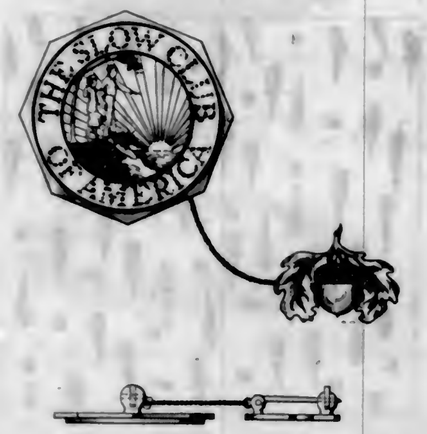
The ornamental design for linoleum or similar hard surfaced floor covering substantially as shown and described.

76,396. CLAMP FOR A VEHICLE BUMPER. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed May 19, 1927. Serial No. 22,084. Term of patent 14 years.



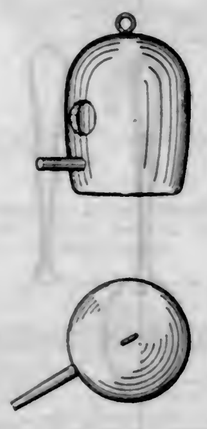
The ornamental design for a clamp for a vehicle bumper, substantially as shown.

76,397. CLAMP PLATE. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Dec. 23, 1927. Serial No. 24,623. Term of patent 14 years.



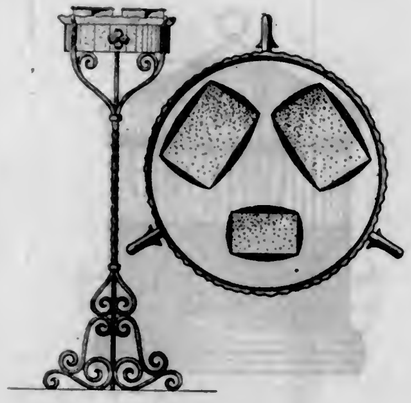
The ornamental design for a clamp plate substantially as shown and described.

76,398. CLAMP PLATE. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Dec. 23, 1927. Serial No. 24,624. Term of patent 14 years.



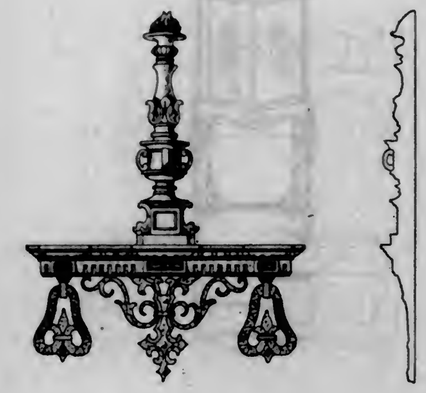
The ornamental design for a clamp plate substantially as shown and described.

76,399. BADGE OR SIMILAR ARTICLE. GEORGE F. KEARNEY, Andalusia, Pa., assignor to Bulletin Co., Philadelphia, Pa. Filed Dec. 22, 1927. Serial No. 24,584. Term of patent 3½ years.



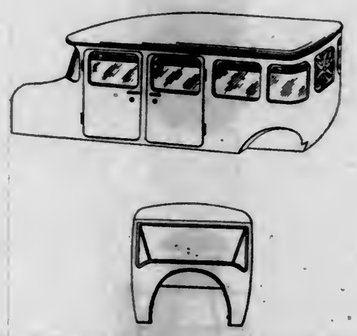
The ornamental design for a badge or similar article as shown.

76,400. BIRD HOUSE. TICE C. KEVITT, Athenia, N. J. Filed Apr. 2, 1928. Serial No. 26,111. Term of patent 14 years.



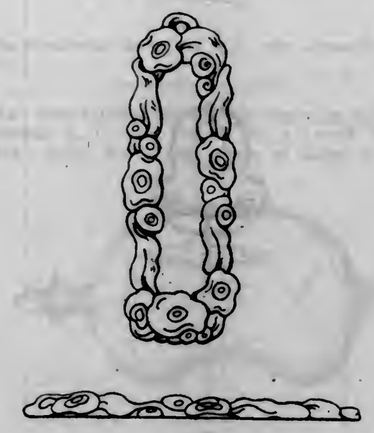
The ornamental design for a bird house, as shown.

76,401. SMOKING STAND. JOHN KOSTER, San Francisco, Calif. Filed Oct. 13, 1927. Serial No. 23,744. Term of patent 3½ years.



The ornamental design for a smoking stand, substantially as shown.

76,402. LIGHTING-FIXTURE BAR OR ARTICLE OF ANALOGOUS NATURE. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to Max Schaffer Co., Inc., a Corporation of New York. Filed June 28, 1928. Serial No. 27,301. Term of patent 7 years.

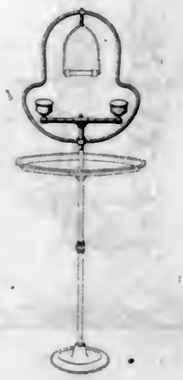


The ornamental design for a lighting fixture bar or article of analogous nature substantially as shown.

76,403. AUTOMOBILE BODY. ANDREW LANG, Edmonton, Alberta, Canada. Filed Sept. 26, 1927. Serial No. 23,547. Term of patent 7 years.

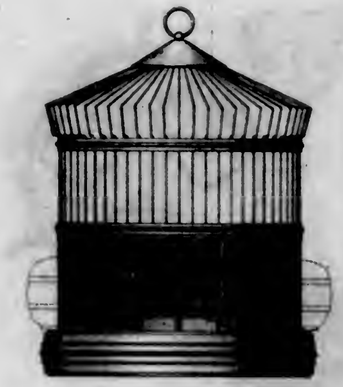
The ornamental design for a badge or similar article tially as shown.

76,404. THERMOMETER FRAME. LULU VERHAREN LAVELL, Minneapolis, Minn. Filed Mar. 28, 1928. Serial No. 25,961. Term of patent 3½ years.



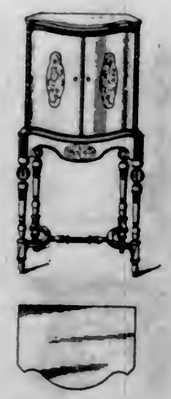
The ornamental design for a thermometer frame as shown.

76,405. BOTTLE FOR PERFUME OR THE LIKE. ANDRÉ LAVAULT, Paris, France, assignor to Associated Merchandising Corporation, a Corporation of New Jersey. Filed Nov. 25, 1927. Serial No. 24,274. Term of patent 14 years.



The ornamental design for a bottle for perfume or the like, as shown and described.

76,406. PARROT STAND. LEWICKI J. LEON, West Chicago, Ill. Filed Dec. 14, 1927. Serial No. 24,482. Term of patent 14 years.

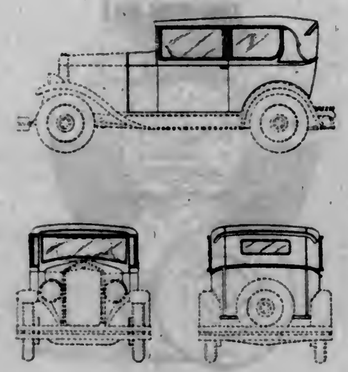


The ornamental design for a parrot stand as shown.

76,407. BIRD CAGE. LEWICKI J. LEON, West Chicago, Ill. Filed Jan. 30, 1928. Serial No. 25,078. Term of patent 14 years.

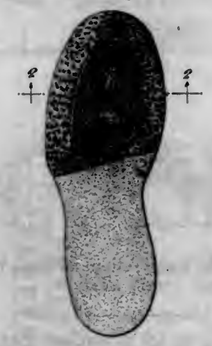
The ornamental design for a bird cage, as shown.

76,408. RADIOCABINET. ISAAC ARYNSAN LUND, Chicago, Ill. Filed June 15, 1928. Serial No. 27,140. Term of patent 3½ years.



The ornamental design for a radiocabinet substantially as shown.

76,409. PITCHER OR SIMILAR ARTICLE. ROBERT B. MCELDOWNEY, New Martinsville, W. Va., assignor to New Martinsville Glass Mfg. Co., New Martinsville, W. Va., a Corporation of West Virginia. Filed Jan. 31, 1928. Serial No. 25,099. Term of patent 3½ years.

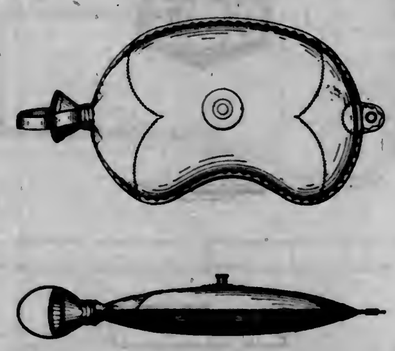


The ornamental design for a pitcher or similar article, as shown.

76,410. CLOSED VEHICLE BODY. AMOS E. NORTHUP, Detroit, Mich. Filed Dec. 27, 1926. Serial No. 20,152. Term of patent 3½ years.

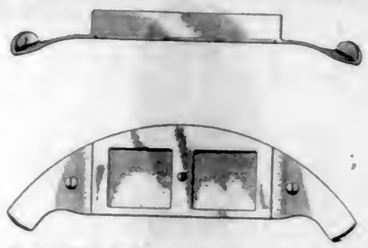
The ornamental design for a closed vehicle body as shown.

76,411. SHOE SOLE. LAURENCE M. OAKLEY, Trenton, N. J. Filed Oct. 22, 1927. Serial No. 23,840. Term of patent 14 years.



The ornamental design for a shoe sole as shown.

76,412. TIE CLIP. WILLARD A. ORMSBEE, Taunton, Mass. Filed Nov. 3, 1926. Serial No. 19,581. Term of patent 8½ years.

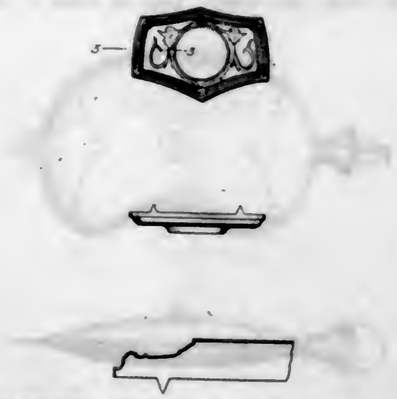


The ornamental design for a tie clip, substantially as shown.

76,413. HOT-WATER BOTTLE OR SIMILAR ARTICLE. STEPHEN L. PALMER, Teaneck, N. J. Filed June 7, 1928. Serial No. 27,035. Term of patent 7 years.

The ornamental design for a hot water bottle, or similar article, as shown.

76,414. MEMORANDUM HOLDER FOR AUTOMOBILE STEERING WHEELS. JOSEPH POLITE, Detroit, Mich. Filed Oct. 19, 1925. Serial No. 15,168. Term of patent 14 years.

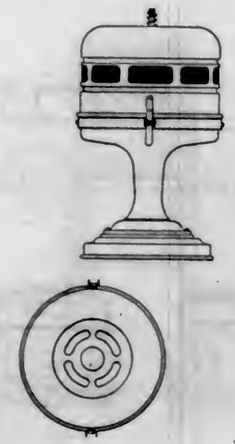


The ornamental design for a memorandum holder for automobile steering wheels, as shown.

76,415. HINGE FOR AN EYEGLASS FRAME. JACOB J. POMERANZ, Brooklyn, N. Y. Filed May 11, 1928. Serial No. 26,638. Term of patent 14 years.

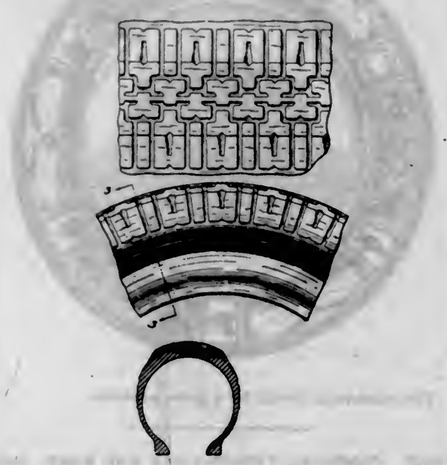
The ornamental design for a hinge for an eyeglass frame as shown and described.

76,416. ESCUTCHEON PLATE. JOHN J. PUNKE, Detroit, Mich., assignor to Hupp Motor Car Corporation, Detroit, Mich., a Corporation of Virginia. Filed May 21, 1928. Serial No. 26,796. Term of patent 7 years.



The ornamental design for an escutcheon plate, substantially as shown.

76,417. SMOKER'S RECEPTACLE. BENJAMIN PUTTERMAN, Brooklyn, N. Y., assignor to American Auto Lamp Co., Inc., a Corporation of New York. Filed Mar. 21, 1928. Serial No. 25,940. Term of patent 14 years.

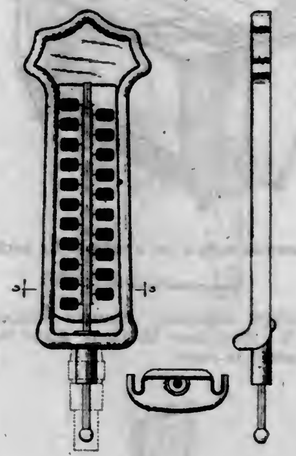


The ornamental design for a smoker's receptacle, substantially as shown.

76,418. CASING FOR CORN-POPPING MACHINE. JAMES H. REICHART, Muncie, Ind. Filed June 18, 1928. Serial No. 27,189. Term of patent 14 years.

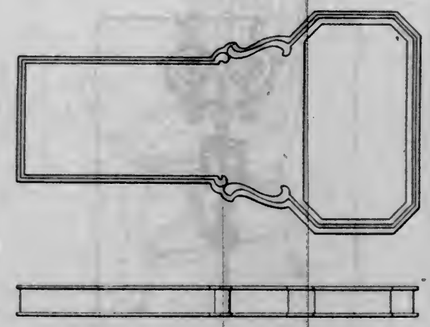
The ornamental design for a casing for corn popping machine, as shown.

76,419. VEHICLE TIRE. ISIDORE J. REMARK, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 27, 1928. Serial No. 26,476. Term of patent 14 years.



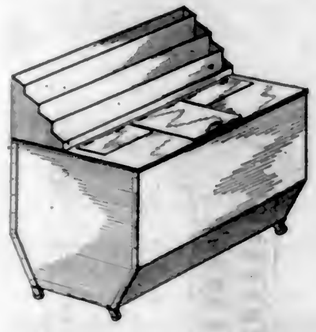
The ornamental design for a vehicle tire as shown.

76,420. DISH OR SIMILAR ARTICLE. JOSEPH S. RICHARDSON, Jeannette, Pa., assignor to McKee Glass Company, Jeannette, Pa., a Corporation of Pennsylvania. Filed Apr. 19, 1928. Serial No. 26,379. Term of patent 3½ years.



The ornamental design for a dish or similar article, as shown.

76,421. THERMOMETER. ALEXANDER D. ROSE, Chicago, Ill., assignor to Jas. P. Marsh & Company, Chicago, Ill., a Corporation of Illinois. Filed June 15, 1928. Serial No. 27,144. Term of patent 14 years.



The ornamental design for a thermometer, as shown.

76,422. SIGN. HARRY G. RUSSELL, Battle Creek, Mich., assignor to Consolidated Electric Sign Corporation, Battle Creek, Mich. Filed July 28, 1927. Serial No. 22,902. Term of patent 3½ years.

The ornamental design for a sign, as shown.

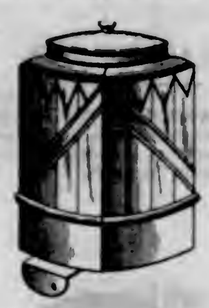
76,423. CABINET FOR BOTTLE COOLERS. JOHN M. SCHILLING, Lima, Ohio. Filed Dec. 19, 1927. Serial No. 24,551. Term of patent 14 years.

The ornamental design for a cabinet for bottle coolers as shown.

76,424. WATCH HOLDER. HERMAN SCHLACHT, New York, N. Y. Filed June 13, 1928. Serial No. 27,106. Term of patent 14 years.

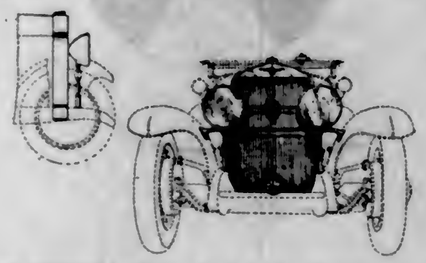
The ornamental design for a watch holder, as shown.

76,425. EMBROIDERED TEXTILE FABRIC. WERNER SCHMID, White Plains, N. Y., assignor to Audrey Dreifuss, Emil Dreifuss, Jerome Dreifuss, Louis Dreifuss, and Sybille Dreifuss, Copartners, doing business as National Lace and Embroidery Company, New York, N. Y. Filed Apr. 28, 1928. Serial No. 26,500. Term of patent 7 years.



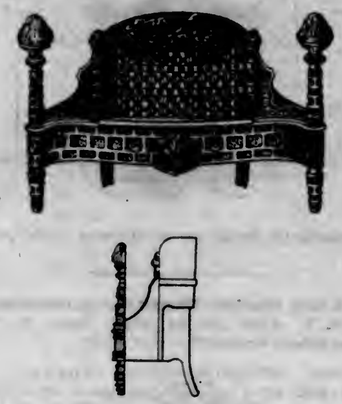
The ornamental design for embroidered textile fabric, as shown.

76,426. PLATE. EMIL L. SCHNEPF, Trenton, N. J., assignor to Scammell China Company, Trenton, N. J. Filed Jan. 28, 1928. Serial No. 25,071. Term of patent 14 years.



The ornamental design for a plate, as shown.

76,427. COMBINED VENDING JAR AND BASE. OTTO Y. SCHNERING, Chicago, Ill. Filed June 14, 1928. Serial No. 27,128. Term of patent 14 years.



The ornamental design for a combined vending jar and base substantially as shown.

76,428. MOTOR-VEHICLE FRONT ASSEMBLY. ERNEST W. SEAHOLM and HARLEY J. EARL, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 15, 1926. Serial No. 19,737. Term of patent 14 years.

The ornamental design for a motor vehicle front assembly as shown.

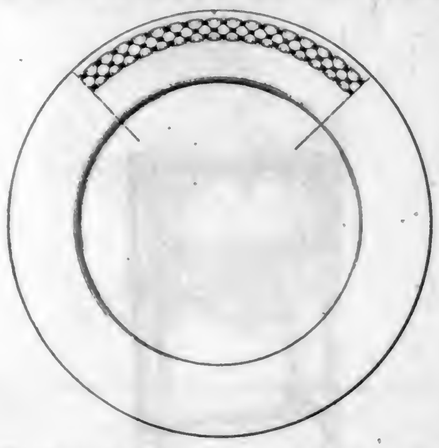
76,429. GAS HEATER. WILLIAM L. SHARP, Steubenville, Ohio, assignor to The Ohio Foundry and Manufacturing Company, Steubenville, Ohio, a Corporation of Ohio. Filed Mar. 8, 1928. Serial No. 25,763. Term of patent 7 years.

The ornamental design for a gas heater, as shown.

76,430. RADIOCABINET OR SIMILAR ARTICLE. MORRIS STETTNER, Brooklyn, N. Y. Filed May 25, 1928. Serial No. 26,858. Term of patent 3½ years.

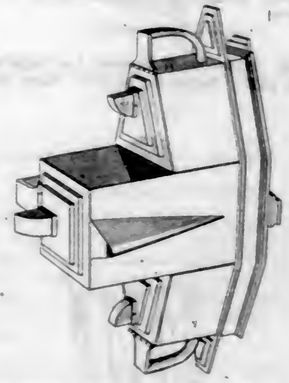
The ornamental design for a radiocabinet or similar article, as shown.

76,431. RADIOCABINET OR SIMILAR ARTICLE. MORRIS STETTNER, Brooklyn, N. Y. Filed May 25, 1928. Serial No. 26,859. Term of patent 3½ years.



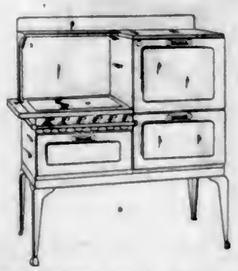
The ornamental design for a radiocabinet or similar article, as shown.

76,432. CHAIR. THEODORE N. STRAND, Los Angeles, Calif. Filed June 6, 1927. Serial No. 22,337. Term of patent 14 years.



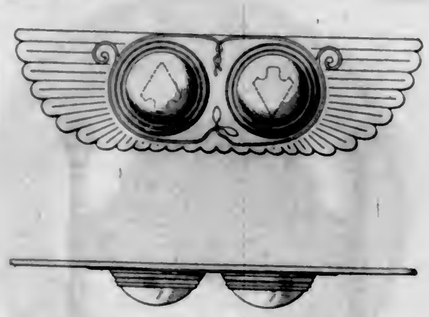
The ornamental design for a chair, as shown.

76,433. PLATE OR SIMILAR ARTICLE. WILLIAM H. TAMS, Trenton, N. J. Filed June 21, 1928. Serial No. 27,218. Term of patent 7 years.



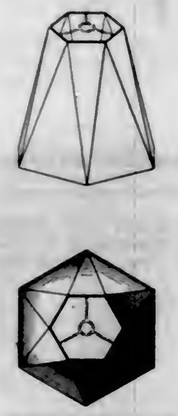
The ornamental design for a plate or similar article, as shown and described.

76,434. TABLE SET. JEAN THEOBALD, Meriden, Conn., assignor to International Silver Company, Meriden, Conn., a Corporation of New Jersey. Filed June 29, 1928. Serial No. 27,321. Term of patent 7 years.



The ornamental design for a table set as shown.

76,435. STOVE. ALBERT H. TINNERMAN, Cleveland, Ohio. Filed Feb. 10, 1928. Serial No. 25,353. Term of patent 14 years.



The ornamental design for a stove substantially as shown, and described.

76,436. ELEVATOR-SIGNAL PANEL. PAUL SCHUYLER VAN BLOEM, Great Neck, N. Y., assignor to Viking Products Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 24, 1927. Serial No. 24,646. Term of patent 3½ years.

The ornamental design for an elevator s'gnal panel, as shown.

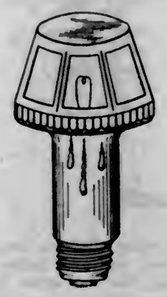
76,437. LAMP SHADE. DÉSIRÉ VANDE GENACHTE, New York, N. Y. Filed Jan. 24, 1928. Serial No. 25,016. Term of patent 7 years.

The ornamental design for a lamp shade as shown.

76,438. DRAPERY-POLE BRACKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,266. Term of patent 3½ years.

The ornamental design for a drapery pole bracket, as shown.

76,439. DRAPERY-POLE SOCKET. RAYMOND H. VERMILLION, Los Angeles, Calif., assignor to H. L. Judd Company, Inc., Wallingford, Conn., a Corporation of Delaware. Filed Apr. 10, 1928. Serial No. 26,272. Term of patent 3½ years.

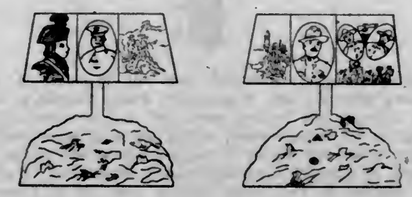


The ornamental design for a drapery pole socket, as shown.

76,440. NARROW WOVEN TRIMMING. CHARLES S. WACKERMAN, Bridgeport, Conn. Filed July 3, 1928. Serial No. 27,372. Term of patent 7 years.

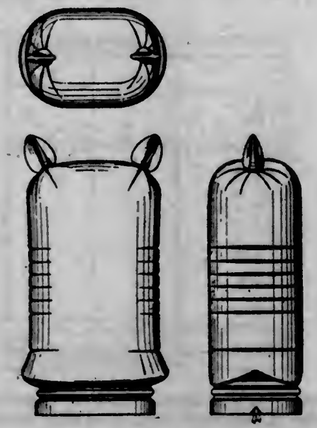
The ornamental design for narrow woven trimming substantially as shown.

76,441. INCANDESCENT-LAMP BULB OR SIMILAR ARTICLE. ALFRED WEBER, New York, N. Y. Filed July 19, 1928. Serial No. 27,529. Term of patent 7 years.



The ornamental design for an incandescent-lamp bulb or similar article, substantially as shown.

76,442. HEAD FOR LIGHTING UNITS. FRANK G. WELSCH, South Bend, Ind., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 23, 1928. Serial No. 27,243. Term of patent 14 years.



The ornamental design for a head for lighting units substantially as shown.

76,443. ELECTRIC TABLE LAMP. SAMUEL WESTERFIELD, New York, N. Y. Filed Sept. 10, 1927. Serial No. 23,354. Term of patent 3½ years.

The ornamental design for an electric table lamp as shown.

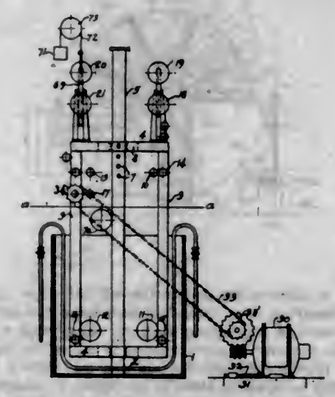
76,444. LIGHT GLOBE. STANTON D. WILSON, St. Louis, Mo. Filed June 16, 1928. Serial No. 27,165. Term of patent 14 years.

The ornamental design for a light globe, as shown.

76,445. WATCH DIAL OR SIMILAR ARTICLE. SAN DOW JACK YUEN, New York, N. Y. Filed June 19, 1928. Serial No. 27,198. Term of patent 3½ years.

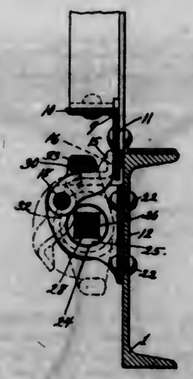
The ornamental design for a watch dial or similar article substantially as shown.

76,446. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. SALIM G. ZAROU, Brooklyn, N. Y., assignor to Zarou Bros., New York, N. Y., a Partnership composed of Salim G. Zarou and Abraham G. Zarou, Brooklyn, N. Y. Filed Mar. 20, 1928. Serial No. 25,926. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article of manufacture substantially as shown.

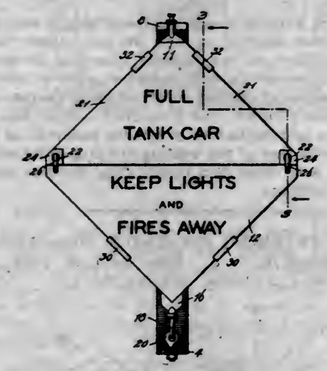
PATENTS



GRANTED SEPTEMBER 25, 1928.

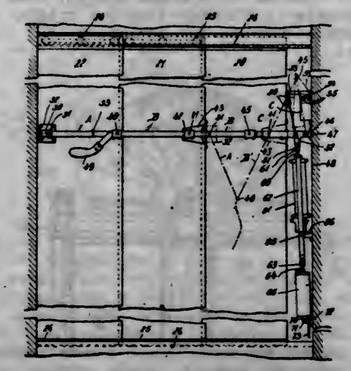
1,685,078. SATURATOR. FLOYD W. ADAMS, Peoria, Ill., assignor to The Barrett Company, a Corporation of New Jersey. Filed Apr. 19, 1923. Serial No. 633,080. 7 Claims. (Cl. 91—46.)

4. In a device of the character described, a saturating tank, a band having parallel portions moving in the same direction and adapted to receive an object between said portions, said band passing into said tank.



1,685,079. CANE CAR. JOSEPH C. ABEL, Westwood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed July 28, 1926. Serial No. 125,442. 19 Claims. (Cl. 105—308.)

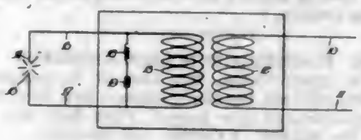
1. In a car, a gate pivotally mounted at its upper edge and adapted to swing to closed position by gravity, a pivotally mounted latch for said gate and a pivotally mounted locking means for said latch mounted inwardly of and below said latch.



2. In a car, a gate pivotally mounted at its upper edge and adapted to swing to closed position by gravity, a pivotally mounted latch for said gate and a pivotally mounted locking means for said latch mounted inwardly of and below said latch and adapted to operate said latch to holding position as said locking means is moved to locking position.

1,685,080. PLACARD AND HOLDER THEREFOR. WILLIAM K. AUCHINCLOSS, New York, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 30, 1927. Serial No. 223,064. 8 Claims. (Cl. 40—68.)

8. A device of the kind described comprising a support, a placard board permanently and pivotally secured at its lower end to the lower end of the support, and means at the upper end of the placard board for engaging the upper end of the support to secure the board to the support, said means being adjustable whereby to permit reversal of the said placard board and to tension the latter.

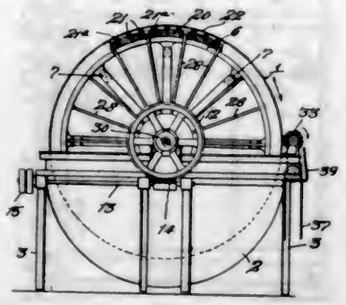


1,685,081. DOOR-CLOSURE MECHANISM. THOMAS BRADY, East Orange, N. J., assignor, by mesne assignments, to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 29, 1923. Serial No. 665,532. 3 Claims. (Cl. 268—50.)

2. Door closure mechanism comprising lever mechanism, a rod pivoted thereto, a yoke connected to said rod, a power cylinder having a piston connected to said yoke

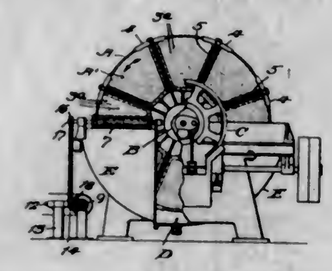
for actuating said yoke and rod in one direction and resilient means mounted within said yoke and operatively connected to said rod for actuating the rod in the opposite direction.

1,685,082. MEANS FOR STABILIZING AND MODIFYING THE METALLIC WELDING ARC. J BIRCHARD GREEN, Chicago, Ill., assignor to Chicago Steel & Wire Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1926. Serial No. 115,502. 3 Claims. (Cl. 219—8.)



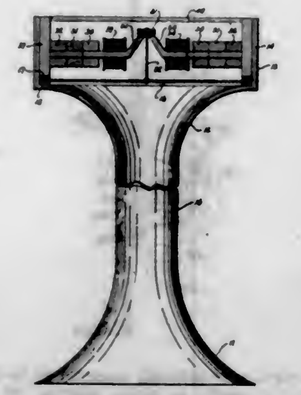
1. An arc welding apparatus comprising a set of welding electrodes adapted to form an arc, circuit elements including inductance and capacity connected between said electrodes to constitute with the welding arc an oscillatory circuit, a source of current supply of lower frequency than said oscillatory circuit, and a connection from said source of supply to said oscillatory circuit for maintaining therein oscillations by way of the welding arc formed between said electrodes, said connection constituting the sole source of supply for said arc.

1,685,083. SWIMMING APPARATUS. GEORG PAUL HOPPMANN, Brooklyn, N. Y. Filed Sept. 28, 1927. Serial No. 222,421. 2 Claims. (Cl. 9—18.)



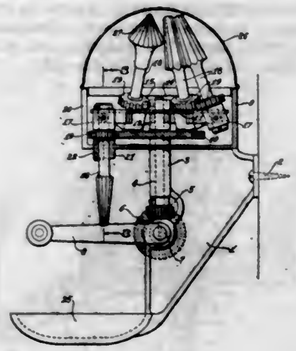
1. A swimming apparatus comprising a vest, a girdle, a frame attached to said vest and girdle, depending fins pivoted in said frame, and means for swinging said fins to and fro, an arm pivoted in said frame and a thong adapted to be connected to the foot of a swimmer for moving said fin, a lever, a connecting rod joining said arm and lever, and means for normally retracting said fins.

1,685,084. APPARATUS FOR SEPARATING LIQUID FROM PULP FIBERS. JOHN H. HOYT, Hazleton, Pa., assignor to United Filters Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 1, 1924. Serial No. 689,938. 6 Claims. (Cl. 92—36.)



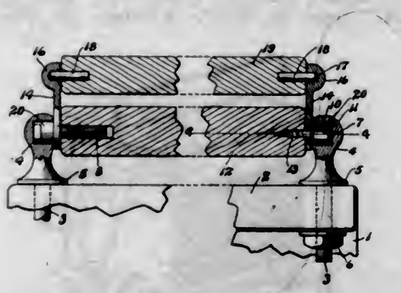
1. In an apparatus for separating liquid from pulp fibers, a receptacle for the pulp solution, a drum extending into the receptacle, means to rotate the drum, a perforated smooth surfaced separating plate on the surface of the drum, means to pass the liquid through said perforations to deposit a layer of pulp on said perforated plate in the solution, and means comprising a rotating brush to remove the deposit from the perforated plate in a substantially continuous sheet.

1,685,085. DEWATERING APPARATUS. JOHN T. HOYT, Hazleton, Pa., assignor to United Filters Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 1, 1924. Serial No. 689,939. 19 Claims. (Cl. 92—36.)



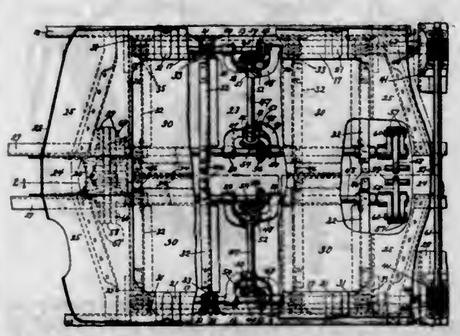
1. In a dewatering apparatus of the type described, the combination of a tank for containing the solution to be dewatered, a separating medium, comprising a smooth, fine mesh perforated plate, means to move the separating medium through the solution, means to create a pressure differential on opposite sides of the plates to pass the water through the perforations to deposit the solid material on the exposed surface of the plate, and means to substantially completely clean the separating medium during each cycle of filter operation.

1,685,086. LOUD-SPEAKER UNIT. MILLER REESE HUTCHISON, Llewellyn Park, N. J., assignor, by mesne assignments, to Acoustic Products Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 26, 1927. Serial No. 171,350. 9 Claims. (Cl. 179—109.)



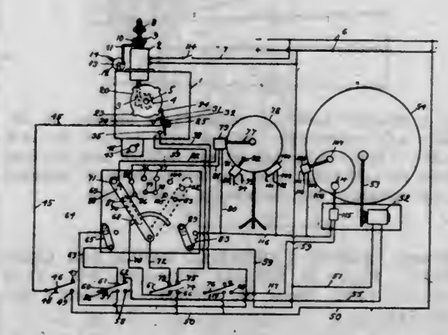
1. In a telephone device, the combination of stationary electromagnets having alined cores, the end portions thereof being bent into partial convergence, a movable armature positioned adjacent the ends of said cores on one side of the magnet, a diaphragm on the opposite side of the magnet and operatively connected to the armature, and a resonant chamber adjacent said diaphragm for emphasizing the action of the diaphragm with respect to predetermined notes of the musical register.

1,685,087. APPARATUS FOR REAMING SMOKING PIPES. HAROLD M. JOHNSON, St. Louis, Mo. Filed Nov. 30, 1927. Serial No. 236,639. 8 Claims. (Cl. 131—18.)



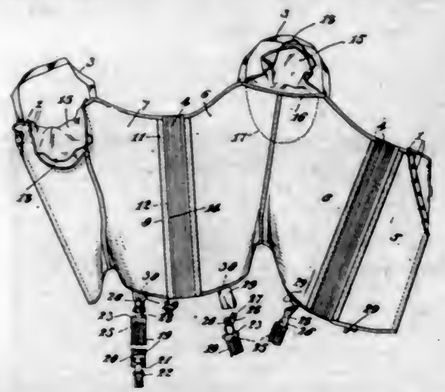
1. An apparatus for reaming smoking pipes, comprising, a support, a series of reamers mounted on said support for movement to reaming position, a guide on said support adapted to receive a reamer when moved to reaming position, and means for driving the reamer in said guide.

1,685,088. TOILET-SEAT HINGE. PAUL A. JOHNSON, Grand Haven, Mich., assignor of one-half to Alvin E. Jacobson, Grand Haven, Mich. Filed May 7, 1928. Serial No. 275,686. 4 Claims. (Cl. 4—236.)



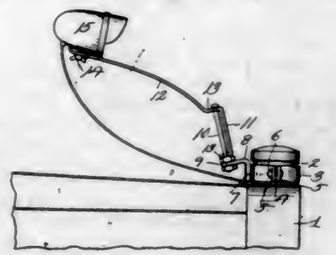
1. A hinge comprising, a vertical post having a head at the upper end thereof, said head having a horizontal cylindrical opening in one side, a hinge member comprising a threaded rod, an arm projecting laterally from one end of the rod and a threaded extension having an axis paralleling the axis of the rod extending from said arm, said extension having a cylindrical opening substantially therethrough, a bar of metal having an opening at one end to pass over said arm and a cylindrical nut threaded on to said extension and against the outer side of said bar, said nut being received within the opening in said head and said bar extending upwardly above the arm and formed at its upper end with a head having a horizontal opening at its inner side.

1,685,089. HOPPER CAR. ADOLPH KASSLER, New York, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 16, 1923. Serial No. 657,721. 23 Claims. (Cl. 105—250.)



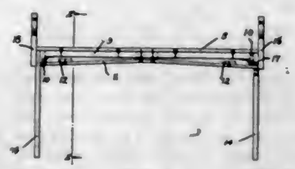
1. A hopper car having a single discharge opening and a pair of longitudinally arranged drop doors hinged at the car sides and closing said opening, transmission mechanism carried by said doors, an operating shaft adjacent one end of said doors and connecting the transmission mechanism of one door to the other, and loose connections between said operating shaft and transmission mechanism.

1,685,090. AUTOMATIC DRUM. ALEX M. LIFSHITZ, Brooklyn, N. Y. Filed Sept. 27, 1927. Serial No. 222,395. 7 Claims. (Cl. 84—104.)



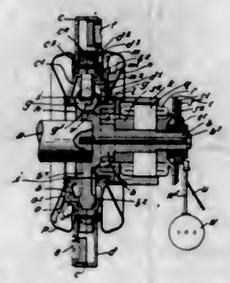
5. In an automatic drum, the combination with a plurality of electromagnetic devices for operating said drum, a plurality of contact members for said devices, a cylindrical member, a plurality of sections on said cylindrical member, said sections being adapted to operate said contact members in a predetermined order, means to change the relative position of said sections and said contact members thereby changing the order of operation of said devices, electrical connections for said contact members, and manually operated means to change said electrical connections.

1,685,091. APPAREL. ANNA LIFTER, New York, N. Y. Filed Dec. 19, 1922. Serial No. 607,769. 1 Claim. (Cl. 2—33.)



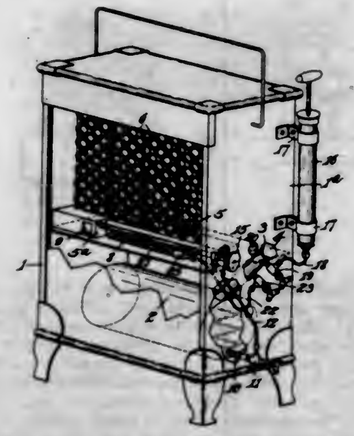
A brassière including a band, short downwardly extending tabs, each comprising a ribbon loop stitched adjacent the edges thereof to the lower edge of the brassière, and hose supporters having fastening devices at the upper ends thereof, said devices comprising each a stud carrying tongue and a gripping loop straddling the corresponding tab and gripping the material thereof therebetween.

1,685,092. DIRIGIBLE HEADLIGHT. FRANK LIPKE, Mishawaka, Ind. Filed June 11, 1927. Serial No. 198,019. 3 Claims. (Cl. 240—62.)



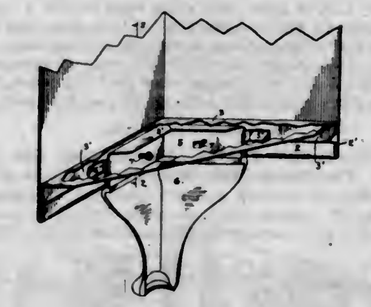
1. A dirigible headlight comprising a bracket, an upwardly and rearwardly inclined arm carried by said bracket, a lamp rearwardly of the inclined arm, an arm carried by said lamp, said arm being pivotally mounted on the upwardly and rearwardly inclined arm.

1,685,093. BATHTUB DRESSING TABLE FOR CHILDREN. FRANK M. MCENIRY, Milwaukee, Wis. Filed Dec. 10, 1926. Serial No. 153,835. 2 Claims. (Cl. 45—51.)



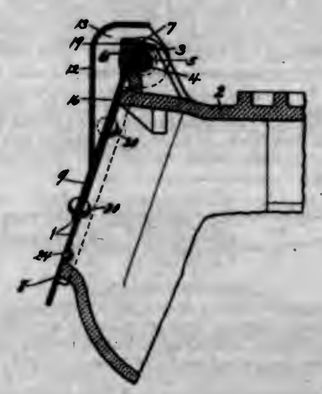
2. A folding bath tub table, comprising a platform portion, a pair of spaced apart strips secured to opposite sides of the under surface of the platform portion, a pair of foldable strips adjacent the end portions of the first-mentioned strips and at right angles thereto, said foldable strips being hinged to the first-mentioned strips, a pair of legs secured to each of the foldable strips, a side member secured to each pair of legs and the adjacent foldable strip, said side members being outwardly of the side edges of the platform portion and normally extending vertically thereabove, and a pair of connected together flexible locking members secured medially to the under surface of the board and adapted to releasably abut against said sides when the same are in open position.

1,685,094. METHOD AND DEVICE FOR BALANCING ROTATING-MACHINE-PARTS. EDWIN ALWIN FRANKLIN PUNOA, Mulheim-on-the-Ruhr, Germany. Filed Mar. 26, 1921, Serial No. 456,036, and in Germany Apr. 1, 1919. 17 Claims. (Cl. 73—51.)



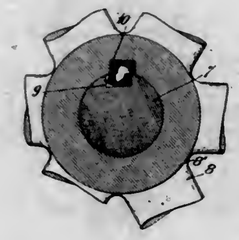
1. A method of balancing rotating bodies, which comprises mounting the body to be balanced on a yielding support whereby the former may vibrate, mounting balancing weights off the axis of rotation of and for coaxial rotation with said body, rotating the latter and rotating the weights at different speeds relative to the speed of rotation of the body, so that the change of position of both weights with respect to the body is simultaneous and automatic with the change in their relative position one to the other.

1,685,095. HYDROCARBON HEATING STOVE. HARVEY BENDER REPPETTO, Clyde, Ohio. Filed Feb. 7, 1927. Serial No. 166,327. 9 Claims. (Cl. 126—93.)



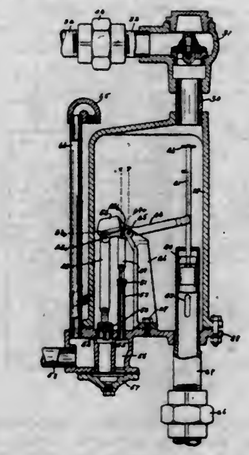
5. A radiant heater of the character described comprising a casing of open-front type having radiants mounted therein, a manifold within said casing through which vaporized fuel is supplied to said radiants, a liquid fuel reservoir located within said casing at a level below that of the generator, a pump mounted in fixed position on the casing and having connection with said reservoir whereby air pressure may be introduced within said reservoir, a generator opening into said manifold and adapted to receive fuel from said reservoir by the force of pressure contained within the latter, and means for heating said generator, said means including a preliminary heating device adapted to be initially supplied with gas impregnated air from within the top portion of the reservoir, and thereafter to be supplied from another source.

1,685,096. STOVE-LEG CONNECTION. EDWIN A. RUTENBER, Milwaukee, Wis., assignor to A. J. Lindemann & Hoverson Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 18, 1927. Serial No. 199,657. 11 Claims. (Cl. 126—305.)



1. In a stove leg connection, a leg proper having a flange at its top, a frame member and a bracket secured together and having spaced portions to receive the leg flange, said members supporting a bottom member which is connected therewith.

1,685,097. JOURNAL-BOX LID. ROBERT J. SCHEIBLI, Jr., St. Louis, Mo., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed July 28, 1926. Serial No. 125,448. 6 Claims. (Cl. 308—47.)

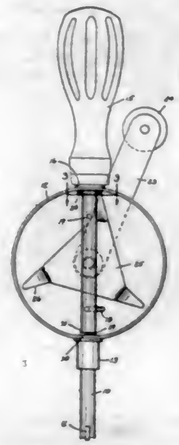


1. In combination, a casing open at one end, a pivotally supported closure therefor, and a resilient plate of substantially the same width as the closure secured thereto and having attaching portions extending adjacent the sides of the closure and a free resilient tongue intermediate the attaching portions and bearing against a fixed abutment adjacent the pivoted end of the closure whereby to exert a uniform pressure on the closure for substantially the entire width thereof.

1,685,098. DRIVING KEY. MAX SKLOVSKY, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Mar. 7, 1927. Serial No. 173,278. 9 Claims. (Cl. 64—105.)

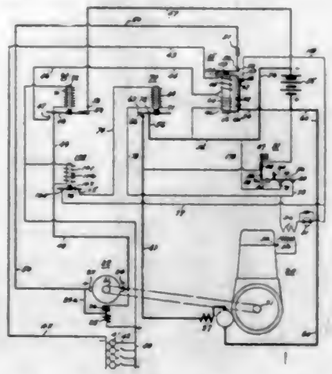
2. A safety driving key of the class described consisting of a hollow bar of rectangular cross section.

1,685,099. WATER SYSTEM. JASPER A. SMITH, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Continuation of application Serial No. 69,312, filed Nov. 16, 1925. This application filed Feb. 28, 1927. Serial No. 171,515. 19 Claims. (Cl. 137—79.)



18. An air charging apparatus for a water system comprising in combination a chamber, a drain passage communicating with the chamber, an air passage communicating with the chamber near its bottom, and means for opening and closing the passages in response to the flow of water through the chamber.

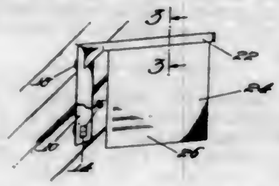
1,685,100. GRINDING TOOL. DAVID L. SPRAKER, Indianapolis, Ind., assignor to Spraker Manufacturing Company, Indianapolis, Ind., a Corporation. Filed May 21, 1926. Serial No. 110,681. 2 Claims. (Cl. 74—14.)



1. A grinding tool including a rotatable shaft, a pair of pins on said shaft positioned in different radial planes and in different parallel planes transverse to the shaft, a tri-

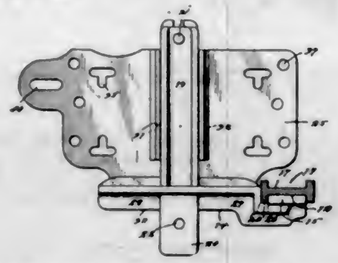
angular star-wheel having a plurality of radial extending fingers spaced apart, said fingers being adapted to engage first with one pin and then with the other for rotating said

tool in opposite directions, said fingers being equi-distant from the axis of the star-wheel and the latter being between said parallel planes.



1,685,101. ELECTRICAL GENERATING SYSTEM. FRANK F. STARR, Dayton, Ohio, assignor to Delco-Light Company, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 30, 1926. Serial No. 84,803. 5 Claims. (Cl. 290—30.)

3. An electrical generating system comprising, in combination, a prime mover, a generator driven thereby, a work circuit supplied by the generator, and a single electromagnetic device, for maintaining said engine operative while the generator supplies current to the work circuit and for interrupting the flow of current from the generator to the battery when the current demand in the work circuit exceeds a certain amount.



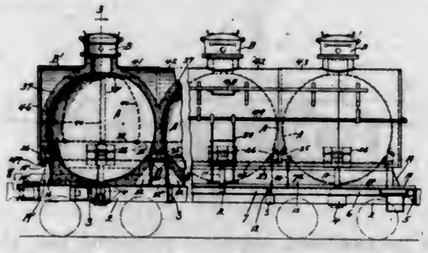
1,685,102. ADVERTISING DEVICE. W. KEATH SUMMERHAYES, Jr., Louisville, Ky. Filed May 21, 1926. Serial No. 110,669. 1 Claim. (Cl. 40—128.)

In an advertising device, a display means comprising a single sheet of stamped material including three portions connected to each other, a base member, a bracket member and an arm member, said base member comprising a rectangular element connected to the remaining portions by a substantially narrow strip at the side of one of its shorter edges and adapted to be bent double longitudinally to provide front and rear faces, the rear face having openings for the reception of supporting elements; the bracket member being adjacent the base member and comprising a polygonal element having two parallel sides and two angularly converging sides disposed at approximately right angles to each other, the longer of the parallel sides being

adjacent the bracket member, and the whole element adapted to be doubled upon itself along substantially a central line to contact with the base element in a supporting position; and an extending arm comprising a rectangular strip doubled upon itself longitudinally and provided with inwardly and upwardly turned edges having a space therebetween for the reception and rejection of a placard.

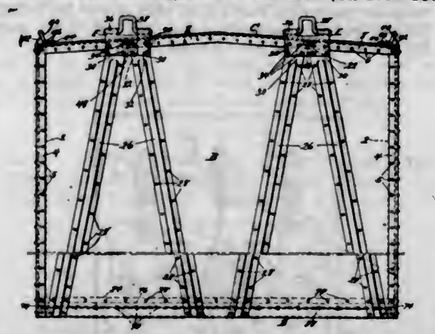
1,685,103. MOTOR STAND. MAX TAIGMAN, New York, N. Y. Filed Feb. 9, 1923. Serial No. 617,964. 2 Claims. (Cl. 248—14.)

2. In a device of the class described, the combination of a base plate, a bracket for supporting the same, said bracket including a vertically disposed pedestal piece and a horizontally disposed extension integrally connected, said extension being substantially T-shaped in vertical cross-section to form a flat support for the plate and a deep vertically extending web, said pedestal piece and said extension coacting to form a slot therebetween adapted to receive a flange of a channel shaped supporting upright.



1,685,104. CAR UNDERFRAME. JOHN D. THOMPSON, Union City, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 1, 1927. Serial No. 180,185. 19 Claims. (Cl. 105—414.)

9. In an underframe, a center sill having a plurality of top and bottom flanges, vertical webs connecting the top and bottom flanges, and an arch-shaped portion connected to the bottom flanges and arranged intermediate the vertical webs.

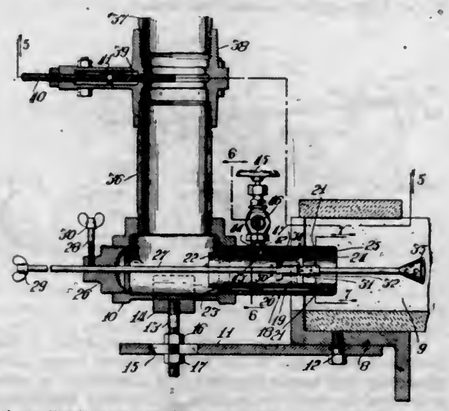


16. In combination, flanged side sills, a bolster, relatively short reinforcing members secured to the side sills adjacent to bolster, an end sill, a center sill, tie plates connecting the reinforcing members and the bolster, and flanged members of gradually increasing height secured to the center sill and extending from the rear of the bolster to the end sill.

1,685,105. MULTIUNIT TANK CAR. JOHN D. THOMPSON, Union City, and VICTOR WILLOUGHBY, Ridgewood, N. J., assignors to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed July 1, 1927. Serial No. 202,869. 15 Claims. (Cl. 105—360.)

1. In a tank car, an underframe having side and center sills, cross bearers carried by the underframe and defining a plurality of tank receiving areas, supporting means carried by said side sills and cross bearers, and tanks in said tank receiving areas mounted on said supporting means.

1,685,106. CONTAINER. JOHN D. THOMPSON, Union City, and VICTOR WILLOUGHBY, Ridgewood, N. J., assignors to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 7, 1927. Serial No. 224,687. 10 Claims. (Cl. 105—366.)



1. A container comprising side and end walls, external and internal angles connecting adjacent corners of said walls, a top, carlines and purlins secured to the top, a bottom, reinforcing elements secured to the side and end walls, a base secured to the bottom and on which the container is supported, a door mounted in one of said walls, and loops secured to the container and adapted to be engaged by a crane or the like whereby the container may be lifted and moved about.

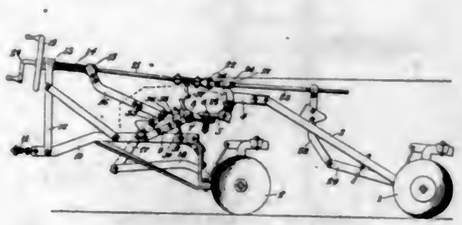
1,685,107. TRUSSED STRUCTURE. HAROLD G. TREGLUS, Park Ridge, Ill. Filed July 14, 1924. Serial No. 725,883. 5 Claims. (Cl. 108—28.)

1. In a structure of the character described, the combination of a truss, including angularly disposed upper chord members, and an unbroken arched member substantially continuously connected thereto, said arched member being disposed relatively to the angularly disposed upper chord members of the truss so that it crosses and recrosses said angularly disposed upper chord members, said arched member being of curved laminated construction.

1,685,108. OIL BURNER FOR FURNACES. GEORGE E. TUFFLEY, Syracuse, N. Y., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed July 16, 1925. Serial No. 43,930. 13 Claims. (Cl. 158—76.)

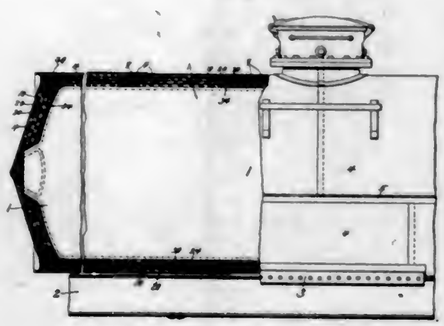
1. A liquid fuel burner comprising a nozzle formed of inner and outer pipes, the stationary inner pipe being spaced apart from the outer pipe to form a passage between said pipes, means for supplying air to said passage and to the inner pipe, means for supplying oil to the inner pipe, means in said inner pipe for atomizing the fuel, an adjustable spreader located in the path of the mixture discharged from said nozzle, and means for simultaneously adjusting said fuel atomizing means and said spreader.

1,685,109. GAUGE. CHARLES WEBER, Jr., Elkhart, Ind., assignor to C. G. Conn, Ltd., Elkhart, Ind., a Corporation of Indiana. Filed Mar. 28, 1927. Serial No. 178,822. 4 Claims. (Cl. 33—168.)



1. A pad gauge comprising a gauge bar, there being indicia on the bar indicating the pad number, and means on the bar adapted to contact one side of the pad, whereby the opposite side thereof is caused to register with indicia on said gauge bar to indicate the pad number.

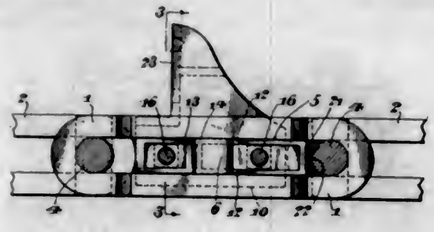
1,685,110. TANDEM-DISK HARROW. CHARLES H. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Oct. 10, 1923. Serial No. 667,661. 10 Claims. (Cl. 55—83.)



1. A disk harrow comprising vertically swingably adjustable front and rear harrow frames, draft means connected with the front frame, means connecting said frames together in tandem relation for lateral and vertical swing-

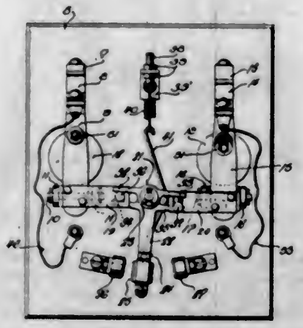
ing relatively to each other, and means connected with said connecting means and with one of said frames and operable to move said connecting means to vary the line of draft applied to the rear frame vertically with relation to the line of draft applied to the front frame.

10. In a disk harrow having in combination a front frame and disk gangs, a rear frame and disk gangs, means connecting the frames together and adapted to be raised or lowered to vary the position of the rear frame vertically relative to the front frame, said means including a rockable member pivotally mounted on the front frame and extending rearwardly, means supporting the rear frame on said member, a screw pivotally attached to the front frame, and a rotatable device secured on said member and engaging with said screw and operable to rock said member to raise or lower the rear frame.



1,685,111. INSULATED TANK CAR. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 17, 1925. Serial No. 56,992. 15 Claims. (Cl. 154—44.)

8. A heat insulation structure for use between a tank and a sheathing therefor, comprising laminations having fastening elements for connecting adjacent laminations, the fastening elements of a given lamination being staggered with respect to the fastening elements of adjacent laminations whereby heat conductive contact between the outer and inner sides of said structure is interrupted by insulating material.

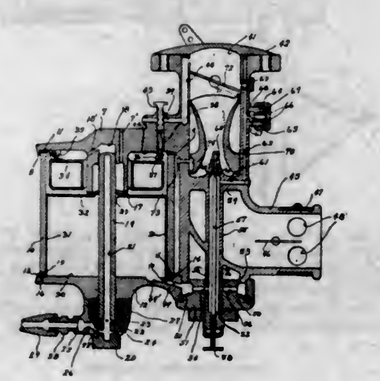


14. In a tank, means insulating the same comprising a plurality of contiguous sheathing sections having laminated insulating material secured thereto, the insulating material of adjacent sections being overlapped forming staggered joints substantially adjacent the meeting edges of the sheathing sections.

1,685,112. ATTACHMENT FOR CHAINS. GEORGE W. WILMOT, Hazleton, Pa., assignor to Wilmot Engineering Company, Hazleton, Pa., a Corporation of Pennsylvania. Filed May 22, 1926. Serial No. 110,860. 5 Claims. (Cl. 198—176.)

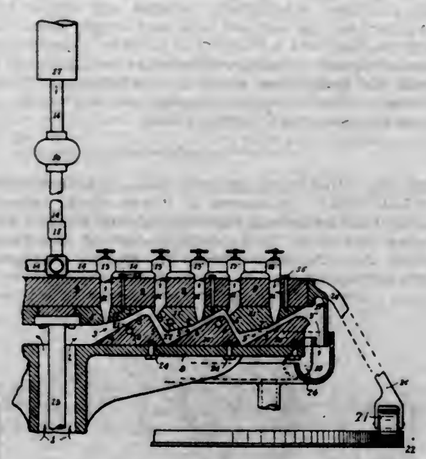
5. An attachment adapted to be mounted upon a selected link of a heavy duty chain, the said attachment being provided with a contact portion intermediate its ends for contacting with a portion located intermediate the opposite ends of said link, the said portion being integral with and extending transversely of said link, and with a portion at one of its ends for contacting with an element for connecting the said link to adjoining links of the chain structure.

1,685,113. MECHANICAL MOVEMENT. GUSTAV O. WILMS, Milwaukee, Wis., assignor to The Reliance Company, Milwaukee, Wis., a Corporation of Wisconsin. Original application filed Apr. 3, 1922, Serial No. 549,353. Divided and this application filed Nov. 15, 1924. Serial No. 750,163. 5 Claims. (Cl. 74—14.)



1. A mechanical movement, comprising a movable member, an arm movable between predetermined spaced points, means normally urging the arm to engage either of said points, a connection between said member and arm whereby a movement of the member to one position moves the arm against its urging means to one side of an imaginary line drawn between the points from where the urging means tends to move the arm toward the adjacent point, and means holding the arm spaced from the adjacent point against its urging means, said last means permitting the arm to be moved by its urging means to complete its movement toward the adjacent point upon the reverse movement of the member a predetermined distance.

1,685,114. CARBURETOR. HALSEY C. ABERN, Chicago, Ill. Filed Sept. 19, 1925. Serial No. 57,331. 3 Claims. (Cl. 158—36.1.)

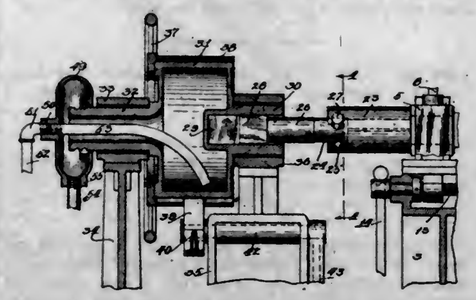


1. A carburetor adapted for use with an internal combustion engine having an intake manifold comprising chamber bearing means adapted for attachment to, in

communication with, said manifold; a flexible dividing member adapted for dividing said carburetor into a pair of compartments, said compartments being normally in communication with each other and said flexible member being adapted for sealing said compartments from communication with each other upon the flexing of said mem-

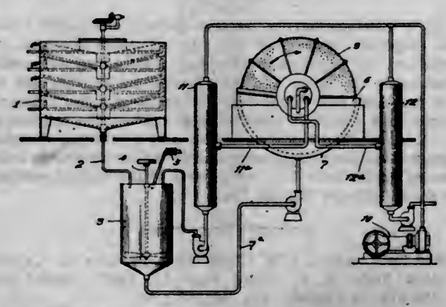
ber beyond a predetermined point in one direction; fluid conducting means communicating with one of said compartments and adapted for delivering fluid thereinto; a float mounted in said compartment last mentioned; means operable by said float for closing communication of said compartment with said manifold upon the delivery of a predetermined amount of fluid into said compartment.

1,685,115. APPARATUS FOR MAKING COLLOIDAL FUEL. HENRY ADAMS, Plainfield, N. J. Filed Mar. 13, 1925. Serial No. 15,251. 30 Claims. (Cl. 83—7.)



1. In apparatus of the character described, in combination, means for pulverizing carbonaceous substances by continuous and successive steps, and means for supplying material to the first mentioned means during all of said steps for coating the pulverized particles with a film.

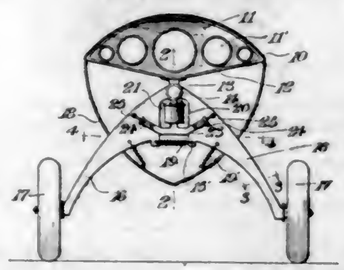
1,685,116. TRAY AND METHOD OF MAKING SAME. ABRAHAM BARCHOFF, New York, N. Y. Filed Oct. 28, 1924. Serial No. 746,274. 1 Claim. (Cl. 65—15.)



A sheet metal tray having its upper surface indented to form a median channel with branches extending laterally to both sides of both ends thereof, each branch having at its extremity a conform additional depression, said depressions in said upper surface producing embossments which serve as supports on the lower surface of said tray.

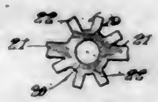
1,685,117. PAPER-UNWINDING STAND WITH WATER-COOLED DRUM. EARL ELWIN BERRY, Beloit, Wis., assignor to Beloit Iron Works, Beloit, Wis. Filed Apr. 18, 1924. Serial No. 707,403. 6 Claims. (Cl. 242—55.)

2. In a reeling off stand, supporting members, a spool rotatably supported by said members, a brake mechanism, and a unitary separable connecting bar adapted to be slidably engaged with said brake mechanism and removably engaged with said spool, the ends of said bar being supported by said brake mechanism and said spool respectively.



1,685,118. PROCESS FOR RECOVERING SUGAR VALUES. ROBERT C. CAMPBELL, Millburn, N. J., assignor to United Filters Corporation, Hazleton, Pa., a Corporation of Delaware. Filed May 7, 1925. Serial No. 28,549. 14 Claims. (Cl. 127—55.)

1. The method of recovering sugar values from the muds separated from sugar juices which comprises continuously filtering the muds, continuously returning the



cloudy portion of the filtrate to a previous point in the process, continuously collecting any remaining portion of the filtrate and continuously washing the filter cake and collecting the wash water, and completely cleaning the filter surface at each cycle of the filter operation.

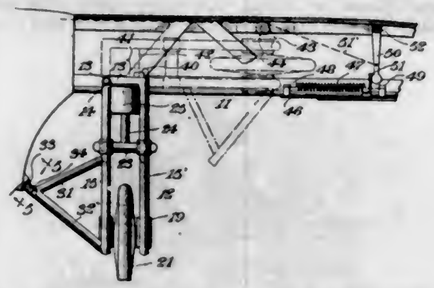
1,685,119. LANDING GEAR FOR FLYING MACHINES. EDMUND B. CARNS, New York, N. Y. Filed Mar. 31, 1927. Serial No. 179,989. 11 Claims. (Cl. 244—2.)

1. A flying machine having a fuselage and branching legs having a common pivot connected to the fuselage above the center of gravity of the fuselage.

1,685,120. NUT LOCK. EDMUND B. CARNS, New York, N. Y. Filed Apr. 9, 1927. Serial No. 182,211. 1 Claim. (Cl. 151—3.)

As an improved article of manufacture, a nut lock flat washer of soft metal having on its periphery diametrically opposed relatively large arms and having other and smaller arms irregularly spaced extending from its periphery between the first mentioned arms, all said arms lying normally in the plan of the washer body.

1,685,121. FUSELAGE. EDMUND B. CARNS, New York, N. Y. Filed May 18, 1927. Serial No. 192,243. 15 Claims. (Cl. 244—30.)

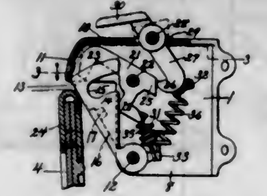


1. A fuselage having, at the corners, triangular tubular longérons, transverse ribs connecting the upper longérons and, also, the lower longérons, rigidly disposed struts connecting the upper and lower longérons on each side of the fuselage, and diagonal braces connecting the adjacent struts and ribs, and, also, bearing against the longérons.

11. A fuselage having a frame, and a covering therefor comprising an air tight metal fabric with a wire mesh body having sealed interstices with parts of the sealing omitted to form openings through the cover.

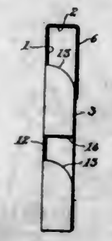
1,685,122. AIRCRAFT CHASSIS. EDMUND B. CARNS, New York, N. Y. Filed June 17, 1927. Serial No. 199,570. 8 Claims. (Cl. 244—2.)

1. An airplane having a chassis attachment hinged to swing between the wing and the side of the fuselage of the airplane, and automatic locking means acting when the chassis attachment swings downward and disposed to fasten the lower inner portion of the attachment to the fuselage and the upper outer portion to the wing.



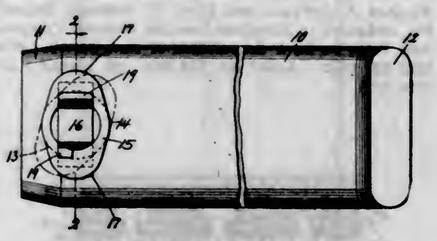
3. An airplane having a chassis attachment hinged to swing into a pocket in the frame of the plane and to swing downward along side of the fuselage of the plane, a self opening gate closing over a part of the pocket, and means controlling the gate and chassis attachment which when released permits the gate to open and the chassis attachment to drop.

1,685,123. MUSICAL-INSTRUMENT CASE. SAMUEL A. CLICK, Elkhart, Ind., assignor to C. G. Conn, Ltd., Elkhart, Ind., a Corporation of Indiana. Filed Oct. 22, 1925. Serial No. 64,266. 3 Claims. (Cl. 206—13.)



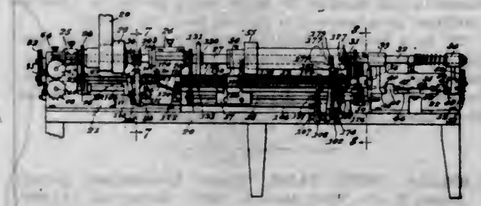
1. An interior frame for a musical instrument case of the character described comprising in combination, two side bars spaced apart, two medial bars arranged between said side bars, substantially parallel and spaced from each other and from said side bars, each of said medial bars being provided with a plurality of laterally projecting and cooperating lugs forming a plurality of compartments between said medial bars, one of said compartments having a belled end, and means for securing said bars together as a unit for arrangement within a case.

1,685,124. HOLDING MEANS FOR CAR-VESTIBULE TRAPDOORS. ALPHONSE A. CONSTANTINE, Jeffersonville, Ind., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed July 21, 1925. Serial No. 45,091. 20 Claims. (Cl. 105—435.)



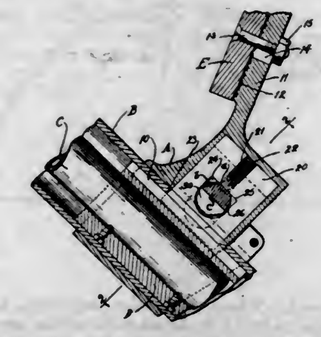
1. In a door holding device, a door holding means, a locking means for said door holding means, a door operated means for actuating said door holding means to holding position and yielding means connecting said locking and door operated means.

1,685,125. COMBINATION PACKING AND DISPLAY CONTAINER. MORRIS M. EINSON, Yonkers, N. Y., assignor to Einson-Freeman Co., Inc., a Corporation of New York. Filed Jan. 20, 1926. Serial No. 82,401. 6 Claims. (Cl. 206—44.)



1. In a combined display stand and carton, an outside enveloping member scored and folded to form side sections with a rectangular top section in between, a tier of pockets positioned upon one of the side sections, said tier of pockets being formed of an integral section of scored and foldel sheet material.

1,685,126. DRAFT-KEY RETAINER. CHARLES H. EVANS, Jersey City, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 15, 1926. Serial No. 135,587. 8 Claims. (Cl. 85—5.)



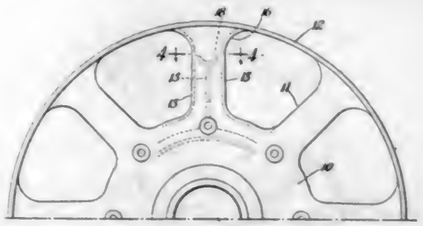
1. A draft key retainer comprising a flanged tubular member supported by its flange in the opening in a draft key, and a yieldable fastening element insertible and expansible within said tubular member, and having means on each end thereof for retaining the same in interlocked relation with said tubular member.

1,685,127. RUBBER-RING-CUTTING MACHINE. GUY L. HAMMOND, LESTER H. MESSINGER, Jr., and WILLIAM NICHOLAS, Bridgeport, Conn., assignors to The Black Rock Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 30, 1927. Serial No. 179,502. 22 Claims. (Cl. 164—69.)

1. In a machine of the character described, a rotary tube-supporting shaft including a supporting surface, a rotary cutter-knife so constructed and arranged as to be moved into cutting relation with a tube on said shaft at a point outwardly removed from the end of said supporting surface, a cam shaft including cam means imparting oscillatory movement to said cutter-knife, adjustment means for varying the extent of movement of said cutter-knife and its relation to said cam, and work feeding means for feeding said tube to be cut.

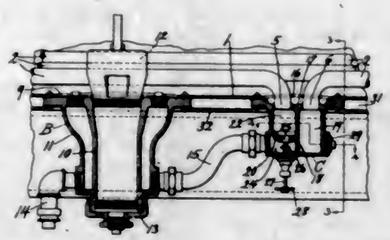
1,685,128. AUTOMOBILE LOCK. ORVILLE S. HERSHEY, Chicago, Ill., assignor to Hershey Manufacturing Company, Chicago, Ill., a Corporation of Colorado. Original application filed Apr. 13, 1922, Serial No. 552,357. Divided and this application filed Dec. 18, 1926. Serial No. 155,619. 1 Claim. (Cl. 70—127.)

In combination, a lock having a housing in which is contained a bolt and operating means therefor, an electrical switch including a pair of fixed contacts, a movable switch element adapted to make or break an electrical connection between said contacts, a connection between the bolt operating means and the movable switch element such that the latter is actuated in response to movements of the former, and spring means working through the movable switch element providing a friction detent for the bolt operating means, substantially as described.



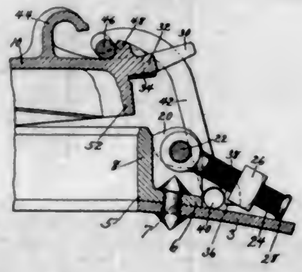
1,685,129. SAXOPHONE. AVERY J. HILTON, Gloucester, Mass. Filed Dec. 7, 1925. Serial No. 73,707. 14 Claims. (Cl. 84—385.)

1. In a saxophone, a valve controlling a higher register tone, an individually operable valve controlling a tone of a



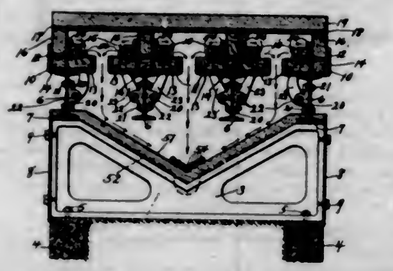
lower register, a unitary set of resonant valves adapted to render the lower tone resonant when said tone ceases to be resonant upon closure of the second named valve, and means for causing simultaneously the opening of the higher register tone valve and the resonant tone valves.

1,685,130. VEHICLE WHEEL STRUCTURE. JOHN W. HOLT, Cleveland, Ohio, assignor to National Malleable and Steel Castings Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 5, 1926. Serial No. 139,626. 6 Claims. (Cl. 301—65.)



6. In a vehicle wheel of the cast metal type, a radial spoke member having a U-shaped cross section opening to the inner side of the wheel, a centrally disposed rib member extending along the spoke between the flanges of the U-shaped structure, said rib member being bifurcated at its outer end and the bifurcations being joined to the flanges, said flanges and the outer web of the spoke structure having a flared formation at the point of juncture with the felloe portion of the wheel, and a web member forming a flared closing wall for the inner side of the flared end section of the spoke member.

1,685,131. TANK-CAR COIL HEATER. CHARLES I. HUMMER, Newark, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed May 6, 1927. Serial No. 189,319. 2 Claims. (Cl. 257—207.)

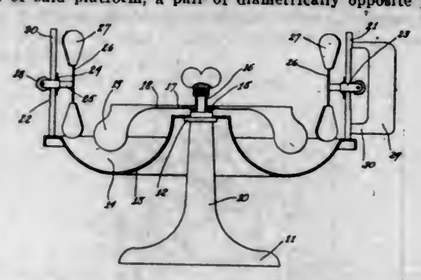


2. In a car tank, series of continuous heating coils therein each having an inlet and an outlet, a distributor secured to the tank and provided with a steam outlet common to each series of coils, a valve controlled chamber to which the inlet end of each series of coils is connected, and a common steam inlet chamber for said valve controlled chambers.

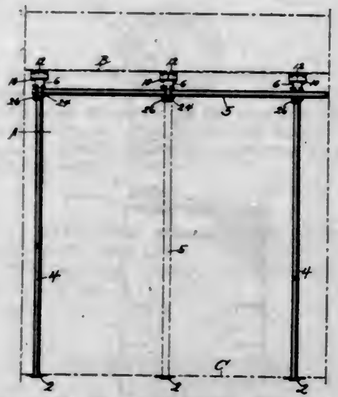
1,685,132. CAR-TANK-DOME CLOSURE. ROBERT W. JOY, Brooklyn, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 12, 1925. Serial No. 56,004. 14 Claims. (Cl. 220—55.)

1. In combination, a closure, means for securing the same in closed position on a receptacle, and restraining means for limiting the rise of the closure from the receptacle, releasable only when the cover is actually partly raised.

1,685,133. ELECTRIC HEATER FOR LONG BARS. WILLIAM S. JOHNSON and JOHN W. SHEFFER, Berwick, Pa., assignors to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed May 15, 1922. Serial No. 561,081. 20 Claims. (Cl. 219—11.)



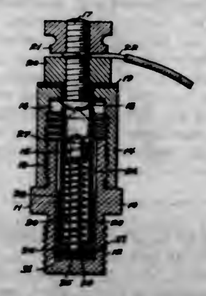
1. In an electric heater having a heating chamber for long bars, a heating circuit adapted to be completed by a bar in said chamber heated from an outside source and means in said chamber for maintaining the bar in a heated condition upon removal of the bar from the circuit.



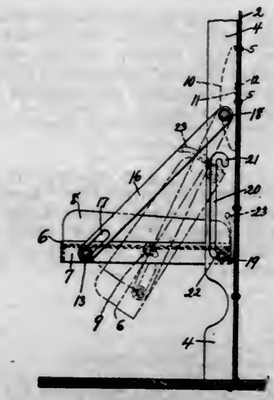
19. In a heater, a heating chamber for long bars having a plurality of horizontally alined bar supporting sections, and a common drawing section for said bar supporting sections, said drawing section being so formed as to direct the bars to a common discharge.

1,685,134. WIND VANE. FRANK LUIPERSBEK, Boundbrook, N. J. Filed Mar. 5, 1927. Serial No. 172,984. 3 Claims. (Cl. 46—14.)

1. In a wind vane, a pedestal, a platform having an annular channel therein rotatable on said pedestal, a horizontal propeller rotatable on said pedestal in the channel of said platform, a pair of diametrically opposite positioned vertical posts mounted on said platform, and a pair of vertical fans vertically adjustably mounted on said posts.

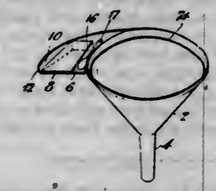


1,685,135. STANCHION BRACKET. ALVARO MENDEZ, East Orange, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 8, 1927. Serial No. 218,208. 9 Claims. (Cl. 105—355.)



1. A device of the kind described comprising a casing receiving the upper end of a stanchion, guides depending from the casing, and means formed integral with one of said guides for supporting an adjacent stanchion.

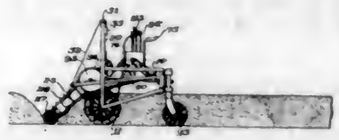
1,685,136. THERMOSTATICALLY-CONTROLLED CIRCUIT CLOSER. HERBERT D. MONTGOMERY, New York, N. Y. Filed Jan. 19, 1925. Serial No. 3,212. 9 Claims. (Cl. 200—142.)



1. A thermostat including a metal shell having one end threaded and adapted to be positioned in a support, and having a bore therein opening through the other end, a readily replaceable insert in the form of a cylindrical open end cartridge loosely positioned in said bore and including a base member engaging the bottom of the bore, a circuit closing plunger housed within the outlines of the cartridge secured at one end by fusible solder to said base member, a spring bearing on said base member and plunger to project the same when released by the melting of the solder, a cap telescoping the shell in screw-threaded engagement therewith for closing the open end of the bore and for housing the inserted cartridge in a dust proof casing and a binding post carried by and insulated from the cap for receiving an external conductor, said post having an inner end facing the open end of the cartridge and disposed in the path of movement of the free plunger and adapted to be engaged thereby when projected by the spring.

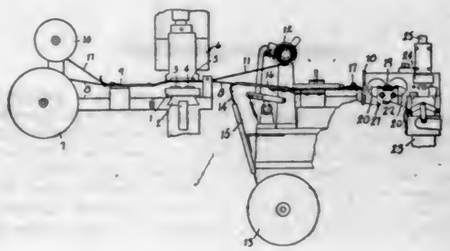
1,685,137. FOLDABLE SEAT. DANIEL RANDALL NICHOLS, Berwick, Pa., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 10, 1927. Serial No. 167,239. 3 Claims. (Cl. 155—85.)

3. In a seat, spaced uprights each having a guideway formed therein terminating in upper and lower recesses, pivots secured to the rear of the seat and working in said guideway and adapted to rest in the recesses to support the seat in folded or elevated position respectively, and hangers secured to the seat and to the uprights above the guideways, said seat when in elevated position normally urging the pivots to seating position in the lower recesses.



1,685,138. PAPER CONTAINER. JAMES G. NORTON, Leonia, N. J. Filed July 1, 1921. Serial No. 481,781. 17 Claims. (Cl. 229—1.5.)

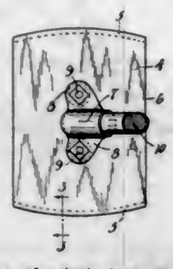
17. In a container constructed to be discarded after a single use without substantial economic loss, an inner section composed of thin, flexible paper and formed in the shape of a cone, and an outer section composed of relatively thick, stiff paper and comprising a main body portion shaped to conform to the inner section and a tubular, handle portion opening into the body portion and extending downwardly from the reduced lower end thereof, said han-



die portion being constructed so as to enable a number of said outer sections to be nested one within another, and said inner section being constructed to fit into the body portion of the outer section and to close the lower end of said outer section.

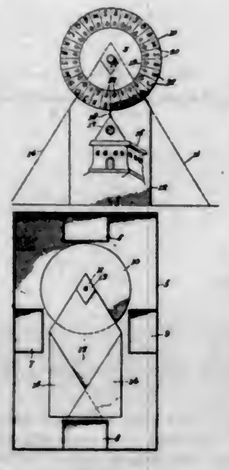
1,685,139. SAND CUTTING, SCREENING, AND PILING MACHINE. ELMER A. RICH, Jr., Chicago, Ill., assignor to The American Foundry Equipment Company, New York, N. Y., a Corporation of Ohio. Filed Aug. 29, 1923. Serial No. 659,896. 14 Claims. (Cl. 262—2.)

1. A machine of the class specified having a continuous material conveying member and a screening device, the conveying member being movably mounted to permit it to convey material upwardly and discharge it upon the screen or to convey it upwardly and discharge it in a direction away from the screen.



1,685,140. PRINTED LABEL AND PROCESS OR METHOD OF MANUFACTURING THE SAME. ARTHUR ROSENTHAL and MARTIN ROSENTHAL, Grand Rapids, Mich., assignors to Rose Patch and Label Co., Grand Rapids, Mich. Filed Sept. 25, 1926. Serial No. 137,705. 4 Claims. (Cl. 270—1.)

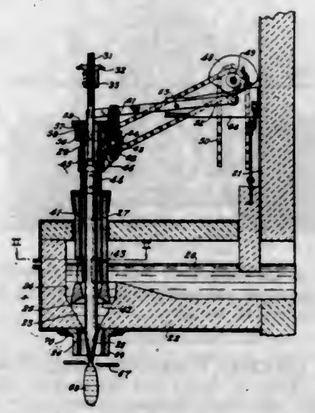
1. The method of making a printed label consisting in printing the same on double plate intaglio press with a blotter strip between the counter and the label strip, advancing the strip a label length and the blotter strip at a different rate for the second impression to complete the label, delivering the label strip to a label cutter in a continuous strip, applying an overlay strip of glazed tissue paper beneath the printed label strip, clamping the same to the label strip and cutting and then folding, and creasing the label and strip under heat, as specified.



1,685,141. BRUSH AX. ALBERT N. SCHAEFER, Minneapolis, Minn. Filed Aug. 22, 1924. Serial No. 733,634. 2 Claims. (Cl. 30—11.)

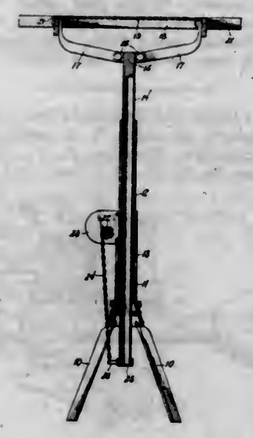
1. An ax comprising a relatively heavy generally rectangular head provided with a sharpened cutting blade at one edge thereof, an elongated handle secured to said head at an oblique angle thereto and having its longitudinal center line substantially disposed in a plane which extends perpendicularly to said head and substantially parallel with the edge of said blade, and connection between said handle and said head being approximately at the center of gravity of said head and the weight of said

head being so balanced relatively to the handle that the device may be swung in the manner of a golf club to cut brush or saplings close to the ground.



1,685,142. GAME. JOHN W. SMITH, Dover Village, Ohio. Filed Oct. 22, 1926. Serial No. 143,357. 1 Claim. (Cl. 273—135.)

Game apparatus for use with cards having suit and individual designations thereon, comprising a box having compartments projecting inwardly from its opposite side and end walls adapted to receive stacks of the cards therein, and a spinning device having a foldable stand with a fixed index adapted to fit in said box between the compartments and provided with a pivoted disc having card designations thereon for cooperation with the index and projecting from one end of the stand, the height of the stand and disc being slightly less than the distance between the compartments in the opposite ends of the box and the width of the stand when folded and the width of the disc between the side compartments being slightly less than the distance between the side compartments for nesting the folded spinning device in the box between the compartments.

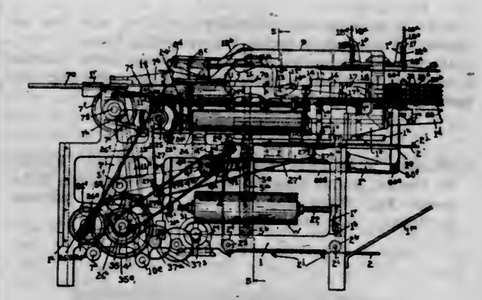


1,685,143. APPARATUS FOR DELIVERING CHARGES OF MOLTEN GLASS. LEONARD D. SOUBIER, Toledo, Ohio, assignor to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 4, 1924. Serial No. 684,296. 26 Claims. (Cl. 49—55.)

1. In a glass feeder, the combination of a container for molten glass having an outlet opening in its bottom, a plug or rod of refractory material projecting downward through the glass over the outlet, the lower end of said plug being tapered and protruding through the outlet, and means providing a heated chamber enclosing said protruding end.

8. In a glass feeder, the combination of a container for molten glass having an outlet opening in its bottom, a core extending downward in the glass over the outlet concentric therewith, a regulator, and means to move the regulator spirally about the axis of the core toward and from the outlet.

1,685,144. ELEVATOR AND SUPPORT FOR WALL BOARDS AND THE LIKE. AIN AUSTIN, De Kalb, Ill. Filed Apr. 14, 1927. Serial No. 183,816. 3 Claims. (Cl. 304—4.)

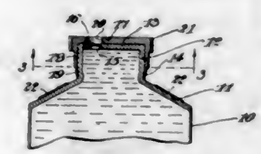


1. A device for elevating wall boards and the like to ceilings and supporting them in place to be nailed, comprising, in combination, a base, a tubular standard telescopically mounted on the base, a plug in the top of the tubular standard, a plurality of outwardly extending brackets secured to the plug, a horizontal and substantially oblong open work frame carried by said brackets, and mechanical means to raise said standard.

1,685,145. HOOK. HERMAN BARTENBACH, Pittsburgh, Pa., and ALBERT E. FREEMAN, Andover, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 16, 1926. Serial No. 135,928. 3 Claims. (Cl. 24—230.5.)

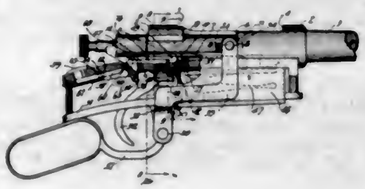
1. A hook having two oppositely curved sections comprising a substantially S-shaped body portion, a substantially circular button at one end thereof, and a second substantially circular shaped button at the other end thereof, said buttons lying in a plane substantially at right angles to each other on opposite sides of an axis passing through the hook to the midpoint of each curved section.

1,685,146. BREAD-WRAPPING MACHINE. HENRY F. BECHMAN, Battle Creek, Mich., assignor to Battle Creek Bread Wrapping Machine Company, Battle Creek, Mich. Filed Feb. 6, 1923. Serial No. 617,209. 49 Claims. (Cl. 93—2.)



1. In mechanism of the character specified, loaf clamps adapted to engage opposite sides of the loaf when the latter is raised; a reciprocating slide carrying one of the said clamps; an oscillating lever on said slide carrying other of said clamps; a cam for actuating said oscillating lever at the proper time during its reciprocation by the slide; and an oscillating lever mounted on said slide and operated by the same cam, said oscillating lever carrying the final top end folding blades, substantially as described.

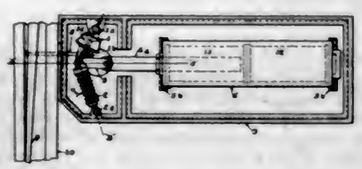
1,685,147. CONTAINER. OSCAR B. CASE, Williamsport, Pa. Filed Aug. 17, 1926. Serial No. 129,743. 2 Claims. (Cl. 221—60.)



1. In a container, in combination, a collapsible metallic receptacle; a threadless neck to said receptacle having an exterior annular recess; a closure extending across said neck opening and having a recess in a portion thereof causing a reduction of the thickness of the closure at the recess portion; a cover for the device comprising an

upper cover portion having an opening therein capable of revoluble positioning in alinement with the closure recess, and having a downwardly extended annular flange positioned around a portion of the exterior face of the

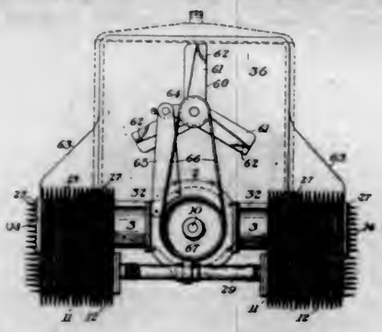
neck and revoluble thereon, and an inwardly extended annular portion of the cover fitted within the neck recess and retaining the closure from vertical removal but allowing of its revolution.



1,685,148. FIREARM. HERBERT S. CONANT, Troy, N. Y. Filed Apr. 18, 1925. Serial No. 24,254. 21 Claims. (Cl. 42—16.)

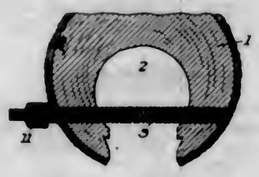
4. In a firearm, the combination with a sear and an ejector, of a common spring for operating both.

16. In a bolt action firearm, a finger lever having a slidably mounted pivotal bearing for effecting the opening and closing of the breech mechanism.



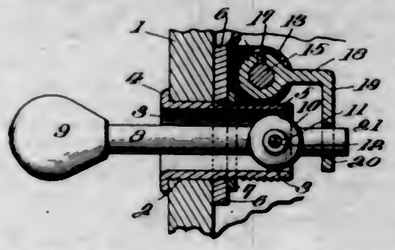
1,685,149. ELECTRIC SWITCHING DEVICE. MILTON W. COOKE, Mount Lebanon, and OSCAR WILLIAMS, Pittsburgh, Pa. Filed May 23, 1927. Serial No. 193,495. 6 Claims. (Cl. 246—231.)

1. In an electrically operated switch throwing device comprising a solenoid and a magnetic plunger connected to a toggle joint employing a common articulation.



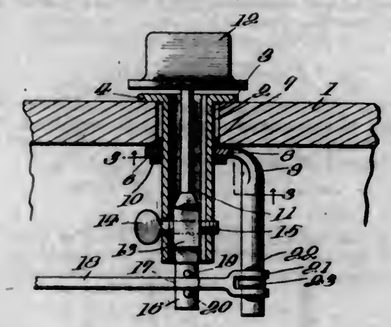
1,685,150. AIR COMPRESSOR. JAMES A. DAVEY, Sound Beach, Conn., and PAUL H. DAVEY and CHARLES L. GAUGLER, Kent, Ohio; said Gaugler assignor of one-third of his entire interest to The Davey Tree Expert Company, Kent, Ohio, a Corporation of Ohio. Filed Mar. 31, 1924. Serial No. 703,098. 10 Claims. (Cl. 230—211.)

1. In combination with an automotive vehicle having an engine and a radiator, an air compressor mounted adjacent the radiator, means for driving the compressor from the engine of the vehicle, a fan adapted to deliver



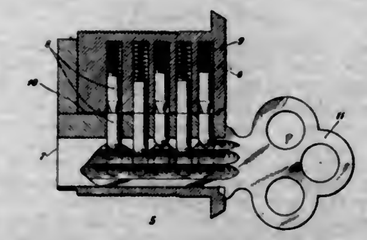
cooling air to the compressor and to the radiator, and a casing surrounding the radiator and adapted to direct the air delivered by the fan.

1,685,151. APPLYING THREADED BRACING RODS TO TREES. PAUL H. DAVEY and WILLIAM R. WILLIAMS, Kent, Ohio; said Davey assignor of one-fourth to James A. G. Davey, Sound Beach, Conn., and said Williams assignor to The Davey Tree Expert Company, Kent, Ohio, a Corporation of Ohio. Filed Nov. 21, 1925. Serial No. 70,499. 1 Claim. (Cl. 47—8.)



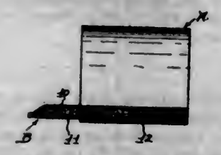
The method of treating a tree cavity consisting in forming uniform openings in the side edges of the cavity, threading said openings, and connecting said threaded openings by bracing means filling said openings and terminating at or near the outer ends thereof.

1,685,152. FLUSH-TANK-OPERATING LEVER. EDWARD L. DELANY, Brooklyn, N. Y., assignor to Delaney Realty Corporation, Brooklyn, N. Y. Filed Jan. 18, 1926. Serial No. 82,111. 7 Claims. (Cl. 4—67.)



1. A flush valve operating mechanism comprising a tubular member, means for fastening the same to the flush tank, a flush valve operating lever pivotally supported by the tubular member, an operating handle passing through the tubular member and pivotally mounted to have an up and down movement therein, and an arm carried by the flush valve operating lever and having an opening therein through which the inner end of the operating handle passes.

1,685,153. FLUSH-TANK-OPERATING LEVER. EDWARD L. DELANY, Brooklyn, N. Y. Filed Mar. 9, 1926. Serial No. 93,400. 9 Claims. (Cl. 4—67.)

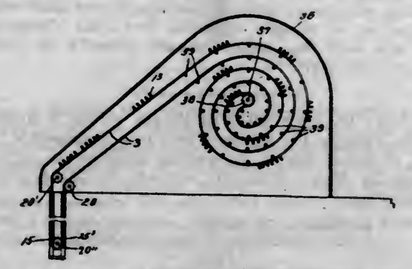


1. A flush tank operating mechanism comprising a tubular member, means for securing the same to the flush tank, a flush valve operating lever extending through the tubular member and pivotally mounted therein, an arm supported by the tubular member and extending parallel therewith, a link loosely mounted on the arm, a flush valve carrying lever pivotally mounted to the upper end of the link and having a loose connection with the flush valve operating lever.

1,685,154. LOCK. WILLIAM H. EDWARDS, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 17, 1927. Serial No. 169,001. 2 Claims. (Cl. 70—47.)

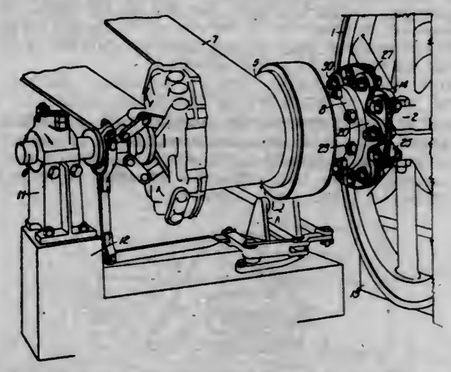
1. A lock comprising a casing, a movable barrel therein, a plurality of chambers in the casing, a corresponding set of chambers in the barrel adapted to be brought into alinement therewith, a member movable in each of the alined chambers comprising a pin and a driver, certain of the drivers being beveled at their meeting points with their associated pins, and other of said drivers being unbeveled at such points.

1,685,155. ARCH SUPPORT. HARRY DENNIS EMBOTT, St. Paul, Minn. Filed Aug. 28, 1922. Serial No. 584,650. 2 Claims. (Cl. 36—71.)



1. An article of the class described, comprising an elastic foot encircling band, an elongated, flexible case greater in length than the width of said band, said case being secured to the band inside and transversely thereof with one end within the confines of said band, said case having an opening at said end, and padding material applicable in desired quantities to the case through said opening, said padding being kept against accidental removal from the case by the action of the band in holding said case against the foot.

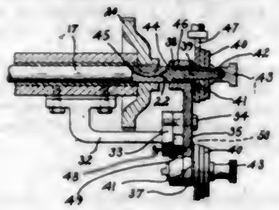
1,685,156. ELECTROCHEMICAL PROCESS FOR SEPARATING IRON FROM ALUMINUM. FRANCESCO GIORDANI, Naples, Italy, assignor to Pomilio Brothers Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 25, 1922. Serial No. 584,387. 1 Claim. (Cl. 204—9.)



In a process for purifying solutions consisting mainly of aluminum salts, positioning therein an electrode of aluminum and another adapted to act as positive electrode for a metal to be eliminated, and connecting them in circuit, substantially as set forth.

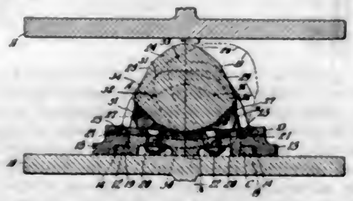
1,685,157. ADVERTISING DEVICE. EDWARD FORD GOELLER, New York, N. Y. Filed Apr. 5, 1926. Serial No. 99,739. 6 Claims. (Cl. 40—28.)

1. An apparatus for displaying an advertising sign over the wall of a building, which comprises a flexible sheet carrying lamps which are arranged to present an advertisement, a take-up device to which the sheet is connected, the sheet being adapted to be withdrawn from the take-up device and supported over the wall of the building to display the advertisement and the take-up device being adapted to retract and fold the sheet upon itself to conceal the same, and means for spacing the folds of the sheet to prevent breakage of the lamps.



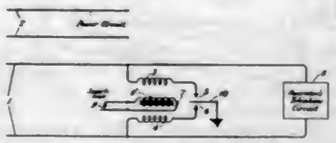
1,685,158. COUPLING. SAMUEL B. GOLD, Kansas City, Mo., assignor to Weber Engine Company, Kansas City, Mo., a Corporation of Iowa. Filed Nov. 21, 1927. Serial No. 234,696. 3 Claims. (Cl. 64—96.)

1. In a shaft coupling, complementary coupling members connected with respective shaft members, each coupling member having peripheral ears in staggered relation



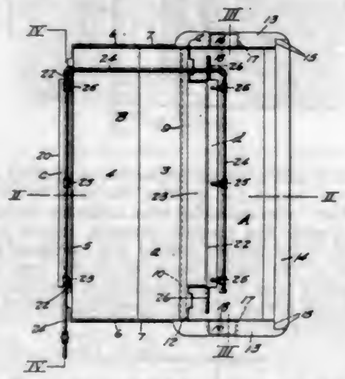
with similar ears on its complementary member, flexible links attached to selected adjacent ears of each coupling member and to intervening ears of the complementary member.

1,685,159. LENS-GRINDING MACHINE. WILLIAM A. GUNNING, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 23, 1925. Serial No. 25,307. 9 Claims. (Cl. 51—101.)



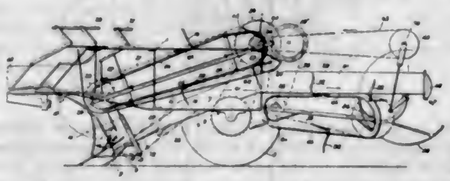
1. In a template controlled lens edging machine, the combination with a rotatable lens holding shaft, of a plurality of formers mounted eccentric to the shaft and arranged to be brought selectively into axial alignment with said shaft, and means engaged therewith for rotation with the shaft.

1,685,160. ANTIFRICTION BEARING. STACY B. HASKELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Sept. 12, 1923. Serial No. 662,215. 8 Claims. (Cl. 308—224.)



8. In a side bearing for railroad cars, an open top casing, a bearing plate in said casing inclined from the middle of the casing upwardly towards the ends of the casing, an antifriction roller capable of rolling movement on said bearing plate, said roller being in cross section wide at the bottom and narrow at the top, top and bottom bearing surface of said roller being so formed that the distance between the top and bottom bearing points of the roller on the load line as the roller assumes different positions in its rolling movement toward the end of the casing is diminished in proportion to the rise of the bearing plate, and interengaging parts on said roller and said casing to guide the roller in its rolling movement.

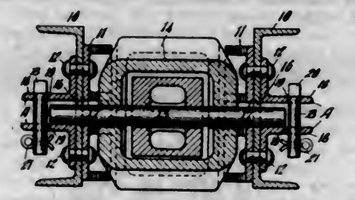
1,685,161. MULTIWINDING DISCHARGE BALANCE COIL. RICHARD K. HONAMAN, Bloomfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 27, 1926. Serial No. 91,214. 2 Claims. (Cl. 179—78.)



1. A line circuit exposed to inductive interference, a circuit to be protected associated therewith, and a protective device comprising a multiwinding transformer having two equal turn windings differentially arranged on a common core, each of said windings connecting a protector gap to different sides of said line circuit, and an auxiliary winding mounted on said common core and having a greater number of turns than either of said equal turn windings, and a spark gap across the terminals of said third winding.

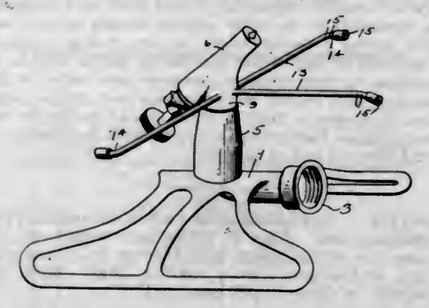
1,685,162. TINNING POT. PERCY E. HUNTER, Pittsburgh, Pa., assignor of one-half to Bernard West, Weirton, W. Va. Filed June 24, 1927. Serial No. 201,115. 7 Claims. (Cl. 266—39.)

1. A tinning pot consisting of a continuous body portion forming front, bottom and rear walls, a longitudinal partition therein, and end plates having coating metal supply pockets opening to the interior.



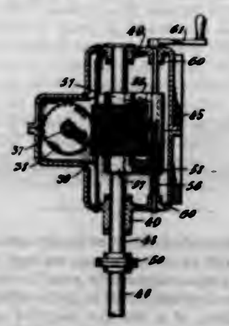
1,685,163. COMBINDED RAKE AND BINDING APPARATUS. MARI JEANSON, Etrelles, France. Filed July 31, 1925, Serial No. 47,358, and in France July 31, 1924. 2 Claims. (Cl. 56—343.)

1. A combined rake and binding apparatus comprising a main frame carrying wheels, central teeth composed of various members pivoted together, a pivot shaft for the teeth which forms part of a frame pivoting on the machine frame, the axis of pivotation being situated forwardly of the points of the said teeth, lateral teeth of different lengths forming a collecting element situated within the machine frame, a pivot shaft for the said teeth forming part of a frame pivoting on the machine frame and situated forwardly of the said teeth, chains connecting each group of teeth with the machine frame, and means for raising the said pivoting frames.



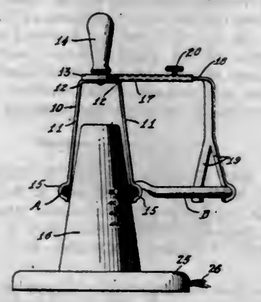
1,685,164. DRAFT-RIGGING-KEY RETAINER. GEORGE A. JOHNSON, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Sept. 19, 1925. Serial No. 57,267. 1 Claim. (Cl. 213—50.)

In a railway draft rigging, the combination with center sills having key-receiving openings and a key working in said openings, said key having an end thereof extending through the slot of and projecting beyond the corresponding sill; of angle members secured to the last named sill, said angle members having horizontal flanges disposed respectively at the top and bottom of the opening of said



sill; and a detachable key extending through said flanges, said key co-operating with the corresponding end of said first named key to retain the latter in operative position.

1,685,165. SPRINKLER. JOHN H. KEYS, Dayton, Ohio, assignor to The Dayton Irrigation Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 20, 1922. Serial No. 537,935. 3 Claims. (Cl. 299—69.)



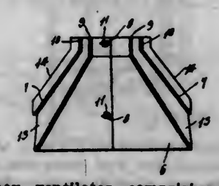
3. In a rotary sprinkler, an upwardly inclined nozzle mounted for rotation about a vertical axis intersecting the inclined nozzle at a mid-length point beyond which the nozzle extends in opposite directions, a plurality of radially disposed propulsion jet arms operatively connected with the nozzle for imparting unison rotary motion thereto, means for regulating the discharge from said inclined nozzle, and means for supplying water simultaneously to the inclined nozzle and to the jet arms.

1,685,166. DIFFERENTIAL TIMING DEVICE. RICHARD LA FRANCE, Toledo, Ohio. Filed Apr. 14, 1926. Serial No. 101,922. 7 Claims. (Cl. 74—7.)

1. The combination of a helical driving gear and helical driven gear running in mesh with each other, a yoke embracing the ends of the driving gear, and manually rotatable means for effecting unitary axial movement of the yoke and driving gear to advance or retard the normal point of contact of the driven gear circumferentially from the corresponding point of the driving gear.

1,685,167. WORKHOLDER. GEORGE L. LJUNGLOF, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Sept. 26, 1923. Serial No. 665,032. 3 Claims. (Cl. 81—3.5.)

1. A device of the character described comprising a base, a conical rim stretching plug rising from the base, a lens rim holder associated with said base and having a handle, a supporting member on the handle, depending arms extending from the supporting member, said arms having rim engaging portions, said supporting member being provided with a lateral extension, and an arm depending from the extension having rim engaging portions.

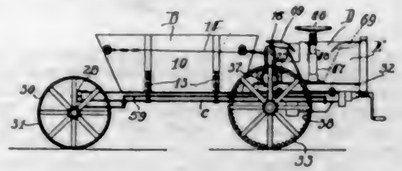


1,685,168. PREPARATION OF FUR FOR SHRINKING AND FELTING. JOHN H. MARTIN, Central Park, N. Y. Filed Apr. 28, 1926. Serial No. 105,314. 4 Claims. (Cl. 8—21.)

4. The improvement in the art of preparing fur for shrinking and felting, which consists in subjecting the fur to the action of an organic acid with an admixture of glycolic acid.

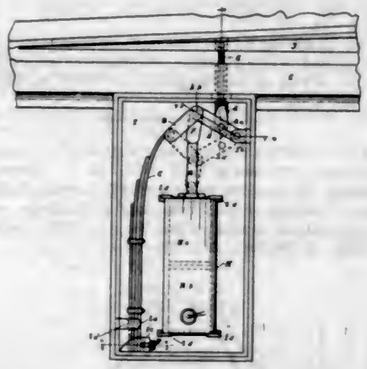
1,685,169. PREPARATION OF FUR FOR SHRINKING AND FELTING. JOHN H. MARTIN, Central Park, N. Y. Filed Apr. 28, 1926. Serial No. 105,315. 2 Claims. (Cl. 8—21.)

2. The improvement in the art of preparing fur for shrinking and felting, which consists in subjecting the fur to the action of an inorganic acid with an admixture of glycolic acid.



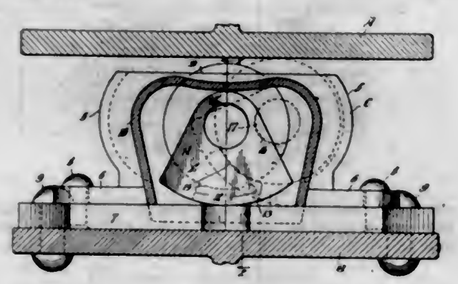
1,685,170. VENTILATOR FOR CHIMNEYS. ALEXANDER MCDONALD, Pittsburgh, and WILLIAM O. SMITH, Wilkinsburg, Pa., assignors of seventy one-hundredths to John C. Young, Pittsburgh, Pa., and thirty one-hundredths to said Smith. Filed May 1, 1926. Serial No. 106,162. 2 Claims. (Cl. 98—66.)

1. A chimney ventilator comprising correspondingly shaped inner and outer truncated pyramidal members or frustums spaced from each other, the sides of the members



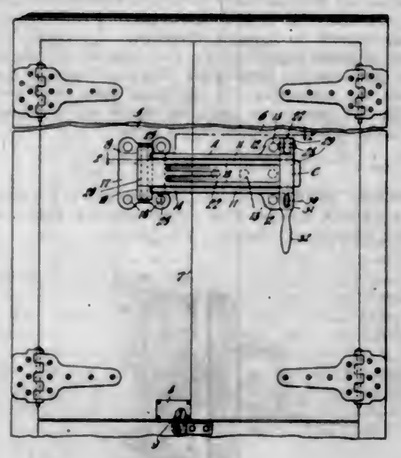
being arranged in upwardly converging planes to taper the space between them and increase the velocity of the air currents passing upwardly through the said space, said members having spaced vertical sections formed as extensions of the sides of the said members and arranged opposite each other to form a vertical passage to change the direction of the air currents from inclined to vertical to stimulate the draft of the chimney and to prevent the said air currents from sweeping across the top of the chimney and choking the same, said inner and outer frustums being composed of angular sections having overlapped portions located at the centers of the sides of the frustums, and vanes arranged exteriorly of the outer frustum and extending along the overlapped portions of the sections and provided at the top with vertical portions located at the vertical section of the outer frustum, said vanes being adapted to cause currents of air to move upwardly over the outer frustum and to have their direction changed from inclined to vertical at the top of the chimney ventilator.

1,685,171. SEPARABLE TRACTOR DUMP WAGON. WALTER J. MCVICKER and ARTHUR R. SANDT, Minneapolis, Minn., assignors to Enterprise Machinery Company, Minneapolis, Minn. Filed May 3, 1920. Serial No. 378,423. 8 Claims. (Cl. 280—91.)



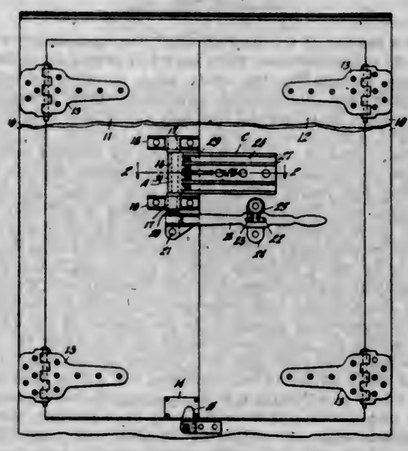
1. A separable tractor wagon, including a body, a detachable tractor element secured to one end of said wagon, means for steering said wagon in either direction and means for steering said wagon with the pair of wheels at either end thereof, with each pair independent of each other or with all of the wheels collectively.

1,685,172. SWITCH-THROWING DEVICE. JOHN L. MILTON, Louisville, Ky., assignor to Cheatham Electric Switching Device Company. Filed Apr. 11, 1927. Serial No. 182,879. 35 Claims. (Cl. 246—318.)



1. A toggle joint provided with a pair of levers having one common articulation and independent bearings at their outer ends, one of said bearings being fulcrumed to the free end of a spring member which is substantially rigid at the other end.

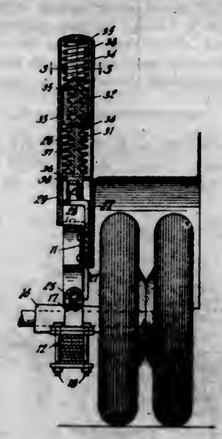
1,685,173. ANTIFRICTION BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed July 11, 1924. Serial No. 725,331. 1 Claim. (Cl. 308—226.)



In an anti-friction bearing, the combination with relatively movable bearing members presenting opposed extended bearing surfaces; a rocker bearing on one of said surfaces, said rocker having a supporting bearing seat; a roller normally supported on said seat, said roller being engageable by the other opposed bearing surface, said roller having trunnion means thereon loosely journaled in bearings on said rocker and having lateral play in all directions in said bearings, whereby said roller is displaceable with respect to the bearing seat of the rocker when the rocker is tilted to either side of its normal centered position and the roller is supported by rotation on said trunnions free of said seat.

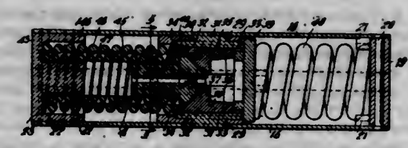
1,685,174. REFRIGERATOR-CAR-DOOR-OPERATING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 23, 1925. Serial No. 64,294. 2 Claims. (Cl. 268—72.)

1. In a car door fastener, the combination with a pair of doors mounted to swing about vertical axes and having their free edges adapted to abut in closed position; means for fastening one of said doors when the same is in closed position; of a bracket mounted upon said door adjacent the forward edges thereof, within the top and bottom edges thereof, said bracket being provided with a pair of vertically spaced upstanding ears carrying a pivot pin; of an abutment member mounted adjacent the forward edge of the other door and projecting beyond said forward edge, said abutment member being channel-shaped in form and provided with a curved nose portion at its outer extremity, the inner extremity of said abutment member being widened and having means thereon to pivotally support a locking lever at the upper end, said widened portion at its lower end having an eyelet adapted to engage an opening in said locking member; and a lever fitting within the channel in said abutment member, the end of said lever adjacent said locking member being adapted to be engaged by the latter to lock the same in position, the opposite end of said lever member being pivotally mounted upon the pivot pin on the first mentioned door, said lever being adapted to engage the outer side of the nose of said abutment member and said lever being provided with a reversely turned actuating portion adapted to engage the inner side of the nose of said abutment member, whereby swinging movement of said lever effects movement of said other door in opening and closing directions.



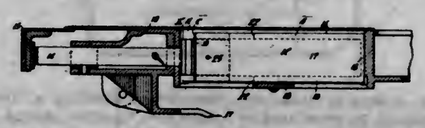
1,685,175. DOOR-OPERATING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 16, 1926. Serial No. 81,648. 4 Claims. (Cl. 268—72.)

1. In a door operating mechanism, the combination with a relatively fixed member and a swinging door member; of a rotatable shaft including an elongated crank portion provided with offset cylindrical journal sections at opposite ends thereof, and one of said ends having a flattened extension thereon; means on said fixed member in which the journal sections of said shaft are rotatably mounted; a handle mounted on the flattened extension of said journal section, said handle being arranged to be secured to said door member when the same is closed; and a keeper bracket secured to said door member, said bracket having means providing spaced abutments coextensive with said crank center and adapted to receive the crank member between said abutments.



1,685,176. SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 30, 1926. Serial No. 132,484. 10 Claims. (Cl. 188—129.)

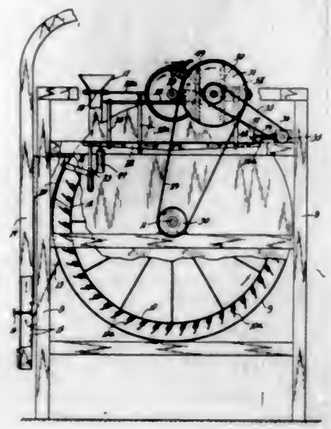
1. In a friction shock absorbing mechanism, the combination with relatively movable members; of a shell connected to one of said members, and a plunger connected to the other member and extending into said shell; bearing means in said shell against which said plunger bears; yieldable means adapted to provide resistance at opposite sides of said bearing means; and means for



simultaneously flexing said yieldable means upon movement of said plunger in opposite directions to afford resistance to the travel thereof.

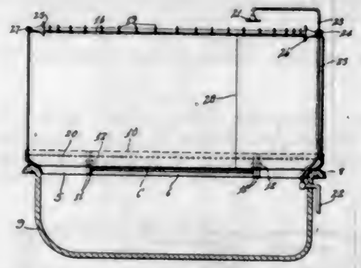
1,685,177. BUFFING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 31, 1927. Serial No. 179,864. 9 Claims. (Cl. 213—222.)

9. In a buffing mechanism, the combination with a rectangular housing made up of opposed channel members, the webs of said channels defining opposed walls of the housing and the flanges of said channels defining the remaining walls of said housing and being disposed in spaced relation to provide guides between their free edges; of spacing means fixed to the channels for securing the parts together, one of said spacing means being in the form of a friction shell; a buffer head provided with guide arms slidably disposed in the guides provided by the flanges of the channel members; and means for resisting movement of said buffer head inwardly of said housing, including friction means cooperating with the shell.



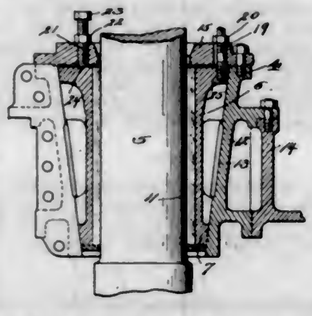
1,685,178. BUFFING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 22, 1927. Serial No. 185,888. 5 Claims. (Cl. 213—222.)

1. In a buffing mechanism of the character described, comprising an integral housing open at one end; a main spring means arranged in said housing; a shell mounted



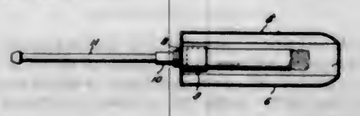
in said housing and movable longitudinally with respect thereto; removable members cooperating with the walls of said housing to provide guide means for said shell; a wedge; friction shoes co-operating with said wedge; liners for said shell having friction surfaces co-operating with said friction shoes; and means for detachably connecting said liners to said shell, said means serving to maintain said removable members in operative position.

1,685,179. MACHINE FOR TREATING GRAIN. WALLACE A. ROGERS, Anoka, Minn. Filed May 26, 1926. Serial No. 111,750. 9 Claims. (Cl. 83—30.)



1. A machine for the treatment of grain and the like, having in combination a treating chamber, an intake passage and a discharge passage communicating therewith, gates adapted to control the flow of material through said passages, actuating mechanism adapted to alternately control the movements of said gates, means for connecting said actuating mechanism to a source of power and timing mechanism comprising a rectilinearly movable retaining member adapted to normally engage said means and means for reciprocating said retaining member whereby said first mentioned means will be periodically released.

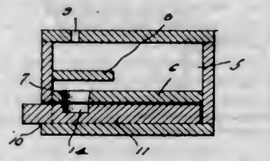
1,685,180. ATTACHABLE SHOWER. JOHN C. SHELLEA, Maywood, Ill., assignor to John F. Saye, Maywood, Ill. Filed Aug. 19, 1927. Serial No. 214,149. 4 Claims. (Cl. 4—149.)



1. A device of the type described comprising a frame arranged to be secured to a bath tub, uprights carried by said frame, a tube similar in general curvature to said frame, a downwardly extending spraying member, communications between said sprayng member and said tube, a curtain adjustably carried by said tube, an inwardly extending spraying member carried by and in communication with said tube, and means integral with said frame for receiving a portion of said curtain for guiding water which engages with said curtain into the tub.

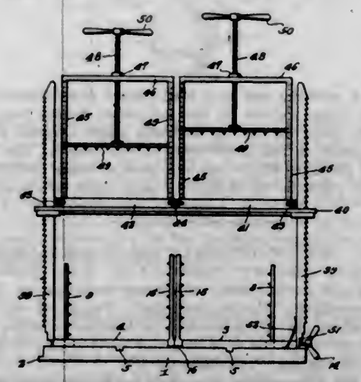
1,685,181. BEARING FOR HYDRAULIC-TURBINE SHAFTS. HARALD STYERTSEN, York, Pa., assignor to S. Morgan Smith Company, York, Pa., a Corporation of Pennsylvania. Filed Sept. 2, 1924. Serial No. 735,448. 1 Claim. (Cl. 308—69.)

In a bearing of the class specified, the combination with a shaft and a container fitted over and having an inclined surface surrounding the shaft, of a plurality of longitudinally and horizontally adjustable shoes interposed between the container and the shaft and formed with inner straight surfaces and outer inclined surfaces having a continual contact and sliding fit with the inclined surface of the container, the shoes having bearing devices extending full length of the inner side thereof and surrounding and directly engaging the shaft, a sectional annular cover mounted over and close to one set of ends of the shoes, said cover formed with radial pads and each pad having an outer centrally located radial slot and a pair of openings in transverse alinement inwardly at a distance from the slot, the pads being over the ends of the shoes and corresponding in number to the number of the latter, and means for individually adjusting and fixing the adjustment of the shoes and their bearing devices, consisting of an outer adjusting bolt engaging the slot of each pad and a pair of adjusting screws engaging the said openings at a distance inward from the bolt, the adjusting bolt of each pad being secured to the adjacent extremity of its shoe and the adjusting screws having their inner ends contacting with but unsecured to the end of the adjacent shoe, the bolts and screws of all the pads being operable to modify the adjustment of the shoes without releasing the cover, the adjusting bolts supporting the weight of the shoe located at such distance outwardly from the outside of the shoe to dispose the centers of gravity of the shoes between the said bolts and the inner bearing devices, the outer edges of the cover being secured to the container outside of the said adjusting bolts.



1,685,182. CIGAR AND CIGARETTE HOLDER. ROBERT L. WHITSEL, South Chicago, Ill. Filed June 26, 1926. Serial No. 118,645. Renewed Aug. 6, 1928. 1 Claim. (Cl. 131—51.)

In a cigar and cigarette holder of the class described, a substantially rectangular shaped open top receptacle, the side walls thereof being flared outwardly at their upper ends to provide wings, the upper end of the forward

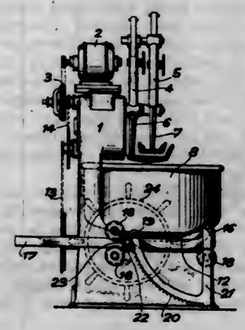


end wall of the receptacle terminating at the lower edges of the wings, the upper edge of the rear end wall of the receptacle extending to the upper edges of the wings, the upper portion of the rear end wall being provided with a threaded opening, a nipple extending through the opening, the intermediate portion thereof being threaded for engagement with the threaded opening, an enlarged socket member formed on the forward end of the nipple for receiving one end of the cigar or cigarette and disposed between the rear end portions of said wings, the rear face of the enlarged socket member engaging the inner face of the upper portion of the rear end wall of the receptacle, the other end of the nipple being provided with a stem receiving socket, said nipple being further provided with a longitudinal smoke passage affording communication between the respective sockets.

1,685,183. DISPENSING CONTAINER. HOWARD H. WILHELM, Jefferson City, Mo. Filed May 16, 1927. Serial No. 191,905. 1 Claim. (Cl. 273—144.)

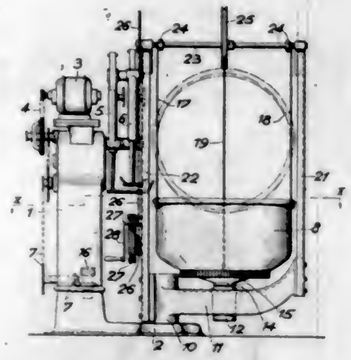
In a dispensing container of the character described, a closed box having an article entrance opening within the top wall thereof, a false bottom wall within the box in spaced relation with the main bottom wall thereof, one end wall of the box being provided with an opening between said false and main bottom wall, said false wall being provided with an opening through which the articles within the box may pass, and a T-shaped slide member mounted for sliding engagement between the false and bottom walls of the box, the outer end of the slide member at all times projecting through the opening in the box, and being provided at its top side with a pocket for registry with the opening in the false wall when the member is slid inwardly so that the articles passing through the opening in the false wall may drop therein and be removed from the box by moving the slide member in an outward direction.

1,685,184. SLICING MACHINE. PASCUAL ABÁLSAMO, Buenos Aires, Argentina. Filed Oct. 8, 1926, Serial No. 140,307, and in Argentina July 26, 1926. 3 Claims. (Cl. 146—102.)



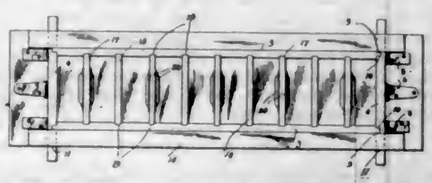
1. In a food-slicing machine of the type comprising a movable feed carriage, the combination of a sliding feed plate supported longitudinally upon the carriage to move in unison therewith; a lever pivotally mounted on the carriage and having a pin-and-slot connection with the plate to advance or retract said plate at will relatively to the carriage; and means on the feed plate for retaining thereon the food to be sliced.

1,685,185. DOUGH-KNEADING MACHINERY. FRIEDRICH AESCHBACH, Aarau, Switzerland. Filed Jan. 12, 1928, Serial No. 246,269, and in Switzerland Nov. 21, 1927. 3 Claims. (Cl. 259—100.)



1. In a dough kneading and mixing machine, in combination, a kneading trough, two kneading arms, a mechanism adapted to impart movement to said arms so that their lower ends move in elliptical paths and pass each other in close proximity in counter directions, means provided with each kneading arm to withdraw it from the trough, and an inter-connection between said lifting means adapted to permit one of said arms to be raised without raising the second arm when one of said means is actuated and to raise both arms when the means of said second arm are actuated to prevent said arms from knocking against each other.

1,685,186. KNEADING MACHINE. FRIEDRICH AESCHBACH, Aarau, Switzerland. Filed Jan. 12, 1928, Serial No. 246,270, and in Switzerland Nov. 21, 1927. 5 Claims. (Cl. 259—100.)

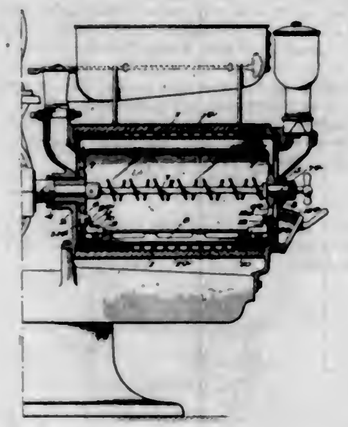


1. In a mixing and kneading machine, in combination, a machine frame, a kneading trough, a frame in which said trough is rotatably mounted, and rails adapted to be endwise displaceable in said machine frame in substantially horizontal direction, said frame being mounted in a tiltable manner on said rails.

1,685,187. DOUGH KNEADING AND MIXING MACHINE. FRIEDRICH AESCHBACH, Aarau, Switzerland. Filed Jan. 12, 1928, Serial No. 246,271, and in Switzerland Nov. 21, 1927. 3 Claims. (Cl. 259—100.)

1. In a dough kneading machine, in combination, a machine frame, an arm swingable about a vertical axis relatively to said frame, a kneading trough rotatably mounted on said arm, and means for lifting and tilting said trough, said means being fixed to said arm and swingable with the latter.

1,685,188. BRICK MOLD. JOSEPH H. BECKWITH, Pine Bluff, Ark. Filed Jan. 31, 1927. Serial No. 164,851. 5 Claims. (Cl. 25—121.)



1. A brick mold comprising a bottom, side and end walls pivoted to said bottom, said end walls having their end portions overlapping the ends of said side walls and projecting transversely therefrom, the projecting end portions of the end walls being formed with recesses leading from their upper edge faces, and spring strips of greater length than the side walls secured intermediate their ends against the outer faces of said side walls and having their end portions projecting longitudinally therefrom and recessed from their under faces to provide shank portions fitting into the recesses leading from the upper edge faces of the end walls and bills to engage the outer side faces of the end walls, the extreme end portions of said strips having their under faces beveled longitudinally to form cam surfaces.

3. A brick mold comprising a bottom, side and end walls carried by said bottom, and removable partitions resting upon said bottom and extending between the side walls with their ends engaging the same, alternate partitions being provided with core members projecting from opposite sides thereof whereby bricks formed in the mold will each have one side face formed with a recess.

1,685,189. ICE-CREAM FREEZER. HARRY C. COVER, Baltimore, Md., assignor of one-half to himself and one-half to Manuel Hendler, Baltimore, Md. Filed Oct. 3, 1927. Serial No. 223,707. 6 Claims. (Cl. 259—9.)

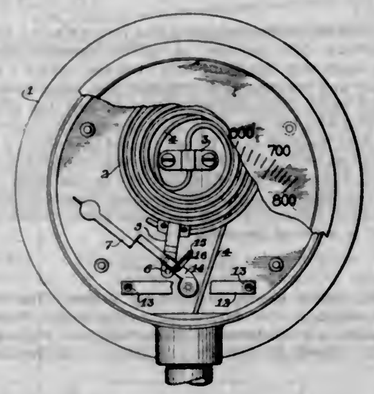
1. An ice cream freezer and the like, comprising a cylinder having end heads, at least one of said heads being movable to open said cylinder at one end, a rotary dasher assembly longitudinally arranged and supported within said cylinder, said assembly including a longitudinal scraper to travel with said rotary assembly in scraping engagement with the inner surface of said cylinder, said scraper being pivotally mounted in and carried by said

assembly, and means whereby said scraper is rendered longitudinally removable from and applicable to said assembly through the open end of the freezer that is normally closed by said movable head, while said assembly remains in supported position in the head.

1,685,190. HAT AND METHOD OF MAKING THE SAME. JOSEPH T. CURTIS, New York, N. Y. Filed Oct. 17, 1927. Serial No. 226,658. 1 Claim. (Cl. 2—198.)

A head covering cut in a single piece from material to form the body portion of the hat when folded together, means for securing the top and side edges thereof, and a loop attached to the lower edge of the body of the head covering through which the top of said head covering is drawn to regulate the height of said head covering.

1,685,191. MANUFACTURE OF SOLID ALKALI METAL SALTS OF ORGANIC COMPOUNDS. KARL DOBMAIER, Leverkusen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Jan. 19, 1928, Serial No. 248,004, and in Germany Jan. 18, 1927. 4 Claims. (Cl. 260—13.)



1. In the process for the manufacture of solid alkali metal salts of organic compounds, the step which comprises treating the organic compounds with the alkali metal salts of hydroxylated aromatic bodies.

1,685,192. SPECTACLES. ERNEST E. EMONS, Akron, Ohio, assignor of one-half to Robert E. Hillier, Akron, Ohio. Filed Sept. 17, 1925, Serial No. 56,957. Renewed Mar. 3, 1927. 5 Claims. (Cl. 88—53.)

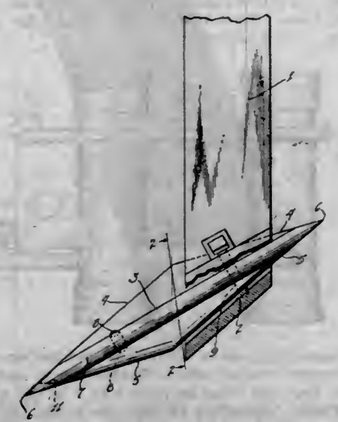
1. In a pair of spectacles, a front, a pair of end pieces carried by and projecting therefrom at each end thereof, and a pair of temple bars hinged to said end pieces, the axes of the hinges between the bars and end pieces being inclined with respect to the plane of the front, said bars and end pieces having like bevelled surfaces and with the bevel of each surface extending throughout rearwardly at an inclination from its top, the bevelled surfaces of the end pieces adapted to abut the bevelled surfaces of said bars and in connection with the axes of the hinges disposing the front at an acute angle with respect to the bars when these latter extend rearwardly at right angles with respect to the front to prevent the latter from riding downwardly on the nose when set thereon.

1,685,193. THERMOMETER. EDWARD B. FOOTE, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Mar. 3, 1927. Serial No. 172,477. 7 Claims. (Cl. 73—109.)

2. In an instrument of the character described, the combination with a pressure-responsive element and a pointer to be moved thereby, of a shaft, a bearing therefor, a thrust bearing at one end of the shaft, spring means for maintaining the shaft axially under pressure against said thrust bearing, the pointer being connected to said shaft and means connected with the pressure-responsive element for angularly moving the shaft.

1,685,194. AUTOMATICALLY-ADJUSTABLE EMBROIDERY GUIDE. ALBERT J. FORSETH, Grand Forks, N. Dak., assignor to B. F. Gilbert, Fort Worth, Tex. Filed May 5, 1924. Serial No. 711,082. 1 Claim. (Cl. 112—139.)

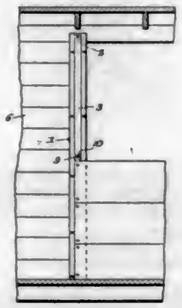
An attachment for sewing machines comprising a thin metal body portion adapted to extend across the bifurcation of the presser foot of a sewing machine on the upper side of the presser foot, a member on the under side of the body portion adapted to clamp on the under side of the presser foot, said body portion having a thread receiving groove extending across it on its upper side, which groove



defines a rib on the under side of the body portion, said rib being adapted to extend into the bifurcation of the presser foot and a tongue on the body portion extending crosswise of said groove.

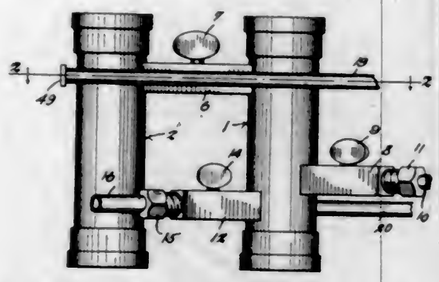
1,685,195. PROCESS OF PURIFYING OILS AND FATS. WILHELM GENSECKE, Bad Homburg, Germany, assignor to American Lurgi Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 5, 1925, Serial No. 7,180, and in Italy Feb. 15, 1924. 2 Claims. (Cl. 87—12.)

1. In a process for the purification of oils and fats containing free fatty acids, the steps of slowly introducing a soda solution in amount sufficient to neutralize the free fatty acids into a body of the oil or fat to be purified, and continuously removing the water content of the reaction mixture by evaporation during the neutralization process in an amount at least equal to the amount of water introduced in the form of the soda solution plus the amount formed by reaction.



1,685,196. SCARIFIER TOOTH. CLARENCE E. GILBERT, Aberdeen, S. Dak. Filed Nov. 8, 1924. Serial No. 748,659. 1 Claim. (Cl. 262—33.)

A scarifier tool comprising a body provided with parallel walls and ribs provided with parallel walls extending substantially at right angles therefrom, the outer walls of one of said ribs being tapered from a point at one side of the central portion of the tooth to the ends, the walls of the other rib being tapered from a point on the opposite side

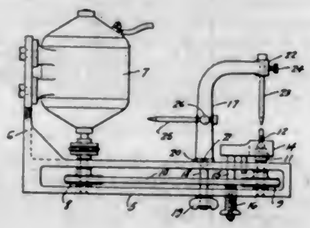


of the center of the tooth to the ends, whereby cutting edges are formed on each end and the horizontal ribs being extended from one end of the tooth to the other.

1,685,197. COMBINED GRAIN-DOOR STRIP AND SIDE-DOOR-POST PROTECTOR. SYLVESTER L. JOINES, McGregor, Tex. Filed Mar. 5, 1927. Serial No. 173,125. 4 Claims. (Cl. 20—27.)

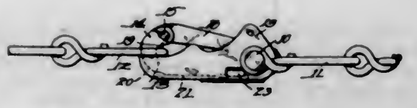
1. A combined grain door strip and side door post protector located interiorly of a car at opposite sides of the door opening thereof and comprising a metallic housing composed of spaced longitudinal side bars consisting of angularly disposed flanges provided with smooth exteriorly curved contast faces and having their inner side edges undercut, and connected together at their back edges by spaced cross pieces, a wood filler strip arranged in the metallic housing and having laterally projecting side portions fitting the undercut side edges of the said side bars, said filler strip being provided with a reduced front portion arranged between the side bars in flush relation with the outer faces thereof, said filler strip filling the space between the side bars of the housing, said filler strip being adapted to receive the fastening device of a grain door, and devices piercing the wood filler strips and the aforesaid back cross pieces whereby to secure thes trip and housing together.

1,685,198. HUMIDIFIER. ABRAHAM F. MARK, Cedar Rapids, Iowa. Filed June 5, 1926. Serial No. 114,022. 1 Claim. (Cl. 123—25.)



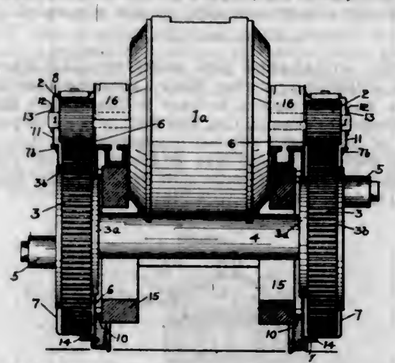
In a humidifying device for internal combustion engines, approximately parallel adjacently-spaced first and second tubes, the first tube being provided with a lateral moist air inlet and with a lateral hot air inlet, the second tube having a lateral outlet, means for connecting the intake manifold of an internal combustion engine with the outlet, a connecting member joined at its ends to the tubes and having a bore which establishes communication between the tubes, a needle valve operating in one end of the bore of the connecting member and extended across the second tube, means connected to the needle valve at a point external to the second tube for operating the needle valve from a distance, a valve controlling each inlet and under the governance of an operator, and closures removably mounted on the ends of the tubes.

1,685,199. PROCESS OF TREATING HATS AND THE LIKE. RAYMOND H. OAKES, Brooklyn, N. Y., assignor to R. H. Comey Brooklyn Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 20, 1927. Serial No. 162,412. 7 Claims. (Cl. 8—2.)



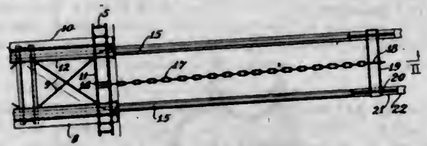
1. A process for removing spots or discolorations from Panama hats and the like which comprises subjecting them to a bath containing calcium hydroxide and then treating the same to remove the alkali.

1,685,200. COUNTERSINK MACHINE. RAYMOND C. PHILLIPS, Los Angeles, Calif., assignor to W. S. Rush & Company, Los Angeles, Calif., a Partnership consisting of W. S. Rush, E. S. Rush, and B. C. Graves. Filed Oct. 6, 1924. Serial No. 741,830. 2 Claims. (Cl. 77—5.)



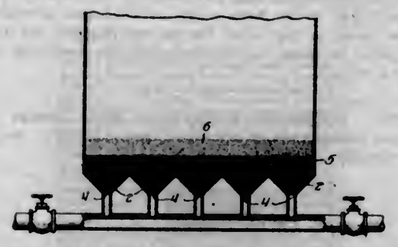
1. A machine of the class described comprising: a base; a countersink drill mounted to extend upwardly therefrom; a depth stop embracing said drill and having a post for raising and lowering said stop, said post being mounted upon said base; means acting upon said post for adjustably raising and lowering said stop; an upright centering pin standard mounted to be turned on said base about a vertical axis and having an overhanging arm provided with a depending adjustable pin fixed thereto in line with said drill; a centering pin adjustably mounted on said standard and extending laterally of said drill; and means to lock said standard in selected positions.

1,685,201. SNAP HOOK. HENRY ST. PIERRE, Worcester, Mass., assignor to St. Pierre Chain Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 4, 1927. Serial No. 210,656. 3 Claims. (Cl. 24—241.)



1. As an article of manufacture, a snap-hook comprising a casing formed of a piece of sheet metal doubled on itself to provide two parallel walls spaced apart, a locking lever located between said walls, a wire spring having a hump for engaging the end of said lever in closed or locking position, preventing its accidental disengagement, the casing being bent in on opposite sides to clamp the shank of said spring in position between the sides of the casing, the casing being cut out under the free end of the spring to give it space for motion.

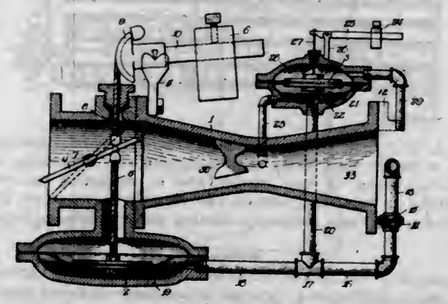
1,685,202. GEAR CASING. ARTHUR F. PITKIN and RALPH P. LA PORTE, Schenectady, N. Y. Filed Oct. 4, 1924. Serial No. 741,551. 5 Claims. (Cl. 74—56.)



5. In a railroad vehicle, the combination of a shaft; a gear wheel mounted thereon; and a casing, for containing oil, enclosing the gear wheel, and comprising two members enclosing opposite sides of the gear wheel, and encircling the shaft; one of the members having a bottom portion removable to provide a space through which the shaft may be moved cross axially out of the member.

1,685,203. ROTARY DUMP. ERSKINE RAMSAY, Birmingham, Ala. Filed June 7, 1927. Serial No. 197,053. 7 Claims. (Cl. 214—52.)

1. The combination with a rotary dump adapted to turn about a longitudinal fixed axis, of means to overcome endwise movement of the dump, comprising a mounting spaced from and in line with the dump, and swinging connecting means between said mounting and dump, the point of attachment of said connecting means to its mounting being adjacent to the projected axis of rotation of the dump.



1,685,204. LIQUID-TREATING MATERIAL AND METHOD OF MAKING SAME. ARTHUR SCHREIER, Vienna, Austria, assignor, by mesne assignments, to General Zeolite Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 3, 1921, Serial No. 512,688, and in Austria Oct. 8, 1920. 7 Claims. (Cl. 99—1.)

1. A sterilizing material comprising a pervious foundation material with a surface deposit of silver, reduced to metallic form by photochemical action.

7. A process of preparing an active metal coating upon a porous material to be used in purification of fluids, which comprises depositing in and upon the porous material a light sensitive compound of the metal, exposing to light and producing the metal in situ.

1,685,205. RATE OF FLOW CONTROLLER. MILTON F. STEIN, Chicago, Ill., assignor, by mesne assignments, to General Zeolite Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1924. Serial No. 756,489. 12 Claims. (Cl. 137—78.)

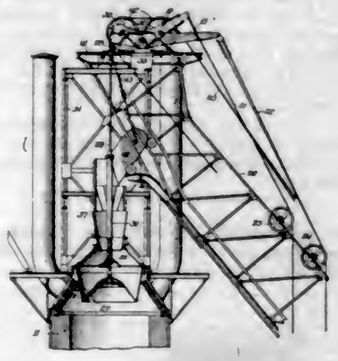
1. A rate of flow controller comprising a tube having a constricted area therein, means for regulating the flow through said tube, a diaphragm operatively associated with said means and having both chambers thereof in communication with said tube at the high pressure portions thereof, and hydraulically operated means for modifying the pressure on one side of said diaphragm incident to change in the rate of flow.

10. In a rate of flow controller the combination with a Venturi tube, of means for controlling the rate of flow through said tube, and means for imparting a rotary motion to the said flow.

1,685,206. RECORD-FILING SYSTEM. CHESTER I. WAGNER, New York, N. Y. Filed Sept. 28, 1923. Serial No. 665,359. 55 Claims. (Cl. 129—16.5.)

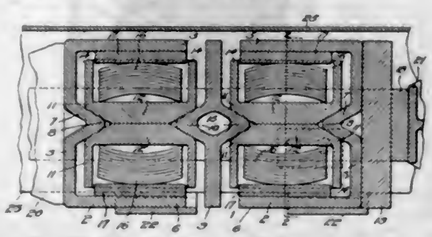
34. A guide for filing-systems, said guide comprising a body-portion, and a plurality of tabs thereon, one tab bearing an alphabetical index, and a separate tab bearing complemental numerical indicia.

41. A record-filing system comprising guides respectively constituted of relatively indestructible material with indicia formed permanently thereon, in relief.



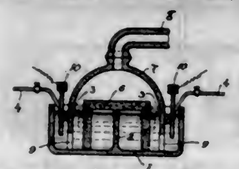
45. A record-filing system comprising guides constituted of relatively indestructible material, and provided with permanent indicia formed in field of contrasting colors.

1,685,207. SIZING APPARATUS. EDWARD A. WHITE, Lewiston, Idaho. Filed Nov. 10, 1926. Serial No. 147,505. 5 Claims. (Cl. 209—84.)



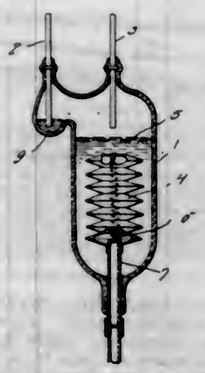
1. In a fruit sizing machine, a travelling carrier having a series of fruit sizing cups and each cup comprising a section fixed to said carrier and a companion section hinged to said fixed section and closable thereagainst by gravity, and cam means for opening said movable sections.

1,685,208. BLAST-FURNACE CONSTRUCTION. FREDERICK H. WILLCOX, Chicago, Ill., assignor to Freyn Engineering Company, Chicago, Ill., a Corporation of Maine. Filed May 17, 1924. Serial No. 713,966. 1 Claim. (Cl. 214—18.)



Blast furnace construction comprising a bell supporting frame carried by the furnace structure, a skip incline structure supported independently of the furnace, and idler pulleys carried by the skip incline coacting with bell operating cables whereby the lateral thrust of such cables is received by the independent skip incline structure.

1,685,209. DRAFT RIGGING. DONALD S. BARROWS, Rochester, N. Y. Filed Apr. 22, 1926. Serial No. 103,908. 12 Claims. (Cl. 213—30.)

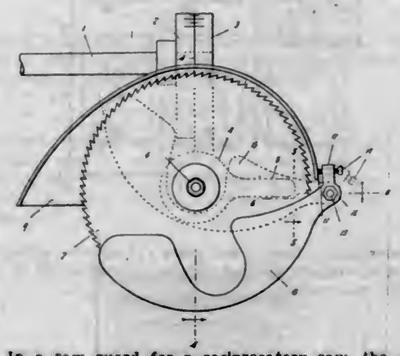


1. In a draft gear, in combination, a friction casing formed with a wedge-shaped inner portion, a plurality of spring carriers enclosed in said casing and formed with friction faces cooperating with the wedge-shaped portion on the casing, a plurality of spring plates contained in said carriers, a follower formed with a wedge-shaped portion complementary to the wedge-shaped portion on the casing and engaging corresponding portions on the spring carriers whereby, when the gear is compressed, the spring carriers move away from each other and compress the spring plates, and wear plates positioned between said spring plates and the adjacent sides of the casing and movable with said carriers when the gear is operated.

1,685,210. APPARATUS FOR ELECTRICALLY HEATING LIQUIDS. GUSTAV BAUM, Weissenstein-on-the-Drau, Karnten, Austria, assignor to The Niagara Electro Chemical Company, Inc., New York, N. Y., a Corporation of New York. Original application filed Oct. 15, 1925, Serial No. 62,603, and in Austria Oct. 28, 1924. Divided and this application filed Oct. 19, 1926. Serial No. 142,582. 9 Claims. (Cl. 219—40.)

1. An apparatus for heating liquids by electrical energy consisting of a liquid container made of insulating material, structures with small interstitial spaces dipping into the liquid in the container and extending above the liquid level, and means for leading electric current through the liquid contained in the structures.

1,685,211. HEAT OR PRESSURE RESPONSIVE CIRCUIT CLOSER. LESTER E. BECK, Kelly Station, Pa. Filed Aug. 11, 1927. Serial No. 212,303. 7 Claims. (Cl. 200—152.)

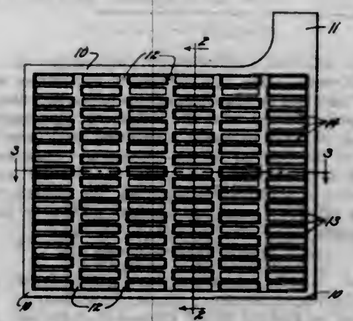


1. A device of the class described comprising a vessel, an electric conducting fluid partly filling the vessel, a bellows immersed in the fluid, a pair of electrodes extending into the vessel so that when the bellows expands the fluid is displaced to cause the immersion of the electrodes for closing a circuit.

1,685,212. LOCOMOTIVE DRIVING BOX. JAMES G. BLUNT, Schenectady, N. Y. Filed Sept. 17, 1926. Serial No. 136,059. 2 Claims. (Cl. 308—43.)

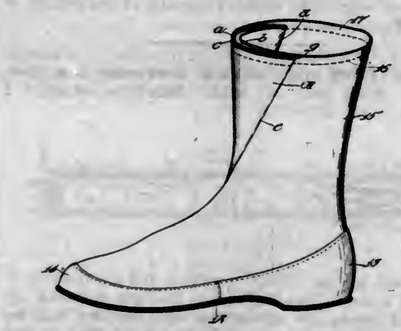
2. The combination of a locomotive driving box, having a recess in the inner face of each of its side walls; a crown brass fitted in the box; a supplemental bearing fitted in each of the recesses, and supporting the crown brass; a wedge fitted in each recess, below the supplemental bearing, affording partial support for the bearing, and adapted to effect vertical adjustment thereof; a lubricant cellar, having means affording partial support for each of the supplemental bearings, said cellar being adapted for adjustment to effect vertical adjustment of the bearings; and means for vertically adjusting the lubricant cellar.

1,685,213. TOOL GUARD. EDWIN DOUGLAS BOYCE, Norristown, Pa. Filed Feb. 20, 1925. Serial No. 10,561. 3 Claims. (Cl. 143—159.)



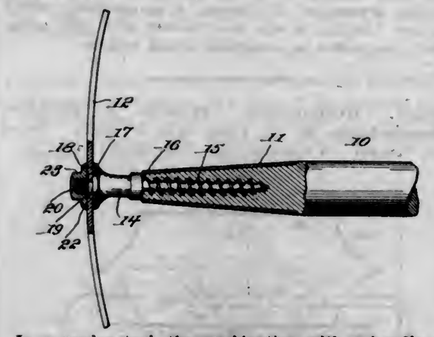
1. In a saw guard for a reciprocatory saw, the combination of a cover plate mounted in fixed relation to the saw and provided with a lug positioned in advance of the saw; and two cover plates pivotally mounted on said lug and provided with arcuate lower edges.

1,685,214. PRODUCTION OF COMMERCIAL BORAX FROM RASORITE BY A WET METHOD. THOMAS M. CRAMER, Long Beach, Calif., assignor to Pacific Coast Borax Company, a Corporation of Nevada. Filed Jan. 22, 1927. Serial No. 162,941. 3 Claims. (Cl. 23—41.)



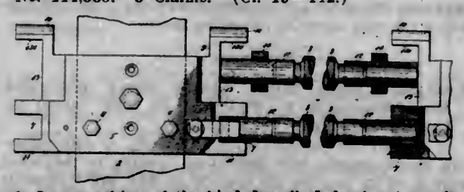
1. In the production of a commercial borax from a solution-resistant sodium borate mineral typically containing four molecular proportions of water to two molecular proportions of B_2O_3, a method which comprises: subjecting said mineral to the action of a form of water at a temperature substantially above 212° F.

1,685,215. STORAGE-BATTERY PLATE. JASPER N. DAVIS, Denver, Colo. Filed June 1, 1926. Serial No. 112,841. 3 Claims. (Cl. 136—36.)



1. In a storage battery plate a grid having a series of parallel, intersecting bars, said bars being rhomboidal in cross section, the cross sections of adjacent bars being at an angle to each other and the cross sections of alternate bars being parallel to each other.

1,685,216. FOOTWEAR. GEORGE P. DIKE, Brookline, Mass. Filed Jan. 20, 1923. Serial No. 613,801. 6 Claims. (Cl. 36—50.)



1. An article of footwear having a circumferentially closed upper which is folded upon itself along a diagonal line extending from a point near the bottom of the shoe diagonally across to the opposite side of the leg at the top.

1,685,217. GARDEN TOOL. EUGENE P. GUTHRIE, Dallas, Tex. Filed Aug. 7, 1925. Serial No. 48,848. 1 Claim. (Cl. 306—26.)

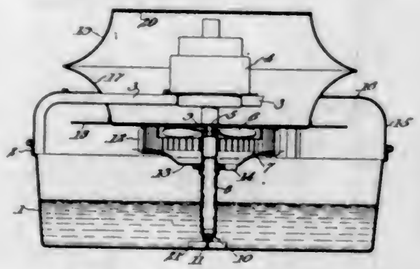
In a garden tool, the combination with a handle provided with a ferrule to prevent splitting of the end of the handle, a shank having a threaded extension having a tapered end penetrating axially through the end of the handle with a shoulder at the base of the extension, the end of the shank opposite the extension having a rectangular boss with a screw stud extending from the face of the boss, a plate having an opening corresponding in shape to fit the boss, the boss being of less thickness than the thickness of the plate, and a nut threadedly engaging the stud to clamp the plate to a flat face at the end of the shank at a point closely adjacent the base of the boss, thereby holding the plate rigid and against turning.

1,685,218. BEARING FOR TOP-DETACHING ROLLS. WILLIAM P. HOMANS, Canton, Mass., assignor to Alsatian Machine Works, Limited, Boston, Mass., a Corporation of Massachusetts. Filed June 8, 1926. Serial No. 114,535. 3 Claims. (Cl. 19—142.)

1. In a machine of the kind described, having top rolls and bottom rolls, a top roll having at each end a bushing

of substantially an equal diameter throughout and a socketed interior to receive an end of said top roll, and bearings to hold said top roll in proper relation to a bottom roll adapted to engage a bushing at any portion of its periphery.

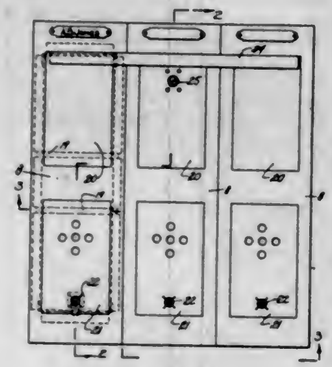
1,685,219. COIN BOX. HANS K. LORENTZEN, New York, N. Y. Filed Mar. 26, 1926. Serial No. 97,535. 2 Claims. (Cl. 232—15.)



1. A coin box having an open end, and an aperture in one side, a control box fitting into the open end, and key controlled means for obstructing said aperture and for assisting in locking said control box in position in said coin box.

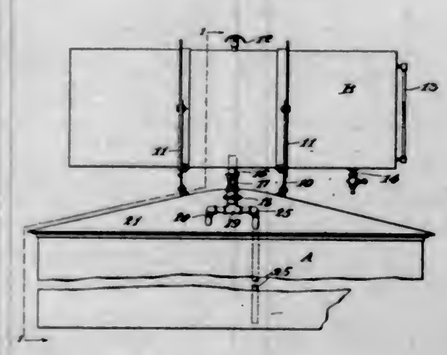
1,685,220. PROCESS OF ACYLATING CARBOHYDRATES. EDMUND B. MIDDLETON, Parlin, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed June 3, 1925. Serial No. 34,733. 3 Claims. (Cl. 260—101.)

1. The process of acetylating a carbohydrate which comprises bringing ketene into contact with said carbohydrate suspended in a suitable liquid medium.



1,685,221. HUMIDIFIER. FREDERIC F. BAHNSON, Winston-Salem, N. C. Filed June 30, 1924. Serial No. 723,404. 8 Claims. (Cl. 261—91.)

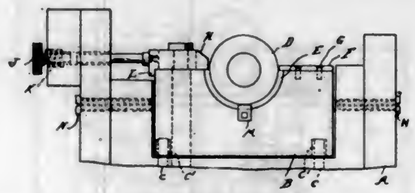
1. In a humidifier, a supporting frame, a motor carried by the frame, a tube depending from said frame and having an opening near the upper end thereof, said tube being rotatable by said motor to deliver water through said opening, a fan located above said opening and establishing a current of air downwardly along said tube, and means carried by and extending laterally from said tube below said opening to receive water delivered therethrough, said means having openings therethrough permitting a portion of said air current to cross the path taken by the water and to move outwardly from said tube below the said laterally extending means.



1,685,222. MAIL BOX. ALBERT EDGAR BLACKMAN, Mount Vernon, N. Y. Filed Aug. 16, 1924. Serial No. 732,515. 7 Claims. (Cl. 232—25.)

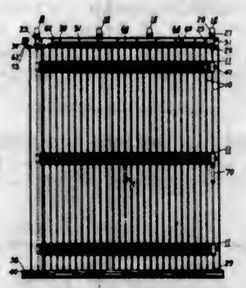
5. A mail box provided with a plurality of mail receiving compartments, each having an opening in the lower portion of its face for the removal of mail and a separate opening of substantially the same area located above the first mentioned opening for the insertion of mail, an individual door provided with an individual lock for closing each of said lower openings, a master door section for closing each of said upper openings, said sections

hinged adjacent their lower edges and opening outwardly and a bar rigidly secured to and connecting all of said master door sections.



1,685,223. ELECTRICAL APPARATUS. ROBERT V. BINGAY, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Dec. 20, 1924. Serial No. 757,120. Renewed Mar. 22, 1927. 8 Claims. (Cl. 220—85.)

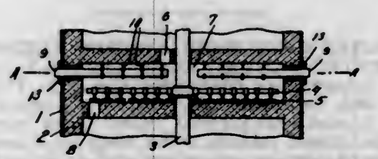
1. The combination of a transformer tank, an oil expansion tank and means forming two passages which communicate at one end with the interior of said expansion tank, one of said passages connecting with the upper portion of the interior of the transformer tank and the other of said passages extending downwardly through the interior of said transformer tank and communicating with the interior of said transformer tank near the bottom thereof.



1,685,224. HOLDING BLOCK FOR BROACHING HALF BEARINGS. LOWELL C. BLOMSTROM, Detroit, Mich., assignor to Federal Mogul Corporation, Detroit, Mich., a Corporation of Michigan. Filed July 18, 1927. Serial No. 206,524. 7 Claims. (Cl. 90—59.)

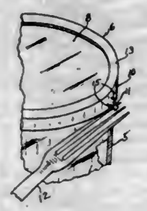
1. Means for holding a half bearing in position for broaching, comprising, in combination with a base block provided with a seat of suitable contour, a fixed shelf projecting over one lateral edge of the bearing seat, under which one edge of the half bearing is adapted to be slipped when the latter is first placed in its seat, and a slidable

holding piece adapted to be moved transversely of the axis of the half bearing for accurate engagement over the upturned opposite edge of the latter.



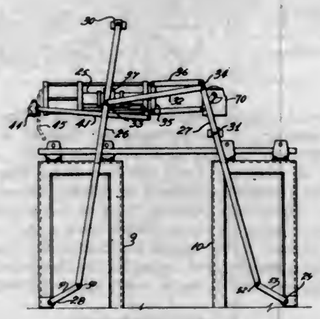
1,685,225. GATE MECHANISM. THOMAS BRADY, East Orange, N. J., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 10, 1926. Serial No. 121,572. 6 Claims. (Cl. 89—86.)

1. A gate comprising, a plurality of parallel vertical members, a plurality of hinges for connecting said members together, said hinges being arranged in a plurality of horizontal rows, and a plurality of members, secured to the vertical members and movable with respect to the hinges, for positioning the hinges on the vertical members.



3. A gate comprising, a plurality of spaced vertical tubes, supporting hangers attached to certain of said tubes, hinge members connecting and spacing said tubes, and sleeves secured to the tubes, said sleeves serving to position the hinge members on the tubes.

1,685,226. HEATING HIGH-TEMPERATURE APPARATUS. CHARLES LALOR BURDICK, New York, N. Y., assignor to Guggenheim Brothers, New York, N. Y., a Copartnership. Filed June 25, 1926. Serial No. 118,413. 5 Claims. (Cl. 266—1.5.)

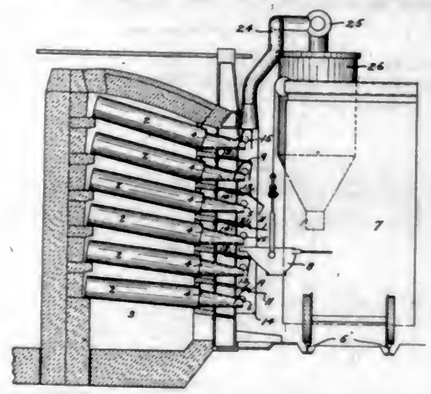


1. The combination with a high temperature apparatus having a heating chamber of circular section of electric heating units comprising a plurality of elongated electric heating elements each radially disposed in said chamber and of such construction that the amount of heat generated by said element progressively increases from the center towards the periphery of said heating chamber.

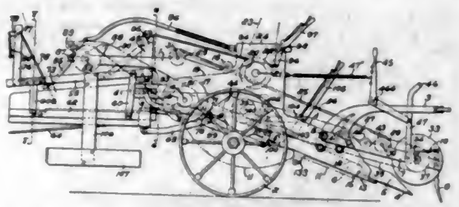
1,685,227. CLOSURE DEVICE. LESLIE R. N. CARVALHO, Toledo, Ohio. Filed Oct. 27, 1925. Serial No. 65,154. 5 Claims. (Cl. 215—46.)

1. A receptacle closure comprising a top portion, a depending flange having a margin thereof formed at regular intervals with small lugs, said lugs being curved outwardly transversely of their length with diminutive radii to make tearing of said flange expeditious, and a resilient curved flange formed by bending inward the margin between the said lugs, to separably attach the closure to a receptacle by friction.

1,685,228. ELEVATOR AND INCLOSURE THEREFOR. WILLIAM B. CROWELL, New York, N. Y., assignor to Elevator Supplies Company, Inc., Hoboken, N. J., a Corporation of New Jersey. Filed Dec. 7, 1926. Serial No. 153,078. 14 Claims. (Cl. 187—1.)



2. A four-walled elevator inclosure extending past a plurality of landings and provided with a pair of passageways in one of its walls at each landing, in combination with an elevator cage in said inclosure also provided with a pair of passageways in the corresponding wall, gates normally preventing passage of persons thru said passageways, a controller in said cage for causing the cage to stop opposite said landings, and means controlled from said cage for opening the gates at a landing opposite which said cage has stopped.

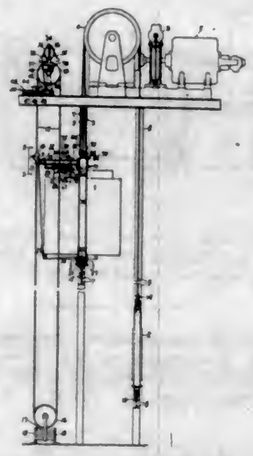


1,685,229. APPARATUS FOR TREATING FUMES. MORTON I. DORFAN, New York, N. Y., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Nov. 21, 1923. Serial No. 676,018. 5 Claims. (Cl. 266—19.)

1. In combination with a plurality of retorts each having means for discharging burning fumes, a hood disposed over each of said discharge means, each of said hoods com-

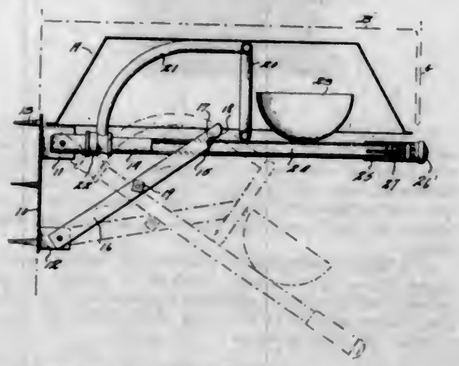
prising an adjustable wall located in front of said discharge means and being formed to provide a combustion zone at the adjacent retort and having an opening for admitting fresh air directly to said zone, means for collecting gases of combustion from all of said hoods, and means for separating the solids from the collected gases.

1,685,230. POTATO DIGGER. THOMAS GIBERSON, Caribou, Me. Filed Apr. 16, 1926. Serial No. 102,472. 16 Claims. (Cl. 55—138.)



5. A potato digger comprising a frame, yielding row positioning members at the forward end thereof, a motor-operated rotatable feeding member between the positioning members for feeding the row centrally of the digger, an elevator with a smooth surfaced row pusher thereover resting upon and frictionally pushing the row rearwardly for elevating the row; a swinging shaker with a vine buncher at the rear thereof, a vine kicker for kicking the vines toward the bunching member and means on the frame for operating the feeding member, elevator, row pusher and kicker.

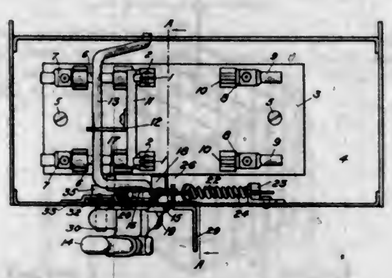
1,685,231. RECOVERY OF SULPHUR. WILLIAM H. HOWARD, Salt Lake City, Utah. Filed Aug. 20, 1927. Serial No. 214,445. 7 Claims. (Cl. 23—226.)



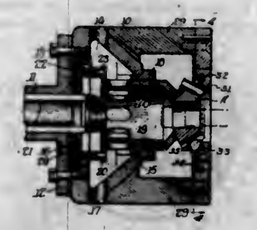
1. The method of recovering sulphur from furnace gases containing sulphur dioxide which comprises passing the furnace gases in contact with a body of water to form a solution of sulphur dioxide, passing a current of air in contact with the sulphur dioxide solution to form a mixture of air and sulphur dioxide, and subjecting the mixture of air and sulphur dioxide to the action of incandescent carbonaceous material.

1,685,232. ELEVATOR SAFETY APPLIANCE. FREDERICK HYMANS, Yonkers, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 30, 1926. Serial No. 138,704. 4 Claims. (Cl. 187—89.)

3. Means for causing the operation of a governor rope actuated safety appliance comprising, coacting jaws carried by the car, spring means tending to cause said jaws to grip the governor rope, a latch for retaining said jaws away from the governor rope, and means controlled by the hoisting ropes for releasing said latch to cause the jaws to grip the governor rope and effect the operation of the safety appliance.



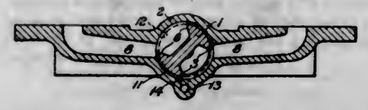
1,685,233. DISHPAN HOLDER FOR SINKS. JOHN R. JEWETT, Jr., Grand Island, Nebr. Filed May 12, 1927. Serial No. 190,930. 5 Claims. (Cl. 248—20.)



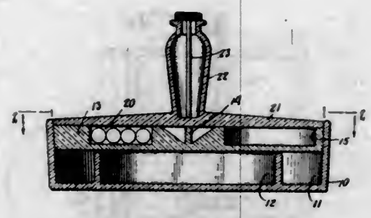
4. A dish pan holder of the character described including a bracket, an arm pivoted upon the bracket, a frame projecting upward from the arm and approximately conforming to the shape of an inverted dish pan, means for latching the arm in a raised position and means for releasing the said latching means including a push button mounted upon the forward end of the arm.

1,685,234. QUICK-MAKE-AND-BREAK ELECTRIC SWITCH. MORRIS KATCHER, New York, N. Y., assignor to Columbia Metal Box Co., New York, N. Y. Filed Feb. 6, 1925. Serial No. 7,327. 6 Claims. (Cl. 200—67.)

1. A quick make-and-break electric switch comprising circuit terminal contacts, switch levers for opening and closing the circuits between said contacts, a box for enclosing said contacts and switch levers, a handle located outside the box having an extension projecting through one wall of same and rotatably mounted therein, said extension having a necked down portion projecting just within the box, a slotted sheet metal stamping having its slotted portion fitting over said necked down portion within the box, said stamping having a tongue bent up from it and towards the interior of the box, means for operating the switch levers and spring actuated means having a lost motion connection to said operating means for snapping the switch levers into open and closed positions, said spring means being adapted to be tripped by said tongue.

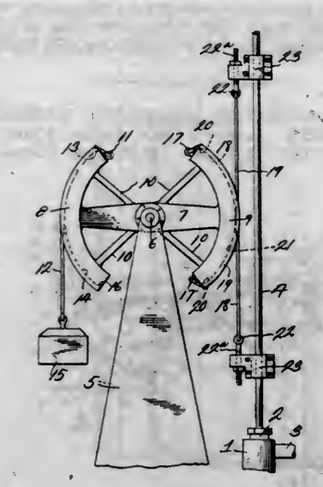


1,685,235. CHUCK. HERBERT E. KEMPTON, KEITH F. GALLIMORE, and RAYMOND M. WOYTYCH, Fond du Lac, Wis., assignors, by mesne assignments, to The Heald Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 2, 1924. Serial No. 723,661. 6 Claims. (Cl. 279—1.)



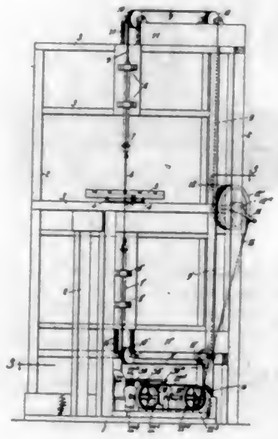
6. A chuck having, in combination, a chuck body, a front plate provided by said body, said front plate having a central axial bore, hollow guiding means in said body having an interior cylindrical surface coaxial with said bore, a clamping member in the form of a sleeve longitudinally movable in said guiding means, spring means to normally force said clamping member towards said front plate, and a draw bar for drawing said clamping member away from said front plate.

1,685,236. PLUG COCK. JOSEPH LAWSON, Great St. Helens, London, England, assignor to Asiatic Petroleum Company, Limited, St. Helens Court, London, England. Filed Jan. 3, 1928, Serial No. 244,341, and in Great Britain Sept. 24, 1926. 8 Claims. (Cl. 251—110.)



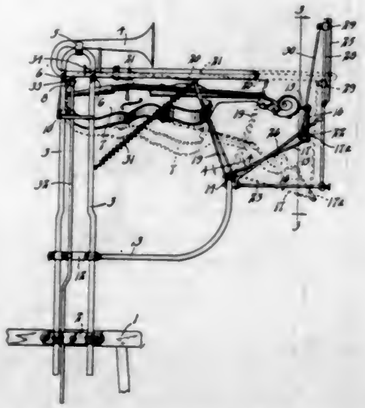
1. In a plug cock the combination of a plug, a plurality of ports formed in the periphery of said plug, grooves formed in the periphery of said plug and extending completely around said ports, and means adapted to place said grooves in communication with a reservoir.

1,685,237. VANITY TRAY. LOUIS LEVIEN, New York, N. Y. Filed Aug. 18, 1927. Serial No. 213,965. 3 Claims. (Cl. 206—1.)



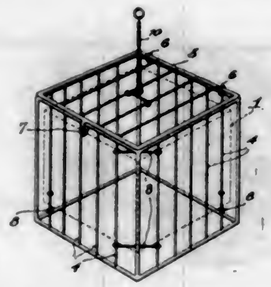
3. A vanity case having a body portion having the interior thereof provided with a circular flange therein, an intermediate cover member located within said body portion and adapted to rest upon said flange, said intermediate cover member having a central depression provided with a ridge to serve as a hand-hold and a cover positioned upon said intermediate portion and within said body portion.

1,685,238. DERRICK WALKING BEAM. WILLIAM R. MCDOWELL, Las Vegas, Nev. Filed July 14, 1926. Serial No. 122,481. 1 Claim. (Cl. 74—5.)



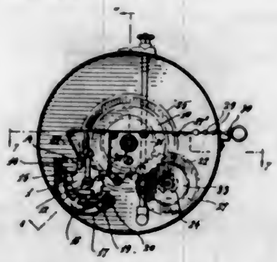
The combination with a pump rod, an oscillating walking beam adjacent said pump rod, of segmental members concentrically arranged and carried by the end of said beam, a flexible member anchored to the upper end of one of said segmentally shaped members in a groove in the outer periphery thereof, a weight carried by said flexible member, said weight being positioned whereby upon oscillation of the beam in one direction, one side of said weight will pass between the adjacent ends of the segmental members, the other segmental member having its outer periphery adjacent the pump rod, flexible members connected to opposite ends of the last mentioned segmental member, said flexible members extending through grooves in the periphery of the last mentioned segmental member and anchored to the pump rod at spaced points.

1,685,239. RECIPROCATING-SAW MACHINE. CHARLES A. MORAN, Bernardsville, N. J. Filed Mar. 13, 1926. Serial No. 94,378. 10 Claims. (Cl. 29—74.)



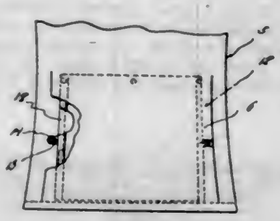
1. A reciprocating saw machine comprising two flexible elements for reciprocating the saw, an oscillating element, two oscillating wheels for receiving said flexible elements and to which said flexible elements are respectively secured, and adjustable means respectively connecting said wheels to said oscillating element for tensioning said flexible element.

1,685,240. OPERATING MEANS FOR MUSICAL INSTRUMENTS. ALBERT NELSON, Buffalo, Minn. Filed July 12, 1926. Serial No. 121,873. 14 Claims. (Cl. 84—170.)



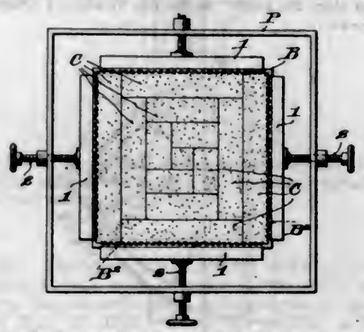
6. In combination with a bowed instrument of the viol type and a wind instrument of the type having a playing slide, a vertically adjustable standard adapted to hold said instruments in such relation that said first mentioned instrument can be bowed and said last mentioned instrument blown at the same time by a single operator, the base of said first mentioned instrument being pivoted to said standard and means for operating the tuning slide of said second mentioned instrument from movement imparted thereto by swinging movement of said first mentioned instrument.

1,685,241. INSECT TRAP. ANNABELLE S. NORTHRUP, Norfolk, Va. Filed July 7, 1926. Serial No. 121,022. 2 Claims. (Cl. 43—107.)



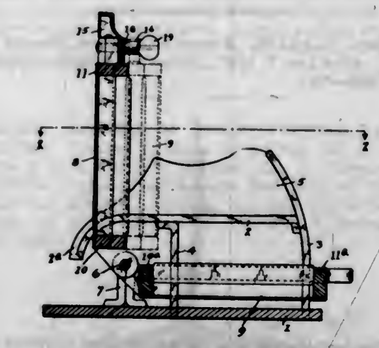
1. An insect trap comprising a guard body consisting of a plurality of spaced wires, horizontally disposed members carried by certain of said spaced wires, a removable bait carrier including a frame and bait-carrying side walls arranged to form a cube and the corners of the frame of said bait carrier being adapted to rest on the horizontal supporting members thereby to expose all sides of the bait carrier.

1,685,242. PEDOMETER. ROBERT VAUGHAN OWEN, New York, N. Y. Filed Aug. 23, 1927. Serial No. 214,808. 4 Claims. (Cl. 235—105.)



1. In pedometers, in combination with a casing, a distance indicating member and gearing for driving said member, a pendulum device for actuating said gearing and a striker for actuating said pendulum.

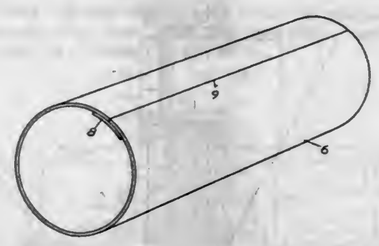
1,685,243. GAME POUCH. JOHN WOODS RICH, Woolrich, Pa. Filed Dec. 29, 1927. Serial No. 243,256. 1 Claim. (Cl. 2—248.)



As a new product of manufacture, a game pouch for use in association with a hunter's coat pocket, said pouch being composed of two thicknesses of material connected together along the top and bottom edges, and stitched along their remaining side edges up to a predetermined point, forming entrance mouths on opposite sides, said pouch being constructed of substantially water-proof material, and being equipped with apertured tabs and fastening means whereby it may be separably connected with a coat.

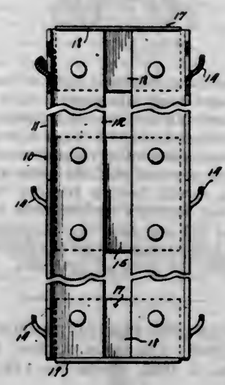
1,685,244. METHOD OF MAKING SOUND AND VIBRATION INSULATING UNITS. SIEGFRIED ROSENZWEIG, New York, N. Y. Filed Sept. 4, 1925. Serial No. 54,585. 2 Claims. (Cl. 20—4.)

1. A method of making sound and vibration insulating units of the type including a sound deadening center and a metal frame which consists in assembling a plurality of pieces of soft material in a rectangular metal frame until the sides of the frame bulge outwardly, and subsequently restoring the frame to its normal shape by exerting pressure on the outwardly bulged sides thereof to compress the pieces of material to lock the same in place.



1,685,245. VEGETABLE CUTTER. CALOGERO RUSSO, Cleveland, Ohio. Filed May 4, 1925. Serial No. 27,678. 3 Claims. (Cl. 146—147.)

1. A cutter comprising a base, means for supporting articles to be cut, said means comprising parallel spaced bars above the base, a pair of frames pivoted to swing independently about a common axis toward and from the base and parallel blades fixed in said frames and positioned to pass between said bars, both said frames being movable to positions in which said blades are entirely below the top surfaces of said bars.

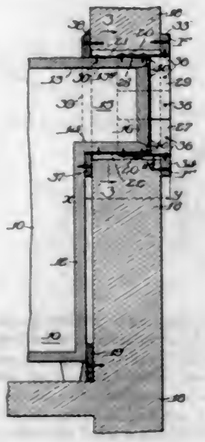


1,685,246. CONTAINER AND METHOD OF MAKING THE SAME. ALAN M. SCAIFE, Pittsburgh, Pa., assignor to Wm. B. Scaife & Sons Company, a Corporation of Pennsylvania. Filed June 1, 1927. Serial No. 195,645. 3 Claims. (Cl. 113—116.)

1. A tank having a longitudinally-extending seam formed by abutting edges of the tank and an interior longitudinally-extending strap member brazed to each other, the ends of said strap being swaged to form inclined faces at one side of the tank only to permit the ready insertion of the tank heads.

3. The method of making a cylindrical metal vessel having a longitudinal joint interiorly reinforced, consisting in cutting a sheet metal blank to bring its longitudinal edges together in abutting relationship, then inserting a reinforcing metal strip having flattened ends on said seam, said strip bridging the seam and running the full length of the vessel, initially fastening together the adjacent faces of the strip and the vessel on both sides of the seam and throughout the length of the seam in such a manner as to prevent the intense heat of the subsequent brazing operation from distorting or warping the strip, and finally brazing the parts together.

1,685,247. STUDDING FOR BUILDING STRUCTURES. EDWARD B. SELWAY, Leetsdale, Pa. Filed Nov. 22, 1927. Serial No. 235,005. 1 Claim. (Cl. 72—115.)

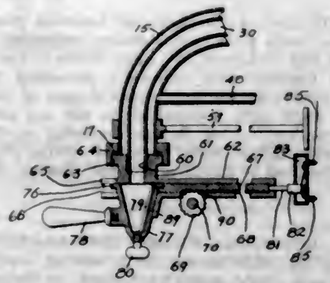


A metallic stud of the character described comprising two parallel angle irons having flanges projecting toward each other and perforated, the other flange of each angle iron being provided with outwardly projecting tongues, tie plates connecting the first named flanges of the angle irons, and angle irons disposed at the top and bottom of the studding and having flanges connected to the first named flanges of the angle irons and having horizontal flanges formed with apertures for the passage of pipes, wiring, etc.

1,685,248. REFRIGERATOR AND INSTALLATION CONSTRUCTION THEREFOR. OTTO STRUPP, Dwight, Ill. Filed June 4, 1927. Serial No. 196,498. 6 Claims. (Cl. 20—1.11.)

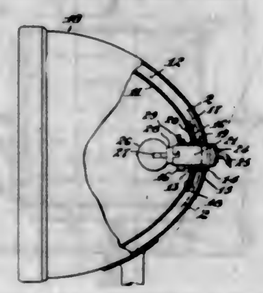
1. The combination with a refrigerator having a body extension of the character described adapted to pass deeply

into an opening through a building wall, of a metallic covering surrounding the extension and projecting to the outside of the building wall when the refrigerator is nor-



mally installed, with a border-like member at the outer extremity of said covering for closing the outer margins of the opening through the building wall.

1,685,249. MACARONI DIE. MARIO TANZI, Boston, Mass. Filed Jan. 23, 1928. Serial No. 248,855. 5 Claims. (Cl. 107—14.)



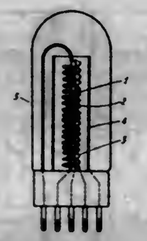
3. A die for forming macaroni and the like consisting of a die plate having a dough discharging aperture comprising a longitudinal slot and an opening located midway of the length of said slot and constituting a lateral enlargement thereof, a channel substantially equal in area with said opening extending through said die plate and terminating in said opening, dough feeding recesses leading through said die plate and passages leading from said recesses to said longitudinal slot and also to said channel, said dough feeding recesses and passages being of relatively large areas as compared with the area of said slot.

1,685,250. APPARATUS FOR DISPENSING ICE CREAM AND THE LIKE. FREDERICK E. KEY, East St. Louis, Ill. Filed Nov. 1, 1926. Serial No. 145,477. 4 Claims. (Cl. 107—8.)

1. In an apparatus for dispensing ice cream comprising a magazine adapted to hold a body of cream, a restricted discharge opening formed in one end of said magazine, a valve for closing said discharge opening, a dispensing device adapted to be moved into alignment with said opening when said valve is opened, means for applying pressure to the interior of said magazine at the end opposite said opening simultaneously with the opening of the valve, and means for automatically stopping the application of additional pressure when said valve is closed.

1,685,251. LAMP. FRANK THURBER, Los Angeles, Calif. Filed Mar. 25, 1926. Serial No. 97,412. 1 Claim. (Cl. 240—44.)

In combination with a reflector having an opening therethrough; a ductile plate secured to the reflector and having an opening registering with the opening in the reflector; a sleeve extended through the opening in said plate; a tubular member seated in said sleeve and adapted to receive an incandescent electric lamp; means carried by said sleeve whereby said tubular member may be lengthwise adjustable in the sleeve, said plate being constructed of ductile material whereby said sleeve, said tubular member and the lamp carried thereby may be bodily shifted with respect to the reflector so that the filament of the lamp may have universal focusing with respect to the reflector.



1,685,252. CURTAIN. RUDOLPH O. TRUER, Murray Hill, N. J. Filed July 7, 1927. Serial No. 203,910. 4 Claims. (Cl. 156—10.)

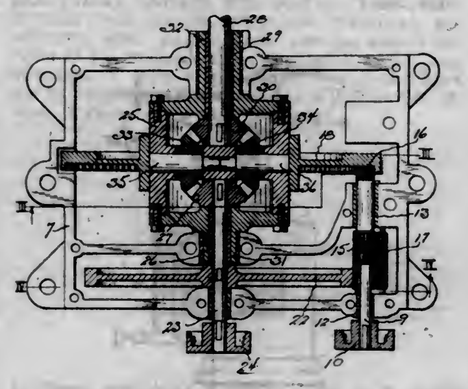
1. The combination of a curtain heading provided upon its back with a textile drapery-carrying strip, and flexible metal carriers attached thereto and being normally flat and disposed parallel to the plane of the hanging curtain but readily bendable into hooks adapted to cooperate with a curtain rod.

1,685,253. DOUBLE-GRID THERMIONIC TUBE. MANFRED VON ARDENNE, Berlin, Germany, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Dec. 17, 1926, Serial No. 155,544, and in Germany Dec. 1, 1925. 1 Claim. (Cl. 250—27.5.)

A thermionic tube comprising a straight filament substantially 2 centimeters long, a pair of concentric coiled grids about the filament composed of wire whose diameter is substantially 2 millimeters, the inner grid having substantially 13 turns and a diameter of substantially 2.7 millimeters, the outer grid having a diameter of substantially 602 millimeters and having substantially 18 turns, the inner grid being adapted for causing high frequency

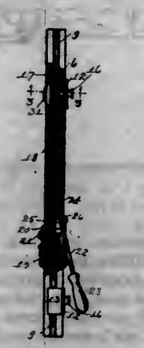
variations in the electron stream of the tube, and the outer grid being adapted for causing low frequency variations in the electron stream of the tube.

1,685,254. REENFORCED PLASTER BOARD. CURRY O. WALPER, Detroit, Mich., assignor to Standard Plastering System, Inc., Detroit, Mich., a Corporation of Michigan. Filed Mar. 15, 1926. Serial No. 94,797. 2 Claims. (Cl. 72—16.)



1. In a building construction, a plaster board having a wire fabric embedded therein and coextensive therewith, a support, fastening elements driven through the board into said support and the heads of which contact with and are obstructed by said wire fabric, thereby leaving recesses in the board, and plaster applied to the outer surface of the board and filling said recesses.

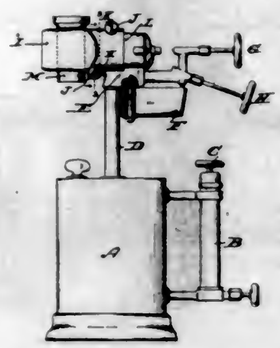
1,685,255. METHOD OF MANUFACTURING RAIL ANCHORS. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Original application filed June 9, 1925, Serial No. 655,240. Divided and this application filed Apr. 23, 1924. Serial No. 708,493. 2 Claims. (Cl. 29—169.)



1. In the manufacture of a rail anchor having a bearing near one end for the marginal upper surface of the rail base and a bearing at a place intermediate the ends of the anchor for the under-surface of said rail base, the method of accurately positioning said bearing surfaces with respect to each other both lengthwise of the anchor and vertically thereof, which comprises bending the blank to form said intermediate bearing, holding said blank on a form so as to fix the position of the intermediate bearing and bending the end of the blank around a form and over a projection thereon so as to indent the blank at substantially the termination of said bend to form the point of bearing of said end bearing surface.

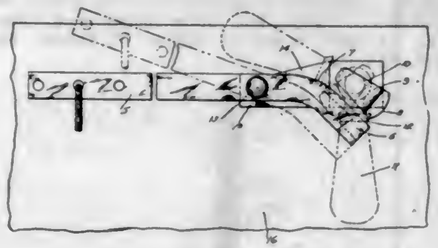
1,685,256. SPEED REDUCER. DIXON E. WASHINGTON, Kansas City, Mo. Filed Feb. 20, 1926. Serial No. 89,595. 2 Claims. (Cl. 74—34.)

1. A speed reducer comprising a supporting casing, a differential case rotatably carried thereby, a differential gear-set within said case including a pair of master gears disposed in axial alinement and each keyed to a shaft extending exteriorly of said differential case and rotatably mounted on said casing, a driven shaft mounted on said casing, means actuated by said driven shaft for rotating one of said master gear shafts in one direction at a slower rate of speed than said driven shaft, said means comprising an idler gear journalled in said casing, and means actuated by said driven shaft for rotating said differential case in the same direction at a higher rate of speed whereby the other of said master gears and associated shaft is rotated at a rate of speed equal to the difference in the rate of speed of said case and first-mentioned master gear and said reducer is provided with a medium and slow speed take-off shaft having rotation in the same direction.



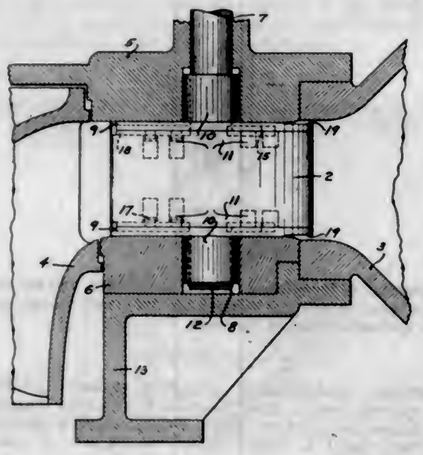
1,685,257. DIRECTION INDICATOR FOR VEHICLES. RUSSELL J. WEIGLE, East Grand Rapids, Mich. Filed Dec. 19, 1927. Serial No. 240,997. 6 Claims. (Cl. 116—52.)

1. In a device of the character described: a body having a guide slot comprising a horizontal portion and a vertical portion; a hinge member comprising leaves swing-



ably connected on a vertical axis one of said leaves being carried by the body; an indicator arm carried by the other leaf of the hinge member swingably on a horizontal axis; an operating elongated member connected to the arm pivotally on a vertical axis and movable in said portions of the guide-slot.

1,685,258. TINNING CUP ATTACHMENT FOR BLOW-TORCHES. HARRY F. WEINERT, Detroit, Mich. Filed Feb. 23, 1927. Serial No. 170,104. 1 Claim. (Cl. 126—240.)

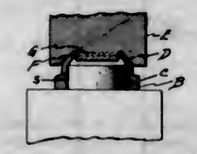


A tinning cup attachment for a torch comprising a tubular bracket, said bracket having opposite end portions axially alined with each other and of different internal diameters, means for attaching the end portion of lesser diameter to the torch, and the end portion of greater diameter having means for supporting the cup transversely of the axis of the bracket with the exterior surface of the cup spaced from the inner surface of the bracket.

1,685,259. FLUSH-TANK FITTING. ARTHUR W. WELLINGTON, Waterbury, Conn., assignor to The Chase Companies, Inc., Waterbury, Conn., a Corporation. Filed Sept. 4, 1926. Serial No. 133,564. 1 Claim. (Cl. 4—67.)

In a revoluble-handle flush-tank fitting, the combination with a valve-lifting lever, the inner end of which is provided with a downwardly-inclined operating-surface, of a handle-shaft, a handle located at the outer end thereof, and an eccentric positioned upon the inner end thereof at an acute angle with respect to the handle and so as to normally occupy a plane parallel with the said operating-surface when the handle is depending in the vertical plane, whereby the weight of the handle and eccentric act in unison to move the said eccentric from a dead-center position with respect to the said operating-surface.

1,685,260. GUIDE VANE. WILLIAM M. WHITE, Milwaukee, Wis. Filed June 17, 1926. Serial No. 116,551. 2 Claims. (Cl. 253—122.)

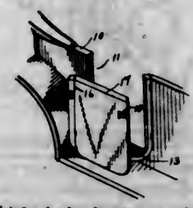


1. In combination, a casing element, a vane element formed to direct fluid into said casing element and pivotally associated therewith, and a packing member supported by one of said elements and resiliently urged against the other on opposite sides of the vane element pivot.

1,685,261. HYDRAULIC TURBINE. WILLIAM M. WHITE, Milwaukee, Wis. Filed Aug. 23, 1926. Serial No. 130,819. 7 Claims. (Cl. 253—122.)

1. In combination, a casing element, a vane element posed about the axis of said rotor, and a series of movable vanes located between said fixed vanes and said rotor, some of the movable vanes having different shape than others.

1,685,262. PROCESS OF MAKING GLAND NUTS. WILLIAM R. WILEY, Mount Clemens, Mich. Filed Dec. 6, 1924. Serial No. 754,288. 4 Claims. (Cl. 10—86.)



3. The process of forming a gland packing nut from an interiorly threaded cylindrical blank, consisting in inbending the top edge thereof by the pressure thereupon of a descending member having in its under face an annular groove of corresponding peripheral size to that of the blank, the outer lateral wall of said groove being angularly inclined to cause an inward inclination of the top edge of the blank when engaged, and thereafter stamping the then inbent top edge of the blank into occupancy of a plane to which the axis of the blank is substantially perpendicular.

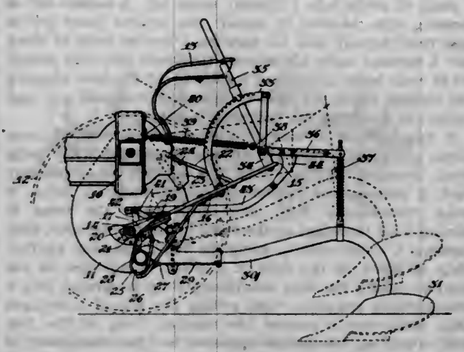
1,685,263. HAT GUARD. FREDERICK WILLIAM JAMES WOLFF, San Francisco, Calif. Filed Sept. 21, 1927. Serial No. 221,075. 1 Claim. (Cl. 132—58.)

In a straw hat securing device the combination comprising, a short elastic band, a clasp engaging each extremity of the said band, said clasp comprising two discs linked together at one portion of their periphery and folded thereat so that their respective peripheries coincide, a small sharp pointed hook of circular cross section secured to the edge of one of the said discs, a series of fine upturned projections of the nature of teeth formed on the edge of the said discs, the said teeth on one disc being adapted to fit between the corresponding teeth on the other said disc.

1,685,264. AUTOMOBILE BODY. WILLIAM H. ATKINSON, Washington, D. C. Filed Apr. 29, 1926. Serial No. 105,483. 7 Claims. (Cl. 296—44.)

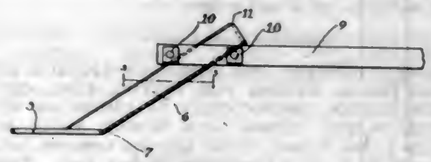
1. A motor vehicle body having a single doorway on either side, a door for said doorway comprising a door-member and an outer-frame, a seat adjacent said doorway, means co-operating with the parts of said door, whereby said doorway may be opened from substantially either jamb to permit access to said seat or to the rear of said seat depending upon the jamb from which said doorway is opened.

1,685,265. CLEANING IMPLEMENT. WILLIAM J. BARBER, Delphos, Ohio, assignor to The E. & N. Manufacturing Company, Delphos, Ohio, a Corporation of Ohio. Filed Sept. 19, 1925. Serial No. 57,351. 9 Claims. (Cl. 15—118.)



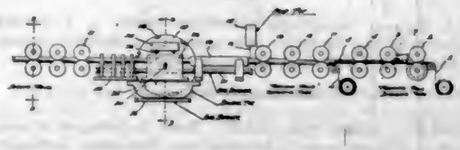
1. In a device of the character described, a handle having an attaching member provided with a projecting edge portion, a holder adapted to fit upon said attaching member and having a projecting edge portion adapted to lie alongside the projecting edge portion of the attaching member, a second holder having a portion adapted to grip said projecting edge portions to secure said holders together and to the attaching member, and a cleaning element carried by one of said holders.

1,685,266. PROCESS FOR HEATING LIQUIDS BY ELECTRICAL ENERGY FOR DISTILLATION, CONCENTRATION, PROVOCATION OF CHEMICAL REACTIONS, ETC. GUSTAV BAUM, Karnten, Austria, assignor to The Niagara Electro Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 15, 1925, Serial No. 62,603, and in Austria Oct. 28, 1924. 6 Claims. (Cl. 219—40.)



4. Process comprising absorbing liquid in a porous non-conducting material and passing an electric current through the liquid thus absorbed.

1,685,267. TRACTOR PLOW. BERT R. BENJAMIN, Oak Park, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 9, 1924. Serial No. 731,104. 13 Claims. (Cl. 97—47.)

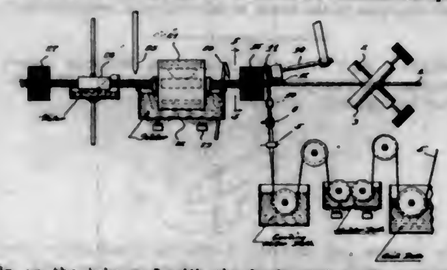


1. The combination with a tractor having an upwardly arched axle structure at the rear, of a rearwardly extending U-shaped frame extending across said arch and having its arms connected to the lower portions thereof, a draft bracket fixed on the under side of each of said arms and formed with a substantially vertical guide-way, a transverse draft bar with its ends mounted on said guide-ways, a rearwardly extending implement beam secured to said bar, a bell crank lifting lever mounted on the outer portion of the U-shaped frame with one arm connected to the rear of the implement beam, a secondary lever mounted on the forward portion of said frame and connected to the draft bar, and a link connecting the two levers for joint movement, whereby parallel movement is imparted to the ends of the implement beam.

1,685,268. CULTIVATOR BLADE. BERT R. BENJAMIN, Oak Park, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Oct. 25, 1926. Serial No. 143,846. 3 Claims. (Cl. 97—207.)

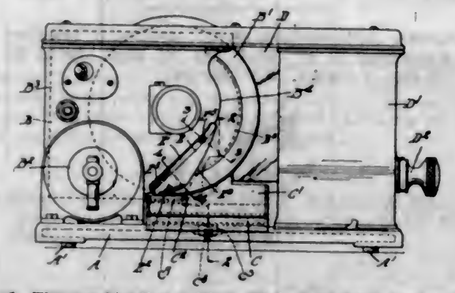
1. An earth working tool comprising a pair of contacting flat blades, the respective blades having oppositely beveled forward edges arranged in offset relation and end portions which are oppositely extended laterally at right angles, and dragbars clamped on the upper ends of the blades.

1,685,269. METHOD AND APPARATUS FOR MAKING TUBING. HARRY W. BUNDY, Detroit, Mich. Filed Oct. 16, 1926. Serial No. 141,955. 3 Claims. (Cl. 113—33.)



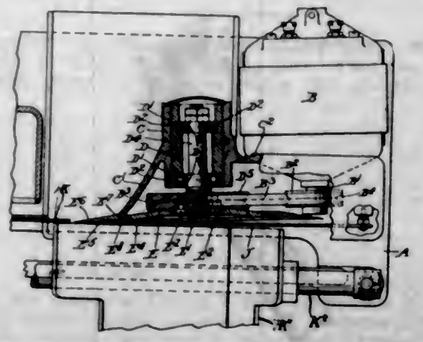
1. An apparatus for making multi-ply, longitudinally-drawn tubing, comprising a set of forming rolls for drawing a strip of stock into a tubular inner ply, a second set of forming rolls adapted to permit the tubular inner ply to pass therethrough and for forming a second strip of stock into a tubular outer ply around the inner ply, said second set of rolls being positioned forwardly of the first whereby the formed inner ply passes through the second set, and means for soldering the two plies together.

3. The method of making multi-ply tubing which comprises utilizing a plurality of supplies of flat strip metal stock, drawing the stock from the supplies simultaneously with a uniform rate of movement, rolling one strip of stock transversely into tube form while the same is moving with the edges of the stock in close proximity, thus forming a substantially complete tube, drawing another strip of stock to the first at a point in advance of the location where the first mentioned strip is formed into a substantially complete tube, rolling the second mentioned strip transversely around the tubular form of the first with a rolling movement opposite to that movement of the rolling of the first mentioned strip, whereby the longitudinal edges of the second strip are in close proximity and diametrically opposite the edges of the first mentioned strip, then securing the tubes together by molten sealing metal and preventing this molten sealing metal from entering in the inside of the tube in material quantities by reason of the longitudinal edges of the first mentioned strip being in close proximity.



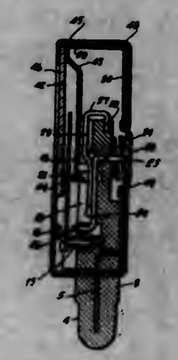
1,685,270. METHOD OF MAKING FINNED TUBING. HARRY W. BUNDY, Detroit, Mich. Filed July 14, 1927. Serial No. 205,594. 1 Claim. (Cl. 113—116.)

The method of making finned tubing which consists in moving a tube longitudinally, rotating the tube while it is so moving, drawing strip stock from a supply, bending this strip stock so that it is angular in cross section to provide an upright and a horizontal portion, crimping or corrugating the upright portion, winding this stock on the tube with the upright portion forming a continuous spiral



fin on the tube and with the horizontal portion directly engaging the body of the tube to form a spiral band on the tube.

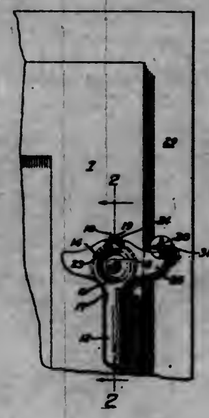
1,685,271. SLICING MACHINE. WILLIAM J. CAMPBELL, Indianapolis, Ind., assignor to American Slicing Machine Company, Chicago, Ill., a Corporation of New York. Filed Nov. 26, 1926. Serial No. 150,712. 6 Claims. (Cl. 146—102.)



1. The combination with a slicing machine having a rotary knife and means for rotating it, of a slice receiving member and a guard for the edge of the knife, integral with said member and conforming generally to the arc of the edge of the knife, said guard extending across the breadth of said receiving member, rearwardly of said knife, and extending upwardly to general alignment with the knife edge.

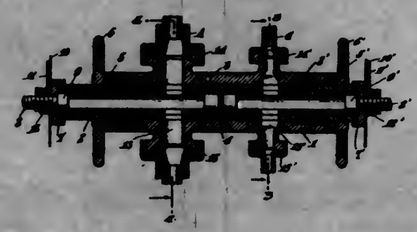
1,685,272. SLICING MACHINE. WILLIAM J. CAMPBELL, Indianapolis, Ind., assignor to American Slicing Machine Company, Chicago, Ill., a Corporation of New York. Filed Sept. 19, 1927. Serial No. 220,610. 10 Claims. (Cl. 146—102.)

1. In a slicing machine, a rotary knife and means for rotating it, a guard plate positioned on the forward side of said knife and a guard plate positioned to the rear of said knife, both faces of said knife being recessed to receive the edges of said guard plates adjacent the side of the knife engaging the material being sliced, the recess in the rear face of the knife being concentric with but of lesser radius than the recess in the forward face of the knife.



1,685,273. AIR-PRESSURE GAUGE. ALBERT E. CARLISS, Floral Park, N. Y., assignor to Acme Air Appliance Co., Inc., a Corporation of New York. Filed Sept. 30, 1927. Serial No. 222,966. 2 Claims. (Cl. 73—109.)

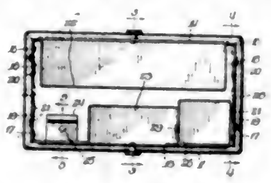
1. In a pressure gauge of the Bourdon tube type, an integral block of metal having a Bourdon tube attached at its base and a conduit passing through said block and leading from a source of air pressure to the base of said tube, an index hand pivotally mounted on said block, means operated by the movement of the said tube under air pressure to rotate said hand, a scale associated with said hand to indicate pressure as said hand traverses said scale, said block having a slot formed therein in a plane perpendicular and longitudinal with respect to said block, two other slots formed in said block in two parallel vertical planes perpendicular to said first mentioned plane, and a vertical aperture leading from that one of said slots farthest from the point of anchorage of the Bourdon tube, a pin mounted in said aperture and means for operating said pin manually, a crank lever bar having right-angular extensions at either end thereof to operate as crank levers, said bar being mounted in said longitudinal slot, so that one of said right-angular extensions will operate in one of said slots to be engaged by said pin, and the other in the other of said slots to engage said index hand, an elastic element in the nature of a spring rod secured to said block, said spring rod adapted to rest within said longitudinal slot to engage said crank lever bar so as to hold the same within said slot under tension, said pin adapted when manually operated to engage one of said extensions of said crank lever bar to rotate said bar, and the other crank arm adapted to engage said index hand to throw the same back to zero position with respect to said index.



1,685,274. LATCH. OTTO P. CRAMER, San Francisco, Calif. Filed June 18, 1927. Serial No. 199,641. 3 Claims. (Cl. 292—204.)

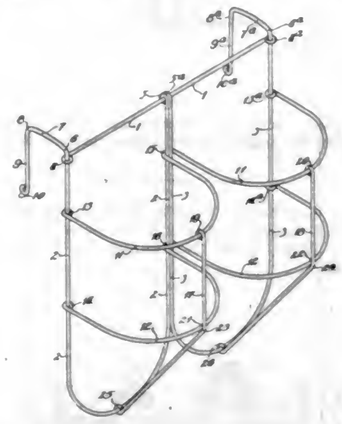
1. A door latch comprising a latch pin adapted to be adjustably fixed to the door casing; a headed pivot pin adapted to be fixed to the door; and a reversible body mounted for pivotal movement on said pivot pin and comprising an operating handle, a shoulder for limiting the movement of the body, wings on opposite sides of the body for engaging the latch pin, a boss for spacing the body

from the door, and a spring interposed between the body and the door for urging the latch into position of engagement.



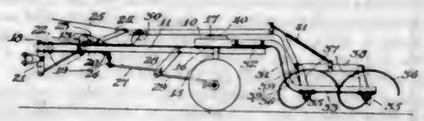
1,685,275. CONTROL VALVE FOR GASEOUS-FUEL BURNERS. HARRY H. DODGE, Green Island, N. Y. Filed Feb. 25, 1926. Serial No. 90,698. 3 Claims. (Cl. 277—1.)

1. In a valve of the class described, a valve body provided with a longitudinal bore and a plurality of transverse gas passages extending through said body, a non-rotatable member within said bore provided with openings adapted to align with gas passages, means for moving said member longitudinally, another member within the bore and provided with openings adapted to align with the gas passages in the body and the openings in the first member, said second member being divided into two parts, means for preventing passage of gas between the parts, and means for independently rotating each part of said second member.



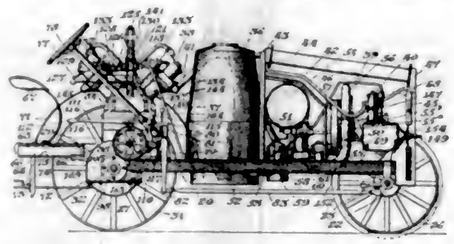
2. In a valve for gas burners, a valve body provided with a longitudinal bore, a plurality of transverse gas passages extending therethrough, a sleeve within said bore provided with openings adapted to align with the gas passages, said sleeve being divided into two parts separated by a gas-tight flexible joint and means for independently rotating each part of the sleeve.

1,685,276. RECEPTACLE. FRED H. DOERR, Grand Haven, Mich., assignor to American Brass Novelty Co., Grand Haven, Mich., a Corporation of Michigan. Filed Apr. 25, 1925. Serial No. 25,739. 4 Claims. (Cl. 220—32.)



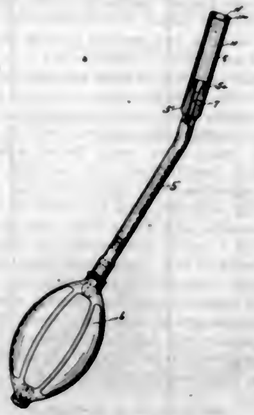
1. In a receptacle, a fixed base, top and ends, a movable side having inwardly extending ears, pivots carried by fixed receptacle members, the ears engaging the pivots, and the ears further frictionally engaging the fixed receptacle members to maintain the movable side in adjusted position.

1,685,277. FRAME AND HOLDER FOR SLIPPERS AND OTHER ARTICLES. MARY ETTA DAYDEN, Chicago, Ill. Filed Dec. 12, 1927. Serial No. 239,602. 2 Claims. (Cl. 211—35.)



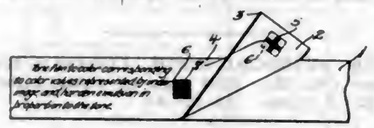
1. A holder frame comprising U-shaped members respectively provided at the ends of the longer ones of the parallel elements thereof with means to engage with horizontal members of determined articles, in combination with members joined to said U-shaped members and respectively provided with a plurality of curved elements, and additional members joined at their ends to one of said curved elements and to the curved elements of said U-shaped members.

1,685,278. COMBINED DISK AND TOOTHED HARROW. WILLIAM C. DWYER, Auburn, N. Y., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed Oct. 31, 1923. Serial No. 671,862. 5 Claims. (Cl. 55—81.)



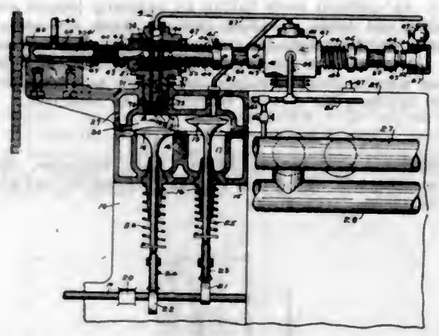
1. A compound harrow comprising a frame, angularly adjustable gangs of harrow disks, a series of harrow teeth mounted on the frame behind the disk gangs and extending across the path thereof, means carried by said frame for supporting said teeth, said means being rotatable with respect to the frame to permit movement in a vertical plane of the points of the teeth relatively to the frame, and means on the frame common to the disk gangs and the harrow teeth for simultaneously shifting the disk gangs horizontally and the teeth vertically and comprising a slidable draft head on the forward end of the frame movable back and forth by draft power, means for connecting said draft head to the disk gangs and separate adjustable means for connecting the draft head to the supporting means for the harrow teeth, said draft head being operable to simultaneously straighten the disk gangs and lift the harrow teeth and to simultaneously angle the disk gangs and lower the harrow teeth.

1,685,279. TRACTOR. GUSTAF W. ENGSTROM, Riverside, Ill., assignor to International Harvester Company, Chicago, Ill., a Corporation of New Jersey. Filed July 28, 1922. Serial No. 578,071. 10 Claims. (Cl. 180—67.)



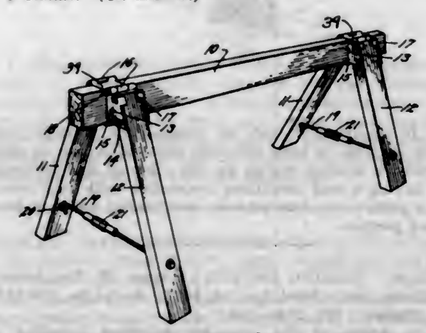
1. In combination, front and rear supporting wheels, a rear axle housing carrying a prime mover on the rear wheels, frame members supported at one end on the rear axle housing beneath the prime mover and at the other end on the front wheels, a boiler supported on the frame in front of the prime mover, a condenser mounted on the frame in front of the boiler, and means for returning condensed steam from the condenser to the boiler.

1,685,280. POWDER-PLACING SYRINGE. LESTER L. FINDLEY, Los Angeles, Calif. Filed July 16, 1927. Serial No. 206,324. 5 Claims. (Cl. 128—205.)



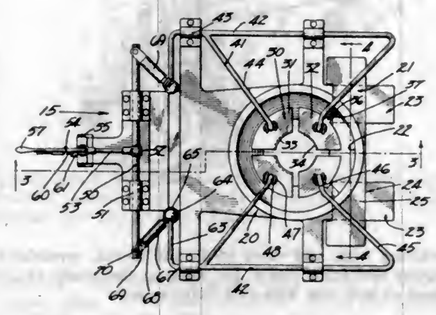
1. In combination, a syringe body or tube adapted to receive a capsule, a capsule adapted to fit telescopically the end of said tube, and detachable means for securing said capsule in place on said tube with both ends open, and means forming a part of said syringe for forcing a blast of air through said tube and said capsule for discharging the contents of said capsule.

1,685,281. PRODUCTION OF COLORED PHOTOGRAPHS. WILLIAM FRANCIS FOX, New York, N. Y., assignor to Natural Color Pictures Company, Inc., New York, N. Y., a Corporation of Delaware. Filed June 22, 1920. Serial No. 390,901. 7 Claims. (Cl. 95—2.)



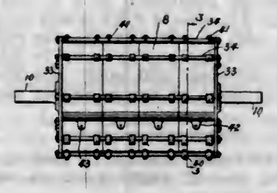
1. A photographic process comprising, printing a positive image and a negative image of the same object in alignment in a single coating of sensitive emulsion on one side of a suitable base, with unaffected emulsion separating said images, said positive image being undermost, toning both images one color and hardening the emulsion material in proportion to the amount of tone, and dyeing the film with a dye of a second color, adapted to act most vigorously on the soft portions of the film.

1,685,282. HYDROCARBON ENGINE. JOHN E. FULLER, Hartsville, S. C. Filed Jan. 18, 1926. Serial No. 81,957. 14 Claims. (Cl. 123—32.)



1. In a fuel injection device for an internal combustion engine, a valve comprising a plug revoluble in a casing, said plug having a passage through it perpendicular to its axis of rotation, and having a relatively large longitudinal passage; said first mentioned passage comprising a tube which crosses the longitudinal passage, but enough smaller in diameter to avoid obstructing the latter, and means for introducing fuel to said tube and lubricant to said longitudinal passage.

1,685,283. COLLAPSIBLE TRESTLE. JAMES P. GIBSON, Denver, Colo. Filed Mar. 17, 1927. Serial No. 175,994. 3 Claims. (Cl. 304—5.)

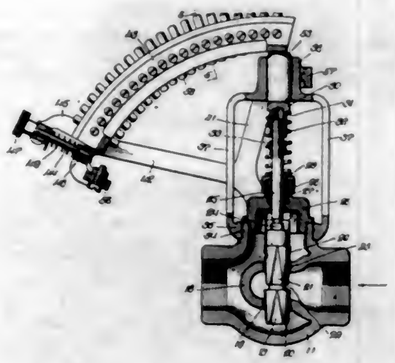


1. Collapsible trestle legs adapted to support a cross piece comprising a pair of legs; a hinge connecting said legs with each other at their one extremity; projections for maintaining said legs at an angle to the faces of said cross piece; and means for causing said legs to approach each other at their other extremities so as to cause said projections to be clamped against said cross piece.

1,685,284. SPIDER HAVING MECHANICALLY-OPERATED PIPE SLIPS. JOHN A. HARDING, Maricopa, Calif. Filed May 21, 1927. Serial No. 193,369. 9 Claims. (Cl. 24—263.)

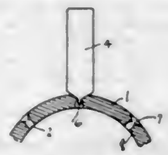
1. In a device of the nature disclosed, the combination of: a body having a vertical bore formed to define a conical seat; a plurality of slips engaging said conical seat; slip carriers connected to said slips, each of said slip carriers having a rock-shaft journaled on said body and each of said rock-shafts being provided with a crank-arm; an operating-shaft journaled on the body; link connections pivotally connected directly to said operating-shaft and said crank-arms; and means for operating said operating-shaft to rock said carriers and elevate the slips.

1,685,285. GRAVITY WATER MOTOR. MILTON D. HAYS, Overbrook, Pa. Filed Oct. 31, 1924. Serial No. 747,093. 12 Claims. (Cl. 170—111.)



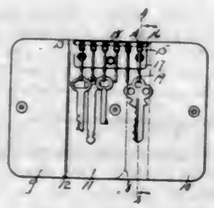
1. For use in a water motor a water wheel comprising a central shaft, end plates on said shaft, a plurality of bars disposed parallel to said shaft and arranged for attachment to the end plates, and a plurality of mutually independent buckets secured to said shaft and to said bars.

1,685,286. FLUID-PRESSURE-CONTROL VALVE. JOHN M. LARSON, Chicago, Ill., assignor to National Regulator Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 7, 1921. Serial No. 513,541. 10 Claims. (Cl. 137—153.)



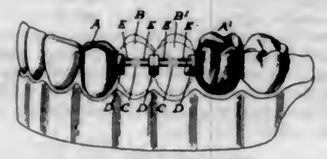
6. In a device for governing the supply of motive fluid to an engine in accordance with the load imposed thereupon and which comprises a balanced valve, a stem on

said valve, a spring normally tending to keep said valve open, an oscillatable yoke member pivotally mounted on said valve, an adjustable cam mounted on said yoke and



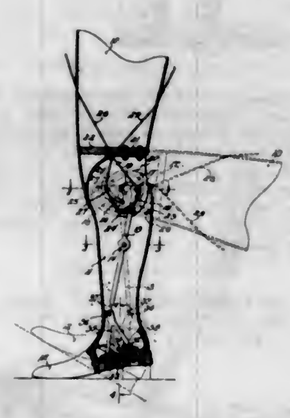
contacting with said valve stem, and means, comprising a spring-restrained screw for altering the angle of incidence of said cam with said valve stem.

1,685,287. PROCESS OF FORMING WELL STRAINERS. JOSEPH H. MCEVOY, Jr., Houston, Tex. Filed Nov. 17, 1925. Serial No. 69,567. 1 Claim. (Cl. 29—163.5.)



A method of forming strainer openings in well pipe comprising cutting longitudinal slots in said pipe, inserting a gauge of its desired width in said slots, and then upsetting the sides of said slots from the outer side to work the metal of the pipe inwardly to constrict the width of the slot about said gauge, said gauge acting to regulate the width of the constricted opening thus formed.

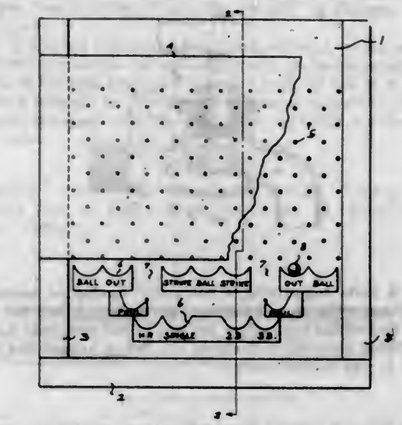
1,685,288. KEY CASE. ARTHUR H. MERRILL, Hartford, Conn. Filed Dec. 12, 1923. Serial No. 680,070. 3 Claims. (Cl. 150—40.)



1. A key case formed of flexible material and embodying two flat sections with one side edge of the first section secured to the second section at a point intermediate its opposite side edges and with a portion of the second section overlying the first section to form a pocket for a key supported by one of the sections, the outer portions of the two sections being foldable to cover keys suspended on the back of the first section opposite to the first named flap.

1,685,289. ARTIFICIAL TEETH. CLEMENT G. MILLER, Kansas City, Mo. Filed Sept. 18, 1925. Serial No. 57,152. 3 Claims. (Cl. 32—9.)

1. An artificial tooth having an angularly shaped side socket and bores extending inwardly from the socket, and a metal retainer comprising a body portion seatable in said socket and spaced pin elements integral with the body portion projectable into said bores, said body portion having a flat face for soldering to an abutment.



1,685,290. ARTIFICIAL LIMB. KARL NEUMANN, Milwaukee, Wis. Filed Oct. 27, 1926. Serial No. 144,440. 10 Claims. (Cl. 3—2.)

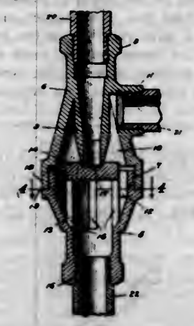
1. In an artificial limb the combination of thigh and shank portions, a lever rockably mounted in one of said portions, a bracket carried by the other of said portions and having a load sustaining connection with said lever, and a guide connection between said bracket and said first named portion.

1,685,291. GAMING DEVICE. ROBERT M. NICHOLSON, Liberty, Tex. Filed Apr. 18, 1927. Serial No. 184,547. 3 Claims. (Cl. 273—138.)

1. A device of the character described including a declining field board, having a plurality of series of pockets disposed transversely across the board, projections upstanding from the board all of which are arranged above the pockets and spaced apart to provide

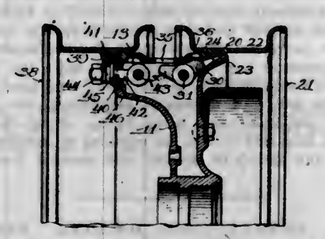
passageways for a ball between them and an apron carried by the board over said projections and above the pockets.

1,685,292. DISPENSING CONTAINER AND METHOD OF DISPENSING ARTICLES THEREFROM. JOHN B. OHLSON, Chicago, Ill., assignor to The Vortex Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 18, 1924. Serial No. 744,341. 9 Claims. (Cl. 312—43.)



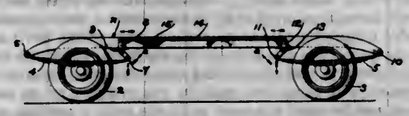
1. The combination with a container adapted to have a stack of nested articles contained therein, stationary relative to said container, a hinged member engaging the endmost article of the stack, and means supporting said hinge member and forming a part of said container and automatically movable relative thereto as individual articles are successively removed therefrom.

1,685,293. ATOMIZING DEVICE. ROY B. PAULL, Seattle, Wash. Filed Feb. 7, 1927. Serial No. 166,397. 1 Claim. (Cl. 261—75.)



An atomizing device comprising a female member having a conical recess therein, a supply nozzle for said member projecting into said recess, a male member having a conical recess therein, a discharge nozzle for the male member projecting into its recess and having spaced side

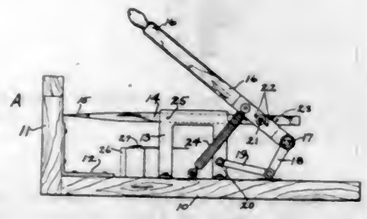
slots, the recesses in the male and female members adapted to conjointly form a mixing chamber, a solid head for the discharge nozzle having a recess therein, the end of the



supply nozzle projecting into said recess in slight spaced relation therewith, and means for entry of a reducing medium for the mixing chamber.

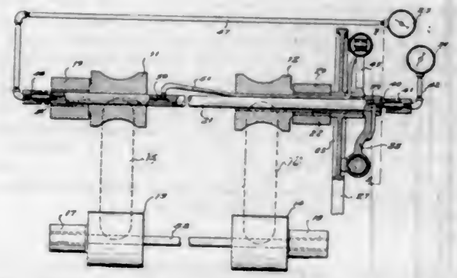
1,685,294. MOTOR-TRUCK WHEEL. JOHN D. RAUCH, Lima, Ohio. Filed Sept. 18, 1926. Serial No. 136,209. 2 Claims. (Cl. 301—13.)

1. In a dual tire wheel, a hub and radiating spokes, a pair of tire rims adapted to be demountably secured on the ends of said spokes from the outer side of said wheel, each of said spokes having an outwardly facing bearing surface with a thrust shoulder along the inner side thereof for engagement with the inner tire rim, rocking pawls mounted on said spokes and movable into and out of locking engagement with the outer side of said inner tire rim when the latter is in mounted position, lugs movably attached at the outer side of said spokes for clamping engagement with the outer tire rim, and a removable spreader ring adapted to fit over the ends of said spokes between said tire rims, said spreader ring having engagement with said rocking pawls to hold them in locked position.



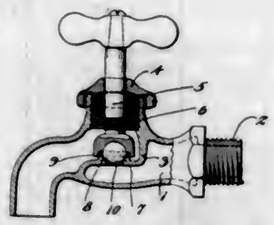
1,685,295. VEHICLE SUSPENSION. CHARLES F. RODIN, San Francisco, Calif., assignor to California Six Wheel Company, Oakland, Calif., a Corporation of California. Filed May 24, 1926. Serial No. 111,097. 2 Claims. (Cl. 280—104.)

1. In a vehicle suspension of the character described, a main frame, a front and a rear wheel, supporting the frame, a semi-elliptical spring interposed between each



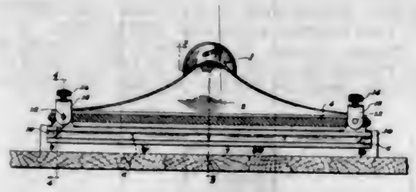
wheel and the frame, a pivotal connection between one end of each spring and the frame, a pair of bell-cranks pivotally attached to the frame, one adjacent the front spring and one adjacent the rear spring, said bellcranks having their lower ends disposed on an angle of substantially 45° with relation to the frame and their upper ends, substantially vertically arranged with relation to the frame, a link pivotally connecting the upper vertical ends of the bellcranks, and a pivotal connection between the lower angularly disposed end of each bellcrank and an adjacent spring.

1,685,296. MACHINE FOR OPENING OYSTERS. OTTO SCHENK, Dayton, Ohio, assignor to Carl R. Balls and Clarence N. Stemper, Dayton, Ohio. Filed Dec. 27, 1920. Serial No. 433,206. 2 Claims. (Cl. 17—9.)



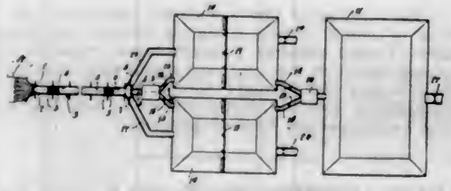
1. A machine for opening oysters, comprising a movable knife, an abutment against which to hold an oyster while its shell is opened with the knife, a spring constantly tending to move the knife toward the abutment, and a manual operating member whereby to move the knife to and fro with reference to the abutment, said member having a large range of movement relative to the distance moved by the knife, and being heavy enough to enable momentum imparted to it by the operator to supplement the action of the spring in moving said member toward the abutment.

1,685,297. BRAKE-TESTING MACHINE. WESLEY K. SHONE, Los Angeles, Calif. Filed Apr. 19, 1927. Serial No. 184,956. 2 Claims. (Cl. 265—25.)



1. In a brake testing apparatus, a roll for imparting motion to a wheel, a shaft to which the roll is fastened, an arm fastened to the shaft, a rotatable driving wheel having an axis coincident with that of the shaft, a fluid pressure cylinder having its axis at an angle to that of the shaft and at a distance from the axis of the shaft, said cylinder connecting the arm and the driving wheel whereby rotation of the wheel will cause the fluid in the cylinder to be compressed and to exert a torque upon the arm, a conduit connecting the cylinder with an axial bore in the shaft, a tube fastened in the bore, a stationary packing in which the tube rotates as the shaft is driven, and a pressure responsive indicator connected to the packing chamber.

1,685,298. VALVE. EDWARD U. SIENA, Cleveland, Ohio. Filed Sept. 21, 1927. Serial No. 221,007. 15 Claims. (Cl. 251—139.)

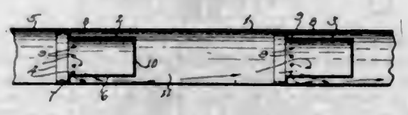


4. A valve comprising, a valve seat having an upstanding flange with an exterior conical surface, a ball for the seat, and means for holding the ball in the seat, said means also being adapted to contract the flange around the ball after it has become worn.

1,685,299. VACUUM-CLEANER ATTACHMENT. WALTER S. SIMPSON, Canton, Ohio, assignor to The United Electric Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 20, 1926. Serial No. 130,534. 1 Claim. (Cl. 15—158.)

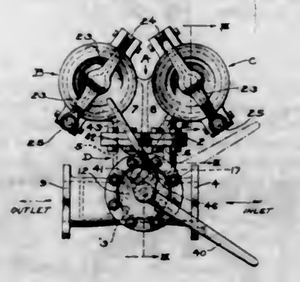
In combination with a nozzle provided with ends and having a mouth rim, an attachment for engagement with said rim and having floor engaging means, balls pivoted upon the attachment for engagement over the ends of the nozzle and means upon the balls for clamping engagement with the nozzle.

1,685,300. PROCESS AND APPARATUS FOR TREATING POLLUTED ACID WASTES. JOHN T. TRAVERS, Columbus, Ohio, assignor, by direct and mesne assignments, to The Travers-Lewis Process Corporation, Columbus, Ohio, a Corporation of Ohio. Filed June 21, 1927. Serial No. 200,491. 7 Claims. (Cl. 210—9.)



1. A process for treating polluted acidified liquid wastes comprising passing the liquid waste through porous calcium carbonate and maintaining the time period of contact between the waste and the porous calcium carbonate in excess of two minutes and less than five minutes.

1,685,301. TREATMENT OF POLLUTED WASTES. JOHN T. TRAVERS, Columbus, Ohio, assignor, by direct and mesne assignments, to The Travers-Lewis Process Corporation, Columbus, Ohio, a Corporation of Ohio. Filed July 9, 1928. Serial No. 291,381. 4 Claims. (Cl. 210—9.)

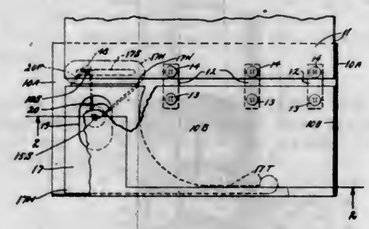


1. A method for treating acidified polluted waste water comprising causing the polluted waste water to enter the pores of calcium carbonate characterized by the fact that it has a porosity substantially the same as travertine in its natural state and be subjected to the neutralizing action of the latter.

1,685,302. MUFFLER. HARVEY E. TYLER, Chicago, Ill. Filed June 13, 1925. Serial No. 36,911. 1 Claim. (Cl. 137—160.)

A device of the type described comprising a casing, a relatively long cup-shaped member having an open end, a closed end, and a plurality of openings circumferentially disposed adjacent the open end, a relatively short enlarged portion rigidly secured to the inner wall of said casing, and a partition connecting said enlarged portion to said relatively long cup-shaped member, said cup-shaped member being adapted to cause gases of combustion to back up on themselves and pass through said openings, said cup-shaped member being disposed in close proximity to the inner wall of said casing, whereby the gases of combustion passing through the openings will be held against the inner wall of said casing and become cooled.

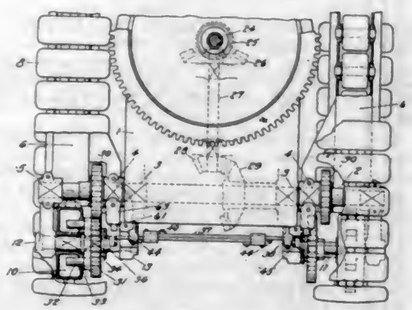
1,685,303. DUPLEX OIL STRAINER. JOSEPH T. VOORHEIS, Oakland, Calif., assignor to Coen Company, San Francisco, Calif., a Corporation of California. Filed Jan. 28, 1925. Serial No. 5,232. 3 Claims. (Cl. 277—19.)



1. A valve mechanism for regulating the flow of a liquid through two separate strainer-containing cylinders, said valve mechanism comprising a cylinder having a pair of ports formed therein adapted to communicate with the upper ends of the respective strainer cylinders, and a second pair of ports adapted to communicate with the lower ends of the respective strainer cylinders, said valve cylinder also having inlet and outlet connections in communication with the respective ports to permit inflow and discharge of the liquid to be strained, a shaft in the valve cylinder and extending through one end thereof, a pair of valves on the shaft cooperating with the respective pairs of ports to open and close the same, means for transmitting a turning movement to the shaft to cause the valves to swing into or out of alignment with the respective ports and a removable partition member in the cylinder between the valves and dividing the valve cylinder into upper and lower compartments.

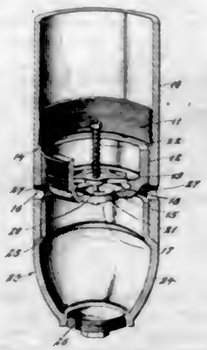
1,685,304. ASPHALTIC MATERIAL AND METHOD OF PREPARING SAME. WILLIAM C. WEST, Louisville, Ky., assignor to West Process Pavement Company, Incorporated, Louisville, Ky., a Corporation of Kentucky. Filed Mar. 26, 1926. Serial No. 97,767. 6 Claims. (Cl. 106—31.)

1. The process of preparing asphaltic road material for storage and shipment the asphalts of which are adapted to be converted to an asphaltic cement on the job by blending, which comprises mixing mineral aggregate with hard asphalt in a powdered form in insufficient quantity to provide the required percentage of asphaltic cement, said mixing being carried out at a temperature below that at which the hard asphalt blends with a soft asphalt, and then adding semi-liquid asphalt or asphaltic flux to bind the powdered asphalt particles on the surface of the aggregate, the quantity of semi-liquid asphalt or asphaltic flux being sufficient to provide the desired percentage of asphaltic cement when blended with the hard asphalt by heating.



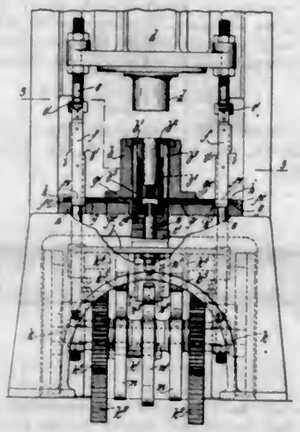
5. A composition of matter adapted for shipping, said composition comprising a loose, granular, non-compacted mass of graded mineral aggregate, a coating of powdered hard asphalt particles on the granules of said aggregate, and a coating of asphaltic flux binding said coating of powdered hard asphalt to the aggregate.

1,685,305. CUFF CONSTRUCTION. JOHN H. ANDERSON, St. Paul, Minn. Filed May 20, 1927. Serial No. 192,827. 3 Claims. (Cl. 2—123.)



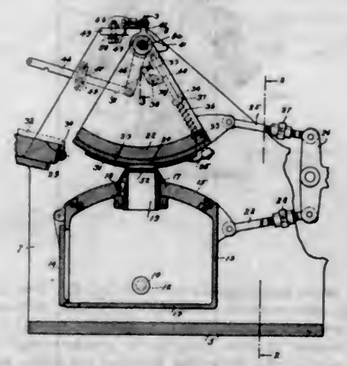
2. A soft cuff comprising a quadrangular piece of soft material and folded to form adjoining inner and outer elongated flaps said inner flap narrower than the outer flap, means for connecting the said folded cuff ends comprising registering buttonholes for a cuff link, a shank button for connecting the ends of the wrist band, and means for bracing and tautening the cuff at its folded end portions and extending toward the center part of the cuff, said cuff bracing and tautening device comprises for each end of the cuff a stay of flat pliable material arranged to lie between the folds of the cuff, and a vertical aperture provided in said stay and through which the cuff link is passed and a tension element on each stay engaging its top part above the cuff link shank extending from the outer part of the upper head portion thence inwardly and over the shank of the wrist band button, thence upwardly to the inner and upper part of the stay, to press the stay downwardly, the lower part of the stay forming an elongated base engaging in the folded part of the cuff.

1,685,306. STEERING APPARATUS FOR MOTOR-DRIVEN VEHICLES. EDWIN J. ARMSTRONG, Erie, Pa., assignor, by mesne assignments, to Bucyrus-Erie Company, South Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 29, 1921. Serial No. 496,469. 28 Claims. (Cl. 180—9.2.)



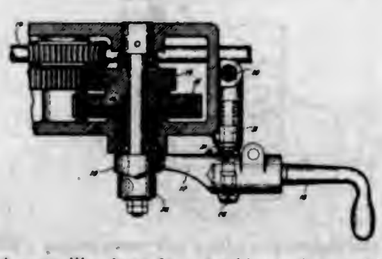
1. In an apparatus of the class described, the combination of a frame; a turn table on the frame; driving wheels for the apparatus at each side of the frame; driving mechanism for the wheels; and means controlled by the movement of the turn table compelling the driving mechanism to vary the relative driving action on the wheels to steer the apparatus.

1,685,307. CEMENTING AND FLOATING SHOE. REUBEN C. BAKER, Coalinga, Calif., assignor to Baker Casing Shoe Company, a Corporation of California. Filed May 11, 1927. Serial No. 190,456. 1 Claim. (Cl. 166—1.)



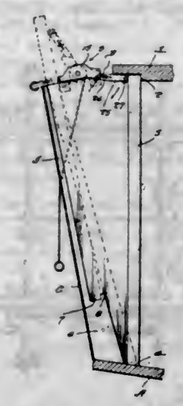
A cementing and floating plug for well casings comprising a cylindrical shoe formed of comparatively indestructible material, a valve structure including a valve cage threaded into said shoe, said valve cage having an opening formed therethrough, a downwardly opening valve controlling said opening, a guide member threaded into the bottom of said shoe and depending downwardly therefrom, the valve structure and guide being formed of friable material whereby they may be broken out after use, said cylindrical shoe having openings formed therethrough intermediate the valve structure and the guide to permit fluid passing through the valve structure to discharge.

1,685,308. PROCESS FOR DRAWING SHEET METAL. GEORGE WILLIAM BERRY, Leeds, England, assignor of one-half to Charles Joseph Rhodes, Wakefield, England. Filed Mar. 19, 1925, Serial No. 16,670, and in Great Britain May 27, 1924. 11 Claims. (Cl. 113—38.)



1. In a draw press, a die including a stationary member and a plurality of drawing members movable longitudinally relative to the stationary member and each other, a die movable toward and away from the stationary and drawing members and co-operating therewith to effect a drawing operation in successive stages, slides mounted to have movement transversely toward each other into the path and obstruct the movement of a drawing member and away from each other out of obstructing position, means carried by and participating in the movement of the movable die co-operating with said slides to move said slides at a predetermined point in the movement of the movable die in the drawing operation out of obstructing position and during the receding movement of the movable die to move said slides to and retain them in obstructing position.

1,685,309. DIEING-OUT MACHINE. EDWARD R. BOYLAN, Los Angeles, Calif. Filed Apr. 2, 1927. Serial No. 180,582. 9 Claims. (Cl. 164—21.)

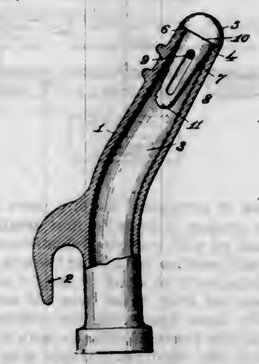


3. A dieing out machine comprising a frame, a die pivoted on said frame, a platen pivoted on said frame opposite said die with its surface opposed to said die, a reciprocative cross head, and links connected to said cross head and to said die and said platen respectively.

1,685,310. CONTROLLING LEVER FOR MACHINE TOOLS. EDWARD P. BURRELL, Shaker Heights, and GEORGE W. DRAKE, Cleveland Heights, Ohio, assignors to The Warner and Swasey Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 3, 1926. Serial No. 145,991. 15 Claims. (Cl. 74—39.)

1. A controlling lever for a machine tool comprising an inner part and an outer part, the inner part having a transversely movable locking member and the outer part being rotatably supported by the inner part to turn about an axis lengthwise of the inner part and having a portion which actuates the locking member when turned in one direction relative to the inner part.

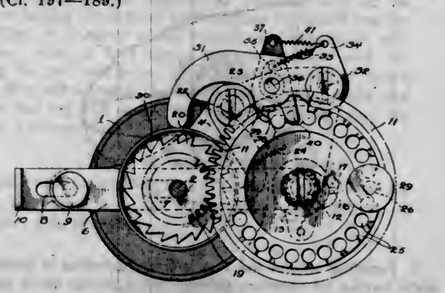
1,685,311. VENTILATING SASH. CHRIS A. CHRISTIANSON, Ulen, Minn. Filed Nov. 11, 1927. Serial No. 232,625. 5 Claims. (Cl. 98—88.)



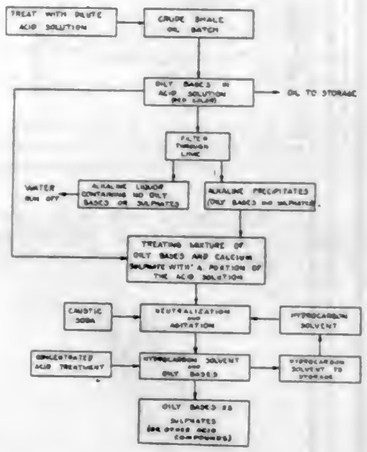
1. In a ventilating sash in association with the usual window frame and a conventional window rain shield, a jamb board secured to the window frame, a tiltable sash adapted to have its upper edge portion bear against the board, the lower edge of the sash to be supported upon the window sill, a pair of tapering rest strips secured to the side walls of the rain shield and against which the sash is adapted to rest when in tilted position, and tensional means for maintaining the sash rigidly in tilted position.

1,685,312. RIPPING UNIT FOR METAL CANS. ABBOTT L. COMBES and HARRY M. KEYSER, East Falls Church, Va. Refiled for abandoned application Serial No. 748,718, filed Nov. 8, 1924. This application filed June 8, 1926. Serial No. 114,575. 1 Claim. (Cl. 220—49.)

The combination with a can body, and a lid crimped upon the can body, the lid being provided with a sunken portion extending into the can body and including a wall at the bottom of said sunken portion, of a carrier ring embracing said sunken portion and initially inserted into the can body with said sunken portion, the outer margin of said ring being interfolded in said crimp for securing the ring within the can body as the lid is secured to said body, the inner margin of said ring being bent to form a channel providing a stop disposed to abut said wall of the lid for initially locating the ring on the lid, and a ripping element held in said channel and operable to rip a wall of the can, said ring and element providing a separate ripping unit.

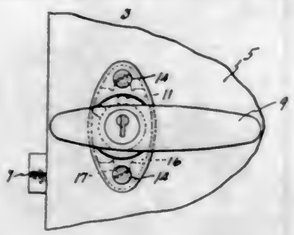


1,685,313. DEFLECTOR FOR GASOLINE-HOSE NOZZLES. RICHARD M. DAVIS, West Pittston, Pa. Filed Aug. 1, 1927. Serial No. 209,748. 2 Claims. (Cl. 137—111.)



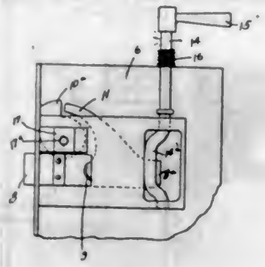
1. A gasoline hose nozzle in combination with a deflector therefor, comprising a head adapted to fit over the end of the nozzle and a stem projecting into the nozzle, said stem being provided with a longitudinally disposed slot and a retaining pin extending through said slot, substantially as described.

1,685,314. BOTTOM MARGIN SPACER FOR TYPEWRITERS. RICHARD M. DAVIS, West Pittston, Pa. Filed Aug. 19, 1927. Serial No. 214,008. 7 Claims. (Cl. 197—189.)



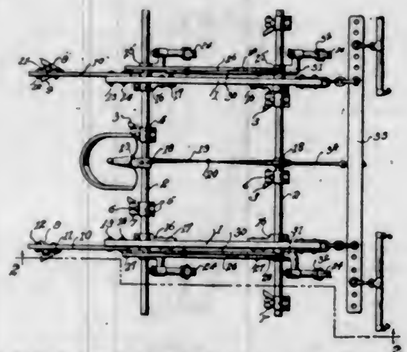
1. In a typewriter, the platen and platen shaft, in combination with a pinion on said shaft, a shiftable member, a gear mounted on said shiftable member and adapted, when the said member is shifted to be moved into and out of mesh with said pinion, a stop adapted to be selectively mounted on said gear, a notched member on the platen shaft, and a pivotally mounted dog adapted to be moved by said stop into engagement with said notched member to lock the platen, substantially as described.

1,685,315. PROCESS OF EXTRACTING THE OILY BASES FROM CRUDE SHALE OIL. DAVID T. DAY, Washington, D. C.; Fred J. Goble administrator of said David T. Day, deceased. Filed Dec. 11, 1924. Serial No. 755,316. 6 Claims. (Cl. 260—25.)



1. The process of extracting the oily bases from crude shale oil which process consists in first treating a body of the crude shale oil with a dilute inorganic acid solution, separating the acid solution containing the oily bases from the oil, neutralizing with an alkali to effect a precipitation of the oily bases and other bases from the acid solution, collecting the oily bases apart from the resultant alkaline solution, treating the precipitated bases with an inorganic acid, neutralizing the resultant mixture with an alkali, agitating said mixture with a hydrocarbon solvent, drawing off the resultant solution from the alkaline aqueous solution, and extracting the oily bases from said resultant solution with an inorganic acid used as the extracting medium.

1,685,316. LOCK-SHAFT-SECURING MEANS. WILLIAM C. DEVEREAUX, Detroit, Mich. Filed Dec. 13, 1926. Serial No. 154,370. 2 Claims. (Cl. 292—348.)

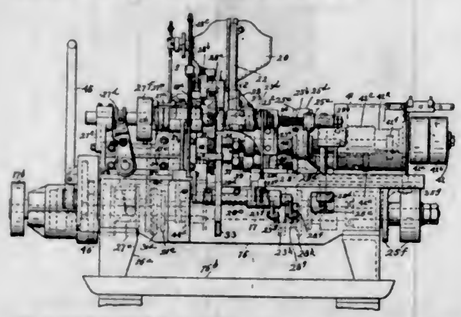


1. Securing means for lock shafts including a metallic plate having an aperture therein and a radial notch opening into the aperture, a lock shaft extending through the aperture and carrying a locking plate having a radial ing adapted to pass through said notch and engage the inner face of said plate, and means surrounding the lock shaft to cover the aperture including an escutcheon plate secured to said metallic plate, a handle mounted on the projecting extremity of the lock shaft, a spacer tube surrounding the lock shaft between the handle and escutcheon plate, and a spring arranged between the spacer tube and locking plate to press the locking plate inwardly.

1,685,317. LATCHING MEANS FOR DOOR-LOCK HANDLES. WILLIAM C. DEVEREAUX, Detroit, Mich. Filed May 4, 1927. Serial No. 188,720. 5 Claims. (Cl. 292—348.)

1. The combination with a lock casing having a lock bolt and actuating cam therefor provided with a polygonal aperture, of a fixed locking plate having a polygonal aperture therein and a rotatable handle shaft having a polygonal rear portion adapted to fit within the aperture in the cam and a circumferentially grooved portion adapted to normally extend through the aperture in the locking plate, the walls of the apertures in the cam and locking plate being angularly disposed relatively to each other while the cam and lock bolt are in their locked positions.

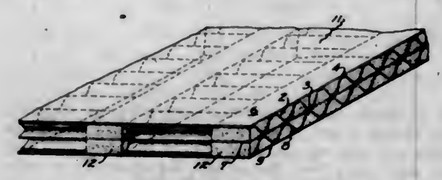
1,685,318. COTTON-CHOPPING MACHINE. JOHN SAMUEL ELDER, Grandfield, Okla. Filed July 26, 1927. Serial No. 208,489. 4 Claims. (Cl. 97—23.)



1. A plant thinning machine comprising parallel runners, beams mounted transversely of the runners and relative to which said runners are adapted to be adjusted longitudinally, means for retaining the runners and beams in adjusted position, spaced cutting devices attached to the beams and transport means for said machine carried thereby.

4. A plant thinning machine comprising parallel runners, beams mounted transversely of the runners and relative to which said runners are adapted to be adjusted longitudinally, means for retaining the runners and beams in adjusted position, spaced cutting devices attached to the beams and adjustable thereon longitudinally and vertically, and transport means for said machine carried thereby.

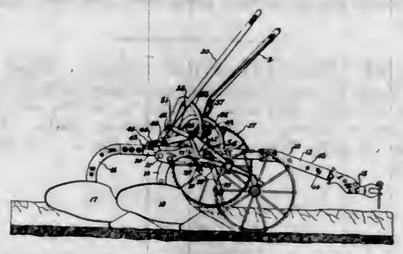
1,685,319. METAL-WORKING MACHINE. HARVEY C. ERDMAN, Shaker Heights, Ohio, assignor to The National Screw and Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 19, 1925. Serial No. 69,967. 19 Claims. (Cl. 29—38.)



1. A metal working machine having a plurality of tools including a pair of countersinking tools and a drilling tool, the countersinking tools being adapted to form countersinks in the blanks of greater diameter than the diameter of the bore formed therein by the drilling tool and means for presenting the blanks successively to the two countersinking tools so that the blank will be countersunk at opposite ends, and then to the drilling tool.

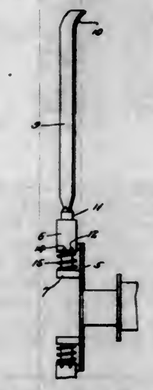
5. A metal working machine comprising a turret having a plurality of chucks, tools movable toward and from the turret, blank delivery means, a chuck which receives each blank before it is delivered to the turret chucks, said chuck having a fixed position at one side of the turret, a rotating tool movable on a fixed axis toward and from the last-mentioned chuck and having an operative stroke in a direction opposite to the operative strokes of the first-mentioned tools, and a transfer means for carrying the blanks from the last-mentioned chuck laterally into alignment with a chuck of the turret.

15. The method of machining blanks which comprises moving them to different stations and at the different stations, countersinking a blank at one end, countersinking it at the other end, and drilling a bore through the blank from the latter end of less diameter than the diameters of the countersinks, the said operations while performed successively upon each blank being performed simultaneously on different blanks.



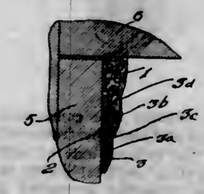
1,685,320. INSULATING BOARD. DOZIER FINLEY, Berkeley, Calif, assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Aug. 10, 1927. Serial No. 212,009. 9 Claims. (Cl. 154—45.)

1. An insulating board comprising a sheet of corrugated paper, a layer of plane paper on each side of the corrugated paper, and a filler between said layers and across the furrows of the corrugated sheet.



1,685,321. SELF-LEVELING WHEELED PLOW. JOHN H. GROENKE, Canton, Ohio, assignor to The Bucher & Gibbs Plow Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 22, 1927. Serial No. 214,585. 5 Claims. (Cl. 97—73.)

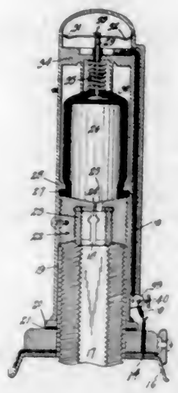
1. An agricultural implement including a frame, a pair of crank axles each mounted at its upper shaft end for oscillation on the frame, a land wheel journalled at the lower end of one of the crank axles, a furrow wheel journalled at the lower end of the other crank axle, a crank arm rigidly mounted on the upper shaft end of each axle, a rigid link having a slot and pin connection at one of its ends with one of the crank arms and at its other end with the other crank arm, a lever pivotally mounted on the link, a connecting bar pivotally connected at one of its ends with the lever and at its other end with one of the crank arms, and means for selectively varying and securing the angular relationship between the link, the lever, and the bar.



1,685,322. [WITHDRAWN.]

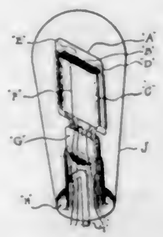
1,685,323. ENGINE-COOLING FAN. PETER V. HANSEN, Salem, S. Dak. Filed Apr. 1, 1927. Serial No. 180,219. 1 Claim. (Cl. 170—162.)

In an engine cooling fan of the character described, a disk-shaped fan body, outwardly projecting lug members radially formed on said body inwardly from the periphery thereof, sleeves formed radially at the periphery of the body and having their inner end portions in spaced relation to the lugs, a plurality of fan blades, pins associated with the inner ends of said blades for engagement with the opening in the respective sleeve and lug, and a coiled spring disposed around the inner end of said blade and between the lug and sleeve for normally maintaining the blade in a set position.



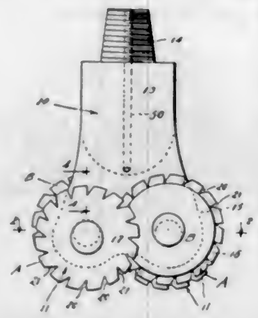
1,685,324. WEATHER STRIP. DAVID H. HARNLY, Chicago, Ill. Filed Apr. 23, 1927. Serial No. 185,930. 4 Claims. (Cl. 20—69.)

1. In a weather strip, a flexible strip, a metal casing partially enclosing the same, said casing having a bottom wall and an upper wall having a longitudinal indenture



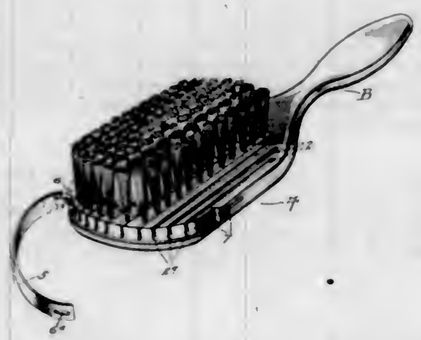
for locking said flexible strip between said walls, the portion of the upper wall forward of said longitudinal indenture being slightly arcuate for deflecting material for preventing tearing of said upper wall from said flexible strip.

1,685,325. TIRE DEFLATION SIGNAL. HUGH R. HUGHES, Kellogg, Idaho, assignor of one-fourth to Dennis R. Frost, one-fourth to Harry A. Mutch, and one-fourth to Harrey J. Papineau, Kellogg, Idaho. Filed July 19, 1927. Serial No. 206,847. 1 Claim. (Cl. 200—58.)



The combination with a valve stem and its valve pin, of a valve cap adapted to be threaded on the stem, means carried by the cap for opening the tire valve, said cap having an inflatable reservoir forming an equalizing air pressure chamber to receive pressure from the tire, an exterior retaining flange on the reservoir and a coacting interior flange on the valve cap, a normally open circuit maker carried in the cap, and means operable to close the circuit when the pressure in the reservoir falls to a certain degree.

1,685,326. THERMIONIC VACUUM TUBE. JAMES DENNEY JORDAN, Owensboro, Ky., assignor to The Ken-Rad Corporation, Owensboro, Ky., a Corporation of Kentucky. Filed Jan. 16, 1926. Serial No. 81,684. 3 Claims. (Cl. 250—27.5.)

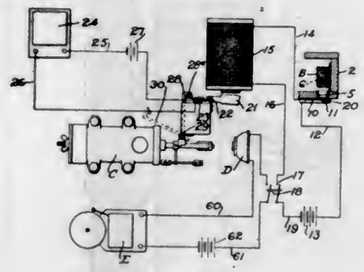


1. A thermionic vacuum tube comprising an evacuated vessel, grid, filament and plate electrodes within said vessel and aligned with the vertical axis of said vessel, and a mounting for activating material within said vessel, said activating material mounting extending laterally across said electrodes in a substantially horizontal direction with respect to the vertical axis of said vessel and connecting with opposite sides of said plate electrode.

1,685,327. WELL-DRILLING BIT. ARCHER W. KAMMERER, Fullerton, Calif. Filed Nov. 12, 1924, Serial No. 749,389. Renewed May 1, 1928. 3 Claims. (Cl. 255—71.)

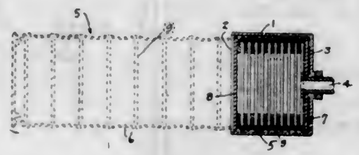
1. A bit including, a flat body, and two pairs of disc cutters carried by the body at diametrically opposite sides of its central axis, each pair of cutters including a cutter at the leading side of the body and a cutter at the trailing side of the body.

1,685,328. SANITARY BRUSH. ELSA S. KOGLER and ALBERT P. KOGLER, San Francisco, Calif. Filed Oct. 26, 1927. Serial No. 228,761. 3 Claims. (Cl. 15—202.)



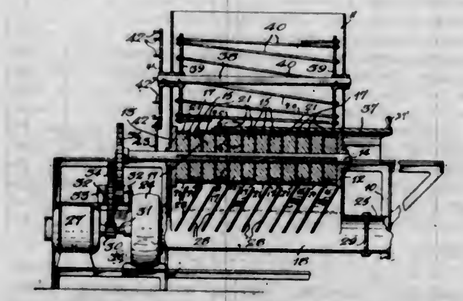
1. A bristle bar for brushes comprising an elongated strip having a line of perforations extending lengthwise thereof and near one marginal edge of the strip, said marginal edge being bent downwardly substantially at right angles to the portion of the strip within which the perforations occur, the body of the strip upon the opposite side of the perforations being bent substantially at right angles to the portion carrying the perforations and being bent upon itself around a wire, the folded portions being pressed toward each other to hold the wire in position and to secure bristles upon the wire and which bristles extend through the perforations in the plate.

1,685,329. ALARM MECHANISM. CHARLES J. LYNCH, San Francisco, Calif. Filed Feb. 18, 1925. Serial No. 9,949. 3 Claims. (Cl. 177—314.)



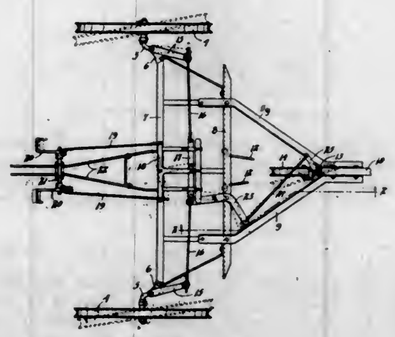
2. The combination with an electric circuit making mechanism, of a magnet adapted to be actuated thereby, a pivotally mounted armature actuated by the magnet, means actuated by the armature for closing an alarm circuit, and other means actuated by the armature for closing a second alarm circuit after a predetermined interval, said other

means including a dash-pot comprising a cylinder, a piston and means for automatically actuating the piston, and a pivoted trip lever for holding the piston against movement,



said trip lever being engageable with and held by the armature and released from such engagement when the armature is actuated by the magnet.

1,685,330. DIRECTION-INDICATING SIGNAL. JOHN MILTON MARONEY, Oakland, Calif. Filed May 14, 1928. Serial No. 277,647. 3 Claims. (Cl. 116—39.)



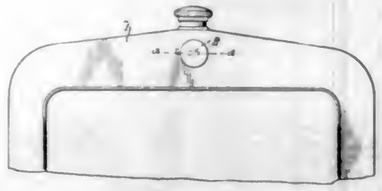
1. A casing having a closed end and an open end, a collapsible member normally disposed within said casing and having one end thereof secured to the casing, means for admitting air to said member and for withdrawing air from said member, and reinforcing rings disposed at intervals along said member.

1,685,331. APPARATUS FOR FEEDING POWDERED FUEL. WILSON L. MCLAUGHLIN and HERROLD L. MCLAUGHLIN, Des Moines, Iowa. Filed July 16, 1927. Serial No. 206,353. 5 Claims. (Cl. 302—49.)

1. In a device of the class described, a hopper, a cylinder rotatably mounted in the bottom of said hopper, a means for rotating said cylinder, scoops formed in the periphery of said cylinder, a means for adjusting the depth of each of said scoops, and an air induction fan for receiving and transferring the fuel fed by the said scoops and air to a burner, for the purposes stated.

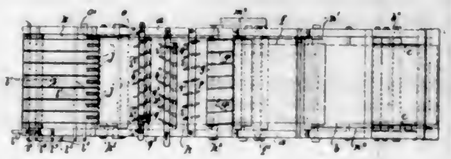
1,685,332. FOOT-OPERATED STEERING GEAR. WILLIAM J. MCCARTY, Murdock, Minn. Filed Aug. 28, 1924. Serial No. 734,617. 2 Claims. (Cl. 280—87.1.)

1. A cultivator having in combination, a frame, a pair of main wheels therefor mounted to swing about vertical axes, arms for swinging said wheels, a castor wheel adjacent the front of said frame, a vertical spindle carrying said castor wheel journaled in said frame, a much shorter arm secured to said spindle, a member movable transversely of said frame and connected to said first mentioned arms for swinging said main wheels, a bell crank lever pivoted on said frame about a vertical axis having one end connected to said arm, and having another end connected to said member, a T-shaped lever pivoted about a vertical axis for moving said member in either direction, and means actuated by the operator for moving said T-shaped lever whereby when said main wheels are swung through a certain angle, said castor wheel will be simultaneously swung through a greater angle.



1,685,333. MAGAZINE BUFFER. HAROLD MACDOUGALL, Maplewood, and WILLIAM G. KENDALL, Newark, N. J. Filed June 11, 1927. Serial No. 198,079. 3 Claims. (Cl. 132—75.)

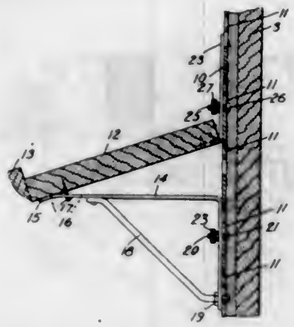
1. A magazine buffer and applicator, including a buffer section and a magazine section having a discharge port adapted to be respectively closed and opened by relative movement between the sections, the said buffer section including a continuous wall and a closed end, the continuous wall having a marginal bead spaced from the end wall, a buffer material arranged over the end wall



and having a marginal portion extending downwardly over the continuous wall and over the bead, and a clamping ring engaging over the bead and clamping the marginal portion of the buffer material in place.

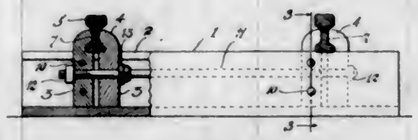
1,685,334. NAME PLATE. ARTHUR L. MYERS, La Crosse, Wis., assignor to Northern Engraving Company, La Crosse, Wis., a Corporation of Wisconsin. Filed Mar. 28, 1927. Serial No. 178,825. 5 Claims. (Cl. 40—20.)

1. In a securing device of the character described, a member, a structure to which said member is to be applied, and a pair of prongs of different dimensions in cross section projecting from said member, said structure being formed with apertured places corresponding respectively in dimensions to said prongs to receive said prongs, the free ends of said prongs after insertion into said apertured places being bent against the wall of said structure to secure said member in position.



1,685,335. APPARATUS FOR SORTING AND STACKING BISCUITS AND OTHER ARTICLES. JOHN CURRIE PATERSON and GEORGE RALPH BAKER, London, England, assignors to Baker Perkins Company Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 4, 1926, Serial No. 127,117, and in Great Britain Aug. 19, 1925. 3 Claims. (Cl. 198—30.)

1. Apparatus for sorting biscuits and other articles comprising a conveyor adapted to feed the articles to an inclined chute provided with spaced partitions inclined to the direction of travel and between which the articles slide by gravity in rows, and a second conveyor receiving the articles from the chute and from which they pass between other series of partitions arranged at different relative angles which act to further align and arrange the articles in rows.

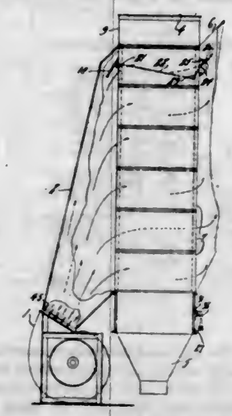


1,685,336. DISPLAY DEVICE. WILLIAM EDWARD PLATT and MAITLAND STORM PLATT, Toronto, Ontario, Canada. Filed Oct. 8, 1925, Serial No. 61,321, and in Canada May 27, 1925. 3 Claims. (Cl. 211—147.)

1. In a display device, the combination with a back and a shelf, of a shelf supporting bracket detachably and vertically adjustably secured to the back, said shelf being slidably secured to the bracket in the vicinity of its

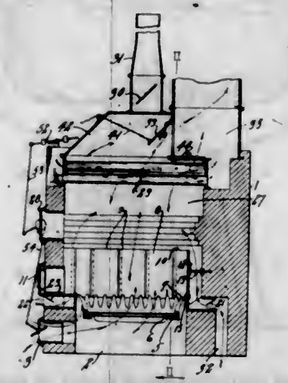
forward edge, and a subsidiary bracket hinged to the back of the shelf and adjustably and detachably secured to the back.

1,685,337. RAILWAY TIE, RAIL FASTENER, AND RAIL JOINT. JESSIE C. POPE, Longview, Tex. Filed Dec. 7, 1926. Serial No. 153,049. 1 Claim. (Cl. 238—77.)



A railroad tie of the class described including a hollow member angular in cross section and open at its ends and top, an inturned longitudinal flange at each side of the top of the member, said flanges constituting rail supports, a block fitted snugly within said member adjacent one end, a recessed neck integral with the block and projecting between the flanges for engaging the outer base flange of one rail of a track, a similar block in the member adjacent its other end, a recessed neck extending therefrom between the flanges for engaging the inner base flange of the other rail of a track, means extending transversely through the blocks and the hollow member for holding them together fixedly, blocks fitted snugly within the hollow member and adjustable longitudinally thereof, one of said blocks having a recessed neck projecting between the flanges for engaging the inner base flange of the first named rail, the other block having a recessed neck for engaging the outer base flange of the second named rail, a rod extending longitudinally of the member through all of the blocks, a collar on the rod, means threaded on one end portion of the rod for shifting said rod longitudinally, thereby to bind the collar against one of the adjustable blocks to shift it toward the adjacent fixed block, thereby to clamp the rail positioned between said blocks, and means threaded on the other end of the rod for engaging the other adjustable block to shift it relative to the adjacent fixed block, thereby to clamp upon the rail between the necks of said blocks.

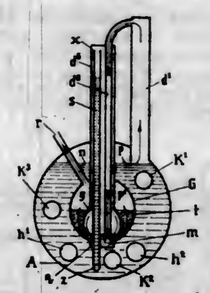
1,685,338. DRYING. OLIVER W. RANDOLPH, Toledo, Ohio. Filed Jan. 28, 1925. Serial No. 5,235. 6 Claims. (Cl. 34—34.)



1. Apparatus for the reduction of the moisture content of bulk material comprising a vertical housing for a column of said material, a first series of ducts extending

transversely into said housing, sub-humid gas supply means to said first series of ducts, and a second series of ducts extending from said housing to be supplied by

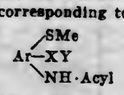
gas as passing through the material from said first series of ducts, said ducts having closed gable type tops and narrowing sides downward to open bottoms.



1,685,339. FURNACE. OLIVER W. RANDOLPH, Toledo, Ohio. Filed Mar. 27, 1925. Serial No. 18,786. 5 Claims. (Cl. 110—72.)

1. A furnace comprising a grate, a primary flare fire pot adjacent the grate having openings extending upwardly thereabout, a secondary sectional fire pot rising from the primary fire pot, a furnace housing, and duct sections extending through the housing provided with sustaining connection means for said secondary fire pot sections.

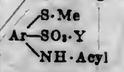
1,685,340. ABSORPTION REFRIGERATING APPARATUS. ALFRED RICHTER, Doberitz, near Berlin, Germany, assignor to A.-G. Für Handels- und Industriewerte Glarus, Glarus, Switzerland. Filed Sept. 15, 1924, Serial No. 737,917, and in Germany Sept. 19, 1923. 4 Claims. (Cl. 62—118.)



1. In an absorption refrigeration apparatus, the combination of an absorber vessel adapted to contain a liquid absorbent for the refrigerant, a second vessel likewire adapted to contain a liquid and having a vapor outlet at the top thereof, an inverted receptacle disposed in said second vessel, pipes providing communication between said vessels, one of said pipes connecting the top or vapor space of said absorber vessel with the second vessel of a point below the liquid level therein, said pipe being so disposed as to act as a liquid seal and another of said pipes establishing communication between the absorber vessel, at a point below the liquid level therein and

within the inverted receptacle, and the second vessel at a point above the point at which the first mentioned pipe terminates in the second vessel, said pipe being so disposed as to act as a liquid seal.

1,685,341. PHARMACEUTICAL PRODUCTS. WALTER SCHOELLER, ADOLF FELDT, MAX GEHRKE, and ERICH BORGWARDT, Berlin, Germany, assignors to the Firm: Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Filed May 9, 1925, Serial No. 29,207, and in Germany June 2, 1924. 8 Claims. (Cl. 260—11.)



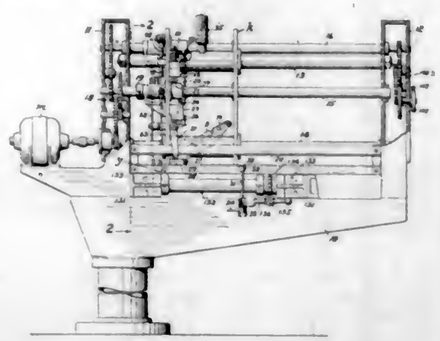
1. As a new product, the derivative of an amino metal mercapto compound corresponding to the formula

wherein Ar is a benzene nucleus, Me is a heavy metal, X is COO, Y is hydrogen or a metal, more especially an alkali metal, such product dissolving in water only with difficulty as an acid, readily as an alkali salt and having a therapeutical effect more especially in cases caused by spirochætae.

1,685,342. PHARMACEUTICAL PRODUCTS. WALTER SCHOELLER, ADOLF FELDT, MAX GEHRKE, and ERICH BORGWARDT, Berlin, Germany, assignors to Firm: Chemische Fabrik auf Actien, (vorm. E. Schering), Berlin, Germany. Original application filed May 9, 1925, Serial No. 29,207, and in Germany June 2, 1924. Divided and this application filed June 1, 1926. Serial No. 113,076. 6 Claims. (Cl. 260—11.)

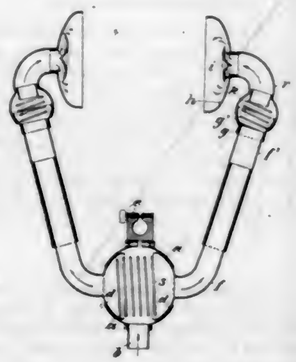
1. As a new product, the derivative of an amino metal mercapto compound corresponding to the formula

wherein Ar is a benzene nucleus, Me is a heavy metal, Y is hydrogen or an alkali metal, such product dissolving in water only with difficulty as an acid, readily as an alkali salt and having a therapeutical effect more especially in cases caused by spirochætæ.



1,685,343. METHOD FOR PLANNING STORMPROOF ZONES AROUND OR THROUGH WOOD DISTRICTS. EMIL STOCK, Bad Flinsberg of Silesia, Germany. Filed July 13, 1926, Serial No. 122,195, and in Germany July 20, 1925. 8 Claims. (Cl. 47—58.)

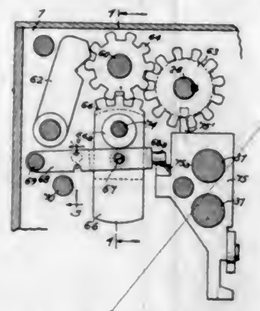
1. A method of protecting forests which comprises polling the trees at the outskirts of the forest to a depth into the forest of approximately three trees to deflect the



air currents thereby preventing the air from banking up against the forest and subjecting the trees to excessive and damaging strains.

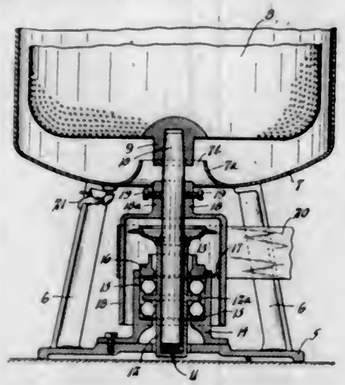
1,685,344. MACHINE FOR SECURING BRIDGE WIRES TO LEAD WIRES OF ELECTRIC BLASTING CAPS. JOSEPH STUART, 2d, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 24, 1927. Serial No. 177,959. 40 Claims. (Cl. 140—112.)

1. In a machine for securing a bridge wire between the ends of the lead wires of a detonator, in combination, mechanism to weld the bridge wire to, and encase it in the metal of, the lead wires, and means to move said mechanism into and out of operative position.



1,685,345. HAIR-DRYING APPARATUS. ERDMANN VOSS, Hamburg, Germany. Filed Mar. 28, 1925, Serial No. 19,061, and in Germany May 8, 1924. 6 Claims. (Cl. 34—26.)

1. An apparatus for drying the human hair by means of hot air, comprising a head adapted to be attached to a hot air conduit, spreading cups, and telescopically composed tubes pivotally attached to the said head and to the said cups, respectively.

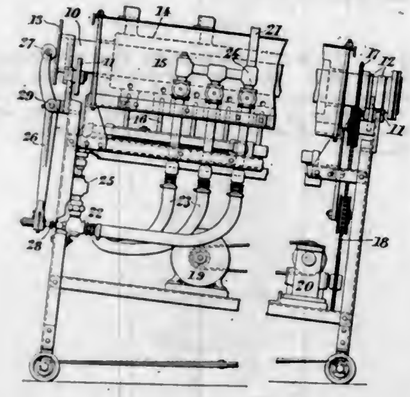


1,685,346. TENS-CARRYING DEVICE FOR CALCULATING MACHINES. OTTO WEISKOPF, Erfurt, Germany. Filed May 1, 1926, Serial No. 106,110, and in Germany May 5, 1925. 4 Claims. (Cl. 235—139.)

1. Single stage tens-carrying device for calculating machines comprising, a denominational slide, dial wheels, a pinion and a single tooth connected with each dial wheel weighted arms mounted below said dial wheels for free rocking motion, toothed sectors forming part of said arms and adapted to connect the single tooth of one dial wheel

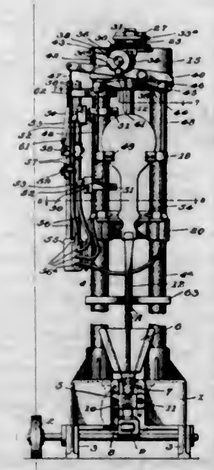
with the pinion of the adjacent dial wheel, means for limiting the stroke of said sectors so as to prevent overrunning and means connected with said denominational slide for throwing said sectors into and out of mesh with said pinions and teeth on said dial wheels.

1,685,347. BEARING FOR CENTRIFUGAL EXTRACTORS. EDWARD J. ZELENKA, Minneapolis, Minn. Filed Jan. 13, 1927. Serial No. 160,855. 2 Claims. (Cl. 308—144.)



1. A shaft controlling device having in combination, a rotating shaft, a sleeve in which said shaft is carried having a circumferential flange between its ends, a casing in which said sleeve is disposed, a plurality of polygonal resilient members formed respectively from strips of resilient metal disposed about said sleeve in radial planes above and below said flange and between said sleeve and the walls of said casing, said members below said flange being supported by said casing, and means threaded into the top of said casing about said sleeve adapted to engage said members above said flange, said members being resilient and flexible whereby they may be flexed to be brought into contact with said sleeve, flange and the wall of said casing, as well as with the bottom of said casing and said last mentioned member.

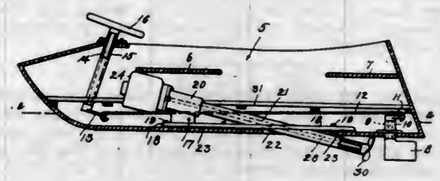
1,685,348. TEMPERATURE-CONTROLLING MEANS. JAMES BAILEY, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed June 11, 1923. Serial No. 644,655. 1 Claim. (Cl. 236—104.)



In a device for the annealing of glass articles, the combination with a rotating chamber to receive the articles,

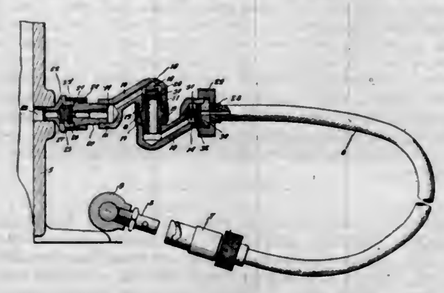
of means for heating the chamber, a controller for regulating the heat so imparted, and means for actuating the con-

troller comprising a member having rolling contact with the end of the chamber and adapted to be shifted by the expansion thereof.



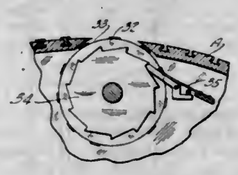
1,685,349. APPARATUS FOR AND PROCESS OF FINISHING BLOWN-GLASS ARTICLES. JAMES BAILEY, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Nov. 26, 1923, Serial No. 676,979. Renewed July 2, 1928. 13 Claims. (Cl. 49—2.)

4. A finishing machine comprising means for supporting the article to be finished with the implement on which it was made suspended therefrom, and means for simultaneously annealing the article and separating it from the implement.



1,685,350. TOY SPEED BOAT. CONRAD R. BUCHET, Long Beach, Calif. Filed Apr. 2, 1927. Serial No. 180,537. 2 Claims. (Cl. 115—34.)

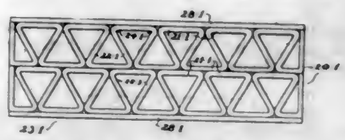
1. In a toy boat; a casing secured in said boat extending downwardly and rearwardly and passing through an aperture through the bottom of said boat, a propeller shaft journaled in said casing having secured to its rear end a propeller; a motor secured to the forward end of said casing and having the rear end of its shaft extending into said casing adjacent the forward end of the propeller shaft, and



a flexible coupling member consisting of a non-metallic sleeve located in said casing and detachably secured to the ends of said shafts.

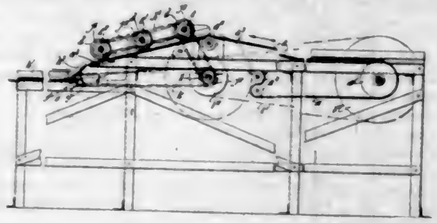
1,685,351. SWIVEL COUPLING. ERNEST W. DAVIS, Oak Park, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 5, 1923. Serial No. 666,722. 1 Claim. (Cl. 285—9.)

In high pressure lubricating apparatus of the class described, a swivel coupling comprising a pair of conduit elements each having a transversely directed opening, an externally shouldered tubular member secured in one of said elements and having its extremity projecting within the transversely directed opening of the other element, means engaging the shoulder on said tubular member to maintain its extremity within said last named element, and a cup washer held against the transverse end face of the extremity of said tubular member and the inner wall of said last named element, said cup washer being positioned so as to exert additional pressure against the parts engaged thereby when fluid under pressure is present within the swivel coupling.



1,685,352. MACHINE FOR PRODUCING POST-OFFICE CLASSIFICATION SLIPS. JOHN P. DAVIS and SAMUEL HEIMAN, St. Louis, Mo.; said Davis assignor to said Heiman. Filed Jan. 24, 1927. Serial No. 163,178. 6 Claims. (Cl. 101—92.)

1. A machine for producing post-office classification slips, comprising a rotatable printing cylinder equipped with type, a rotatable platen that co-operates with said cylinder, feeding rolls for feeding a strip of paper between said platen and cylinder, a rotatable drum on said cylinder pro-

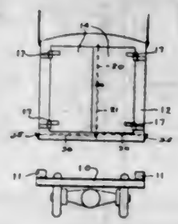


vided with printing type and arranged so that a portion of said drum is positioned in an opening in the periphery of said printing cylinder, a means that normally prevents said drum from turning relatively to the cylinder and a rotatable device actuated by the platen for turning said drum forwardly a definite distance at each cycle of operations of said cylinder.

1,685,353. TRUSSED STRUCTURE. GEORGE HIVES DAWSON, Boston, Mass., and HURXTHAL FIELD FERASE, Canton, Ohio. Original application filed Nov. 26, 1924, Serial No. 676,897. Divided and this application filed Dec. 13, 1924. Serial No. 755,616. 2 Claims. (Cl. 189—37.)

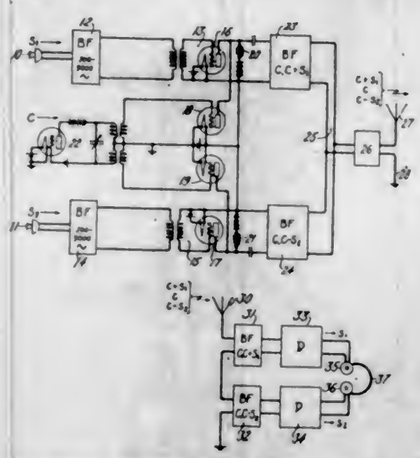
1. A trussed structure including a plurality of trussed elements, each of the elements being formed from a continuous strip and including spaced inner and outer rows of longitudinally extending members and transversely extending connecting members, there being junction angles between the longitudinally extending members and the transversely extending members, and the members of each element being joined to each other at the junction angles for resisting both tension and compression, and inner longitudinally extending members of the elements abutting each other, and means bodily fastening the abutting members to each other.

1,685,354. APPARATUS FOR STACKING BISCUITS AND SIMILAR ARTICLES. HEMMING ALARIK ELFVING, Hango, Finland, assignor to Finsk-Engelska Biscuit-Fabriks A. B., Hango-Vaxel, Finland, a Finnish Company. Filed Mar. 9, 1926, Serial No. 93,617, and in Great Britain Mar. 18, 1925. 3 Claims. (Cl. 107—45.)



1. In apparatus for stacking biscuits, means for spacing the biscuits comprising a movable conveyor adapted to receive the biscuits in disarranged condition, and a plurality of series of discs extending across the path of the conveyor and rotatable in a direction opposed to the travel of the conveyor for arranging the biscuits in definite rows on said conveyor; the discs of the first series being spaced apart for a distance greater than the diameter of the biscuits, and the discs of the following series being spaced apart at distances substantially corresponding to said diameter.

1,685,355. STREAK-RIBBED PRODUCT AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Oct. 25, 1924. Serial No. 745,937. 11 Claims. (Cl. 18—48.8.)



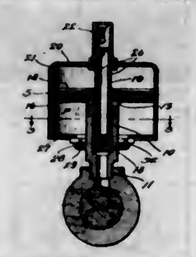
1. A process of making a streak-ribbed sheet material or plastic product which comprises impregnating sheets of thin paper with a synthetic resin comprising urea resin, superposing sheets of different colors, hot-pressing to weld the sheets together to a thicker sheet or block, cutting such pressed material transversely to make thin strips, assembling the strips edgewise in a hot press and pressing to weld the strips together to form a streak-ribbed or variegated partially translucent product.

1,685,356. LOCKING MECHANISM FOR REMOVABLE CONTAINERS. BENJAMIN F. FITCH, Greenwich, Conn., assignor to Motor Terminals Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 2, 1926, Serial No. 126,612. Renewed Dec. 24, 1927. 26 Claims. (Cl. 105—366.)

1. In combination, a container having a door therein and means carried by the container for automatically locking the door whenever the container is deposited upon a predetermined form of supporting surface.

1,685,357. TRANSMISSION SYSTEM. ELMER V. GRIGGS, White Plains, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 16, 1925. Serial No. 62,722. 13 Claims. (Cl. 178—44.)

1. In a carrier system, a method of transmitting signals, which comprises deriving from a single source signal impulses differing in phase from each other, separately modulating a carrier wave by said differently phased impulses, selecting one side band component of each modulation, and transmitting the selected components over a single channel.

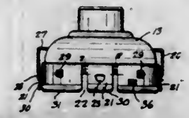


1,685,358. MECHANICAL MANIKIN. CLYDE LUDWICK HARCOURT, Seattle, Wash. Filed Apr. 19, 1927. Serial No. 185,058. 2 Claims. (Cl. 46—40.)

1. A manikin including a torso, a hip portion mounted for undulatory and rotary movement relative to the torso, a head mounted for turning movement, a power mechanism, shafts extending longitudinally of the manikin and operated by the power mechanism, rocking members supported on the shafts and operated thereby, connections between the rocking members to compel a relative undulating movement of the torso and hip portion, means operated

by the mechanism for compelling a rotary movement of the hip portion, and means operated by the mechanism for compelling a turning of the head.

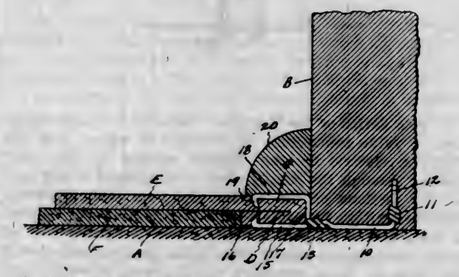
1,685,359. LUBRICATING DEVICE. OTTO J. HERB, Chicago, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 14, 1924. Serial No. 706,337. 3 Claims. (Cl. 184—38.)



1. A lubricating device comprising a fixed tubular member, a fixed piston at the upper end thereof, an inverted cup fitting over said piston, an annular diaphragm mounted on the lower edge of said cup and forming a seal with said member, said diaphragm and member having resilient means mounted on one and engaging the other to lock them against accidental displacement by vibration, and means extending along the axis of said cup inside said member for forcing the cup down over the member.

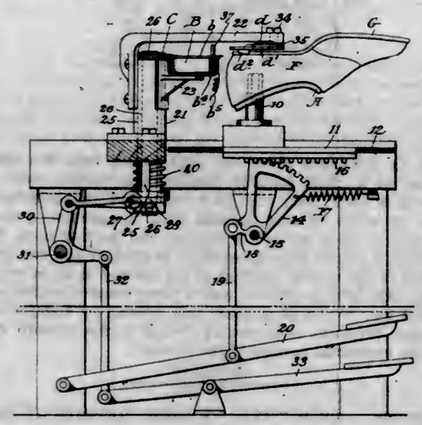
1,685,360. CLEANING COMPOSITION OF MATTER. ROBERT BURNS HOFFMAN, Monterey, Calif. Filed Jan. 26, 1927. Serial No. 163,850. 1 Claim. (Cl. 87—5.)

A silver cleaning composition consisting of 100 grams of diatomaceous earth, 150 grams of water, 6 grams of calcium chloride, one gram ferric oxide, one gram ammonia, and one gram of oil of citronella.



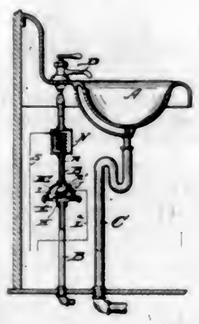
1,685,361. CAP AND SHELL FASTENING. HARVEY HUBBELL, Jr., Bridgeport, Conn., assignor to Harvey Hubbell, Incorporated, Bridgeport, Conn., a Corporation of Connecticut. Filed May 7, 1927. Serial No. 189,649. 13 Claims. (Cl. 178—362.)

3. A casing for electrical devices comprising two telescoping sections, cooperating securing means on the two sections to secure them together, the securing means of one of the sections being mounted on resilient tongues tending to move away from the other section to separate said means, and movable means on one of the sections arranged



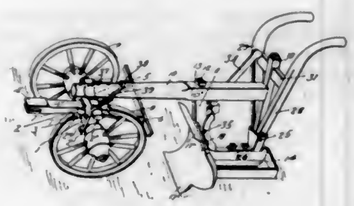
in one position to hold the tongues in securing position and in another position to release them to allow them to move to an ineffective position.

1,685,362. FASTENING DEVICE FOR FLOOR COVERINGS. WILLIAM C. JOSEPH, Fort Worth, Tex. Filed Feb. 8, 1927. Serial No. 166,640. 4 Claims. (Cl. 16—6.)



1. A fastening device for floor coverings comprising, a head for permanently anchoring the device on a floor of the character described, and a pair of arms relatively spaced one above the other and having prongs directed toward each other for receiving a floor covering therebetween, said arms being spaced laterally from each other so that the edge of the floor covering may be threaded therebetween.

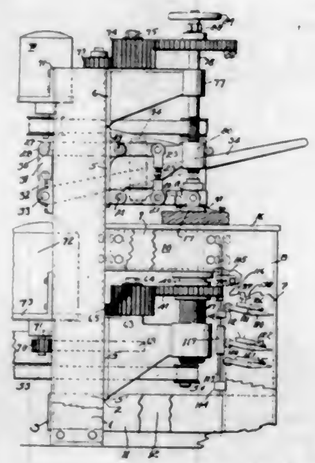
1,685,363. HEEL-SEAT FITTING AND MOLDING MACHINE. JOHN A. KELLY, Brooklyn, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 29, 1925. Serial No. 46,711. 15 Claims. (Cl. 12—17.)



1. In a shaping and trimming machine, a mold, means for heating said mold, a plurality of beveling knives, means for supporting and moving a last into operative position relatively to the mold and said knives, and means for actuating said knives.

1,685,364. ELECTRIC WATER HEATER. ERICH T. P. KOPATZ, Dearborn, Mich. Filed Oct. 25, 1926. Serial No. 143,925. 3 Claims. (Cl. 219—39.)

1. In a device of the character described, a water supply pipe; a valve controlling the delivery of water from the pipe; an electric heating element located in the water passage through the supply pipe; a chambered fitting connecting sections of the supply pipe; an electric switch contained within the chambered fitting; and means adapted to open and close said switch, actuated by the flow of water through the supply pipe upon opening and closing the discharge valve governing the discharge of water from said pipe.



1,685,365. HILLSIDE PLOW. CHARLES WESLEY LADD, Chipman, Alberta, Canada, assignor of one-half to Tom Sing, Edmonton, Alberta, Canada. Filed Nov. 5, 1926. Serial No. 146,517. 2 Claims. (Cl. 97—31.)

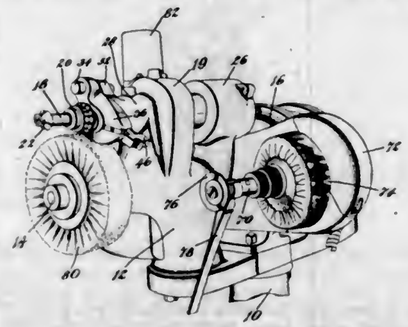
1. In a hillside plow, the combination with the plow beam, of a right angular bracket, the vertical arm of which extends from the plow beam and the horizontal arm of which extends parallel with the ground, a shoe secured at such horizontal portion and bearing upon the ground, a double edge plow share pivoted at one end centrally of the vertical portion of the bracket so as to swing from side to side thereof, and a strap secured to the opposite end of the plow share and having an angular extension pivotally connected at its end to the forward end of the horizontal portion of the bracket.

1,685,366. DEFECTIVE LUMBER REPAIRING MACHINE. HOMER E. LEASH, Oakland, Calif. Filed May 18, 1927. Serial No. 192,231. 8 Claims. (Cl. 144—2.)

1. A machine of the class described comprising a work table, means to secure a piece of lumber thereto, a revoluble spindle, a cutter spindle carried thereby eccentrically, means to rotate said spindles independently, means to cause the first spindle to rise with the cutter spindle, means to stop both spindles when they have passed through the piece of lumber on the table, means to hold a block on

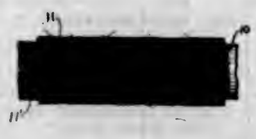
the first spindle, means to cut and thread the block to fit the hole in the lumber, and means to reversely rotate the spindle and block into the hole in the piece of lumber.

1,685,367. SHEET-METAL CONTAINER. JOHN LEE and CHARLES PEARSON, Ingersoll, Ontario, Canada. Filed Mar. 9, 1927. Serial No. 173,951. 1 Claim. (Cl. 220—59.)



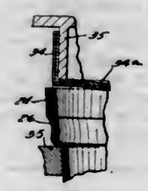
A sheet metal container divided into two portions having annular flanges fitting freely one within the other without wedging contact and each having an annular inclined surface extending at an angle to the annular flanges parallel one to the other and adapted to fit one against the other without wedging contact when the container is closed and so positioned as to hold the annular edge of the interior flange in spaced relation to the end wall of the opposing container member, and tongues extending from the flange of the outer member past the annular edge of the inner member to be bent against an end wall of the container.

1,685,368. FINISHING MACHINE. THOMAS LUND, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 14, 1925. Serial No. 56,266. 9 Claims. (Cl. 12—78.)



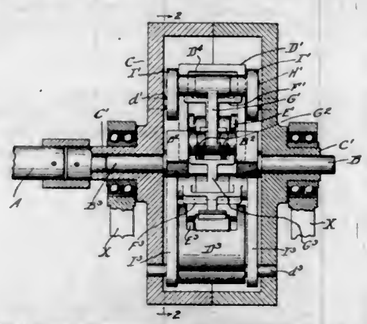
1. In a burnishing machine, a rotary shaft, a circular tool mounted on said shaft and provided with a burnishing surface on its periphery, said shaft being formed with an eccentric portion, a pivoted arm upon said machine having a slotted portion co-operating with the eccentric on said

shaft to vibrate the arm, and a burnishing tool secured to the outer end of said arm for vibration therewith, whereby the greater portion of the edge of the sole of a shoe



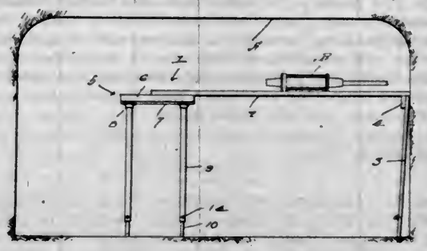
may be burnished by means of the rotary tool and the portion adjacent to the heel-breast may be finished by means of the vibratory tool.

1,685,369. INSULATED WIRE. EDWARD A. MAU and ORRIN F. HUTCHINSON, New Haven, Conn., assignors, by mesne assignments, to Rockbestos Products Corporation, a Corporation of Massachusetts. Filed Nov. 29, 1922, Serial No. 604,022. Renewed Oct. 21, 1927. 6 Claims. (Cl. 173—264.)



1. An insulated electrical conductor comprising a wire and an insulating sheath for the wire consisting of a tough, flexible covering of densely compacted fibres, the fibres of the covering adjacent to the wire being generally parallel to the length of the wire and the remaining fibres being indiscriminately entangled.

1,685,370. PAPER CONTAINER HAVING BODY WITH RENITENT NECK AND PROCESS OF MAKING SAME. ARLINGTON MOORE, Worcester, Mass. Filed Nov. 5, 1923. Serial No. 672,758. 6 Claims. (Cl. 229—5.6.)

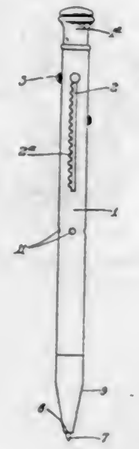


1. A paper container body having a shoulder for limiting the extent of lid insertion, and having an inturned marginal portion spaced at a material distance beyond said shoulder, the body wall between said shoulder and the inturned marginal portion being formed into a renitent and normally inwardly bulged portion adapted to be expanded by an inserted lid and to exert a gripping action on the lid.

1,685,371. POWER TRANSMISSION. CHARLES R. NICHOLS, New York, N. Y. Filed Dec. 24, 1926. Serial No. 156,800. 5 Claims. (Cl. 74—34.)

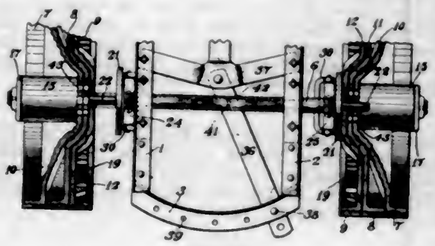
1. In a power transmission, the combination of revoluble members, one or more centrifugal weights each mounted on one of said members so as to move toward and away from the axis of rotation of the latter, and a connection between each such weight and the second member including a crank carried by the latter which on a certain relative angular movement of said members causes said weight to move inward toward the axis of rotation of the member on which the weight is mounted, said connection including provisions for automatically adjusting its effective length at the end of each inward movement of said weight to thereby permit a quick outward movement of the latter.

1,685,372. JACK-HAMMER SUPPORT. FRANK T. NOWALK, Scranton, Pa. Filed Mar. 5, 1927. Serial No. 173,187. 1 Claim. (Cl. 304—6.)



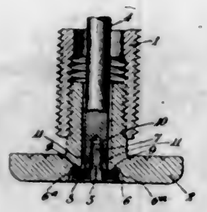
A stand comprising a solid platform having a flat top face, said platform being of substantially rectangular design and decreasing gradually in thickness from its center to the side edges thereof for the full length of the platform, whereby bevelled faces are formed on the bottom of said platform, and front and rear pairs of supporting legs secured at their upper ends to the bevelled faces of the platform, whereby said front and rear pairs of legs are disposed in diverging relation toward their lower ends.

1,685,373. MILLING CUTTER FOR CUTTING SHARPLY-POINTED ANGULAR INCISIONS INTO WOOD. HEINRICH OHAGEN, Breslau, Germany. Filed Apr. 14, 1927, Serial No. 183,740, and in Germany Apr. 23, 1926. 4 Claims. (Cl. 144—136.)



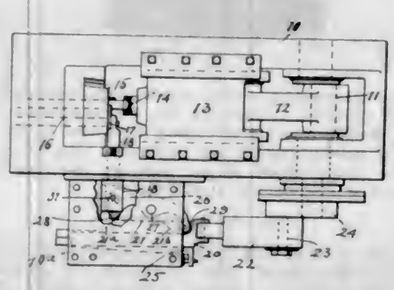
1. A milling-cutter in which the roughing knives and the finishing knives are mounted on one and the same cutter-disk, comprising in combination with the cutter-disk, roughing knives rigid with said disk, and finishing knives mounted in said disk so that they can oscillate in the plane of said disk.

1,685,374. MAGAZINE PENCIL. FRANCIS PARTOS, London, England. Filed Jan. 23, 1928, Serial No. 248,876, and in Great Britain Feb. 1, 1927. 1 Claim. (Cl. 120—14.)



A magazine pencil comprising an outer longitudinally slotted casing, an externally grooved inner tube adapted to serve as a magazine for spare leads, lead carriers slidably mounted in said grooves and inwardly offset at their forward ends, a lug mounted on the rear end of each lead carrier and projecting through one of the slots in the outer casing for projecting and retracting the same, a combined reinforcing and colour band disposed about said lead carriers, and said outer casing having spaced openings formed through its wall whereby the colour of the band may be viewed.

1,685,375. SIDE-DRAFT CONTROL FOR TRACTORS. WILLIAM L. PAUL, Berkeley, Calif., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed July 5, 1923. Serial No. 649,470. 11 Claims. (Cl. 180—17.)

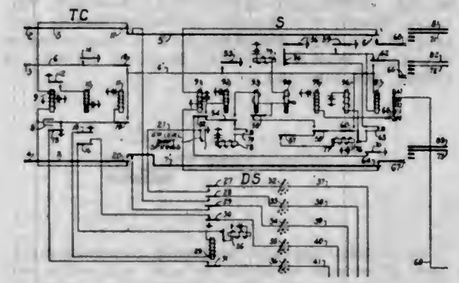


1. In a tractor having a pivoted draw bar, the combination of a frame, an axle supported on the frame, traction wheels journaled on the axle, each wheel composed of a plurality of sections, and means operable by the draw bar to connect one or more of said sections with the driving mechanism of the tractor.

1,685,376. TIRE VALVE. WINFIELD P. PORTER, Greene, Me. Filed Sept. 22, 1927. Serial No. 221,155. 2 Claims. (Cl. 152—12.)

1. A tire valve including a shell, having a base member which latter has a recess in its outer face and an annular lip at the bottom of the recess, a valve plunger in the shell having a threaded bore in its lower end, a valve head receivable in the recess of said base member and having a stud threaded into said bore and an annular recess on its upper face, and a sealing ring in the recess clamped between the valve head and the lower end of the plunger and projecting beyond the periphery of the plunger and being engageable with said annular lip.

1,685,377. CUT-OFF MECHANISM FOR METAL-WORKING MACHINES. JOHN PROVINCE and BENJAMIN PROVINCE, Kent, Ohio, assignors to The Lamson and Sessions Company, Kent, Ohio, a Corporation of Ohio. Filed Oct. 3, 1924. Serial No. 741,346. 4 Claims. (Cl. 10—25.)

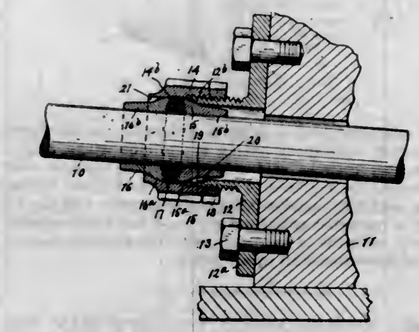


2. In a metal working machine of the type wherein stock is fed into the machine and cut into sections, a frame, and stock cutting mechanism comprising a cutter, a reciprocating and sliding holder carrying the cutter, a double-acting cam having aligned cam surfaces arranged opposite the end of the holder, and means adapted to engage both cam surfaces and connected to said holder for causing the holder to be positively actuated in both directions by movement of the cam.

1,685,378. LUBRICATING DEVICE. WILLIAM RAEBURN, Waterbury, Conn., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 8, 1921. Serial No. 490,464. 3 Claims. (Cl. 184—88.)

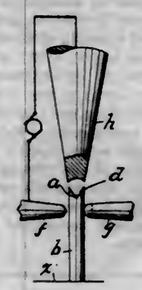
1. The combination with a lubricant receptacle comprising a tubular member having a flange at one end thereof, of a cap for said tubular member comprising a cup-shaped member having a skirt portion adapted to surround the end of said tubular member and terminating in an inwardly projecting flange, and a split tubular ring loosely held in said skirt portion by its own resiliency, said ring having a projection extending inwardly from the inner face thereof and positioned to engage said flange when said cup is forced over the flanged end of said tubular member.

1,685,379. AUTOMATIC TELEPHONE SYSTEM. LEONARD L. RUGGLES, Wheaton, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Original application filed June 6, 1925, Serial No. 35,280. Divided and this application filed May 26, 1927. Serial No. 194,250. 10 Claims. (Cl. 179—9.)



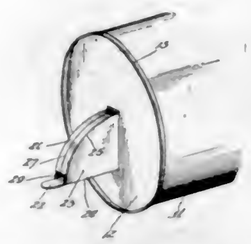
1. In a multi-office telephone system, a director for transmitting digit combinations to trunk calls to any one of a plurality of offices, a registering device associated with said director for indicating the total number of calls trunked to a given office, and means controlled by said device for controlling the transmission of a digit of the combination corresponding to such office.

1,685,380. SCRAPING TOOL. LLEWELLYN B. SHULTZ, St. Louis, Mo., assignor to Pilley Packing & Flue Brush Manufacturing Company, St. Louis, Mo., a Corporation of Missouri. Filed Sept. 9, 1926. Serial No. 134,362. 1 Claim. (Cl. 15—104.19.)



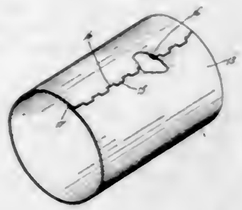
In a device of the class described, the combination with a rod, of a pair of sleeves on said rod, each provided with a bore of greater diameter than the rod and terminating in a restricted portion, bendable scraping blades having their ends between said rod and sleeves and clamped to the rod by said restricted portion, and means for moving said sleeves toward and away from each other to spring the scraper blades and thus vary the effective diameter of the tool.

1,685,381. COMBINED STUFFING BOX AND SHAFT BEARING. JOHN O. SMITH, Cleveland, Ohio, assignor to The Upson-Walton Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 23, 1927. Serial No. 177,491. 5 Claims. (Cl. 308—72.)



1. In combination, a stuffing box comprising a sleeve adapted to have a shaft extend therethrough and a gland adjustable on said sleeve, said sleeve and gland having a pair of opposed annular seats, a bearing for the shaft comprising two separate members interlocked with each other, each provided with a spherically curved portion engaging one of said seats and having a packing between them, and means interposed between the stuffing box and bearing for locking the bearing to a part of the stuffing box.

1,685,382. METHOD OF BRIDGING THE CONNECTING WIRES OF ELECTRIC BLASTING CAPS. JOSEPH STUART, 2d, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Original application filed Feb. 9, 1927, Serial No. 166,853. Divided and this application filed Apr. 23, 1927. Serial No. 185,951. 2 Claims. (Cl. 219—10.)

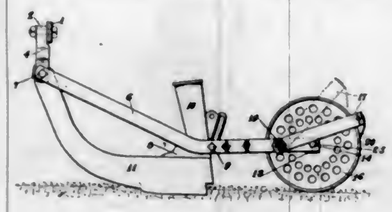


1. A method of securing the ends of a bridge wire to the ends of the spaced apart conducting wires of an electric blasting cap which comprises forming a notch in the end of a conducting wire, positioning the bridge wire in said notch, supporting the conducting wire, and upsetting the metal walls of the notch over the bridge wire while passing an electric current through the bridge wire and conducting wire, thereby both welding the bridge wire to, and encasing it in, the extremity of the conducting wire.

1,685,383. POURING-SPOUT CONTAINER. JOHN J. THOMAS, Westfield, N. J., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 7, 1922. Serial No. 550,299. 2 Claims. (Cl. 221—11.)

1. A container having a spout hinged to an apertured wall thereof, said spout having a top, side wings, and a wall member between said side wings and opposite said top, whereby the material is confined in said spout during pouring, said wall member being cut away near said top to provide a restricted outlet opening and being constructed concentric with the hinge axis so as to make close contact with said apertured wall at all points.

1,685,384. HOOKED AND LAPPED SIDE SEAM FOR TUBULAR BODIES AND METHOD OF MAKING THE SAME. JOHN M. YOUNG, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 19, 1926. Serial No. 89,449. 7 Claims. (Cl. 113—116.)

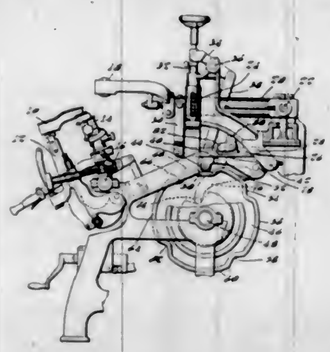


1. A can body made of comparatively light gauge tin plate, said body having its free edges united by a series of interlocked hooks and a series of overlaps, the members of the one series alternating with the members of the other, said hooks being formed of bentback parts of the can body engaging each other at points between the overlaps.

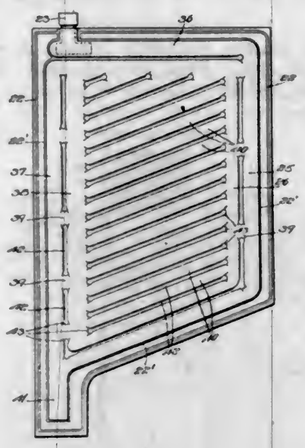
5. The method of uniting the free edges of a can body of comparatively light gauge commercial tin plate, which includes forming the free edges thereof with alternate hooks and overlaps, the hooks of one edge being bent reversely to those of the other edge, bringing said edges together to interlock said hook portions and superimpose said overlaps and thereafter soldering said hooks and overlaps to form a heretically sealed seam.

1,685,385. SCRAPER. CHARLES H. WHITE, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed May 5, 1923. Serial No. 636,900. 1 Claim. (Cl. 280—158.)

The combination of a frame; a ground wheel supported on the frame; a support pivotally mounted on the frame forwardly of the axis of the ground wheel, extending rearwardly and having a vertically swinging movement about said pivot; a scraper secured on said support and movable bodily therewith; said support and scraper adapted to be swung upwardly by an increase of soil on the wheel tread, and dropping back to primal position by gravity in an arc eccentric to the axis of said wheel whereby the scraper operates with a chopping effect on soil on the wheel tread; and a stop to limit the downward movement of said support and scraper.

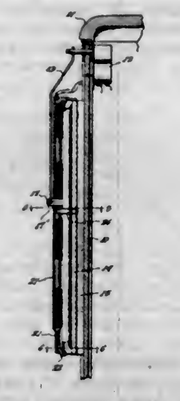


1,685,386. INSULATED CONDUCTOR. ROBERT R. WILLIAMS, Roselle, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 5, 1924. Serial No. 711,043. 14 Claims. (Cl. 178—45.)



1. An electrical conductor comprising a conducting core, a layer of pressure equalizing material surrounding said core, an outer sheath of insulating material, and a separator of chemically inert material positioned between said pressure equalizing material and said insulating material.

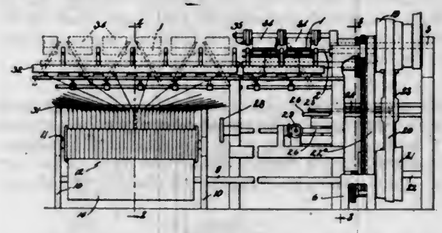
1,685,387. SHOE-PRESSING MACHINE. ERASTUS E. WINKLEY and FRED V. HART, Lynn, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 8, 1925. Serial No. 42,213. Renewed Dec. 19, 1927. 27 Claims. (Cl. 12—34.)



4. In a shoe pressing machine, means for holding a shoe, a tool arranged to operate progressively over the shoe to press it, a pressure mechanism having a pressure cycle of certain characteristics, and a mechanism for inhibiting certain of these characteristics as regards selected shoes.

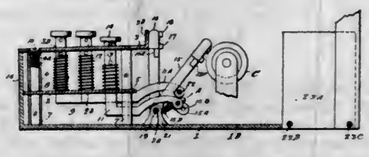
1,685,388. BOILER CONSTRUCTION. RAYMOND E. WHITE, Chicago, Ill., assignor to Tubal Boiler Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 15, 1923. Serial No. 680,804. 2 Claims. (Cl. 122—265.)

1. A boiler section constructed of two sheet metal walls and comprising a plurality of circulating tubes, a pair of inner headers communicating with said tubes, and a pair of outer headers communicating with said tubes.



1,685,389. ELECTRIC HEATING ATTACHMENT FOR WINDSHIELD WIPERS. ERVIN ADAMS, Johnstown, Pa., assignor, by direct and mesne assignments, to Thomas Lochrie and Joseph B. Bell, Windber, Pa. Filed Feb. 17, 1927. Serial No. 169,067. 9 Claims. (Cl. 15—253.)

1. A windshield wiper comprising a squeegee including a head, a heater detachably connected to said head and comprising a core and a heating coil mounted upon said core, the latter having a hook at one end and an attaching device yieldably connected to its opposite end



---

1,685,390. WINDING AND UNWINDING YARNS OR THREADS. EDWARD J. ABBOTT, Wilton, N. H. Filed May 18, 1923. Serial No. 639,830. 15 Claims. (Cl. 242—35.5.)

1. That method of tensioning yarn while winding it from one package to another which comprises positively driving both the winding and unwinding packages, the surface speed of the winding package being greater than that of the unwinding package.

1,685,391. TYPEWRITER. JOSEPH M. ANGELETTI, New York, N. Y. Filed Dec. 14, 1925. Serial No. 75,322. 18 Claims. (Cl. 197—22.)

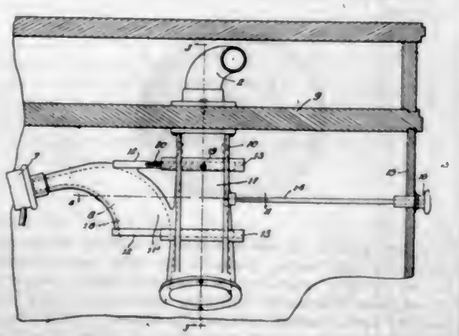
9. In a typewriter the combination of a casing having an open end wall and an open base extension, a plate having rows of slots mounted between the top and base pate of the casing to form two interiorly spaced compartments, the top plate having rows of slots communicating with the rows of the first mentioned slotted plate, of a plurality of approximately L shaped key-bars vertically movable through said rows of slots and means for returning said key-bars to their normally supported position, said means consisting of a compression spring involuting each vertical arm of said key-bars, and means on the bars adapted to engage said springs to compress same against the first mentioned slotted plate.

1,685,392. PRESERVATIVE PACKAGE AND PROCESS OF MAKING THE SAME. GEORGE W. BEADLE, Rye, N. Y., assignor to The Cellacote Company, Inc., a Corporation of New York. Filed Aug. 12, 1925. Serial No. 49,680. Renewed Dec. 17, 1927. 10 Claims. (Cl. 99—8.)

2. An article of manufacture consisting of a skin covered article having pores in its skin, and a non-adherent initially tensioned homogeneous sealing covering of cellulose completely enclosing said article with compressive force exerted peripherally thereof and acting to close said pores against the escape of moisture and entrance of air.

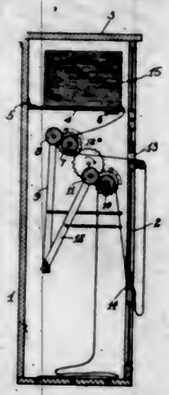
10. The method of treating perishable articles such as fruits, vegetables and the like, to preserve the same, which

includes completely enclosing the article in a homogeneous covering of hydrated cellulose in liquid condition, subjecting the covering to treatment to partially coagulate the same, treating the partially coagulated covering with an acid to complete the coagulation, treating the coagulated covering to neutralize the acid, and finally drying the covering to cause it to shrink and exert pressure on the article.



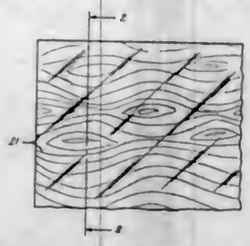
1,685,393. METHOD OF COVERING ARTICLES AND THE PRODUCT RESULTING THEREFROM. HAROLD I. BEADLE, New York, N. Y., assignor to The Cellacote Company, Inc., a Corporation of New York. Filed Oct. 25, 1927. Serial No. 228,547. 12 Claims. (Cl. 99—8.)

1. The method of preserving perishable articles such as fruits, vegetables and the like, from deterioration or decay, which consists in providing a container of hydrated transparent cellulose in moist condition and open at its end, placing the article to be preserved in said container, forcing the walls of the open end of the container laterally on the article to closely surround the same, and drying the container to cause it to contract tightly on the article and thereby form a transparent preservative covering.



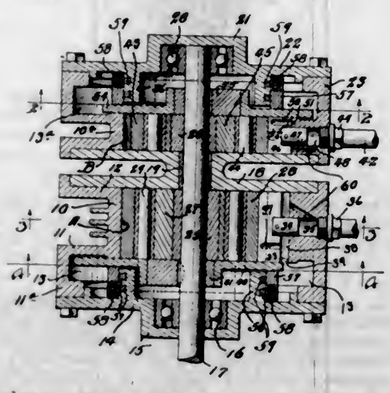
9. An article of manufacture, consisting of a perishable article, such as a fruit or vegetable, and a bag-like preservative container of transparent cellulose surrounding and inherently exerting compressive tension on said article, the walls of the open end of the container being displaced laterally on and closely embracing said article.

1,685,394. COMBINED PHONOGRAPH AND RADIO APPARATUS. JOSEPH W. BISHOP, Muskegon, Mich., assignor to The Brunswick-Balke-Collender Company, Wilmington, Del., a Corporation of Delaware. Filed June 30, 1924. Serial No. 723,114. 4 Claims. (Cl. 179—100.1.)



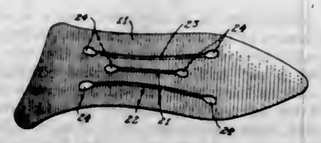
1. In a device of the character described, a phonograph, a radio loud speaker, an amplifying horn, a neck between said amplifying horn and said loud speaker and phonograph, guideways formed integral with said neck, an element having guides fixed thereon and adapted to slide in said guideways comprising two passageways, each passageway adapted to register with the horn, said element one adapted to form an operative connection between said horn and said phonograph, and the other between said horn and said loud speaker.

1,685,395. TOWEL CABINET. JOSEPH N. BORROUGHS, Oakland, Calif. Filed Apr. 16, 1923. Serial No. 632,250. 1 Claim. (Cl. 312—38.)



In a towel dispensing device, a cabinet having a towel compartment in its upper portion and a feeding roll compartment in its lower portion, a shelf separating said compartments and adapted to hold a supply of toweling, said cabinet having an upper opening to permit a portion of said toweling to pass therethrough to be exposed for use, and a lower opening to permit the used toweling to pass back into the cabinet, a feeding roll disposed between said towel compartment and said upper opening to be actuated by the movement of the toweling thereover, and a second roll adapted to be actuated by said first mentioned roll and operative to retract the used toweling back into the cabinet.

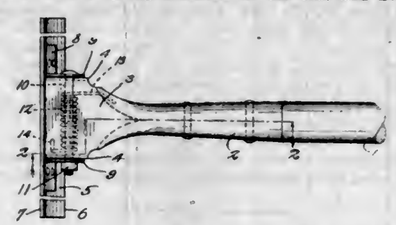
1,685,396. METHOD OF REPRODUCING ARTISTIC DESIGNS. ROBERT F. BROWN, Dayton, Ohio, assignor, by mesne assignments, to Oxford Varnish Corporation, Detroit, Mich., a Corporation of Michigan. Filed Mar. 2, 1925. Serial No. 12,774. 1 Claim. (Cl. 41—26.)



The method of reproducing artistic designs in simulation of the natural appearance of the surface of an article to be imitated, which comprises applying to the under or unexposed face of a transparent panel a single layer of pigment, the layer of pigment varying in thickness and corresponding in color to one of the colors of the natural article and the layer being in the form of an open design, which when applied leaves uncovered portions of the transparent surface being treated, and subsequently applying to said layer and to said uncovered portions of the transparent surface a layer of pigment corresponding in color to the dominating color of the natural surface being treated, whereby the color of the first layer of material wherever said layer varies in thickness will, when thus contrastly blended with the second layer, produce half tones and quarter tones as well as the full tones of the colors of the two layers of material applied to this transparent surface.

1,685,397. GYRATORY PUMP. JOHN O. CARREY, St. Louis, Mo., assignor to C. & C. Engineering Company, Inc., St. Louis, Mo., a Corporation of Missouri. Filed Mar. 15, 1926. Serial No. 94,733. 17 Claims. (Cl. 230—145.)

1. In a gyratory pump a casing provided with a compression chamber, an eccentrically mounted member arranged for gyratory movement in said chamber for compressing fluid therein, an element mounted so as to project into said chamber and be retracted therefrom to maintain contact with the periphery of said member, an outlet duct in said element and leading into a high pressure chamber arranged in said casing, an outlet passage leading from said pressure chamber outwardly through one end of said casing, and a gyratory plate operable independently of and in correlation with said gyratory member for controlling said outlet passage.

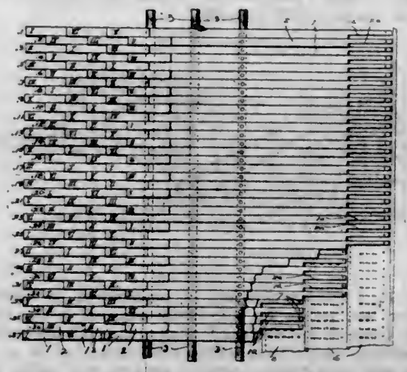


1,685,398. ARCH SUPPORT AND SHOE-SHANK REENFORCEMENT. FRANK G. DELDON, Brooklyn, N. Y. Filed Jan. 5, 1927. Serial No. 159,132. 3 Claims. (Cl. 36—76.)

1. A shoe shank reenforcement formed of sheet metal and having an arch-supporting member characterized by a pair of independently yieldable, longitudinal, portions at each side of the longitudinal center, both pairs of yieldable portions being transversely inclined toward said longitudinal center, and the inner yieldable portion of each pair having a greater yieldability than the outer portion of the pair.

1,685,399. SCRAPER. OSCAR FANBERG, Hensley, W. Va. Filed Aug. 31, 1926. Serial No. 132,759. 1 Claim. (Cl. 37—179.)

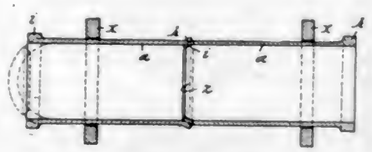
A scraper including a handle engaging ferrule having a broad flat end portion, downturned ears integral with the sides of said end portion, a sheet metal blade having both longitudinal edges curved to reinforce the blade longitudinally, a plate secured to and extending longitudinally of the blade having spaced ears struck therefrom for receiving between them the ears on the end portion of the ferrule, a pivot bolt extending through all of the ears, and a spring mounted on the bolt and housed



between the ears, one end of the spring engaging the end portion of the ferrule and the other end engaging the plate, thereby to hold the blade normally pressed against the free end of the flat portion of the ferrule at a point between the curved portions of the blade.

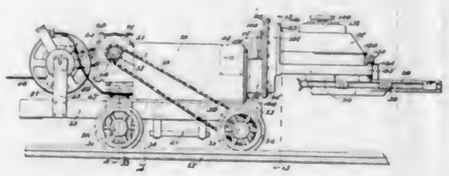
1,685,400. FLEXIBLE CORD OR STRIP PUZZLE. ERNEST L. FARROW, Cleveland Heights, Ohio; Pauline Farrow administratrix of said Ernest L. Farrow, deceased. Filed July 19, 1927. Serial No. 206,902. 5 Claims. (Cl. 273—159.)

1. A game or puzzle, comprising a flexible sheet slitted on adjoining parallel lines to form a narrow flexible portion and loop, a thin flat piece having a square opening with sides about equal in length to the width of said loop and adapted to expose a part of said loop when said piece is superposed upon said sheet, and a tie member adapted to interlock with said loop and to secure said sheet and piece non-rotatably but detachably together.



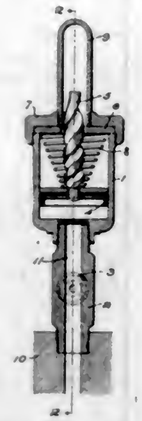
1,685,401. MUSICAL INSTRUMENT. FREDERICK W. FELLOWS, Los Angeles, Calif. Filed Apr. 19, 1923. Serial No. 633,109. 52 Claims. (Cl. 84—45.)

2. In a musical instrument, in combination, a series of tone producing elements, a key-board consisting of key-levers with their respective digital surfaces of sub-



stantially the same shape and size, arranged in vertical tiers, side by side, the digital surfaces in each vertical tier being successively positioned rearwardly between parallel planes coincident with the opposite sides of said digital surfaces, all of the digital portions of alternate keys from left to right being in alignment horizontally and lying in the same plane; operative connections from said key-levers to said tone producing elementa, and a selective control mechanism for connecting said key-levers, by groups, said connections being adapted to connect each of said key-lever groups to a plurality of groups of tone producing elements, one group thereof at a time, the respective pitches of the tones produced by each of the groups of tone producing elements simultaneously connected being separated by the same series of intervals.

1,685,402. MANUFACTURE OF HIGHEST-PRESSURE CONDUITS. JULIUS GROSSWEISCHEDE and GEORG REICHENBECHER, Mulheim-Ruhr, Germany, assignors to Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany, a German Corporation. Filed Jan. 24, 1927. Serial No. 163,132. 1 Claim. (Cl. 29—156.)



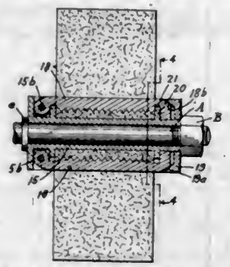
A method of producing turbine-tubes in preventing the production of germs of cracks, consisting in forming a blank from a thick plate of dense structure by simultaneous application of pressure and hot drawing with the aid of dies and mandrels of gradually decreasing diameter and of gradually increasing length a seamless tubular body of gradually decreasing diameter and of gradually increasing length of a special uniform structure, in producing in a manner known per se, during the drawing process an outwardly directed flange at the open end of said tubular body by not drawing the work completely through the die, and in cutting out the bottom of said tubular body to produce an inwardly directed flange.

1,685,403. MINING MACHINE. MORRIS P. HOLMES, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Nov. 1, 1918, Serial No. 260,708. Renewed Nov. 6, 1926. 193 Claims. (Cl. 262—28.)

1. In a mining machine, in combination, a swinging cutter bar, means for adjustably supporting the same, and common self-contained power operated mechanism selectively operative to swing said cutter bar or to adjust said supporting means to position said cutter bar, said mechanism being rendered operative to perform either of said functions by preventing its performance of the other.

1,685,404. LUBRICATING APPARATUS. GUSTAV JOHNSON, West Roxbury, Mass., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 25, 1925. Serial No. 52,388. 5 Claims. (Cl. 184—45.)

1. In a slow feed lubricant cup, the combination of a reservoir, a piston in said reservoir for forcing the lubricant therefrom, a spiral coil spring for forcing said piston toward the discharge end of said reservoir, a stem on said piston having a plurality of threads increasing in steepness away from said piston, a cover member for said piston having a threaded aperture adapted to cooperate with said threads and a cap on said cover for receiving and enclosing said stem.



1,685,405. AUTOMOBILE RADIATOR CAP. NORMAN E. JOHNSON, Chicago, Ill. Filed Mar. 9, 1925. Serial No. 14,044. 2 Claims. (Cl. 220—24.)

1. The combination of a threaded inner member for screw attachment to the neck of a radiator, having spring means movable toward and away from the axis of said member, and a cap having an internal circumferential groove for said spring means, in which groove said spring means is held, having stop means in said groove, co-operating with said spring means to form a ratchet device in said groove, permitting relative rotation between said member and cap in one direction, but positively preventing relative rotation in the opposite direction, said spring means and groove co-operating to also prevent separation of said member and cap, and a packing between said member and cap to prevent leakage, said member being grooved peripherally below said other groove to receive said packing.

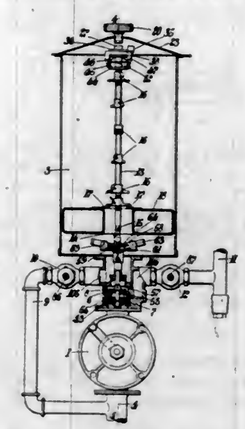
1,685,406. CLEANING AND POLISHING WHEEL. THEODORE P. KIMMAN, Cleveland, Ohio, assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 5, 1926. Serial No. 127,222. 6 Claims. (Cl. 15—230.)

1. A wheel for cleaning and polishing purposes comprising a hub, means on said hub providing radial recesses, strips of extensible material disposed with their intermediate portions in said recesses, retainer members arranged to cross said portions of said strips and to seat in said recesses, cooperating means on said hub and on said members for fixing the position of said members in

said recesses, said hub means also serving to position and maintain said strips in place, and means for forcing said members toward said hub securely to hold said strips in place.

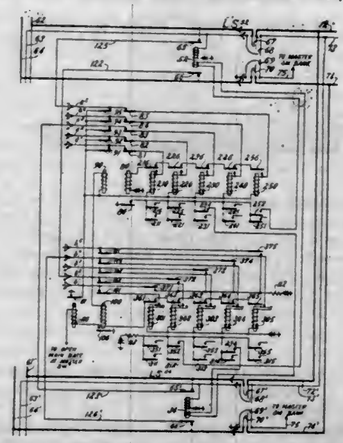
1,685,407. DICYCLIC DERIVATIVES OF PENTAMETHYLENE AND PROCESS FOR THE MANUFACTURE OF SAME. CHARLES MANNICH, Frankfort-on-the-Main, Germany. Filed Oct. 15, 1926, Serial No. 141,887, and in Germany Oct. 27, 1925. 7 Claims. (Cl. 260—45.)

2. As new product 1-phenyl-3.4-trimethylene-pyrazolone which may be produced by treating the reaction product of esters of -keto-pentametbylene-carbonic-acids and phenyl-hydrazine with alkaline condensing agents, the new compound forming slightly coloured crystals melting at 183–184° C., not dissolving in water, but dissolving in the usual solvents, such as ethyl-alcohol, methyl-alcohol, and in caustic alkalis.



1,685,408. LUBRICANT-EXPELLING DEVICE. HOWARD J. MURPHY, Reading, Mass., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 11, 1925. Serial No. 8,588. 9 Claims. (Cl. 221—47.4.)

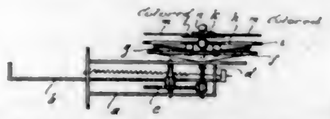
5. A lubricating apparatus comprising, in combination, a lubricant-receiving part having a shoulder, a nozzle for engagement with said lubricant-receiving part, said nozzle including a sealing washer, a closure valve having a stem extending into adjacency to said sealing washer, and a lip located beyond and at one side of said stem, said lip adapted to engage behind one side of said shoulder of said lubricant receiving part whereby a tipping action of said nozzle relative to said lubricant-receiving part about said lip as a fulcrum will cause the end of said lubricant-receiving part to engage said stem to open said valve and whereby said washer will be pressed by the lubricant released through said valve against the head of the lubricant-receiving part to provide a tight seal between said nozzle and said lubricant-receiving part.



1,685,409. APPARATUS FOR DELIVERING MEASURED QUANTITIES OF LIQUIDS. EDWARD CHARLES FREDERICK OAKLEY, Norbury, England. Filed Jan. 27, 1928, Serial No. 250,050, and in Great Britain Aug. 31, 1926. 6 Claims. (Cl. 221—100.)

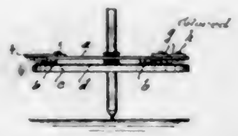
1. An apparatus for delivering measured quantities of liquid comprising in combination a pump, a storage tank connected to the suction side of said pump, a measuring vessel connected to the outlet side of said pump, a suction pipe connecting said storage tank and pump, a non-return valve located in said pipe, a valve chamber connecting said pump and measuring vessel, a valve casing secured within said valve chamber, a pair of valves located and operating within said valve chamber, a discharge pipe connecting said valve chamber and suction pipe, a valve in said discharge pipe, a delivery pipe connected to said valve chamber, a valve in said delivery pipe, mechanism within said measuring vessel comprising a quantity stop rod, a plurality

of stops on said rod, means for setting same in position for delivering a definite quantity of liquid, a float coacting with the stops on the quantity stop rod, means for guiding said float, means for closing the valves in the valve casing, means for maintaining said valves in the closed position, and means for opening said valves, mechanism without the measuring vessel comprising means for actuating the means within the vessel for setting the quantity stop rod and the means for opening and closing the valves in the valve casing, means for actuating the valves in the discharge and delivery pipes and means for actuating the pump.



1,685,410. TELEPHONE SYSTEM. RUDOLPH F. STEHLIK, Chicago, Ill., assignor to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Nov. 3, 1926. Serial No. 145,949. 17 Claims. (Cl. 179—18.)

1. In a telephone system, a group of lines, a preselecting lineswitch terminating each of said lines, a group of trunks, means in each lineswitch for connecting the asso-



ciated line to one of said trunks, and a group of line relays less in number than the number of lines in said group of lines for controlling the connecting means in all said line-switches.

1,685,411. INTERCHANGEABLE TRANSPARENT DISK ON SPARK-PRODUCING TOYS WITH CHANGING PICTURES. CARL ARNOLD, Nuremberg, Germany. Filed Aug. 1, 1927, Serial No. 209,880, and in Germany July 8, 1927. 1 Claim. (Cl. 46—32.)

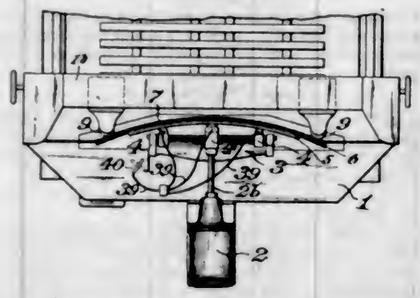
A spark producing toy with changing pictures, comprising in combination with a disk carrying cerium-stones and having apertures, an emery-disk underneath said cerium-stone disk, a vertical shaft, and a driving mechanism for rapidly rotating said shaft, a disk having apertures loosely mounted on said shaft above said cerium-stone disk flaps at the sides of said apertures, and differently colored transparent panes on the apertures and removably fixed on said disk by means of said flaps.

1,685,412. SPARK-PRODUCING TOY. CARL ARNOLD, Nuremberg, Germany. Filed Aug. 1, 1927, Serial No. 209,881, and in Germany Jan. 31, 1927. 2 Claims. (Cl. 46—32.)

1. In a spark producing toy, in combination with an emery disk a cerium-lever and cerium stones fixed on said lever so that they slide on the emery disk, an extension at one end of said lever and having apertures, flaps at the sides of said extension portion of said lever, and colored transparent panes placed over said openings and securely held in position by the folded over flaps of said lever.

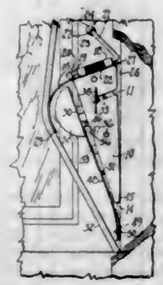
1,685,413. FOUNTAIN PEN. FRANK M. ASHLEY, Brooklyn, N. Y. Filed Oct. 29, 1926. Serial No. 144,923. 10 Claims. (Cl. 120—47.)

1. A fountain pen comprising a pen-section, a barrel having a smooth cylindrical bore which is of increased diameter adjacent the inner end of the pen-section, a piston-rod, a piston carried thereby having a passage leading therethrough, and automatic means for opening said passage on the outward stroke of the piston and closing said passage on the inward stroke thereof.



1,685,414. FOUNTAIN PEN. FRANK M. ASHLEY, Brooklyn, N. Y. Filed Sept. 23, 1927. Serial No. 221,436. 8 Claims. (Cl. 120—47.)

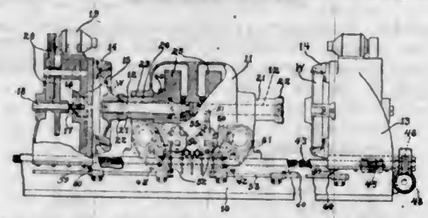
1. A fountain pen comprising a barrel having a reservoir therein, a feed plug having a bore extending therethrough, a tubular piston-rod, a piston thereon, a tube extending from said bore in said feed plug through said piston into said piston rod and contributing to form an annular passage between said piston-rod and tube, said piston and rod having



a passage leading from said reservoir to said annular passage to provide a continuous passage leading from said reservoir through said tube to the atmosphere.

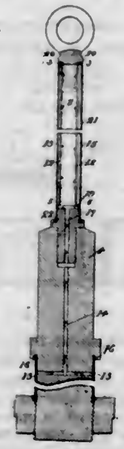
1,685,415. SPRING-FORMING MACHINE. THOMAS F. BUCKLEY, Scranton, Pa. Original application filed Oct. 9, 1924, Serial No. 742,598. Divided and this application filed Dec. 16, 1925. Serial No. 75,745. 3 Claims. (Cl. 153—51.)

1. In a spring forming machine; the combination of a flexible resistance member; a formation plate; presser blocks, cooperating with said plate; and means for converting said presser blocks into electro-magnets to prevent release of formed springs at other than tempering temperature.



1,685,416. BURGLAR ALARM. THOMAS R. CASTLES, Portland, Oreg. Filed Apr. 5, 1927. Serial No. 181,172. 6 Claims. (Cl. 116—82.)

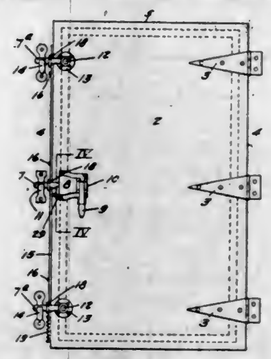
1. A burglar alarm consisting of an alarm member adapted to be actuated by a slight movement of a window sash and to then lock said sash against further movement, in combination with a locking member mounted on said alarm adapted to prevent movement of the opposite sash in the opposite direction.



1,685,417. CAR-WHEEL BORING AND FACING MACHINE. LYNDON C. COLE, Hamilton, Ohio, assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed May 10, 1927. Serial No. 190,278. 9 Claims. (Cl. 29—26.)

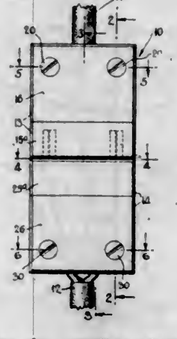
1. A boring and facing machine comprising in combination, a work supporting head having work holding means thereon, a tool supporting head having a boring bar therein, a facing tool mounted coaxially with said boring bar in said tool supporting head, fluid means to force said facing tool axially relative to said boring bar, means admitting fluid through said bar to advance said facing tool, and means for simultaneously rotating said bar and facing tool.

6. A boring and facing machine comprising in combination, a work supporting head having work holding means thereon, a tool supporting head having a boring bar therein, a facing tool mounted coaxially with said boring bar in said tool supporting head, means to simultaneously rotate said boring bar and facing tool, means to slowly feed said work supporting head toward said tool supporting head, and means to rapidly traverse said work supporting head toward and away from said tool supporting head.



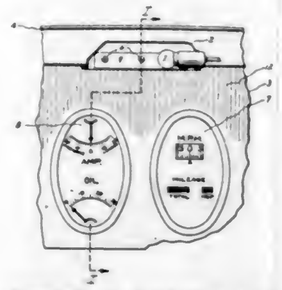
1,685,418. SLEEVE ASSEMBLY FOR VALVE STEMS, PISTON RODS, SPINDLES, PLUNGERS, AND THE LIKE. CHARLES V. FOULDS, Berkeley, Calif., assignor to The Pelton Water Wheel Co., San Francisco, Calif., a Corporation of California. Filed Feb. 12, 1927. Serial No. 167,625. 6 Claims. (Cl. 137—111.)

5. In combination with a pressure chamber, a rod therein and extending exteriorly thereof, a shell embracing the rod and affording a protecting cover therefor, portions of said rod and shell lying in spaced relation affording a passage therebetween extending endwise of the rod and other portions of said rod and shell at points throughout their length lying in supporting contact to prevent the collapsing of the shell, a gland with which the surface of said shell contacts, and means for providing a fluid tight joint connection between the shell and rod at a point within the chamber.



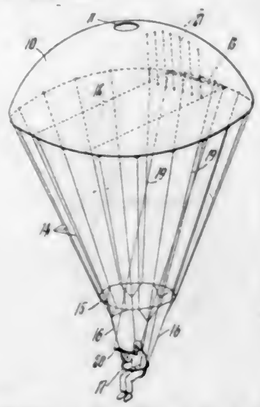
1,685,419. DOOR-LATCH CONSTRUCTION. JOHN EDWARD GLOEKLER, Pittsburgh, Pa. Filed Apr. 27, 1927. Serial No. 186,931. 6 Claims. (Cl. 292—45.)

1. The combination with an apertured door casing and a hasp thereon, of a door provided on its outer side with a latching bolt and a lifting handle therefor, a longitudinally movable operating bar for the handle extending through the door, a lever for the bar pivotally mounted on the inside of the door and pivoted to the bar, and a



loosely mounted horizontally arranged bowed bearing arm for said lever extending beyond the inside of the door.

1,685,420. ELECTRIC-CABLE-COUPLING CONNECTER. JOHN HIGHAM, Port Richmond, N. Y., assignor to Display Stage Lighting Co. Inc., a Corporation of New York. Filed Feb. 28, 1928. Serial No. 257,564. 4 Claims. (Cl. 173—332.)

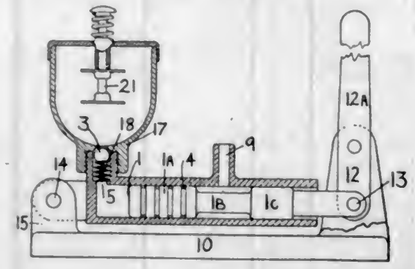


1. In connecters for coupling electric insulated wire cables of the character described, a block formed of machined fibrous sheet material comprising a body piece having a cut away portion and a cover piece, said cover piece being substantially equivalent in shape and dimensions to said cut away portion, spaced metallic contact members driven through an uncut portion of the body piece, said pieces having mating recesses bored in surfaces thereof to form a housing about an inner end of each of said members when the cover piece is applied to replace said cut away portion, a binding post carried by each of said inner ends within said housing, screw fastening means threaded into the body piece and through the cover piece for clamping said pieces together, said pieces having a passage cut to extend between them communicating their mated recesses with the exterior of the block, an end portion of the cable extending through said passage, conductor wires of said cable being secured to said binding posts, the walls of said passage formed with a plurality of smoothly cut ridges extending at least partially therethrough, the insulating portions of the cable end being pressed against and conformed to the contour of said ridges to serve as a strain relief, said passage being proportioned in cross section to securely clamp the cable end portion between said pieces yet permit the latter to come into abutment without injuring the cable insulation.

1,685,421. DASH LIGHT. EDWARD E. HUNTINGTON, Toledo, Ohio, assignor to The Willys-Overland Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 26, 1925. Serial No. 77,796. 4 Claims. (Cl. 240—8.16.)

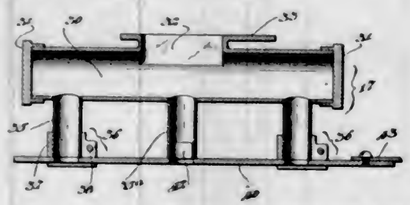
3. In an automobile, a combination which includes a dash board having a plurality of instruments disposed thereon; a lamp, and a channel shaped housing parallel to the board partially enclosing the lamp and reflecting the light thereof, said housing being provided with a longitudinal slot shaped to restrict the light to the portion of the board bearing the instruments.

1,685,422. PARACHUTE. DANE HURLBURT, Cannes, France. Filed Dec. 9, 1925. Serial No. 74,315. 11 Claims. (Cl. 244—21.)



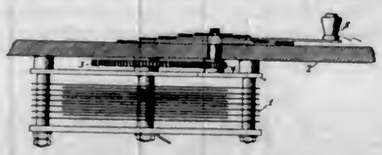
1. In combination, a parachute, an elongated sheet disposed beneath the parachute having its ends secured to the parachute respectively at opposite edge portions thereof, and means for tilting said sheet from horizontal position.

1,685,423. METHOD OF MAKING TENNIS BALLS. LEE R. HURLBURT, Jeannette, Pa., assignor to Pennsylvania Rubber Company, Jeannette, Pa., a Corporation of Pennsylvania. Filed Nov. 8, 1927. Serial No. 231,957. 1 Claim. (Cl. 18—56.)



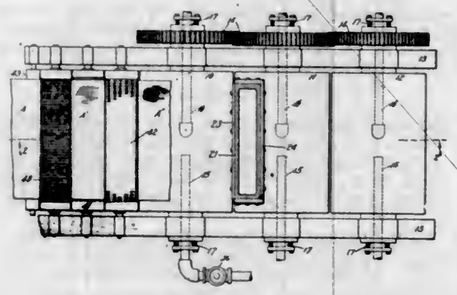
As a step in the manufacture of hollow rubber spheres the method herein described which consists in preforming two hemispherical shells of semi-cured and relatively plastic rubber with edges shaped to complementary tongue and groove, and vulcanizing into an integral sphere of elastic but non-plastic material, the shells while held under pressure to edge-to-edge engagement.

1,685,424. EMULSIFICATION APPARATUS. GUY CLEMENT HURRELL, Blackheath, London, England. Filed Nov. 12, 1927, Serial No. 232,919, and in Great Britain Nov. 13, 1926. 5 Claims. (Cl. 99—2.)



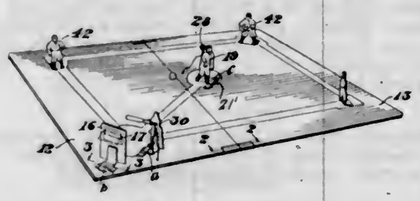
5. Means for effecting emulsification of liquid comprising a cylinder with means for delivering liquid to the cylinder, a plunger closely fitting within said cylinder said plunger and cylinder movable relatively to one another in order to force such liquid between the plunger and the cylinder and emulsify it, a container for the liquid to be emulsified mounted upon one of said relatively movable parts and an automatic valve at the junction of the container and such relatively movable part.

1,685,425. SUBDIVIDING ATTACHMENT FOR MEASURING MACHINES. JOHN R. LITTY and TRUED B. LUNDIN, Philadelphia, Pa. Filed Mar. 19, 1927. Serial No. 176,672. 5 Claims. (Cl. 107—29.)



5. A sub-dividing attachment for a measuring machine comprising a receptacle, a plurality of conduits communicating with the interior of the receptacle and forming outlets therefrom, valve slides secured to the bottom of the conduits, and a valve adapted to operate in the slides for simultaneously opening and closing the ends of the conduits.

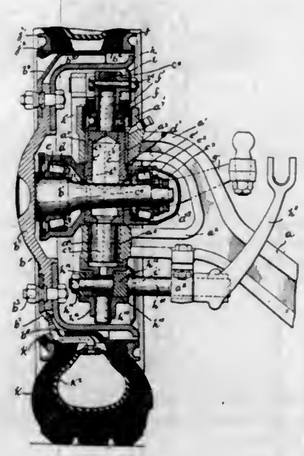
1,685,426. STATION SCALE. SIEGMUND LOEWE, Berlin-Friedenau, Germany, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Mar. 2, 1927, Serial No. 172,136, and in Germany Oct. 22, 1925. 3 Claims. (Cl. 116—124.)



1. An arrangement for varying and indicating the angular position of a rotatable member comprising a reduction driving system for said rotatable member, an indicating scale comprising a flat spiral coil separated between its turns cooperating with the driving end of the system, the driving end of the system comprising a flat member extending through the separations between the spiral coils, and means on said flat member indicating on said scale the angular position of the driving end of the system.

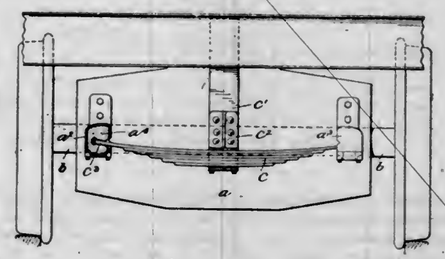
1,685,427. MACHINE AND PROCESS FOR DRYING CRINKLED PAPER. WILLIAM A. LORENZ, West Hartford, Conn., assignor to The Otaka Fabric Company, Hartford, Conn., a Corporation of Connecticut. Filed Aug. 9, 1927. Serial No. 211,761. 5 Claims. (Cl. 34—48.)

1. In a paper drying machine, a plurality of heated cylinders about which the paper is adapted to successively pass, and means for holding the paper with progressively increasing pressures against the cylinders.



1,685,428. TOY BASEBALL GAME. MICHAEL J. LOWRY, Los Angeles, Calif. Filed Nov. 23, 1926. Serial No. 150,238. 2 Claims. (Cl. 273—89.)

1. In a game apparatus, a board, a pitcher embodying a plate formed to represent a miniature base ball player, a keeper on said board, a tongue on said plate engageable with said keeper to detachably secure said plate stationary on said board, a vertically swinging arm pivoted on said plate, a ball receiving pocket mounted on the arm, spring means for actuating the arm to throw the ball from the said pocket, a cord attached to said arm adapted to be manually pulled to retract said arm in opposition to said spring, and a stop on said plate for limiting forward movement of said arm.

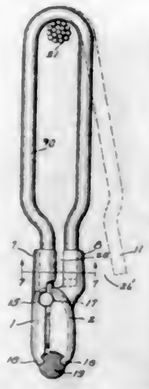


1,685,429. BRAKE. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed June 10, 1924. Serial No. 719,225. 1 Claim. (Cl. 188—194.)

In a wheel having a spindle formed integrally with the wheel disc and a brake for the wheel, a knuckle for the spindle, a knuckle pin rigidly secured to said knuckle and carried with an axle to permit turning of the wheel, brake shoes, an extension on the upper end of the knuckle pin for anchoring the brake shoes to the knuckle pin, a bearing, a mount therefor on the axle below the knuckle pin, said

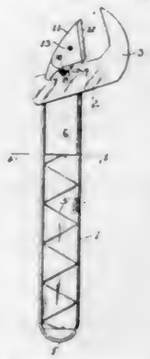
mount closing the bottom of the knuckle pin aperture, as well as housing the bearing, and means mounted on said bearing and on the axle to apply said brake shoes.

1,685,430. SUSPENSION FOR ELECTRIC RAILWAY MOTORS. ALFRED F. MASURY, New York, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed July 6, 1927. Serial No. 203,717. 2 Claims. (Cl. 105—139.)



1. In combination with a railway truck, a motor mounted on the axle, housings mounted upon the nose of the motor, blocks of yielding nonmetallic material disposed within the housings, and a leaf spring carried rigidly with the bolster transom of the truck and having its ends disposed within the blocks of yielding non-metallic material.

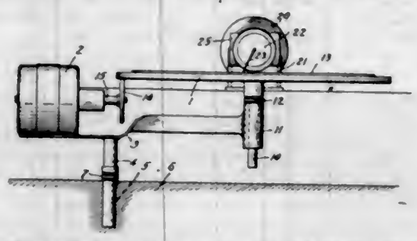
1,685,431. TROLLEY-WIRE CLAMP. SAMUEL S. MATTHES, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Sept. 7, 1927. Serial No. 217,939. 8 Claims. (Cl. 191—40.)



1. A trolley wire clamp comprising a pair of clamping members, a groove in each member to receive the ends of a suspension member and one end of the suspension member permanently secured in one of the grooves, means detachably holding the other end of the suspension member, jaws on the lower edges of the clamping members to grip the trolley wire, securing means to draw the clamping

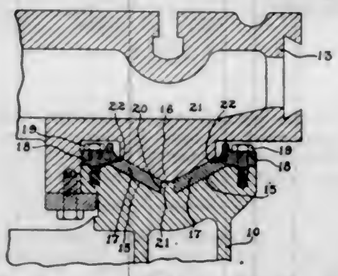
members together and into contact with the trolley wire, enlarged integral means on each end of the securing means to prevent withdrawal of the securing means and coacting

means on the clamping members to prevent relative rotation of the clamping members when the securing means is partially withdrawn.



1,685,432. OPEN-END ADJUSTABLE WRENCH. HOMER A. MEAD, Turlock, Calif. Filed July 3, 1926. Serial No. 120,499. 1 Claim. (Cl. 81—110.)

A wrench of the class described comprising a hollow formed sheet metal handle having two flat sides, and two rounded sides, one of said rounded sides having the edges of the metal brought substantially in contact, one end of said handle being rounded up, the other end having a hardened jaw fixed therein, the face of said jaw being approximately parallel with one edge of said handle, there being an opening through the rounded sides adjacent said jaw, a shank adapted to slide through said opening at a slight angle, notches in said shank, a transverse pin in said opening adapted to be engaged by said notches, a jaw on said shank approximately parallel with said hardened jaw, an abutment slidable in said handle and having an angle to suit the angle of said shank, and a flat zigzag shaped spring extending from said abutment to the end of the handle and adapted to press said abutment against said shank.



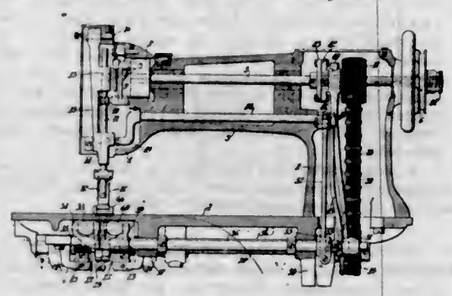
1,685,433. PHONOGRAPH. DANIEL D. MOUNTS, Los Angeles, Calif. Filed Mar. 8, 1927. Serial No. 173,674. 2 Claims. (Cl. 274—12.)

1. In a phonograph, a supporting arm pivoted intermediate of its ends, a turn-table on one end of the arm, rotary drive mechanism mounted on the opposite end of the arm so as to counterbalance the turn-table, a frictional driving connection between the drive mechanism and the turn-table, and a stationary sound box having a stylus adapted to engage the groove of a reproducing

record mounted on the turn-table for swinging the supporting arm so as to radially move the reproducing record relative to the stationary sound box in accordance with travel of the stylus along the groove of the record.

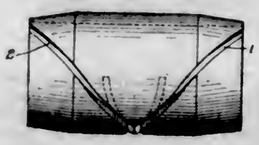
1,685,434. BEARING STRIP FOR MACHINE-TOOL WAYS. ALBERT WILLIAM PARKES, Dundas, Ontario, Canada, assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 4, 1925. Serial No. 54,450. 4 Claims. (Cl. 308—3.)

1. A machine tool comprising in combination, a base, a reciprocatory table thereon, ways on the base for said table, a bearing strip for said table on said ways, an integral projection on said base forming an abutment for one edge of said bearing strip, and a clamping strip engaging the opposite edge of said bearing strip for retaining it rigidly in position.



1,685,435. DOG HARNESS. GEORGE W. PHILBRICK, Winthrop, Mass. Filed July 2, 1927. Serial No. 203,077. 4 Claims. (Cl. 54—71.)

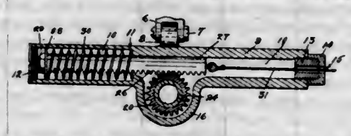
1. A dog harness comprising a pair of oblong collars, formed to loosely surround the fore legs of a dog and move lengthwise thereon; means for supporting the collars side by side in close proximity to the body and permitting endwise movement of the collars on the legs, said means including a back strap extending across the back and attached at its ends to the outer side portions of the collars; and a pull strap attached at its ends to the rear portions of the collars, extending loosely across the back, and provided with means for engaging a leash, the arrangement being such that when the leash is loose or



detached, the collars hang loosely and permit free movements of the fore legs, and when the leash is attached and held, the pull strap may be tensioned by a pulling dog, so that the collars are drawn rearwardly against the front sides of the fore legs to impede movements thereof.

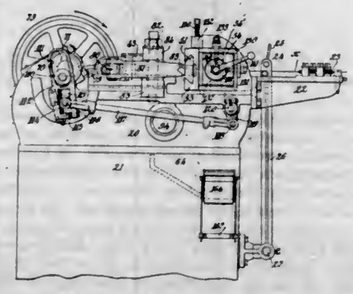
1,685,436. FEEDING MECHANISM FOR SEWING MACHINES. JOHN C. RINGE, Stratford, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 10, 1927. Serial No. 160,015. 8 Claims. (Cl. 112—208.)

1. Feeding mechanism for sewing machines comprising, in combination, an endwise reciprocatory needle, means for imparting lateral work-feeding movements to said needle, a main feed-dog having work-feeding movements at one side of the work in unison with the feeding movements of said needle, operative connections for actuating said main feed-dog, an auxiliary feed-dog having work feeding movements at the same side of the work as the main feed-dog, and means for actuating said auxiliary feed-dog in differential relationship with respect to said main feed-dog and needle-feed.



1,685,437. CONNECTER FOR SECTOR-SHAPED CONDUCTORS. ATLEE B. SAUERMAN, Pittsburgh, Pa., assignor, by mesne assignments, to General Cable Corporation, a Corporation of New Jersey. Filed Mar. 24, 1926. Serial No. 97,000. 1 Claim. (Cl. 173—263.)

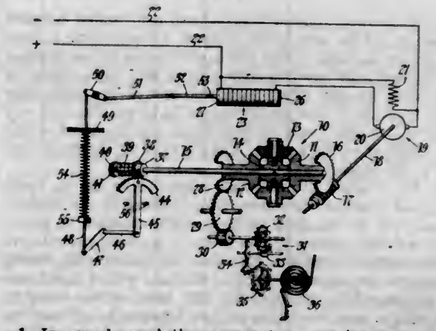
A relatively infusible sleeve adapted to be soldered to place, and to effect electrical union of two sector-shaped conductors, the sleeve being sector-shaped in cross-section and being ported by a transversely extending opening, such opening extending through one angle of the said sleeve, the web of material of which the sleeve consists being through another angle continuous, unbroken by such elongate opening.



1,685,438. LIGHT-CONTROL APPLIANCE. ALBERT A. SAVASKY, Cleveland, Ohio, assignor to The Pathfinder Accessories Corporation, Cleveland, Ohio, a Corporation of Ohio. Filed July 7, 1926. Serial No. 120,923. 1 Claim. (Cl. 240—62.)

In an appliance of the character described for use with an automobile steering element, the combination of a structure including vertically and horizontally extending hollow sections in communication with each other, means for attaching said sections to the front cross bar of an automobile, a sleeve mounted to turn in the vertically disposed section, a pinion secured to the lower portion of said sleeve, a spring actuated rack adapted to reciprocate in the horizontally disposed section and in mesh

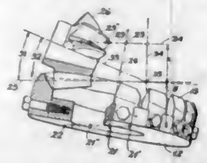
with said pinion, a spring wire connecting one end of said rack with said steering element and a light including a stud fixed in said sleeve.



1,685,439. NAIL-MAKING MACHINE. ROBERT W. STROUT, Brooklyn, N. Y., assignor, by mesne assignments, to E. W. Bliss Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 19, 1926. Serial No. 82,264. 19 Claims. (Cl. 10—49.)

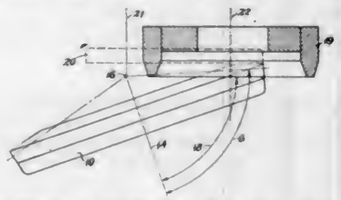
1. In a nail machine, wire-gripping means, a swaging hammer and wire-cutting means, with nail head-adjusting means comprising a normally stationary frame carrying the cutting means, said frame mounted adjustably on the main frame of the machine, and movable longitudinally of the wire to adjust the cutting means, and means for fastening said adjustable frame fixedly to the main frame after its adjustment.

11. In a nail machine comprising a driving shaft and reciprocating wire feed, means for operating said feed comprising elliptical gears driven from said shaft, and through which the feed is reciprocated, whereby to impart to the feed a quick feeding stroke and slow return stroke, each having a gradual acceleration and retardation.



1,685,440. SPEED-REGULATING MECHANISM. HARRY L. TANNER, Brooklyn, N. Y., assignor to Ford Instrument Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Sept. 14, 1927. Serial No. 219,546. 9 Claims. (Cl. 171—229.)

1. In speed regulating apparatus, a prime mover, an electrical speed control system for said prime mover including a control circuit and a variable resistance element



in said circuit, said speed control system being adapted to control the speed of said prime mover in accordance with the variation of the resistance of said resistance element, an epicyclic gear train to one member of which the prime mover is connected, speed limiting means connected to another member of the gear train, and means for controlling said variable resistance element including a pinion having a yielding connection with a third member of the gear train, a member connected with said pinion for actuation thereby, and a spring associated with the member for moving it to vary the resistance of the resistance element.

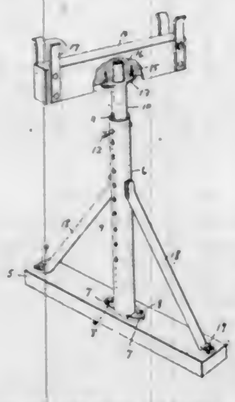
1,685,441. METHOD OF PRODUCING GEARS. ERNEST WILDHABER, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Feb. 28, 1927. Serial No. 171,607. 32 Claims. (Cl. 90—4.)

1. The method of producing a pair of beyel gears which consists in generating the side tooth surfaces of one member of the pair two sides simultaneously, by moving a pair of cutting edges in concentric curved paths across the face of a tapered gear blank, while imparting a relative rolling movement between said cutting edges and the blank in the manner of a gear rolling on a crown gear whose axis intersects the axis of the blank in its apex, and generating the side tooth surfaces of the other member two sides simultaneously by moving a pair of cutting edges in concentric curved paths across the face of a tapered gear blank while imparting a relative rolling movement between said tools and blank in the manner of a gear meshing with a crown gear whose axis is offset from the blank axis.

1,685,442. METHOD OF PRODUCING BEVEL GEARS. ERNEST WILDHABER and ALLAN H. CANDEE, Rochester, N. Y., assignors to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed June 3, 1926. Serial No. 113,550. 39 Claims. (Cl. 90—4.)

1. The method of producing a bevel gear which consists in generating its side tooth surfaces by imparting a relative motion between a tool and a gear blank in the manner of a tapered gear meshing with a basic gear, other than its mate, with its axis offset from the axis of the basic gear while effecting a relative movement between the tool and blank to produce teeth on the blank which extend along lines inclined to the straight generatrices of the pitch surface of the blank.

20. The method of producing a bevel gear having teeth extending longitudinally along lines inclined to the straight generatrices of its pitch surface, which consists in generating one side surface of the teeth by imparting a relative rolling motion between a tool and the gear blank, during cutting, in the manner of a gear meshing with a basic gear and in generating the opposite side faces of the teeth by imparting a relative rolling motion between a tool and the blank, during cutting, in the manner of a gear meshing with a basic gear, other than the first gear, with its apex offset from the axis of said basic gear.

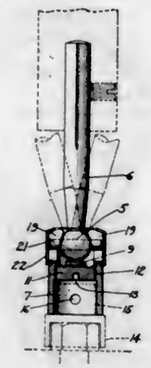


1,685,443. METHOD FOR THE MANUFACTURE OF PLASTIC COMPOUNDS. GEORGES EMMANUEL ZELGER, Montreuil, France, assignor, by mesne assignments, to du Pont-Pathe Film Manufacturing Corporation, Wilmington, Del., a Corporation of Delaware. Filed Apr. 6, 1925, Serial No. 21,197, and in France Mar. 10, 1925. 5 Claims. (Cl. 106—40.)

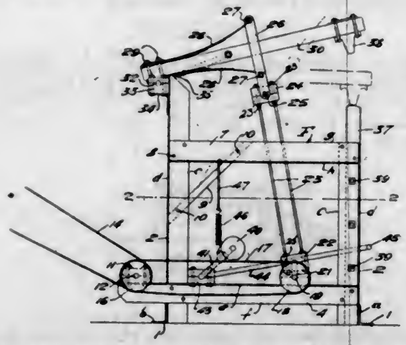
5. A plastic compound consisting of a mixture of 100 parts of acetylcellulose with 20 parts of monoethyl-diphenyl phosphate.

1,685,444. METHOD FOR THE MANUFACTURE OF PLASTIC COMPOUNDS. GEORGES EMMANUEL ZELGER, Montreuil, France, assignor, by mesne assignments, to Du Pont-Pathe Film Manufacturing Corporation, Wilmington, Del., a Corporation of Delaware. Original application filed Apr. 6, 1925, Serial No. 21,197, and in France Mar. 10, 1925. Divided and this application filed July 30, 1926. Serial No. 126,102. 2 Claims. (Cl. 106—40.)

2. A plastic compound comprising a mixture of acetylcellulose with phosphoric esters containing both aliphatic radicals and halogenated aromatic radicals.



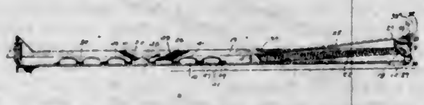
1,685,445. ADJUSTABLE SCAFFOLD JACK. LINUS BASH, Tulsa, Okla. Filed Sept. 15, 1927. Serial No. 219,702. 1 Claim. (Cl. 304—4.)



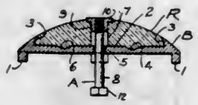
In a jack of the character described, a base, a hollow standard secured to the base intermediate its ends and extending vertically therefrom, a bar vertically slidable within the standard, means whereby the bar may be secured at predetermined points within the standard, a horizontal plate at the upper end of the bar, said bar being formed with a bore extending inwardly at its upper end, an elongated cross bar, a bore extending inwardly at the intermediate portion of the cross bar, a pin adapted to project from the bore of the bar for engagement within the bore of the cross bar, and means between the horizontal plate and the cross bar for securing the same together.

1,685,446. UNIVERSAL JOINT. GEORGE W. BENEDICT, Minneapolis, Minn., assignor to Mid-West Manufacturing Company, Minneapolis, Minn., a Corporation of South Dakota. Filed May 11, 1922. Serial No. 560,192. 1 Claim. (Cl. 64—91.)

A universal joint including a cylindrical member and a spheroidal element adapted to be received within one end of the member, the outer end portion of said member having its interior surface curved substantially to conform to the external surface of the spheroidal element whereby outward movement of the element is prevented, said cylindrical member having an interiorly threaded portion, and a raised abutment fitting within the cylindrical member and adapted to be received in threaded engagement within said member and adjustable relatively to the interior curved surface of the socket to the spheroidal element to prevent inward movement of the spheroidal element and take-up wear and play in the parts.

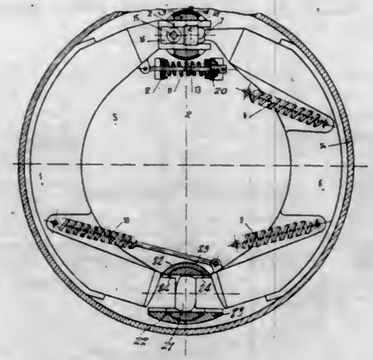


1,685,447. POWER HAMMER. WILLIAM W. BIELER, Hays, Kans. Filed Mar. 9, 1926. Serial No. 93,526. 1 Claim. (Cl. 78—32.)



A power hammer comprising a stand having an anvil located thereon, a shaft having angularly disposed end portions, a bearing receiving one end portion and mounted upon the stand, a helve attached at a point between its ends to the other end portion of the shaft and disposed transversely of the first mentioned end portion thereof, leaf springs mounted at the opposite sides of the helve, and having end portions secured to the helve at the first mentioned portion of said shaft, a hammer head carried by the helve and adapted to engage the anvil and power operated means connected with the free ends of the leaf springs.

1,685,448. FILING STRUCTURE. THOMAS C. BUTTERWORTH, Mill Valley, Calif. Filed July 7, 1926. Serial No. 121,027. 3 Claims. (Cl. 129—1.)

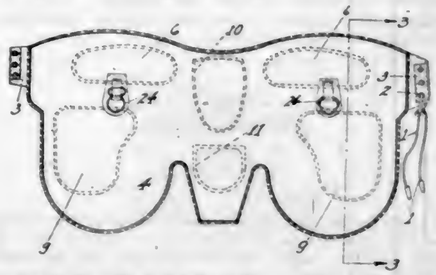


1. A filing structure having a bottom, detachable members adjacent one end of the structure adapted to retain sheets having apertures therein by passing through said apertures, said structure having an end with apertures therein, said members comprising open spring loops each having a pair of arms extending respectively through said apertures, the upper arm of each loop having a raised portion over which the sheets may be passed, said raised portion functioning to hold the sheets temporarily in thrown-back position, the legs of the loops having arcuate end portions which fit around and resiliently press in opposite directions against the edges of said end surrounding said apertures.

1,685,449. TRAFFIC BUTTON OR SIGNAL. DAVID H. DURAND, Denver, Colo. Filed Sept. 8, 1927. Serial No. 218,312. 1 Claim. (Cl. 88—1.)

A traffic button comprising a base member provided with depending lugs, means for anchoring the base member in applied position, and a reflector mounted upon the base member, said anchoring means coacting with the reflector to hold the reflector in applied position upon the base member, opposed faces of the reflector and base member having interfitting lugs and recesses, each substantially prism form.

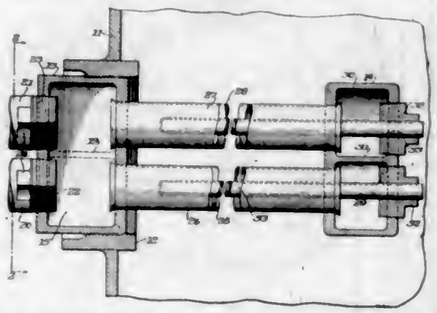
1,685,450. BRAKE OF THE EXPANDING-SHOE TYPE. GUIDO FORNACA, Turin, Italy. Filed Sept. 20, 1926, Serial No. 136,592, and in Italy Sept. 28, 1925. 6 Claims. (Cl. 188—78.)



1. In a brake of the expanding shoe type, the combination with a brake drum, shoes cooperating with said drum, a supporting member, and a cam in the latter for operating said shoes, of a fork on one end of one of said shoes, a thrust member in which said fork is slidably mounted, a bearing in said supporting member in which the thrust member is rotatably mounted, and a curved head at the adjacent end of the other shoe fitted in said fork to receive and transmit the thrust according to the direction of rotation of the brake drum.

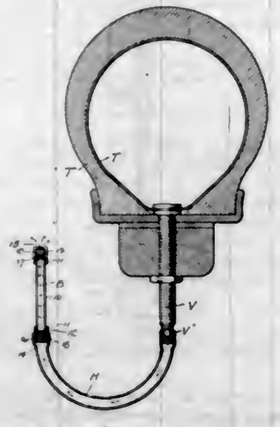
1,685,451. METHOD OF TREATING PEARL CHIPS AND PRODUCT. GEORGE H. GEBHARDT, Muscatine, Iowa. Filed Dec. 21, 1927. Serial No. 241,721. 9 Claims. (Cl. 8—5.)

9. The method of treating pearl chips for increasing their beauty, comprising polishing the pearl chips, subjecting the pearl chips to the action of a liquid dye in the



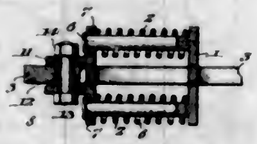
presence of a substance which tends to open the pores of the pearl chips and lead in the dye, again polishing the dyed pearl chips, and then subjecting the pearl chips to the action of a substance which serves to fix the dye and hold the polish.

1,685,452. ATHLETE'S PROTECTIVE HARNESS. HUGO GOLDSMITH, Cincinnati, Ohio, assignor to The P. Goldsmith Sons Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 5, 1927. Serial No. 224,236. 6 Claims. (Cl. 2—23.)



1. Football protective harness comprising the combination of a waist enclosing protective garment, and a pair of trousers, with interconnecting means between said garment and said trousers, said means connected to the trousers well below the waist line so that clearance will be provided which will permit a jersey to be worn either next to the body or between said garment and said trousers.

1,685,453. WATER-HEATING UNIT. ADOLPH T. JOHANSON, Chicago, Ill., assignor of one-half to Milton E. Page, jr., Chicago, Ill. Filed May 20, 1927. Serial No. 192,841. 2 Claims. (Cl. 257—255.)



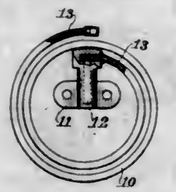
1. A water-heating unit for boilers, comprising in combination, an outer externally-threaded coupling adapted to be screwed into a threaded opening in the boiler-wall and divided into three chambers, four tubes supported by said coupling and adapted to be positioned on the inside of the boiler to be heated by the hot water of the latter, two of such tubes connecting individually to two of said chambers, the other pair of tubes both connecting with the third chamber, an inner coupling divided into two chambers, one of said individual tubes and one of said pair connecting with one chamber of the inner coupling, the other two tubes connecting with the remaining chamber of the inner coupling, said inner coupling being supported by said tubes, internal tubes inside of said four tubes closed at their front ends and open at their rear ends to connect with the hot water of the boiler, plugs in said inner coupling carrying said internal tubes, means to admit water to be heated to said first coupling, and means to discharge the heated water from said first coupling.

1,685,454. TESTING DEVICE FOR VALVES. CARL JOHNSON, Los Angeles, Calif. Filed June 1, 1926. Serial No. 113,090. 4 Claims. (Cl. 73—51.)

4. A testing device for tire valves comprising a body having a transparent portion through which liquid in the body can be viewed, the body being provided with an inlet and an outlet, and valves normally closing the inlet and outlet so as to confine a quantity of liquid in the body, the inlet valve opening inwardly of the body and the outlet valve opening outwardly of the body.

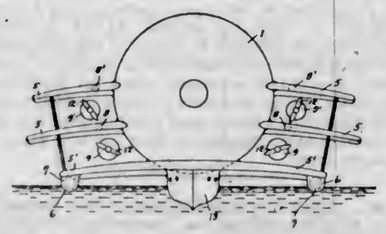
1,685,455. COMBINED WEAR PLATE AND CENTERING DEVICE FOR DRAFT-RIGGING KEYS FOR RAILWAY CARS. SYLVESTER L. JOINER, McGregor, Tex. Filed Apr. 14, 1926. Serial No. 102,020. 4 Claims. (Cl. 85—5.)

3. In combination with a draft key, of a combined wear plate and centering device comprising an inner plate provided with a slot through which passes the key which is adapted to bear against draft rigging, an attaching plate having a draft key receiving slot and provided with openings and having means for securing it to the key, pins extending from the main plate and slidable through the openings in the attaching plate, and coiled springs disposed on the pins and interposed between the said plates.



1,685,456. SHELF STRIP. JACOB KOCH, Buffalo, N. Y. Filed Mar. 29, 1927. Serial No. 179,373. 1 Claim. (Cl. 40—17.)

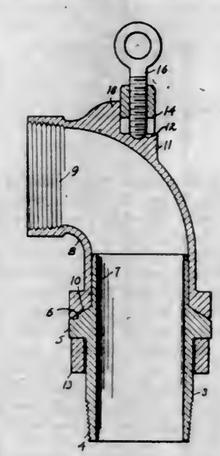
A device of the class described formed from a single sheet of metal stamped to provide an oblong flat body having means on the longitudinal edges thereof for slidably



holding a card, said means terminating a distance from each end of the body, and each end of the body at its edge being stamped to form a projection V-shaped in cross section and tapering inwardly.

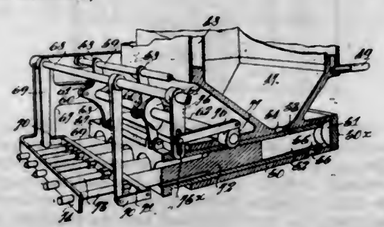
1,685,457. PRESSURE-RESPONSIVE INSTRUMENT OF THE BOURDON SPRING TYPE. DONALD C. LAMB, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed June 9, 1927. Serial No. 197,644. 3 Claims. (Cl. 73—109.)

3. In apparatus of the character described, a Bourdon tube of resilient metal having substantially parallel opposing walls in close proximity to each other, a core of resilient metal substantially filling the space defined by the walls and a support for the tube rigidly connected to the latter, the said core being rigidly connected with the tube at the point of connection of the latter with the support and being free to move relatively to the tube at its opposite end.



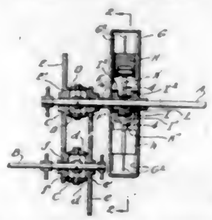
1,685,458. AIRSHIP. LEONARD P. LIDBACK, Honolulu, Territory of Hawaii. Filed Feb. 1, 1928. Serial No. 251,129. 1 Claim. (Cl. 244—6.)

An airship having a container for gas, a boat-shaped cabin swung from the bottom of the container, a plurality of sets of wings projecting laterally on both sides of said container, the lowermost wings of each set extending entirely across the ship and on top of the cabin, and gasoline containing pontoons disposed at the extremities of the lower wings.



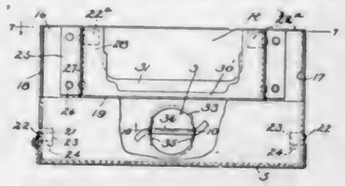
1,685,459. COUPLING. JOHN W. MACCLATCHIE, Compton, Calif. Filed Aug. 31, 1925. Serial No. 53,486. 2 Claims. (Cl. 285—108.)

1. In pipe coupling, a fixed conduit having an outwardly flanged end and a substantially uniform bore terminating in a downwardly and outwardly inclined seating surface extending to the outer periphery of the flanged end, a displaceable conduit having a cooperating upwardly and inwardly inclined seating surface and an end projecting an appreciable distance axially beyond said cooperating seating surface at the inner periphery of said cooperating seating surface and adapted to be guided by the inclined seating surface of the fixed conduit for snug telescopic reception of the projecting end of the displaceable conduit in the bore of the fixed conduit so as to engage the cooperating seating surfaces, means for supporting the displaceable conduit permitting turning thereof relative to its supporting means, a yoke pivoted to the supporting means for elevating the displaceable conduit, a seat on the fixed conduit adapted to receive the yoke when the displaceable conduit has been elevated sufficiently to bring the cooperating seating surfaces into proximate relation, the yoke and the projecting end of the displaceable conduit being of a



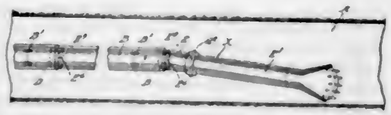
relative length initiating guiding engagement of the projecting end of the displaceable conduit by the inclined seating surface of the fixed conduit an appreciable distance in advance of elevation of the yoke sufficiently to clear and overlie the seat on the fixed conduit, and clamping means on the yoke adapted to engage the seat for drawing the cooperating seating surfaces into tight engagement.

1,685,460. DEPOSITING APPARATUS. WILSON R. MYERS and BERNHARD O. OPITZ, Portland, Oreg. Original application filed Dec. 7, 1926, Serial No. 153,099, and in Canada Dec. 24, 1926. Divided and this application filed July 18, 1927. Serial No. 206,665. 4 Claims. (Cl. 107—28.)



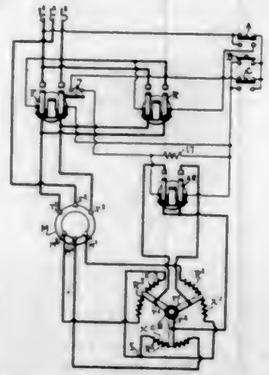
1. A filler for delivering a multiple of measured volumes of liquid intermittently, consisting of a hopper having a plurality of openings formed in the bottom thereof, said hopper having a base provided with a plurality of cylindrical openings each closed at one end each of which openings communicates with one of the hopper openings, each cylinder opening having a hollow sleeve open throughout its length and slidably placed therein, said sleeve having a port therein which registers with one of said hopper openings when said sleeve is in an outward position, said sleeve having a second port formed therein registering with a discharge port in said base when said sleeve is in the innermost position; a piston in each sleeve and having a piston rod; and means for sliding said piston and sleeve in a manner that said hopper opening will communicate with the interior of said sleeve while said piston is being withdrawn and that the discharge port of said sleeve shall communicate with the discharge of said base when said piston is forced into said sleeve.

1,685,461. GEAR TRANSMISSION. CHARLES R. NICHOLS, New York, N. Y. Filed Apr. 19, 1926. Serial No. 102,845. 11 Claims. (Cl. 74—34.)



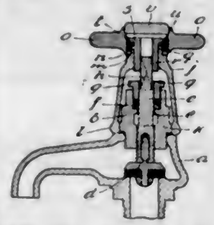
1. In a power transmission, the combination with driving and driven shaft elements, of gear elements forming a differential gear train connecting said shafts and including a gear element revolving at different speeds relative to the speed of another element of the transmission with different speed ratios between the two shaft elements, and means for exerting a reactive force between said gear element and said other element comprising one or more weights each mounted on one of the two last mentioned elements and a connection between each such weight and the other of the two last mentioned elements including a crank carried by the latter and operative to move the corresponding weight toward the axis of the element on which it is mounted during each of successive increments of relative movement of the connected elements, and means for automatically adjusting the effective length of said connection at the end of each of said increments to permit the corresponding weight to move quickly outward from said axis.

1,685,462. SWITCH BOX. GRANVILLE E. PALMER, Brookline, and ERNEST G. JOHANSSON, Boston, Mass., assignors, by mesne assignments, to The Palmer Electric and Manufacturing Company, Waltham, Mass., a Corporation of Massachusetts. Filed June 30, 1925. Serial No. 40,645. 20 Claims. (Cl. 247—2.)



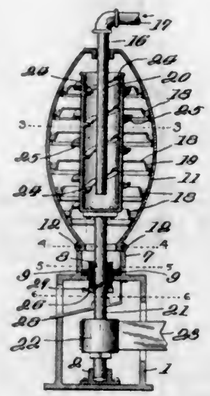
1. A switch box comprising side walls, a reversible end wall member having an opening extending inwardly from one edge and pivotally supported between said side walls and partially closing the end of the box, and a cover for the box, the cover having a part which covers said opening when the cover is closed and the end wall is in one of its positions.

1,685,463. SHAKER CONVEYER. JOHN H. D. PETERSEN and JOHN W. WILSON, Chicago, Ill., assignors to Link-Belt Company, Chicago, Ill., a Corporation of Illinois. Filed July 12, 1926. Serial No. 121,795. 3 Claims. (Cl. 198—220.)



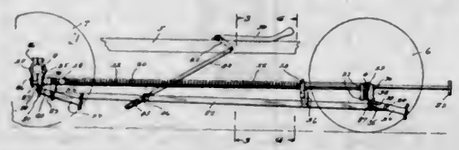
2. In a self-feeding conveyer, in combination, a generally horizontal conveyer trough and means for imparting to it a differential conveying reciprocation, and a digging and feeding member secured thereto and adapted to move in unison with it and to deliver material directly thereto, said digging member being mounted, in relation to said trough, to permit its rotation about both horizontal and vertical axes.

1,685,464. MOTOR CONTROLLER. EDWIN W. SEEGER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 30, 1925. Serial No. 72,073. 5 Claims. (Cl. 172—179.)



1. In a motor controller, the combination with electro-responsive line and accelerating switches, of control means for said switches comprising a push-button switch biased to open position, said push-button switch having a single closed position and adapted when closed to provide an energizing circuit for said line switch, auxiliary contacts on said line switch adapted upon closure of the latter to complete a maintaining circuit therefor, said maintaining circuit being effective only upon release of said push button switch, the operating winding of said accelerating switch being also included in series in said maintaining circuit and adapted upon utilization of the latter to effect operation of said last mentioned switch for commutation of the motor circuit connections, and a normally closed push-button switch adapted upon opening thereof to effect simultaneous deenergization of both of said electro-responsive switches.

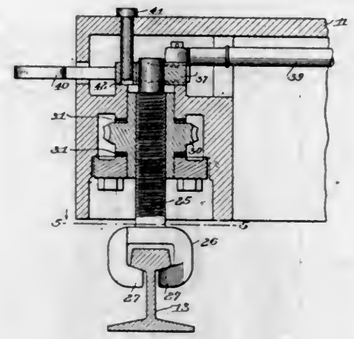
1,685,465. SCREW-DOWN TAP OR COCK. GEORGE NEVILLE SPERRYN, Birmingham, England. Filed Oct. 19, 1925, Serial No. 63,207, and in Great Britain Mar. 31, 1925. 3 Claims. (Cl. 251—48.)



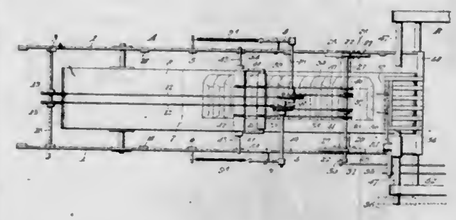
1. A screw-down tap, comprising a body provided with a seating therein, a spindle carrying a valve head adapted to engage the seating, a gland in the upper end of the body through which the spindle passes, a hollow casing sleeve, enclosing but out of contact with the spindle and gland, detachably secured upon the body and normally stationary thereon but readily removable without disturbing the spindle or gland, a handle provided with a shank extending through the upper end of the sleeve and slidably keyed to the spindle, and a readily releasable connection between the handle and the sleeve permitting their independent relative rotation.

1,685,466. ORE SEPARATOR. EDDIE H. STEPP, Knoxville, Tenn. Filed Nov. 22, 1926. Serial No. 150,069. 5 Claims. (Cl. 209—205.)

1. A centrifugal ore separator, comprising a bowl having an amalgam retaining trough on its inner wall, and an inner rotary member provided with means on its exterior for lifting the body of concentrate and water to retard the downflow thereof and simultaneously throwing it outwardly to bring the valuable heavier mineral content into contact with the said amalgam surface.



1,685,467. VEHICLE STOP. MAX STOCKOV, New York, N. Y., assignor of one-half to Max Sherr, Philadelphia, Pa. Filed Sept. 16, 1926. Serial No. 135,876. 2 Claims. (Cl. 180—83.)

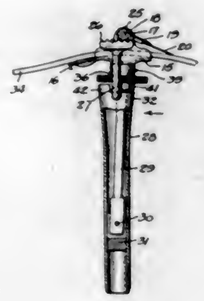


1. The combination with a motor vehicle, of spring-tensioned rods adapted to be reciprocated, a plurality of jacks pivotally connected to said vehicle, linkage connecting the laterial jacks in tandem, detents carried by said rods, a yoke-member slidably secured to said rods and means associated with said linkage and coacting with said detents and said yoke member to release said jacks in depending position upon reciprocation of said rods.

1,685,468. RAIL CLAMP. ALFRED TROSCH, Rochester, N. Y., assignor to Consolidated Machine Tool Corporation of America, Rochester, N. Y., a Corporation of Delaware. Filed July 18, 1927. Serial No. 206,560. 9 Claims. (Cl. 188—43.)

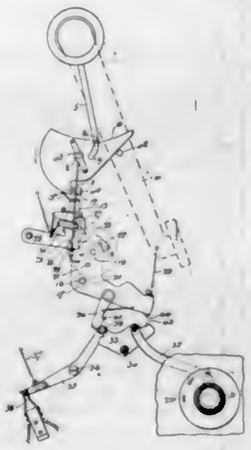
1. The combination with a truck adapted to run on railway rails, of a clamp for engaging the head of a rail, said clamp including a threaded shank, and being movable from an effective to an ineffective position by turning said shank, and being engageable with the head of a rail by longitudinal movement of said shank when said clamp is in its effective position, a nut threaded on said shank and adapted to produce longitudinal movement thereof when rotated relative to the shank, and a control member fixed to said shank for turning the same from effective to ineffective position and also for preventing the shank from rotating with said nut when the nut is turned to move the shank.

1,685,469. MECHANISM FOR MAKING SIDE-SEAM ENVELOPES. CARL L. TUCKER, Denver, Colo., assignor of one-half to Willett R. Lake, Denver, Colo. Filed July 13, 1926. Serial No. 122,140. 10 Claims. (Cl. 93—62.)



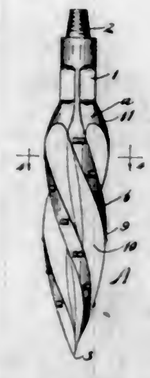
1. In a device of the character described, the combination with a slowly moving endless belt and means for successively depositing envelopes thereon, said envelopes having the forward flap unfolded but stipped with glue; of endless movable elements in contact with said belt, means to engage and fold over the said unfolded flap and draw said envelope in between said movable elements and said belt, means for pressing the flap against the bouy of the envelope and means for holding the envelopes upon the belt until they reach a point of discharge.

1,685,470. RAZOR-STROPPING DEVICE. CHARLES L. VAN AMBURGH, Long Beach, Calif. Filed Nov. 11, 1926. Serial No. 147,798. 13 Claims. (Cl. 30—12.)



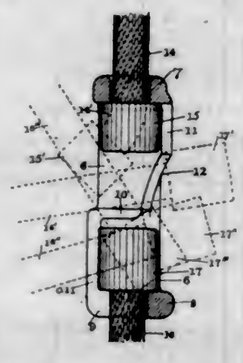
1. In a razor stropping device, a support; a frame mounted in an oscillating relation to the support; a blade guard forming a part of the frame; means for frictionally engaging a strop in the frame; a shaft rotatably mounted in the frame; a blade holder secured on the shaft for rotation therewith and adapted to have its rotative movement arrested by the engagement of a blade therein with the strop; a pinion fixed on the shaft for oscillating the blade holder; and a segmental gear meshing with the pinion and

being in a fixed relation to the support so that the pinion will be rotated by the segmental gear and will thereby cause the blade holder to oscillate and to swing the blade therein



from one strop-engaging position toward another immediately upon an impulse given to the device for moving it longitudinally on the strop in the direction toward the blade's strop-engaging position.

1,685,471. STOPPING MEANS OF TALKING MACHINES. ERIC NEWHAM WATERWORTH, West Hobart, Tasmania, Australia. Filed Dec. 15, 1927, Serial No. 240,278, and in Australia Feb. 11, 1927. 9 Claims. (Cl. 192—118.)

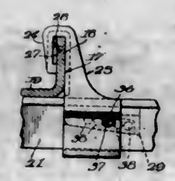


2. In stopping means in talking machines having a pallet wheel rotated by the machine motor and mounted on a plate adapted to be rocked about the axis of the motor spindle to actuate the stopping means, a pallet lever and a latch member pivotally mounted thereon that are intermittently rocked independently and together while the tonearm is moving and in which when the movement of the tonearm ceases the latch member becomes locked to allow the stopping means to function, a pivotally mounted plate adapted to be rotated by the tonearm, a latching rod frictionally connected to said plate the movements of the rod being regulated alternately through said plate and the pallet wheel.

1,685,472. OIL-WELL TOOL. GEORGE D. WATSON, Torrance, Calif. Filed Nov. 16, 1925. Serial No. 69,323. 7 Claims. (Cl. 153—81.)

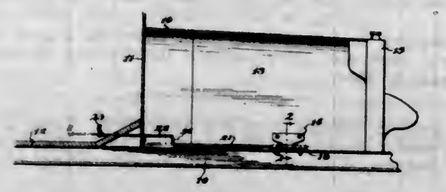
1. A swage formed with spaced ribs and tapering toward its forward end.

1,685,473. BULL HOOK. OSCAR A. WIRKKALA, Deming, Wash. Filed Feb. 6, 1926. Serial No. 86,484. 1 Claim. (Cl. 24—123.)



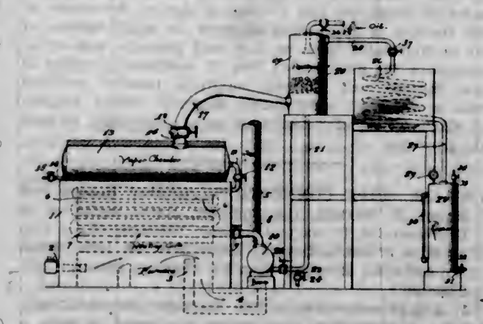
In a logging bull hook in combination, a hook eye to fasten a knotted pitch line thereto, U-form hook jaws, two pillars connecting said eye to said jaws integral therewith, two opposite transverse bosses on the interior walls of said pillars shorter than the width thereof, a front wall on said pillars extending from said jaws to said bosses having a central slot from said jaws to said bosses, and a rear wall on said pillars above the back of said U-form jaws disposed diagonally from said eye to the rear ends of said bosses having a transverse hole therethrough impassable for said knobbed pitch line when engaged in said eye but passable for a knobbed choker cable when presented endwise thereto and a slot from said eye to said bosses.

1,685,474. BRAKE-BEAM SAFETY HANGER. JACK WILSON, Chicago, Ill., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed July 21, 1926. Serial No. 123,891. 6 Claims. (Cl. 188—210.)



1. In a railway truck, a pair of brake beams, a spring plank having upstanding flanges provided with aligned notches, a pair of hangers having hook-shaped extensions engaging said upstanding flanges and provided with projections for engaging said notches, said hangers being provided with aligned angular closed slots beneath said spring plank

and adjacent thereto, a straight bar angular in cross section slidably mounted in said aligned slots beneath said plank and conforming to the shape of said slots, said bar being supported by said hangers in close proximity to said

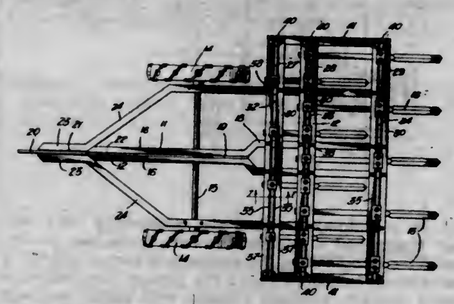


plank, whereby said bar is adapted to engage said plank and the outer end of said slot to prevent the disengagement of said projections from said notches, and means engaging said hanger and bar for preventing longitudinal movement of said bar through said slots.

1,685,475. MOTOR-VEHICLE HOOD LATCH. VERLAND E. WUTHNOW, Dillon, Kans. Filed Feb. 23, 1927. Serial No. 170,319. 1 Claim. (Cl. 292—145.)

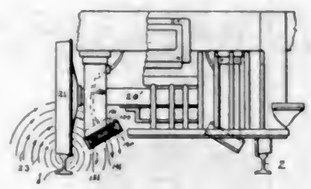
In a motor vehicle, the combination with the dash, the floor, chassis side bar and motor enclosing hood, of a plate attached to the side bar and provided with alined spaced sleeves, a companion plate attached to the hood and having a sleeve adapted to aline with the said spaced sleeves and occupy a position therebetween, a longitudinal rod slidably mounted in the floor, dash and rear sleeve of the plate attached to the said side bar and engageable with the alined sleeves to lock the hood, and having an intermediate portion offset to provide a stop to engage the dash and prevent disengagement of the front end of the rod from the said rear sleeve, and a finger piece at the rear end of the rod.

1,685,476. PROCESS FOR CRACKING OILS. JOSEPH G. ALTHER, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Aug. 20, 1920, Serial No. 404,745. Renewed June 9, 1926. 5 Claims. (Cl. 196—58.)



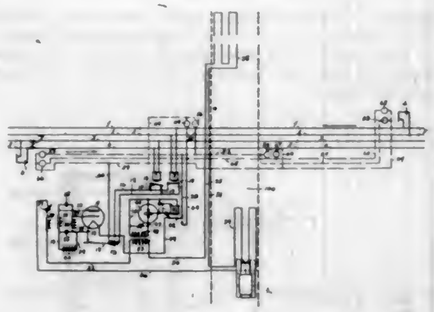
2. The process of cracking petroleum oil, comprising passing the oil through a coil of progressively decreasing size disposed within a heating zone wherein the diameter of the coil decreases in accordance with a lowering temperature in the heating zone, in discharging the oil from the smallest portion of the coil into a vapor chamber, in collecting vapors from said chamber and in subjecting said vapors to a condensing action.

1,685,477. CORSET. AUGUST B. BECK, Cranford, N. J., assignor of one-half to Samuel E. Rizzuto, Brooklyn, N. Y. Filed Oct. 4, 1927. Serial No. 223,865. 3 Claims. (Cl. 2—43.)



1. In combination with a corset, a belt-like pad secured along its upper and end edges only to the upper edge of and inside the corset and extending substantially around the entire upper edge of the corset.

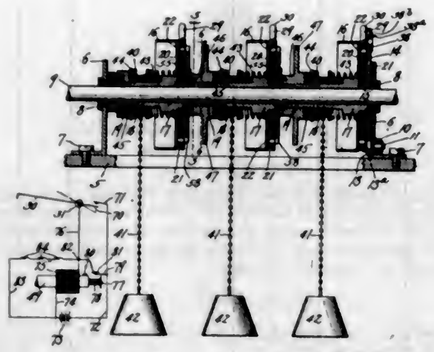
1,685,478. CULTIVATOR. LOUIS BRENNEIS, Oxnard, Calif., assignor to Brenneis Manufacturing Company, a Corporation of California. Filed Mar. 10, 1924, Serial No. 698,058. Renewed July 27, 1927. 6 Claims. (Cl. 97—233.)



1. In a cultivator, the combination of: a frame; bar members placed in parallel relationship and directed laterally so as to form lateral horizontal directed channels; earth tools having horizontal securing bars, each of which is arranged to extend across two of said lateral channels; bolt means extending through the forward one of said two lateral channels and securing the forward ends of the tool bars in place; and U-bolts extending through the rearward one of said two lateral channels and looping around said tool bars to secure the rearward ends of said tool bars in place, all of said bolt means and U-bolts being slidably disposed in the respective lateral channels to provide adjustment in spacing of said earth tools

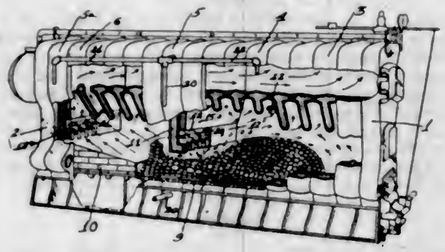
1,685,479. TRAIN-CONTROL APPARATUS. THOMAS E. CLARK and JAMES E. CLARK, Detroit, Mich., assignors to Continuous Train Control Corporation, Detroit, Mich., a Corporation of Michigan. Filed Oct. 24, 1925. Serial No. 64,524. 3 Claims. (Cl. 246—63.)

1. In a train control system, the combination with the rails of the trackway and means to propagate high-frequency currents of predetermined wave lengths therein so as to induce electro-magnetic lines of force and flux around the rails throughout definite distances, a vehicle on said rails, and a flat collector coil mounted on the vehicle between the rails to cut said lines of force and having its axis substantially tangent to the direction of said lines of force, said coil being positioned adjacent said rail in a direction inclined to plane of the track.



1,685,480. SAFETY INSTALLATION FOR GRADE CROSSINGS. THOMAS E. CLARK, Detroit, Mich., assignor to Continuous Train Control Corporation, Detroit, Mich., a Corporation of Michigan. Filed Mar. 25, 1927. Serial No. 178,240. 13 Claims. (Cl. 246—63.)

1. In a highway crossing, the combination with railway tracks and a highway crossing them, an electric conductor embedded in the highway, a current source, a transformer for transforming the current into radio-frequency current, a circuit between said source and said transformer, a battery connected to the rails, a relay connected to said rails and adapted to be shunted by an oncoming vehicle to cause the closing of the circuit from the current source to said transformer, and a circuit connecting the transformer to the conductor.

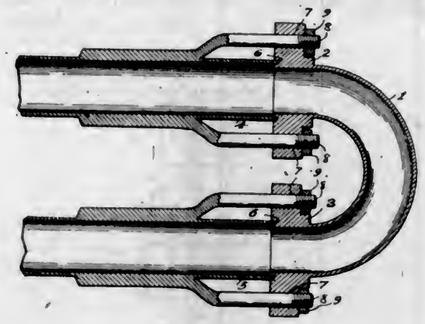


1,685,481. COUNTING MECHANISM. WILLIAM A. DE HART, Teaneck, N. J., assignor of five-sevenths to Edward H. Binns and two-sevenths to Ralph H. Binns, Pittsburgh, Pa. Filed Oct. 2, 1925. Serial No. 60,055. 9 Claims. (Cl. 235—144.)

8. In counting mechanism, a counting wheel, a winding drum coaxial with said counting wheel, said winding drum being rotatable with and relatively to said counting wheel, a yieldable driving connection between said counting wheel and winding drum, a setting disk adjustably connected to said counting wheel, and means releasably

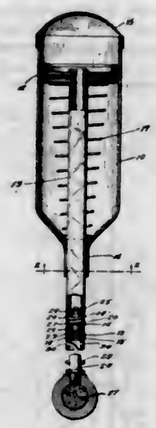
connected to said winding drum under the control of said reset disk for controlling the resetting of said counting wheel.

1,685,482. STEAM AND AIR INJECTOR. JAMES DOHERTY, Chicago, Ill. Filed Apr. 24, 1923. Serial No. 634,232. 5 Claims. (Cl. 110—60.)



1. An air and steam injector for use in a furnace or the like, comprising an air duct provided with air passages of graduated and increasing size as the center of the furnace is approached whereby an equal volume of air is distributed from each of said passages and transversely of the direction of flow of combustion vapors in said furnace, and a steam supplying member provided with a series of equidistantly disposed orifices adapted to discharge equal volumes of steam into each of said air passages.

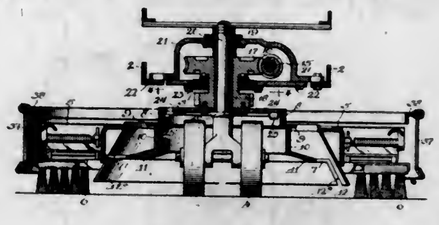
1,685,483. PIPE CONNECTION. GUSTAV EGLOFF and HARRY P. BENNER, Independence, Kans., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Nov. 10, 1920, Serial No. 423,018. Renewed Mar. 12, 1926. 4 Claims. (Cl. 285—20.)



1. A pipe connection of the character described, comprising a connecting pipe length interposed between a pair of pipes to be united having unflanged ends, apertured flanged ends fixed to said connecting length being circularly grooved along one face thereof and adapted

to receive in said grooves the pipe ends, and means comprising rigid extensions formed integral with the pipes and having end portions spaced therefrom adapted to

register with the apertures in said flanges for tightly drawing the flanges against said pipe ends to form pressure tight joints without the aid of packings.

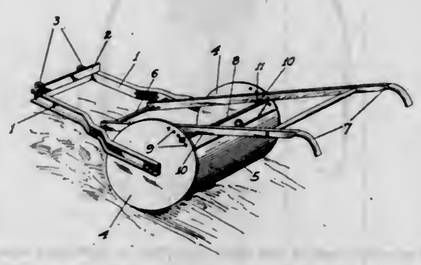


1,685,484. LUBRICANT COMPRESSOR. DOUGLAS F. FESLER, Chicago, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 9, 1924. Serial No. 705,175. 12 Claims. (Cl. 221—47.4.)

12. A lubricant compressor comprising a barrel and co-acting means for placing lubricant under low pressure when said barrel is moved rectilinearly, and under high pressure when said barrel is rotated.

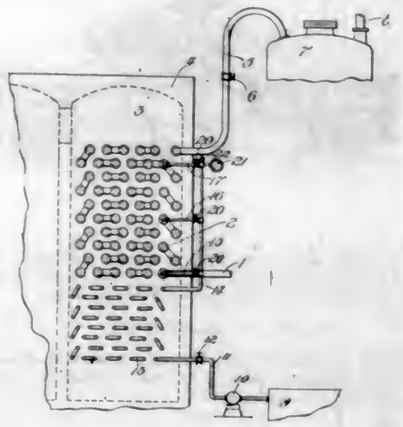
1,685,485. FLOOR-SCRUBBING MACHINE. WALTER S. FINNELL, Hannibal, Mo., assignor to Finnell System, Incorporated, a Corporation of Delaware. Original application filed May 11, 1923, Serial No. 638,166. Divided and this application filed Dec. 18, 1925. Serial No. 76,137. 4 Claims. (Cl. 15—180.)

1. In a floor scrubbing machine, the combination of a driving disc, means for driving said disc, a brush ring structure in direct engagement with said disc and having means for yieldably supporting brushes in contact with



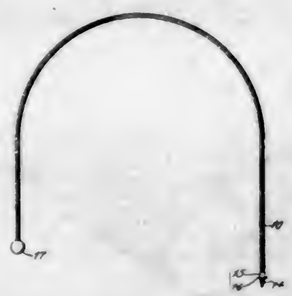
the surface under treatment, and an additional yieldable connection providing said direct engagement between said brush ring structure and said driving disc.

1,685,486. CARPENTER'S RULE. ALBERT G. GRAHAM, Monette, Ark. Filed July 14, 1925. Serial No. 43,585. 1 Claim. (Cl. 33—106.)



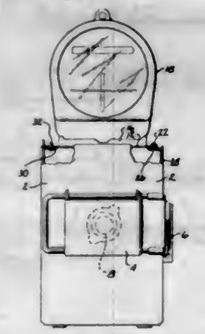
In a carpenter's rule, the combination with a body consisting of a plurality of alined sections having their adjacent ends hingedly connected together and provided with longitudinally extending side edges and oppositely disposed substantially wide graduated faces, of pivot pins rigidly carried by the free ends of the outer sections of the rule and projecting laterally from one of said wide graduated faces and extending at right angles with respect thereto, the outer sides of the pins lying flush with the said free ends of the outer sections.

1,685,487. SCRAPER. JOSEPH H. HALE, Linden, Calif. Filed June 1, 1927. Serial No. 195,639. 3 Claims. (Cl. 37—140.)



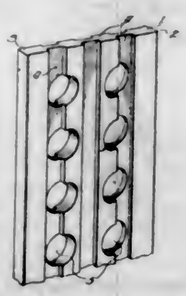
2. A scraper comprising a frame to be moved along the ground, a rotatable bowl member pivoted on to the frame, a handle member mounted on the frame ahead of the bowl and extending rearwardly thereof, and means between the handle and bowl for releasably holding the bowl in a scraping position relative to the ground.

1,685,488. PROCESS AND APPARATUS FOR CONVERTING HYDROCARBONS. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Feb. 19, 1923. Serial No. 619,820. 3 Claims. (Cl. 196—62.)



1. The step of heating oil in an oil cracking process, which consists in continuously passing the oil in a restricted stream through an elongated conduit disposed within a furnace, wherein the oil is raised to a cracking temperature, in stepping up the velocity of flow of the oil stream through said conduit, and in assisting in the heating of the oil in the stream by introducing a superheated inert gas into the oil stream in successive sections of said conduit under a pressure in excess of the pressure on the oil stream and at a velocity greater than the velocity of flow of the oil stream.

1,685,489. LACE FOR FOOTWEAR. CARL JANSEN, New York, N. Y. Filed Feb. 24, 1928. Serial No. 256,610. 1 Claim. (Cl. 24—143.)

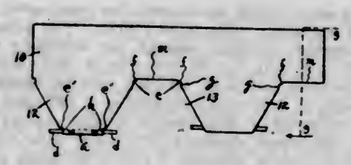


For shoe-laces of the class described a fastening means for connecting the ends of said lace comprising a point at one end, a sleeve on the lace at a distance from said point, a substantially arm-shaped end plate for said sleeve, a ball-shaped body having a hollowed substantially keystone shaped socket formed therein at the opposite end of the lace, an end plate for said socket having a median cross-shaped opening adapted to receive and allow the passage of the cross-shaped end plate of the other lace end into said socket to be locked therein by a twist of the lace.

1,685,490. CASING FOR SAFETY SWITCHES. ERNEST G. JOHANSSON, Boston, Mass., assignor, by mesne assignments, to The Palmer Electric & Manufacturing Co., Waltham, Mass., a Corporation of Massachusetts. Filed May 14, 1926. Serial No. 109,031. 6 Claims. (Cl. 247—2.)

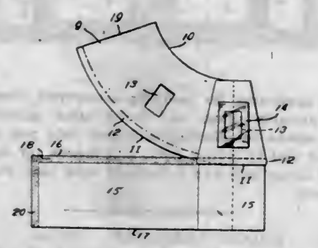
1. The combination of a casing body open at one end, a meter adapter plate for said end, means permanently securing said plate to said body and permitting its reversal about a longitudinal axis and its movement about an axis at right angles to said longitudinal axis, and a main cover for said body portion having a flange overlapping a portion of said plate, said plate having on one side of its longitudinal axis a meter adapting opening which when in one position is closed by said flange and on the other side of said axis a solid portion which when said opening is so closed completes the closure of the casing, said plate having an elongated slot coacting with said securing means so as to permit said plate to be moved transversely to said axis.

1,685,491. NAILING STRIP OR BLOCK. CARL M. JOHNSON, Chicago, Ill. Filed July 22, 1927. Serial No. 207,706. 3 Claims. (Cl. 72—105.)



1. A nailing strip of the class described comprising a relatively thin, flat elongated strip having the opposite lateral edges thereof of greater thickness than the connecting web portion therebetween, so that said relatively thick edges overlap the outer side faces of a pair of adjacent building blocks when said blocks are abutted against the opposite sides respectively of said web portion and having a plurality of longitudinal grooves in said web portion, for cooperating with a building block having similar registering grooves therein to form ke same.

1,685,492. PERFORATOR. WINFIELD S. JONES, Brea, and HAROLD U. BAKER, Los Angeles, Calif., assignors of three-eighths to Winfield S. Jones, two-eighths to Harold U. Baker, and three-eighths to E. D. Jones, Los Angeles, Calif. Filed June 10, 1926. Serial No. 114,917. 5 Claims. (Cl. 81—193.)

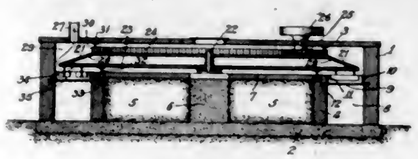


3. Improvements in perforators adapted to be placed within well casing, including a body, a sleeve carried at one end of said body, a head within said sleeve and a frangible member between the head and the sleeve, a mandrel carried by the head, and a friction member upon said mandrel.

1,685,493. ROOFING STRIP. HARRY G. KELLY, Omaha, Nebr. Filed Nov. 27, 1925. Serial No. 71,553. 4 Claims. (Cl. 108—7.)

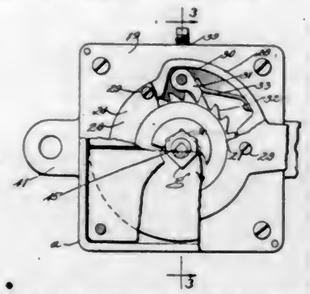
1. A roofing strip having an edge provided with spaced tabs having substantially complementary intermediate recesses, the upper side edges of said tabs being provided with right angular portions projecting into the recesses, the lower edges of said portions providing a stop, and at least part of the upper edges of said tabs being formed at substantially right angles to the said lower edge of said right angular portions to form guiding means, stiff fastening means carried by each tab having bent portions projecting laterally from the lower side edges of said tabs, whereby an overlying strip may be moved upwardly so that the outer part of the bent portions of its fastening means will engage beneath the tabs of an underlying strip while the other part of the bent portions will engage the said guiding means and stop of said underlying strip.

1,685,494. METHOD OF CONSTRUCTING BOTTLE-RECEPTACLE ELEMENTS. LYDIA B. KOCH, New York, N. Y., assignor to Reinforced Paper Bottle Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 26, 1923. Serial No. 677,015. Renewed Mar. 2, 1928. 3 Claims. (Cl. 229—4.5.)



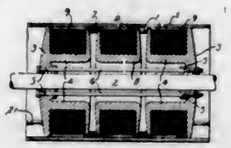
1. A method of forming body portions of receptacles as characterized comprising shaping sheet blanks, the one rectangular and the other arcuate and then rolling said blanks upon themselves and upon each other simultaneously.

1,685,495. DEVICE FOR CREATING ACCURACY IN THE ART OF BOXING. HARRY LATZ, New York, N. Y., assignor to Harry Latz Service, Inc., New York, N. Y., a Corporation of New York. Filed May 11, 1927. Serial No. 190,395. 1 Claim. (Cl. 272—76.)



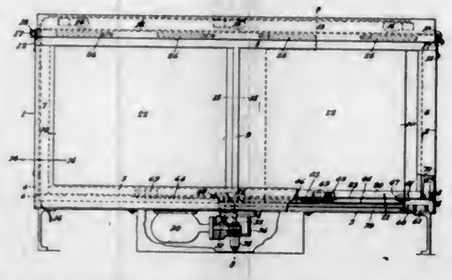
A device for creating accuracy in boxing, comprising a stuffed casing shaped to simulate the upper portion of the human body, having an opening at the bottom thereof to permit the introduction of stuffing, means for supporting said casing comprising a member attached to the top thereof and a second member attached to the casing adjacent said opening, and numbered circles on said casing to indicate striking areas corresponding to vulnerable parts of the human body.

1,685,496. LOW-TEMPERATURE DISTILLATION APPARATUS. HENRY G. LYKKEN, Minneapolis, Minn. Filed May 23, 1924. Serial No. 715,324. 20 Claims. (Cl. 202—4.)



1. An apparatus for treating a material, comprising a pan of annular shape and for holding material to be treated, means for heating said pan, said pan having an inlet port and an outlet port, and means for moving the material along said pan from said inlet port toward said outlet port.

1,685,497. SHOCK ABSORBER. GEORGE C. MARTIN, Los Angeles, Calif. Filed Oct. 27, 1924. Serial No. 746,037. 3 Claims. (Cl. 188—130.)



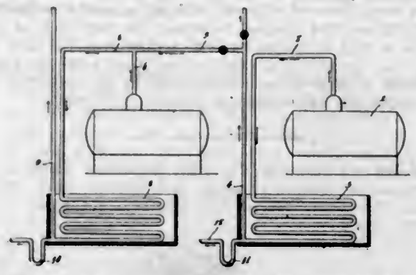
1. A shock absorber comprising a rectangular casing, a cover for said casing having a round central opening, a ratchet toothed gear having an offset flange portion journaled in said cover, a hub including a squared shank interlocked with the gear, a plurality of stationary clutch plates conforming in shape to the casing and interlocked therewith, and a plurality of movable disks interlocked with the squared shank of the hub and arranged between said stationary clutch plates, means for pressing said stationary clutch plates and movable discs in frictional contact, and a lever carrying a pawl operating in conjunction with said ratchet toothed gear whereby movement of the lever in one direction does not move the gear but movement in the other direction will move the gear against the frictional resistance of movable discs and stationary clutch plates.

1,685,498. MAGNETIC PULLEY. PAUL J. MCCULLOUGH, St. Louis, Mo., assignor to Scullin Steel Co., St. Louis, Mo., a Corporation of Delaware. Filed Jan. 12, 1927. Serial No. 160,756. 6 Claims. (Cl. 64—17.)

1. In a device of the character described, a shaft, end plates mounted upon said shaft and adapted to rotate therewith, a drum supported by said end plates, spools mounted in said drum, magnetic coils mounted in said spools, means for drawing said end plates toward each other, and expansible rings located between the outer ends of said spools so that when said end plates are drawn toward each other said rings are contacted against the inner surface of said drum and the outer edges of said spools, substantially as described.

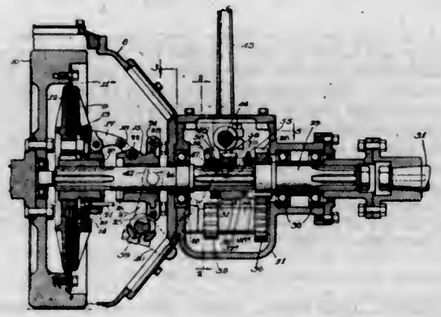
1,685,499. DISPLAY APPARATUS. LESLIE R. MCDONALD, Westmount, Montreal, Quebec, Canada. Filed Nov. 17, 1926. Serial No. 148,809. 8 Claims. (Cl. 40—36.)

1. In a display apparatus, the combination of a case provided with a plurality of placard compartments therein, a series of placard carriers, transferably disposed in said compartments, means for shifting a placard carrier laterally, means for shifting it transversely, such placard shifting means embracing a reciprocable rack bar and a rotating pinion having a fixed position and in mesh with the rack bar and means for rotating the pinion continuously.



1,685,500. ELECTRIC SWITCH. GEORGE J. MEUER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 1, 1926. Serial No. 145,570. 11 Claims. (Cl. 200—67.)

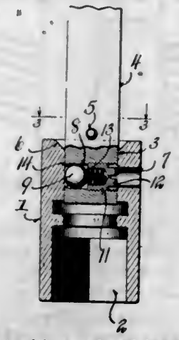
1. In a snap switch mechanism, the combination with a pair of stationary contacts, of a plurality of separately pivoted contact members adapted for movement simultaneously into and out of engagement with said stationary contacts, means for effecting such movement with a snap action, said means comprising a bell-crank lever pivoted eccentrically with respect to said contact members, an insulating abutment interlocked with the free ends of said contact members, a switch actuating arm on said lever, a freely flexible spiral compression spring interposed between said abutment and said actuating arm, and a manually operated arm on said lever arranged at substantially right angles to said actuating arm.



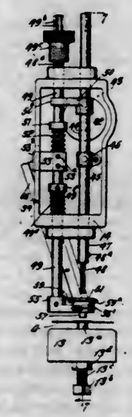
1,685,501. PROCESS FOR RECOVERY OF VAPORS. ROBERT T. OSBORN, Richmond, Calif., assignor, by mesne assignments, to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed July 11, 1922. Serial No. 574,183. 2 Claims. (Cl. 196—12.)

2. A process of recovering escaping or waste petroleum gases which are by themselves substantially uncondensible at atmospheric pressure and temperature, which consists in passing such gases unaccompanied by vapors condensible at or below the pressure and temperature at which said gases can be condensed, into vapors from a distilling unit operating below cracking temperature and pressure to convert higher boiling point oil into vapors which are condensible at atmospheric temperatures and pressures and which vapors contain substantially no constituents of which said gases are composed, thereby

creating a vapor condition such that substantially all of said vapors and gases can be condensed at atmospheric temperatures and pressures, and condensing the said gases together with the said vapors, said gases being retained in the same molecular state from the time of mixing until after their condensation.



1,685,502. CLUTCH AND TRANSMISSION MECHANISM. WILLIAM J. PEARMAIN, Racine, Wis., assignor to Twin Disc Clutch Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 9, 1925. Serial No. 7,803. 4 Claims. (Cl. 74—58.)

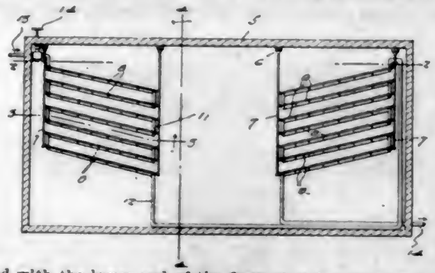


1. In a device of the class described a clutch, a shaft driven thereby, a clutch operating sleeve on said shaft, a second shaft in line with the first said shaft, transmission mechanism for driving the second said shaft from the first including a reversing shifting gear, a hand lever for shifting said clutch operating sleeve and gear, connections between the lever and sleeve such that the clutch is operated only at the respective ends of the arc of movement of the lever, an arm on the lever, a pin on the arm, a shifting fork for the gear having a notch in which said pin engages when the lever is in the intermediate portion of its arc of movement and from which the pin is released when the lever is in the end portions of its arc of movement.

1,685,503. SOCKET WRENCH. EDWARD M. PFAUSER, Milwaukee, Wis., assignor to Blackhawk Manufacturing Company, Milwaukee, Wis. Filed May 19, 1927. Serial No. 192,745. 2 Claims. (Cl. 81—121.)

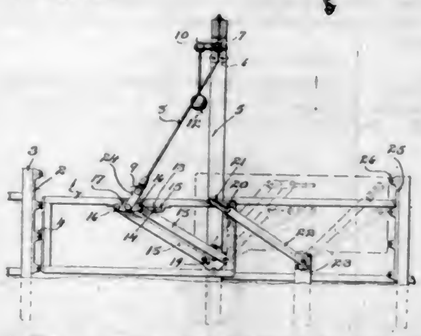
2. A two-piece socket wrench comprising a head socketed for the reception of a nut, and a handle for attachment with said head, one of said members having a socket therein of polygonal contour and provided with a transverse aperture, the other of said members having a shank for engagement in said polygonal recess and provided with a transverse aperture adapted to aline with the first mentioned aperture and of larger diameter than said first mentioned aperture, a ball carried within the aperture of said shank, a plug threaded into said shank aperture and provided with a reduced head for engagement in the first mentioned recess, to positively lock the members together, and a spring interposed between said ball and said plug.

1,685,504. AUTOMATIC SPOT-SETTING MACHINE. WILLIAM SCHEUER, New York, N. Y. Filed Apr. 28, 1926. Serial No. 105,096. 5 Claims. (Cl. 1—3.)



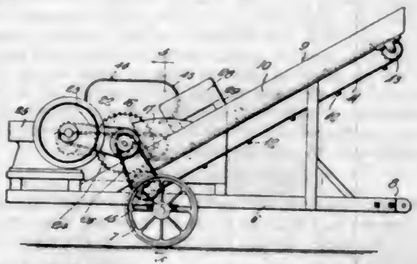
1. An automatic spot setting machine embodying, in combination, a reciprocating plunger mechanism, a stationary spot-clinching die arranged to cooperate therewith, means for feeding spots beneath the plunger, a reciprocating member having spot-engaging means and movable between the said feeding means and die, said reciprocating spot-engaging member being movable simultaneously with the movement of the plunger, means for causing a resilient contact of said reciprocating member with the goods to hold the same in place during the setting of the spot, and means for adjusting the extent of movement of said spot-engaging reciprocating member to vary the degree of resilient pressure on the goods and to compensate for varying thicknesses of goods.

1,685,505. REFRIGERATING APPARATUS. GEORGE T. SMILEY and WALTER R. OHSE, Houston, Tex. Filed Oct. 28, 1927. Serial No. 229,366. 3 Claims. (Cl. 62—101.)



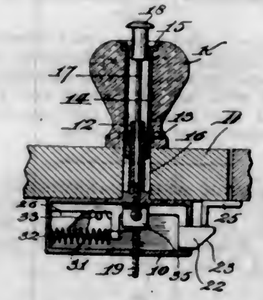
1. In a refrigerating apparatus of the class described, a refrigerating compartment and a plurality of refrigerating units arranged therein, each unit comprising a se-

ries of flues angularly disposed, with their side edges spaced from the walls of the compartment whereby to permit the free circulation of air entirely about each flue



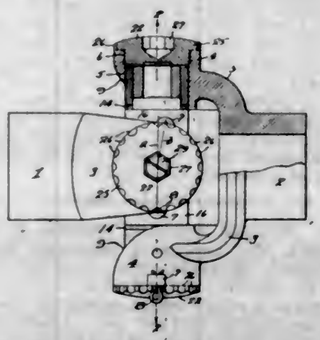
and with the lower end of the flues of each unit extending toward a common point within the compartment and a pipe coil arranged with each of said flues.

1,685,506. GATE. FRANKLIN H. SMITH, Peshtigo, Wis. Filed Dec. 10, 1926. Serial No. 154,011. 3 Claims. (Cl. 39—64.)



1. The combination of a gate, a pair of uprights mounted on opposite sides of the rear end of the gate, levers pivoted adjacent the lower ends of said uprights and having a pin joining their upper ends, a horizontally slotted guide receiving the pin of said levers and carried by said gates intermediate its ends, a second pair of levers pivoted adjacent their lower ends at a point spaced from the lower ends of said first mentioned levers and having slotted upper ends, pins carried by said gate adjacent its rear end and fitting within the slotted upper ends of said last mentioned levers, and cables extending downwardly and operatively coupled to the upper ends of said first mentioned levers.

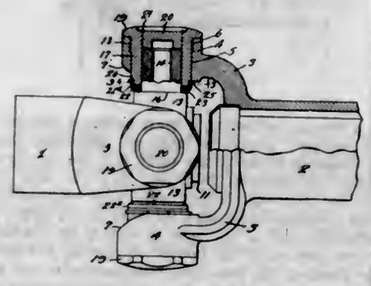
1,685,507. KAFIR-CORN HEADER. ARTHUR G. STEVENSON, Ottawa, Kans. Filed Mar. 25, 1926. Serial No. 97,333. 2 Claims. (Cl. 146—81.)



1. A stalk header comprising a table, a driven cutter at one edge of said table for severing the heads from stalks fed along said table, a relatively short feed belt extending along the table near its other edge, a comparatively long feed belt extending along the intermediate portion of said table with its inner end projecting beyond the inner end of the first named belt, a stalk guiding plate declining to the inner end of said relatively long belt and spaced from the inner end of the shorter belt, the lower edge of said plate being disposed adjacent said cutter, and a resiliently mounted retarder adapted to engage the butt ends of the stalks to hold the latter against angling upon the table as they are presented to the cutter, said retarder being mounted slightly above and adjacent to the lower end of said plate and the contiguous portion of the table.

1,685,508. PUSH CATCH FOR DOORS. THOMAS F. STUART and HENRY A. MOORE, Los Angeles, Calif. Filed Mar. 30, 1927. Serial No. 179,418. 3 Claims. (Cl. 292—168.)

1. A push catch for doors comprising a housing, a spring held latching bolt arranged for sliding movement therethrough, the outer end portion of which latching bolt projects through an opening in one end of said housing, the inner end portion of said latching bolt being provided with an inclined face, a lever fulcrumed within the housing with one end bearing against said inclined face, a push rod mounted for movement through the housing in a plane at right angles to the plane occupied by the latching bolt and a member adjustably mounted on said push rod and bearing on the end of said lever opposite the end that engages the inclined face on the latching bolt.

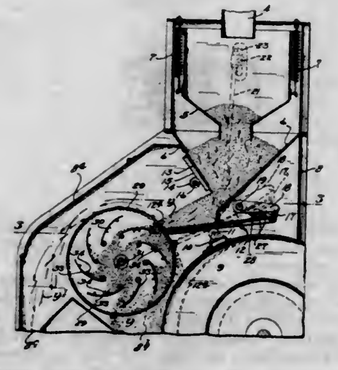


1,685,509. UNIVERSAL JOINT. WILLIAM H. THIEMER, Cleveland, Ohio, assignor, by mesne assignments, to Spicer Manufacturing Corporation, South Plainfield, N. J., a Corporation of Virginia. Filed Nov. 17, 1922. Serial No. 601,457. 4 Claims. (Cl. 64—102.)

1. In a universal joint the combination of a cross member having trunnions each provided with a bore communicating with the central portion of such member, bearing

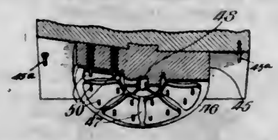
blocks adapted to receive the said trunnions, a cap threaded into the outer end of each bearing block, each cap having a circular head provided with peripheral equi-distantly spaced notches, and a pair of locking members carried by each block and so arranged as to engage alternately a notch in the said cap as the cap is screwed into or out of the said bearing block.

1,685,510. UNIVERSAL JOINT. WILLIAM H. THIEMER, Cleveland, Ohio, assignor to Spicer Manufacturing Corporation, South Plainfield, N. J., a Corporation of Virginia. Refiled for abandoned application Serial No. 601,458, filed Nov. 17, 1922. This application filed Oct. 24, 1924. Serial No. 745,714. 5 Claims. (Cl. 64—102.)



1. In a universal joint, the combination with a trunnion having a shoulder at its inner end, of a bearing block adapted to receive such trunnion and having a bore provided with a thread, a bushing threaded into such bore and receiving the trunnion therewithin, a ring of resilient metal surrounding such trunnion and interposed between the inner end of said bushing and its cooperating shoulder, said ring having a cylindrical flange whose outer edge is adapted to be engaged by the inner end of the bushing and a portion deflected inwardly from such flange toward said shoulder and the trunnion and adapted to engage said shoulder thereby forming a pocket between the inner end of the trunnion and the bushing, which pocket is adapted to be contracted in cross-sectional area by screwing said bushing inwardly, compressible packing material in said pocket and directly engaging said trunnion, and means for conducting lubricant to the space between the bushing and the trunnion.

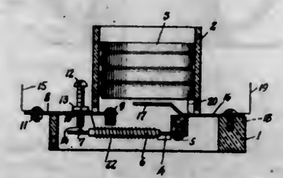
1,685,511. PROCESS FOR PREPARING SPINACH AND THE LIKE FOR CANNING. WILLIAM E. THOMAS, Oakland, Calif. Filed Sept. 27, 1927. Serial No. 222,399. 6 Claims. (Cl. 99—8.)



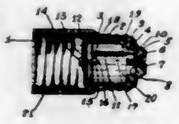
1. A process for preparing vegetables for canning, which comprises wilting the vegetable at the maximum temperature at which the formation of phæophytin from the chlorophyll thereof would be insufficient to appreciably affect the natural color of the vegetable.

1,685,512. SCALPER. JOHN J. VARUSKY, Minneapolis, Minn., assignor to Carter-Mayhew Manufacturing Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Aug. 17, 1927. Serial No. 213,518. 8 Claims. (Cl. 83—44.)

3. A scalping machine comprising a drum-like screen arranged to rotate on an approximately horizontal axis, a supply hopper, a delivery deck receiving from said hopper and delivering against the upwardly moving portion of said screen, said deck being mounted for angular adjustments in a vertical plane for varying the depth of flow from the angle of repose to different points on said screen, and means subject to the flow of stock and having connections to said deck for vertically adjusting the latter and arranged to raise the delivery edge of said deck under decreasing supply of stock and to lower the delivery edge of said deck under increasing supply of stock.

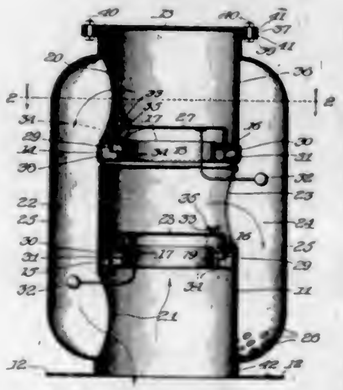


1,685,513. APPARATUS FOR FORMING WHEELS. CARL L. WILBER, Detroit, Mich., assignor to Jefferson Forge Products Company, Detroit, Mich., a Corporation of Michigan. Original application filed June 13, 1921, Serial No. 477,083. Divided and this application filed Apr. 7, 1923. Serial No. 630,511. 6 Claims. (Cl. 164—20.)



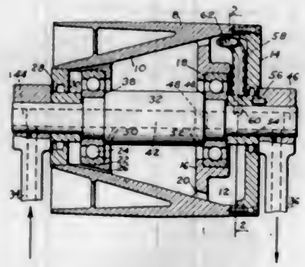
1. A finishing trimmer for spoked-wheel forgings comprising a lower die having wheel receptive cavities, a punch die coacting with the lower die to strike the wheel into said lower die, a lift block in said lower die cavities, means for raising and lowering said lift block, and plungers in said punch die for coacting with the interspoke flashes.

1,685,514. SOCKET FLASHER. NATHAN ABRAMSON, Brooklyn, N. Y. Filed Mar. 6, 1926. Serial No. 92,862. 2 Claims. (Cl. 200—115.5.)



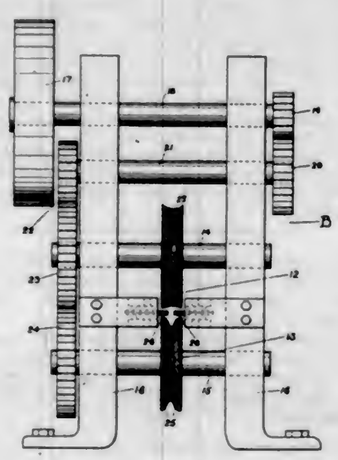
1. In a device of the class described, a receptacle for housing a translating device, a hollow base for housing a thermostatic switch, said switch being perpendicular to the axis of said receptacle, an adjusting means on the outside of the base and adjacent to the receptacle and parallel thereto.

1,685,515. FLASHING PLUG. NATHAN ABRAMSON, Brooklyn, N. Y. Filed Feb. 3, 1927. Serial No. 165,652. 4 Claims. (Cl. 200—122.)



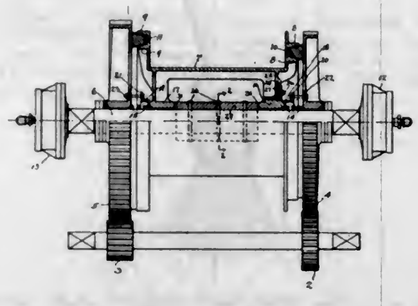
4. A flashing plug, comprising, a tubular conducting shell having one end formed for insertion into an outlet socket to electrically connect said shell and the socket on one side of the circuit, an insulating supporting member within the shell carrying a center contact for the other side of the circuit, a thermostat mounted on one end of said supporting member and extending longitudinally within said shell with its other end free to vibrate with changes in temperature, said thermostat being electrically connected to said center contact, a heating coil controlled by the movement of the thermostat for intermittently heating the thermostat, an adjusting screw, one end of which forms the contact for a lamp to be flashed and the other end of which is in close proximity to the thermostat, said adjusting screw being in electrical connection with the heating coil, said shell constituting the other circuit connection of the lamp to be flashed.

1,685,516. LIQUID SEAL. HAROLD V. ATWELL, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Nov. 5, 1925. Serial No. 67,188. 6 Claims. (Cl. 277—61.)



4. In combination, an open vent-pipe, a liquid containing channel surrounding said pipe, an inverted cup over said vent-pipe and having its sides immersed in the liquid in said channel, pivot means for said inverted cup at one side thereof whereby the cup may be tilted upwardly to permit the escape of vapor from the vent, means extending downwardly from the underside of said cup and rearwardly of said pivot means for counterbalancing the weight of said inverted cup and means to prevent racking of the seal.

1,685,517. BEARING MOUNTING. HARRY G. BALDWIN, New Haven, Conn., assignor to The New Departure Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed Mar. 3, 1926. Serial No. 91,958. 3 Claims. (Cl. 308—117.)

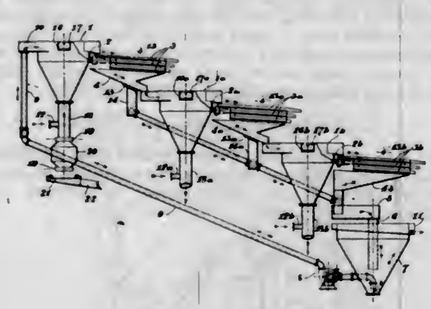


1. In a bearing mounting, a shaft having a central bore, a rotary member having a lubricant collecting chamber therein, bearings between the shaft and the rotary member, means for directing lubricant from the bore in the shaft to the bearings, hollow standards supporting the shaft and communicating with the bore in the shaft, plugs for closing the ends of the bore or cutting off communication of the bore with the hollow standards, a removable plug for dividing the bore into compartments, and means for delivering lubricant from the lubricant collecting chambers to the bore; substantially as described.

1,685,518. METHOD OF MAKING LEAD CAMES. WILLIAM J. BURROWS, St. Paul, Minn. Filed June 17, 1926. Serial No. 116,588. 1 Claim. (Cl. 80—30.)

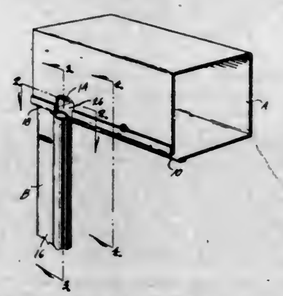
The method of finishing and ornamenting lead cames of the type consisting of two substantially parallel flanges joined at substantially their central portions by a web comprising passing the came through rotary die means acting upon the outer surfaces of said flanges to ornament the same and at the same time passing the web of the came through rotary means disposed at right angles to said die means to serrate both surfaces of said web and force the material of said web about a reinforcing means therein.

1,685,519. DEMOUNTABLE WINDING DRUM. OSCAR B. BJORGE, Portland, Oreg., assignor to Clyde Iron Works, Duluth, Minn., a Corporation of Maine. Filed Sept. 6, 1924. Serial No. 736,260. 4 Claims. (Cl. 254—187.)



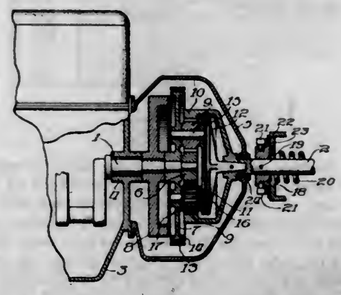
1. In mechanism of the character described, the combination of a shaft, a drum freely rotatably mounted thereon, a cylindrical collar fixed on said shaft within the drum and adapted to be engaged by the respective hub ends of the drum, one such hub-end being separable from the drum, and a cylindrical abutment carried by said drum to surround and be supported by the separable hub.

1,685,520. PROCESS OF CONTROLLING RATE OF OXIDATION. HECTOR RUSSELL CARVETH, Niagara Falls, N. Y., assignor to The Roessler & Hasslacher Chemical Company, New York, N. Y., a Corporation of New York. Filed Jan. 29, 1926, Serial No. 84,543, and in Germany June 6, 1925. 15 Claims. (Cl. 23—184.)



12. A product of manufacture consisting in a pulverulent mixture comprising a finely divided alkali metal and a pulverulent material inert to said alkali metal.

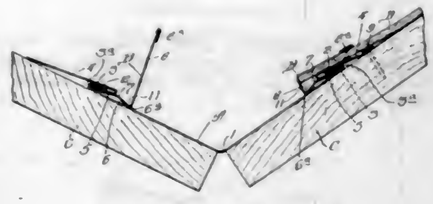
1,685,521. SEPARATION OF MATERIALS OF DIFFERENT SPECIFIC GRAVITIES. THOMAS M. CHANCE, Merion, Pa. Filed June 28, 1927. Serial No. 202,030. 3 Claims. (Cl. 209—173.)



1. A method of separating materials of different specific gravities which consists in immersing said materials in a fluid mass consisting of an agitated mixture of liquid and comminuted solids heavier than said liquid and substantially insoluble therein and having a specific gravity intermediate that of the lighter and heavier of said materials, in providing a plurality of individual fluid masses of the described type, in locating the top of said fluid masses at vertically differing elevations, said differences in elevation depending upon the horizontal distances separating said bodies, in proportioning the gradients between said fluid masses to permit the free flow of liquids by gravity from the top of the fluid mass at a higher elevation to that of one at a lower elevation, in separately feeding into each of said fluid masses materials to be separated thereby, in causing a mixture of comminuted solids and liquid to be circulated from a body of such mixture located at an elevation below said fluid masses into and across the higher of said fluid masses, in separating lighter materials transported by said fluid mixture away from said fluid mass from the constituents of said mixture and of said fluid mass intermixed therewith, in then passing said circulating mixture into and across the top of another of said plural separating fluid masses, in separating the lighter materials carried away from said second fluid mass by said circulating mixture, and in returning said circulating mixture after the removal of said lighter materials into the said body of said mixture located at said lower level.

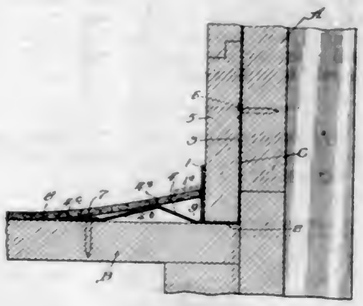
1,685,522. RETHREADER FOR SCREENS. HARRY DIXSON, Pella, Iowa, assignor to Rolscreen Company, Pella, Iowa. Filed Feb. 19, 1927. Serial No. 169,556. 3 Claims. (Cl. 156—39.)

3. In combination with a screen, a guide track provided with a slit opening extending lengthwise of the track, the side edge of the screen being received in the guide track, and a casing having an opening therein and having a notch formed therein, said notch being positioned at the upper end of said track whereby if the side edge of the screen is accidentally withdrawn from the guide track, it may travel into said casing over the upped end of said track and through said notch for allowing it to reenter said track when the screen is withdrawn.



1,685,523. TRANSMISSION. ADIEL Y. DODGE, South Bend, Ind. Filed June 7, 1926. Serial No. 114,081. 6 Claims. (Cl. 74—34.)

1. A variable speed transmission comprising a rotatable driving member, a rotatable driven member coaxial therewith, a gear secured to rotate with the driving member and

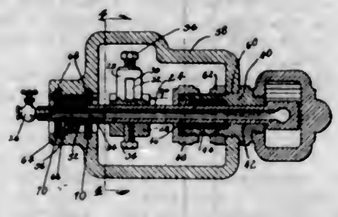


coaxial therewith, a gear secured to rotate with the driven member and coaxial therewith, a gear carrier coaxial with said gears, a gear mounted on said gear carrier and meshing with both said coaxial gears and means for variably controlling the relative rotation of said gear carrier with respect to said driven gear comprising a drag member secured to rotate with said gear carrier, and a second drag member cooperating with said first drag member and rotatable with said driven member, the gear which is rotatable with the driven member being an internal gear and having a chamber in which said drag members are located.

1,685,524. VALLEY, HIP, AND RIDGE CONSTRUCTION FOR ROOFS. FLOYD DOW, Wyanet, Ill. Filed Aug. 17, 1925. Serial No. 50,615. 7 Claims. (Cl. 108—24.)

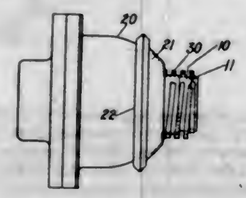
1. The combination of a ridge or valley strip provided at its lateral edges with interlock-flanges, and flashing-strips provided medially with interlock-flanges adapted to engage said first-named flanges, each flashing-strip having one wing adapted to project past the lateral edge of the first mentioned strip and serve as a nailing-strip and another wing adapted to serve as an edge-binding for the roof-covering.

1,685,525. FLASHING FOR ROOF CONSTRUCTION. FLOYD DOW, Wyanet, Ill. Filed Aug. 17, 1925. Serial No. 50,616. 2 Claims. (Cl. 108—26.)



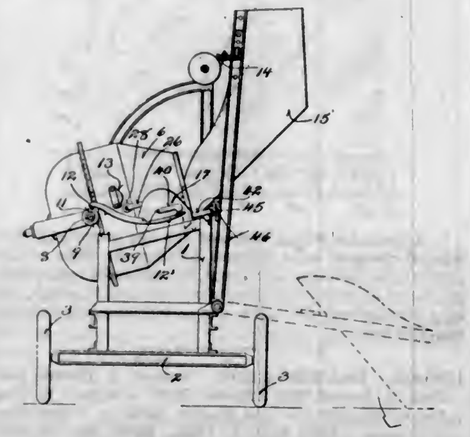
1. A flashing for the purpose set forth, comprising a strip of sheet-metal bent upon itself to afford an intermediate flange, one wing of the metal being then bent to form a web and then bent upwardly to form a nailing-strip, thus affording a channel for the siding between said flange and nailing-strip, and the other wing being bent to provide a skirt adapted to rest upon and having its marginal portion secured to the roof, the intermediate portion of said skirt being provided with an apex adapted to serve as a bearing for the roof-covering and with a channel adapted to serve as a gutter between said apex and said flange.

1,685,526. LATHER BRUSH. ORVILLE D. EARON, Montclair, N. J., assignor to Isabel Earon, Montclair, N. J. Filed Oct. 18, 1926. Serial No. 142,262. 6 Claims. (Cl. 15—193.)



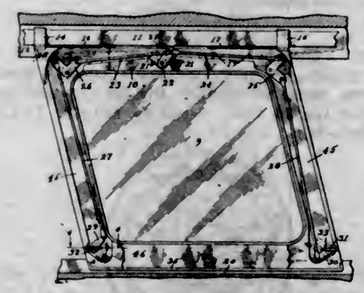
1. In a lather brush, the combination of an annular body, a ring in the body, a knot of bristles having one end thereof in the ring, said ring being provided with an outwardly extending tooth imbedded in the body to rigidly secure the ring against rotation relatively to the body, and a handle secured to the body.

1,685,527. JOURNALING MEANS FOR HOLLOW FLOAT-ARM SHAFTS. JACOB EIGE, Marshalltown, Iowa, assignor to The Fisher Governor Company, Marshalltown, Iowa. Filed Dec. 27, 1927. Serial No. 242,623. 9 Claims. (Cl. 137—104.)



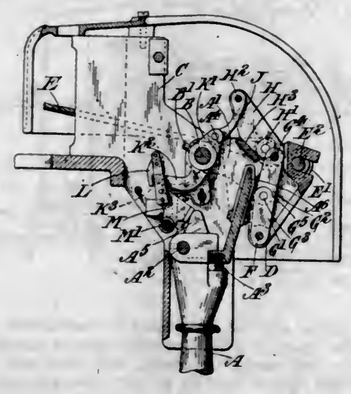
1. A device of the character disclosed comprising a hollow float arm, a float arm casing receiving the float arm, a journal extending from the side of said casing, a hollow shaft extending through said journal and connected with the float arm, a frame projecting from said casing, a ball bearing supported in said frame and spaced from said journal, said hollow shaft extending through said ball bearing and a valve on the outer end thereof.

1,685,528. SPRING-RETAINED CASING FOR UNIVERSAL JOINTS. HARRY MAWSON FUNNELL, New Market, N. J. Filed Apr. 4, 1927. Serial No. 180,796. 4 Claims. (Cl. 64—89.)



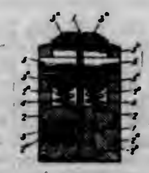
1. A device of the class described a shaft provided with an annular groove extending around the shaft, a coiled spring adapted to freely function on the shaft and having one end coil smaller than the diameter of the effective portion of the spring so that when the reduced end coil engages the groove it is held therein by the radial compression of the end coil and additionally secured by the adjacent coil when the spring is under compression.

1,685,529. AUTOMATIC LOCK AND RELEASE FOR CONCRETE MIXERS. MICHAEL GILSON, Port Washington, Wis., assignor to Kivik-Mix Concrete Mixer Co., Port Washington, Wis. Filed Apr. 14, 1927. Serial No. 183,704. 6 Claims. (Cl. 83—73.)



1. A concrete mixer comprising a frame, a revoluble mixing drum pivotally carried by said frame, latching mechanism temporarily restraining said drum against tilting motion, a charging bucket, means for elevating said bucket to deliver a charge to said drum, a cam carried by said drum, a ratchet wheel and pawl actuated from said cam, a second cam carried by said ratchet wheel, and means actuated by said second cam for tripping said latch after said drum has executed a predetermined number of revolutions.

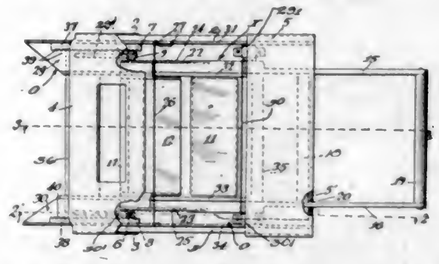
1,685,530. AUTO TOP. FRANK D. GOULD, Oakland, Calif. Filed Sept. 18, 1923. Serial No. 663,381. 7 Claims. (Cl. 296—47.)



1. The combination with a horizontally sliding closure for vehicles, of an overhead track, hangers having hooks to fit slidably over the track, and connecting means between the hangers and the closure, whereby when the closure is depressed the hooks are caused to tilt and grip the track.

1,685,531. CONTROL MECHANISM FOR ELECTRIC SWITCH GEAR. WILLIAM ANDERSON, Hebburn-on-Tyne, and HENRY WILLIAM CLOTHIER, Wallsend-on-Tyne, England, assignors to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England, a Company of Great Britain. Filed Jan. 4, 1926, Serial No. 79,242, and in Great Britain Jan. 14, 1925. 9 Claims. (Cl. 200—17.)

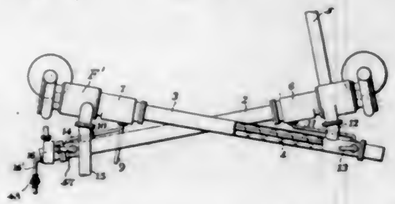
9. In control mechanism for an electric switch the combination of a switchgear housing, a handle comprising an upper part pivoted to the housing and a lower part yieldingly connected to the upper part by means of a pivot and a spring, a switch-operating arm turning about the same axis as the handle, a forked lever pivoted on the upper part of the handle, a toggle connecting the forked lever to the switch-operating arm, a projection on the forked lever adapted to break the toggle, a stop on the upper part of the handle adapted to prevent further rotation of the forked lever after the toggle has been broken, a catch lever also turning about the same axis as the handle, a link forming a toggle with the catch lever and connecting the catch lever to the forked lever, a member pivoted on the switchgear housing, a catch pivoted on this member and forming a toggle therewith and adapted to engage the catch lever when the trip mechanism is set, a projection on the lower part of the handle adapted to release the catch and a locking device for the handle so constructed that the lower part of the handle with its projection is capable of limited movement in order to release the catch whilst the upper part is held against movement until the opening of the switch has released the locking device.



1,685,532. KNIFE BAR FOR PAPER CUTTING AND FOLDING MACHINES. HENRY F. BECHMAN, Battle Creek, Mich., assignor to Duplex Printing Press Company, Battle Creek, Mich., a Corporation of Michigan. Filed Oct. 1, 1927. Serial No. 223,868. 3 Claims. (Cl. 164—66.)

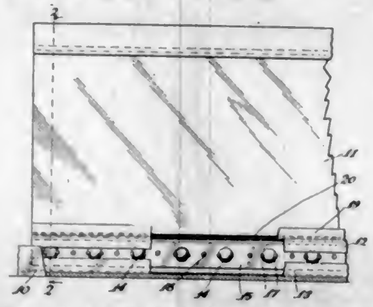
1. A knife bar for the purpose specified, comprising opposite box members having recesses in their opposed sides, means for fastening the members together, a knife blade secured between the box members extending between the recesses in said members and pins attached to

the box members at opposite sides of the blade adapted to contact with the sides of the blade and support the blade against lateral deflection during the cutting operation.



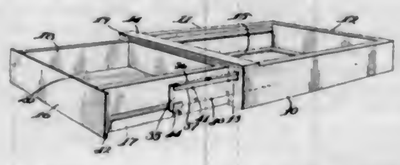
1,685,533. SLICING CUTTER FOR BUTTER, BREAD, AND THE LIKE. JAMES S. DONNELLAN, Los Angeles, Calif. Filed Mar. 9, 1927. Serial No. 173,953. 9 Claims. (Cl. 31—27.)

4. A slicing machine comprising in combination a pair of slidable doors, a pair of slidable cutters spaced from said doors, and means for moving said doors and cutters so that said cutters separate as said doors approach each other and vice versa, whereby material placed on said doors may be sliced and dispensed.



6. A slicing machine comprising in combination a base plate having an aperture therethrough, a frame slidable in said base plate, said frame having thereon a cutter and a door, a second frame slidable in said base plate, having a door and a cutter thereon, there being an operative connection between said frames to cause them to travel in opposed paths, whereby said doors may be brought together over said aperture or removed therefrom, and said cutters may be brought together above said aperture or removed therefrom.

1,685,534. APPARATUS FOR THE SEPARATION OF OIL FROM OIL-CONTAINING SUBSTANCES. CARL DRAHN, Magdeburg, Germany, assignor to the Firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Filed Feb. 4, 1927, Serial No. 165,960, and in Germany Dec. 9, 1925. 7 Claims. (Cl. 87—6.)



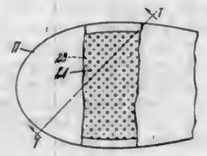
1. In apparatus for extracting oil from oil-bearing material, a series of interconnected extraction chambers each adapted to contain a quantity of solvent, means for charging oil-bearing material into the first of said series of chambers, means for conveying the oil-bearing material through said chambers in succession, whereby some of the solvent in each chamber is carried along with the oil-bearing material to the discharging end of the chamber, pressure means at the discharging end of each chamber adapted to press the solution of oil in solvent from the oil-bearing material, means for conveying said solution from each of said pressure means except the one associated with said first extraction chamber to the end of the preceding extraction chamber into which the oil-bearing material is charged, means for supplying fresh solvent to the charging end of the last of said series of containers, and means for leading off the oil solution from the pressure device of said first chamber.

1,685,535. TRACK FOR SLIDING SASHES. ROBERT I. EUSTIS and FRED S. BEIGER, Los Angeles, Calif., assignors to The Eustis Specialty Co., Los Angeles, Calif., a Corporation of Nevada. Filed Feb. 24, 1926. Serial No. 90,269. 2 Claims. (Cl. 16—100.)

1. A track for sliding sash and the like comprising two opposed channels, balls disposed between the edges of the walls of the channels, and a cage for said balls comprising two strips of metal having apertures therein in which the balls are disposed and means for maintaining the balls in said apertures.

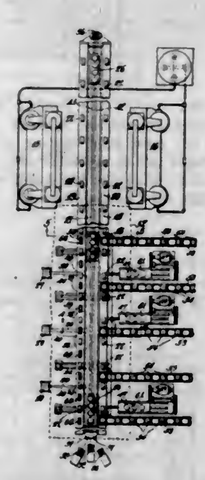
1,685,536. DRAWER SLIDE. ROBERT I. EUSTIS and FRED S. BEIGER, Los Angeles, Calif., assignors to The Eustis Specialty Co., Los Angeles, Calif., a Corporation of Nevada. Filed Sept. 7, 1926. Serial No. 133,842. 19 Claims. (Cl. 45—77.)

15. A drawer construction comprising two parallel side walls, a drawer having its sides therebetween, means providing two flanges extending into grooves in each side and its adjacent side wall and being movably disposed therein, said flanges being arranged one beneath the other but extending in opposite directions, and means connecting the flanges to each other.



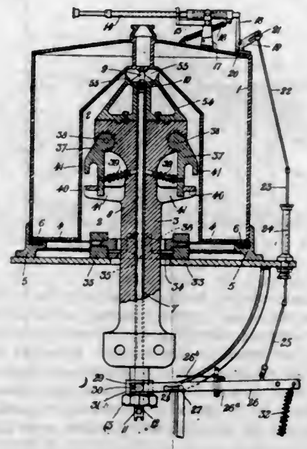
1,685,537. CIRCUIT CONTROLLER. WALTER S. GARLAND, Washington, D. C. Original application filed Feb. 12, 1926, Serial No. 87,873. Divided and this application filed Aug. 16, 1926. Serial No. 129,478. 11 Claims. (Cl. 200—84.)

1. A circuit controller including a rotatable shaft, means carried thereby and provided with a surface having a series of cams, a contact carried by each of said cams,



contact members insulated with respect to said contacts, a pivotally and slidably mounted brush urged to coact with said surface and movable both pivotally and slidably by each cam as said shaft is rotated in either one direction or the other to close a circuit through the contact of such cam and one of said contact members respectively, and float-operated means for rotating said shaft.

1,685,538. SOLE FOR BOOTS AND SHOES. ALFRED A. GLIDDEN and THOMAS M. KNOWLAND, Watertown, Mass., assignors to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed July 22, 1927. Serial No. 207,790. 1 Claim. (Cl. 36—30.)



A sole for boots and shoes having, in combination, a body portion, comprising a plurality of layers of rubber, and a plurality of perforated metal plates, with one plate between each of said rubber layers, the rubber of said layers being bounded together through said perforations, and the perforations of adjacent plates being out of alignment with each other.

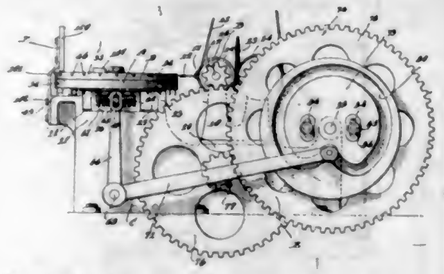
1,685,539. ELECTROMAGNETIC CARRIER SYSTEM FOR HEAVY PLATES. ALFRED GOODFELLOW, Coatesville, Pa., assignor to Charles L. Huston, Coatesville, Pa. Filed Mar. 19, 1925. Serial No. 16,672. 7 Claims. (Cl. 164—48.)

1. The process of transferring heavy metal plate and cutting it in step by step operation, which consists in gripping the plate electromagnetically from below, in progressing the plate to an initial setting above the shearing position by movement of the electro-magnet while maintaining the grip, lowering the plate, operating upon the plate concurrently upon opposite sides, raising it and shifting the plate while maintaining alignment by the shifting means to a setting for repetition of the operation.

1,685,540. APPARATUS FOR RAISING AND LOCATING SUBMERGED VESSELS. THOMAS HODGES, THOMAS ROBERT WILLIAM HODGES, and REGINALD HODGES, Callestick, England. Filed July 7, 1926. Serial No. 121,009, and in Great Britain Mar. 23, 1926. 12 Claims. (Cl. 114—51.)

1. Apparatus for raising and locating submerged vessels comprising two or more bollards secured upon the vessel, floats normally located over said bollards, means for releasing said floats, a cable or its equivalent attached to each float, said cable being adapted to be utilized as a guide for lowering a shackle member into engagement with said bollard, means whereby the shackle can automatically be coupled to said bollard to enable a hawser or the like connected to the shackle to be utilized for raising the vessel, said float having a vertical rod attached to its vertical axis and passing through said bollard, means being provided for engagement with said rod for holding the float in position and for releasing same.

1,685,541. ARTIFICIAL TEETH AND MEANS FOR FIXING THE SAME. CHRISTE JOANNIDES, London, England. Filed Dec. 27, 1920, Serial No. 433,418, and in Great Britain Jan. 13, 1920. 1 Claim. (Cl. 32—9.)

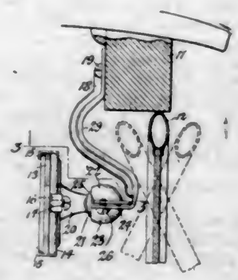


An artificial tooth having a rigid pin for attachment to a backing, the portion of the pin within the tooth being elongated in cross-section in the direction of the length of the tooth, and the portion of the pin exterior of the tooth merging gradually from said elongated section to a circular cross-section, the two said portions being substantially in axial alignment, the portion of the pin exterior to said tooth terminating in an enlarged head, the axis of which is inclined to the axis of the tooth.

1,685,542. AUTOMATIC FEEDING MECHANISM FOR TAPPING MACHINES. SIMON KAIL, Akron, Ohio. Filed Jan. 21, 1925. Serial No. 3,856. 10 Claims. (Cl. 10—139.)

1. The combination with a tapping machine, of a device for feeding articles to be threaded to said tapping machine including a rotary and reciprocatory table, speed reduc-

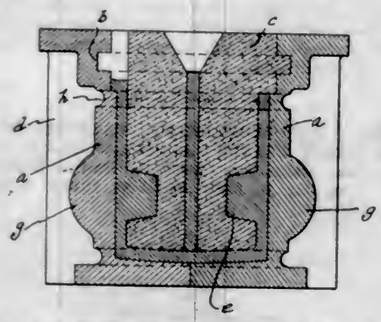
ing mechanism operatively connecting said table with said tapping machine to permit synchronous operation thereof, a plurality of article receiving seats formed in said table, means for feeding the articles to said seats, and automatic means for removing the articles from said seats after being acted upon by said tapping machine.



6. In a machine for feeding articles to be threaded to a tapping machine, a slide block having a horizontally disposed longitudinally extending slot, a work receiving table carried by the block, a cross head arranged centrally within the slot in said block, expansion springs engaging said cross head and normally holding the same at the transverse center of the slot, trunnions formed on the opposite ends of the cross head and rocker arms for engaging said trunnions.

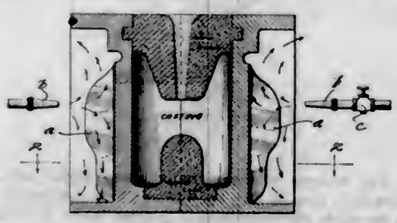
1,685,543. BURNER FOR REGENERATIVE FURNACES. MICHAEL JOHANN LACKNER, Dortmund, Germany. Filed Feb. 24, 1926. Serial No. 90,356, and in Germany Feb. 21, 1925. 2 Claims. (Cl. 263—15.)

1. A burner construction for regenerative furnaces comprising three flues for conveying the combustion air and fuel gases; a slag pocket for each flue for collecting the slag particles which may be carried in the fuel gases; a mixing flue for connecting the flues with each other and with a furnace chamber, said mixing flue increasing in size toward the furnace chamber; and means for interconnecting two of the slag pockets.



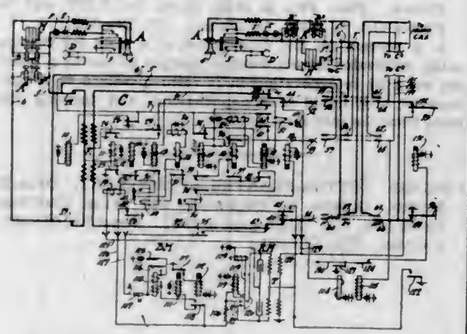
1,685,544. MIRROR BRACKET. WILLIAM LA HODNY, Buffalo, N. Y., assignor to Standard Mirror Co. Inc., Buffalo, N. Y., a Corporation of New York. Filed Apr. 15, 1924. Serial No. 706,693. 2 Claims. (Cl. 45—97.)

1. A mirror bracket comprising a head adapted to be attached to a mirror and provided on its rear side with a ball, a base having a hanger adapted to be attached to a support and provided with a forwardly projecting lug having a half socket and a perforated seat above said half socket, a clamping plate arranged above said lug and having a half socket which forms a complete socket with the half socket in said lug and also provided on its rear edge with a radial retaining teat which loosely engages with said perforated seat, said complete socket receiving said ball, and clamping screws connecting said lug and clamping plate on opposite sides of said socket for holding said ball frictionally in place therein.



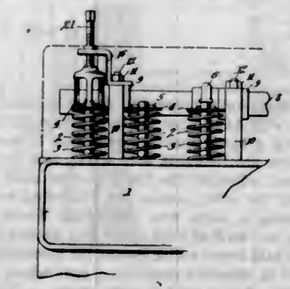
2. A mirror bracket comprising a head adapted to be attached to the rear side of a mirror, a base having a hanger which is adapted to be attached with its upper end to the frame of an automobile canopy and an adjustable connection between the lower end of said hanger and the rear side of said head, said hanger having that part thereof between its upper and lower ends deflected inwardly to provide a clearance space which is adapted to receive a part of the windshield, and the lower end of said hanger being offset forwardly relatively to the upper end thereof for bringing the mirror close to the windshield and the upper end of said hanger extending inwardly beyond the center of the pivotal connection between the lower end of the bracket and the mirror supporting head.

1,685,545. PERMANENT MOLD CONSTRUCTION. HARRY S. LEE, Plymouth, Mich. Filed Oct. 10, 1925. Serial No. 61,673. 8 Claims. (Cl. 22—77.)



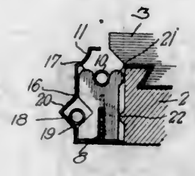
1. In a permanent mold for casting bodies, a mold section having walls contacting with a cast body for conducting heat away from said casting, a portion of the wall sections reduced in cross sectional area at determined points to choke back the heat and reduce the heat conductivity through said wall sections.

1,685,546. PROCESS FOR CONTROLLING METAL CASTINGS. HARRY S. LEE, Plymouth, Mich. Filed Mar. 8, 1926. Serial No. 93,056. 2 Claims. (Cl. 22—212.)



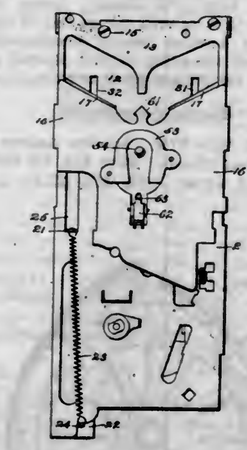
1. In the art of casting ferrous metals in permanent molds, the method of obtaining predetermined varied characteristics in the metal of a cast article, which consists in the controlling of the dissipation of the heat from the cast metal by the application of a regulable cooling fluid to local portions of the mold walls so that such heat is dissipated from various portions of the cast metal in such degrees of rapidity as will effect the varied characteristics in the cast metal.

1,685,547. AUTOMATIC TELEPHONE SYSTEM. CLARENCE E. LOMAX, Oak Park, Ill., assignor to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 20, 1926. Serial No. 96,150. 29 Claims. (Cl. 179—17.)



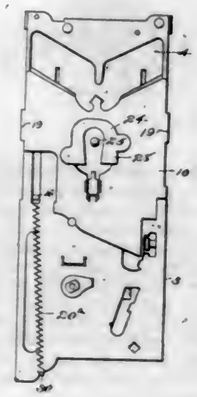
1. In a telephone system, a connector connected to a calling line, ringing equipment comprising a transformer and an interrupter for intermittently connecting one terminal of a source of current to one terminal of the primary winding of said transformer, the other terminal of said source being normally disconnected from the other terminal of said primary winding, means in said connector responsive to the initiation of a call by the calling subscriber for actuating said interrupter, means in said connector responsive to digits dialled by the calling subscriber for extending the connection to a called party line, and means responsive to other digits dialled for connecting said other terminal of said source to said other terminal of said primary winding and for connecting the secondary winding of said transformer to the called line for long or short intervals depending on the digit dialled to signal a desired party on said line.

1,685,548. VALVE-SPRING COMPRESSOR. WILLIAM F. HOUBLEY, Annapolis, and EDWARD G. TOWNSEND, Camp Parole, Md. Filed Dec. 9, 1927. Serial No. 238,899. 14 Claims. (Cl. 29—86.3.)



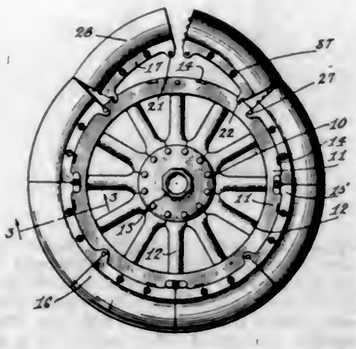
1. A valve spring compressor comprising a bracket adapted to be secured to an engine cylinder head while the latter is operatively assembled with the engine block, said bracket having a foot portion formed for attachment to the engine head, a head on said bracket horizontally and vertically spaced from said foot portion, a pressure device carried by said head, and means on said device adapted to compress a valve spring.

1,685,549. SHORT CIRCUITER. EVERETT P. LARSH, Dayton, Ohio, assignor to The Master Electric Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 7, 1924. Serial No. 704,670. 10 Claims. (Cl. 172—279.)



1. A short circuiter construction for electric motors of the type wherein an annular series of weights are radially movable under centrifugal influence against the yielding resistance of a tension element to effect the electrical interconnection of the windings of a motor, characterized by a disc mounting for the radially movable weights the margin of which is straddled by the weights which are bifurcated for such engagement, the disc being provided with peripheral notches and certain weights of the series being seated in such notches and dividing the series of weights into groups for the purpose of insuring rotation of the weights in unison with the disc, said weights being radially movable independently thereof.

1,685,550. COIN-DETECTING VENDING MACHINE. JAMES H. MANN, Jr., Mont Eagle, Tenn., assignor to Southwestern Sales Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 27, 1924. Serial No. 695,485. 1 Claim. (Cl. 194—97.)

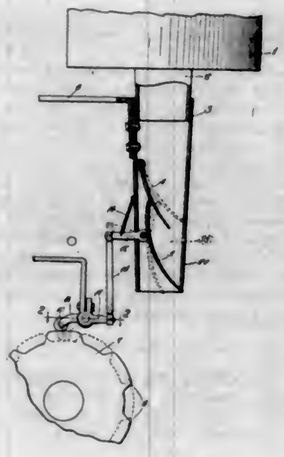


In combination, a frame, a coin-completing mechanical drive, a coin detecting chute formed in the wall of the frame, and an oscillating plate, means to arrest spurious inserts in said chute, and means to dislodge and by-pass said arrested inserts from said chute and away from the coin completing mechanical drive comprising a sliding plate having beveled flanges and an offset thereon, said flanges operating the oscillating plate to spread it away from the adjacent wall at an angle thereto and said offset operating the arresting means to dislodge the arrested insert, and means to actuate said plate and to restore it to normal position.

1,685,551. SPURIOUS-COIN SEGREGATOR. JAMES H. MANN, Jr., St. Petersburg, Fla., assignor to Southwestern Sales Corporation, New York, N. Y., a Corporation of Delaware. Original application filed Feb. 27, 1924, Serial No. 695,484. Divided and this application filed Apr. 29, 1925. Serial No. 26,756. 2 Claims. (Cl. 194—101.)

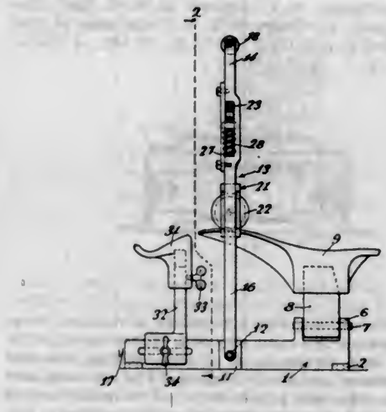
1. In a coin controlled vending machine, the combination with a fixed back plate and a plate having a coin channel therein, of a pivoted plate forming another wall of the channel and having an opening therethrough, a magnet mounted on said pivoted plate and located adjacent to said channel to arrest magnetic inserts, a slidable plate provided with means for oscillating said pivoted plate to spread it away from said channelled plate to by-pass magnetic inserts from said channel, means carried on said back plate to pass through the opening in said pivoted plate to dislodge arrested inserts simultaneously with the oscillation and spreading of said pivoted plate, and means to restore the pivoted plate to normal position.

1,685,552. TIRE AND RIM. ARTHUR JOSEPH MICHAUD, Montreal, Quebec, Canada. Filed Feb. 19, 1927. Serial No. 169,650. 1 Claim. (Cl. 152—22.)



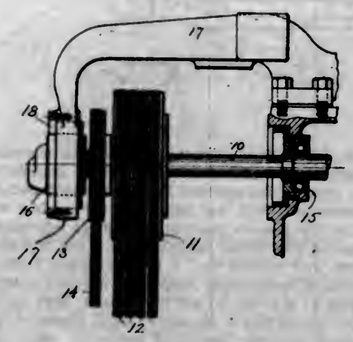
In combination with a vehicle wheel provided with a plurality of transversely extending bolts and pins, a plurality of rim sections formed with casing engaging flanges, apertured ears formed adjacent one end of each rim section, curved projections formed on the opposite end of each rim section engageable with the pins of the wheel, and clamping plates formed with inwardly extending pins engageable with the ears of the rim section and with the bolts to secure the rim sections in position on the wheel.

1,685,553. SAND MOLD FOR CASTING MAGNESIUM AND PROCESS OF MAKING SAME. GILBERT MICHEL, Bagneux, France, assignor to Hart O. Berg, Paris, France. Filed Feb. 5, 1925, Serial No. 7,157, and in France Oct. 4, 1924. 10 Claims. (Cl. 22—188.)



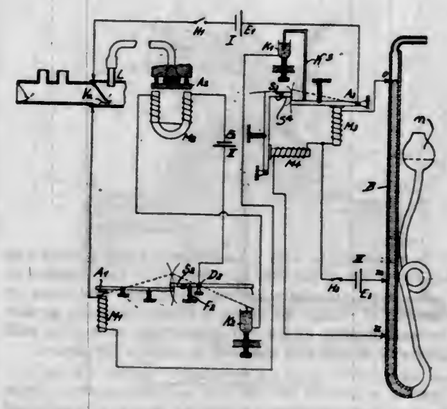
3. A process for the preparation of a mold for casting easily oxidizable metals which comprises preparing a molding sand by incorporating in it rosin dissolved in a non-aqueous oily liquid and naphthalene, and forming the mold from the said sand mixture.

1,685,554. COTTON-PLANTER ATTACHMENT. ONAS E. MORRIS, GEORGE E. CRUMBINE, and WICK GROUNDS, Cedar Hill, Tex. Filed Aug. 6, 1927. Serial No. 211,195. 1 Claim. (Cl. 111—51.)



A predetermined-bulk dispensing device adapted for use in connection with the hopper of a cotton planter or the like, comprising a spout leading from said hopper, upper and lower valves positioned in said spout, said lower valve being positioned adjacent the lower end of said spout to open and close the same, means for actuating said lower valve, comprising a valve arm projecting freely through an opening in the wall of said spout and having its inner end secured to said lower valve, means for normally holding said valve arm in elevated position, a gear wheel actuated by said planter and provided with teeth, a rock shaft mounted adjacent said teeth and having its ends extended to form rock arms, a roller engaging said teeth and journaled in the free end of one of said rock arms, a link connecting the free ends of said other rock arm and said valve arm, said upper valve having its upper end hinged to said spout adjacent the upper end thereof and having its lower end resting against the upper end of said lower valve.

1,685,555. MACHINE FOR ROLLING SOLES. CHRIS NOHR, Pasadena, and PETER NOHR, Los Angeles, Calif. Filed Dec. 22, 1927. Serial No. 241,812. 8 Claims. (Cl. 12—84.)



8. A machine for rolling shoe soles, comprising a base, a last mounted on said base, a frame pivoted to said base, and a roller carried by said frame, said frame being adapted for reciprocation to cause movement of said roller across said last.

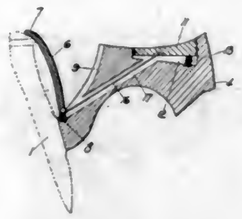
1,685,556. MACHINE TOOL. WILLIAM WALLACE POTTER, Pawtucket, R. I. Filed Oct. 14, 1927. Serial No. 226,248. 3 Claims. (Cl. 308—22.)

1. A machine tool having a shaft and belt gearing comprising a pulley on the shaft and an endless belt, bearings for said shaft on opposite sides of said pulley and a frame member reaching over said pulley, an opening being provided around one of said bearings through which said belt may be bodily passed.

1,685,557. APPARATUS FOR ANALYZING THE ALVEOLAR AIR FROM THE LUNGS. HERMANN REGELSBERGER, Erlangen, Germany. Filed Sept. 9, 1926, Serial No. 134,486, and in Germany Sept. 15, 1925. 7 Claims. (Cl. 23—257.)

1. Apparatus for analyzing alveolar air comprising a burette, a pipe, a suction tube connecting said pipe and burette, a valve in said pipe, said valve being opened and closed by the air of respiration and means operated by the movement of said valve to open and close the suction tube to allow air to be conveyed to the burette.

1,685,558. LICENSE-DISPLAY DEVICE FOR AUTOMOBILES. SIDNEY J. RIDEAU, New Orleans, La. Filed Apr. 30, 1927. Serial No. 188,002. 1 Claim. (Cl. 40—133.)

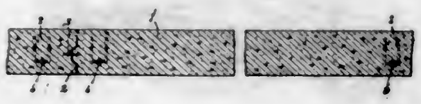


An automobile display device comprising a rectangular casing having an open front and a slot in one end, a stenciled license plate having a flange at one end including a portion for spanning and closing said slot when said license plate is positioned to cover said opening and a portion extending at right angles from the first mentioned portion and provided with a keeper slot, and a lock carried by the casing and having its bolt positioned for engagement in the keeper slot of said flange.

1,685,559. ROOF. WILFRED R. TOBIAS, Los Angeles, Calif. Filed Aug. 10, 1927. Serial No. 211,911. 7 Claims. (Cl. 108—9.)

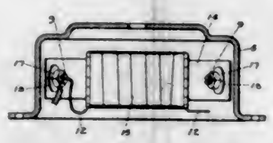
7. A roof having a roof structure with rows of slates thereon, some rows having the slates overlapping considered from one side to the other, and other rows having the slates overlapping considered from the other side of the roof.

1,685,560. LID HOLDER FOR CONTAINERS. GEORGE TRULOCK, Los Angeles, Calif. Filed Nov. 30, 1927. Serial No. 236,682. 7 Claim. (Cl. 53—3.)



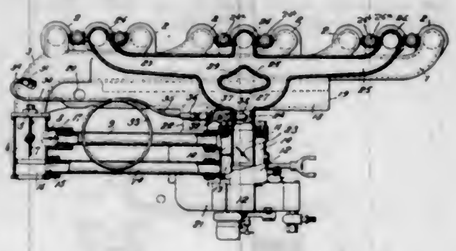
7. In combination with a receptacle having a cover and a handle, a detent pivoted to said handle and adapted to be optionally extended therefrom to engage said cover or withdrawn to release the cover, a trigger pivotally mounted on said handle, and a rod operatively connecting said trigger and detent and adapted to operate the detent.

1,685,561. FOOTWEAR. RALPH A. BUNKER, Yarmouth, Me. Filed July 9, 1927. Serial No. 204,643. 2 Claims. (Cl. 36—45.)



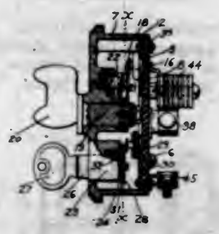
1. Sportsmen's footwear having a vamp, said vamp having an upwardly extending apron, quarters extending upwardly from the rear portions of the vamp, adjustable means to tightly secure the quarters together about an ankle, and adjustable means to tightly secure the apron around the quarters, the later means being unsecured to the quarters and extending from the apron and adapted to surround the quarters.

1,685,562. REENFORCED CONCRETE ROADWAY. BERNARD BRIDDY, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed Mar. 24, 1924. Serial No. 701,282. 2 Claims. (Cl. 94—8.)



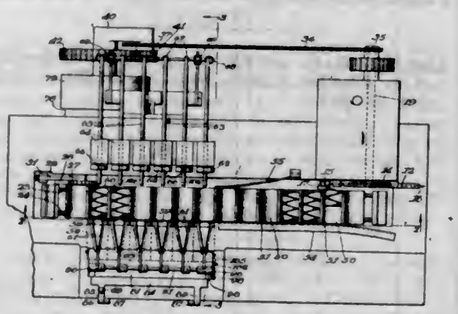
1. In a roadway, a continuous concrete slab, thin metal plates set on edge embedded in the lower portion of the roadway and having their upper edges a distance below the upper surface of the roadway, some of said plates extending longitudinally of the roadway and others extending cross-wise of the roadway, and reenforcing bars embedded in the concrete parallel to and on both sides of said plates.

1,685,563. CONDENSER MOUNTING. WILLIAM B. CONNOLLY, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 5, 1925. Serial No. 67,149. 4 Claims. (Cl. 175—41.)



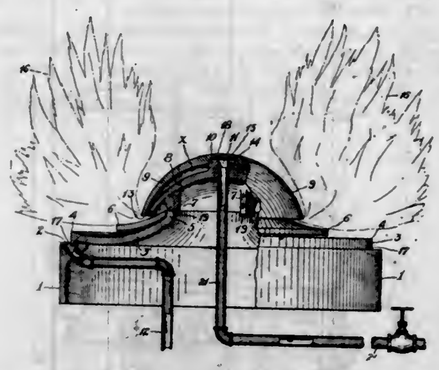
1. The combination, with a condenser of flattened form, with terminals at its ends, and with connecting-wires attached to said terminals, of flexible binding material wrapped endwise around the condenser and enclosing said terminals and the ends of said wires; an elongated strip of flexible material of greater length than the condenser; and flexible binding material wrapped around the condenser and said strip and securing the condenser to the intermediate part of the strip.

1,685,564. INTERNAL-COMBUSTION ENGINE. WILLIAM P. DEPPE, Brightwaters, N. Y. Filed Dec. 9, 1922. Serial No. 605,765. 3 Claims. (Cl. 123—122.)



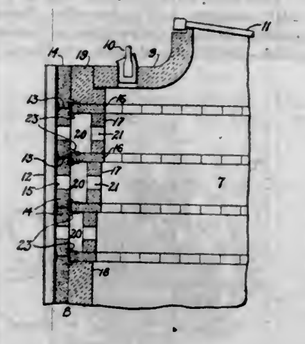
1. In an internal combustion engine, the combination with a carburetor and exhaust and intake manifolds, of means for heating the mixture leaving the carburetor and in the intake manifold, for supplying the engine with a superheated dry gaseous mixture, means for injecting into the mixture in the intake manifold, after the mixture has been heated and become dry, a predetermined amount of hot products of combustion, comprising a tube cut into the exhaust pipe at a point beyond the exhaust port openings, said cut-in tube having a passage of small diameter, a conduit of small diameter connected therewith, said conduit being or larger diameter than the passage in said cut-in tube whereby the exhaust gases are adapted to expand, means comprising coils and bends in said conduit for retarding the flow of the exhaust gas therethrough, a connecting tube entering the intake manifold for injecting the exhaust gases from said conduit into said manifold, and a connecting member between said coiled conduit and said connecting tube, provided with a restricted opening through which the flow of exhaust gases may be controlled according to the speed and throttle opening of the engine.

1,685,565. ELECTRIC SWITCH. FARNUM F. DORSEY, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 4, 1924. Serial No. 684,386. 3 Claims. (Cl. 200—11.)



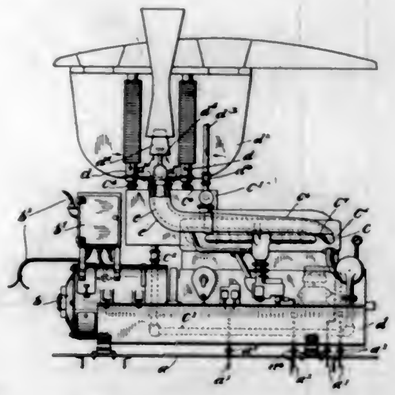
1. A switch comprising: inner and outer concentric, circularly-arranged, stationary contacts lying substantially in one plane, with a space between the inner and outer contacts: two movable contacts each arranged to engage, in each operative position, an inner and an outer stationary contact so as to interconnect them; and means, movable concentrically with the stationary contacts, for moving the movable contacts and pressing them against the stationary contact, said means having the form of a resilient substantially T-shaped arm of sheet metal carrying the movable contacts at its respective ends.

1,685,566. SPRING-INSERTING MECHANISM. JOHN F. GAIL, Evanston, Ill., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 22, 1925. Serial No. 51,729. 5 Claims. (Cl. 226—18.)



5. In a machine for inserting springs between the folds of a folded flexible strip, the combination of a conveyor having a plurality of spring receiving members secured thereto, means for advancing said conveyor and receiving members step by step, means for delivering springs one by one to said receiving members as the latter are moved into receiving position, a plurality of spaced chutes having portions adapted to enter between the folds of said strip, said chutes being disposed to one side of the receiving members carried by said conveyor so as to register axially with a corresponding plurality of receiving members when the latter are stationary, a pusher for simultaneously thrusting a plurality of springs from said receiving members through said chutes and into said strip, and means for actuating said pusher when a predetermined number of loaded spring receiving members register with said chutes.

1,685,567. HYDROCARBON OIL BURNER. JAMES M. GEE, Cleveland, Ohio. Filed May 1, 1925. Serial No. 27,188. 2 Claims. (Cl. 158—80.)



1. An oil burner comprising an inner cupola; an outer cupola mounted thereon and spaced therefrom to form a fuel channel; means forming a conduit adapted to furnish fuel to the inner end of said channel; a bed plate upon which said inner cupola is mounted, said bed plate comprising an annular member having a concave upper surface whose outer peripheral edge lies slightly below the horizontal plane containing the discharge end of said fuel channel; a discular ring loosely mounted upon the inner upper end of said bed plate and extending beyond the projected axis of the discharge orifices of said fuel channel; a base ring formed with an enlarged upper edge having an annular recess, said bed plate being formed with a downwardly-extended outer peripheral flange loosely depending in said recess; and a discharge pipe communicating with the bottom of said recess.

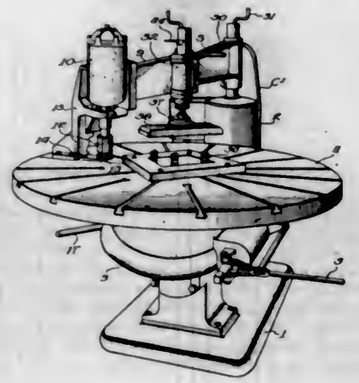
1,685,568. TILE-ANCHORING DEVICE. GEORGE P. JACKSON, Flushing, N. Y., assignor to Combustion Engineering Corporation, New York, N. Y., a Corporation of New York. Original application filed Apr. 21, 1923, Serial No. 633,609. Divided and this application filed Apr. 14, 1925. Serial No. 22,945. 7 Claims. (Cl. 72—101.)

1. A brick-anchoring member comprising a brick-engaging head curved convexly across its outer face, support engaging means constructed to prevent displacement of the member inwardly or outwardly from the support and a web connection between the head and the support-engaging means.

1,685,569. REMOVABLE-UNIT MOUNTING. WILLIAM B. JUPP, Brooklyn, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 19, 1927. Serial No. 214,125. 5 Claims. (Cl. 123—195.)

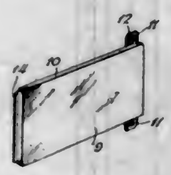
1. A mounting for an internal combustion engine and electric generator mounted as a unit, auxiliary apparatus including exhaust and radiator elements, and means to mount the latter in a plane above that of the engine and generator unit to permit the unit to be removed by movement in a substantially horizontal plane.

1,685,570. PROCESS OF IMPROVING THE QUALITIES OF NICKEL-BERYLLIUM ALLOY. GEORG MASING, Berlin, and OTTO DAHL, Berlin-Charlottenburg, Germany, assignors to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, Germany. Filed Oct. 11, 1927, Serial No. 225,595, and in Germany Sept. 16, 1926. 7 Claims. (Cl. 148—11.)



4. A method for improving the qualities of nickel beryllium alloys which contain large proportions of nickel and up to 5% beryllium, consisting in heating the alloys to a temperature above 700° C., after cooling, and afterwards working them mechanically.

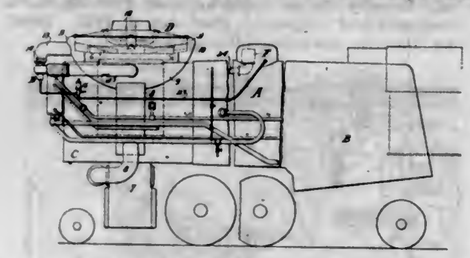
1,685,571. DISPLAY STAND. REGINALD B. MELLER, Alameda, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Jan. 8, 1924. Serial No. 684,966. 6 Claims. (Cl. 40—149.)



1. A sheet having opposite ends fixedly joined to form a structurally continuous band and provided with creases to permit the folding of the sheet into a stable display stand having a plurality of continuous areas on which a display is shown with its elements in perspective, said sheet having a portion partially severed from more than one of said areas and joined to one of said areas by a crease separate from the creases provided for the folding of the sheet, all of said areas lying in different planes to accentuate the perspective relationships of the elements of said display.

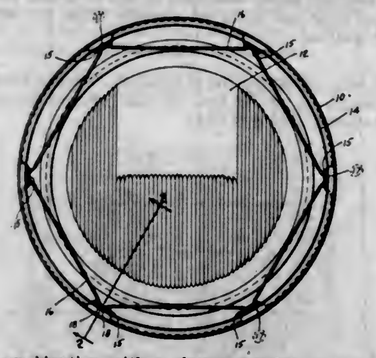
1,685,572. WOODWORKING MACHINE. OSCAR ONSRUD, Chicago, Ill., assignor to Onsrud Machine Works, Inc., Chicago, Ill., a Corporation of Illinois. Filed Feb. 4, 1928. Serial No. 251,887. 5 Claims. (Cl. 144—154.)

1. In a woodworking machine having a rotary work support table and a revolving cutter mounted on a swinging arm which is constantly urged to move the cutter into contact with the work mounted on the table, clamping means for holding the work on the table, means for swinging the arm to move the cutter out of contact with the work, and a single control device for controlling both of said means.



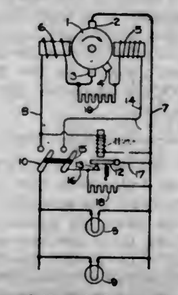
1,685,573. WALL COVERING. PETER ROSSI, Brooklyn, N. Y. Filed Dec. 3, 1927. Serial No. 237,351. 1 Claim. (Cl. 72—19.)

A tile for walls or the like including a body formed from a single sheet of metal and provided about its periphery with a lateral flange, securing lugs projecting from said flange at one end of said body, and an extension formed only at the other end of said body and projecting laterally from the free edge of said flange and engageable beneath the free edge of the flange at the end of a next adjacent tile to provide the sole securing means for the end of the first named tile carrying said extension.



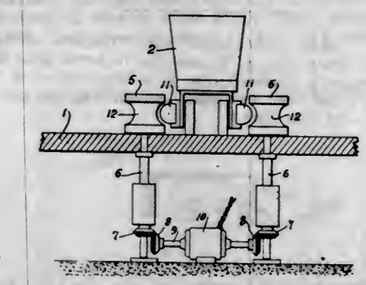
1,685,574. LOCOMOTIVE DRAFT APPLIANCE. EUGENE L. SCHELLENS, Pointe Claire, Quebec, Canada, and JOEL S. COFFIN, Jr., Lisbon, N. H., assignors, by mesne assignments, to C-S Engineering Company, a Corporation of Delaware. Filed May 16, 1925. Serial No. 30,734. 9 Claims. (Cl. 110—162.)

1. In a locomotive, the combination of a draft creating fan operated by exhaust steam, exhaust steam pressure relieving means, and automatic control means therefor, operating to reduce the speed of the fan including a steam



connection leading from the source of live steam, said control means being responsive to the pressure of the live steam when it reaches a predetermined value.

1,685,575. LENS RETAINER. EDGAR D. SPRINGER, Connersville, Ind., assignor to Indiana Lamp Corporation, Connersville, Ind., a Corporation. Filed Oct. 14, 1927. Serial No. 226,250. 1 Claim. (Cl. 240—41.)

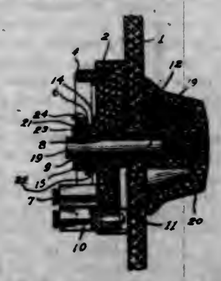


The combination with a closure member, a lens member secured therein, and a plurality of pockets spaced about the inner surface of said closure and from the rear peripheral surface of said lens, of a wire spring retaining ring for securing said lens in said closure member, said ring comprising a plurality of cord-like sides adapted to subtend sections of the periphery of said lens and bear thereagainst under spring pressure, and a plurality of bent portions connecting said cord-like sides adapted to extend into said pockets for retaining said ring in place.

1,685,576. ELECTRIC-LIGHTING SYSTEM. RAYMOND H. SULLIVAN, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 17, 1927. Serial No. 176,265. 2 Claims. (Cl. 171—223.)

1. In a system of the kind described, the combination, with a variable-speed generator of the three-brush type, a lamp-load supplied by the generator, and a vibratory voltage-regulator controlling the current through a field-winding of the generator, of a stabilizing resistance load connected directly between the third brush and the trailing main brush of the generator.

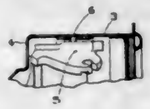
1,685,577. AMUSEMENT DEVICE. AUREL VASZIN, Dayton, Ohio, assignor to The Dayton Funhouse & Riding Device Mfg. Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 11, 1927. Serial No. 167,555. 2 Claims. (Cl. 272—1.)



1. In an amusement apparatus, a platform, a passageway leading from the platform and a pair of revolving rollers located above the platform projecting into the exit passageway and so arranged as to engage with a car passing through said passageway unless said car is exactly positioned therebetween, there being space enough between said rollers to permit of said passage if the car is accurately positioned in the passageway, driving means for rotating the rollers, and means for frictionally engaging the rollers with a portion of the vehicle.

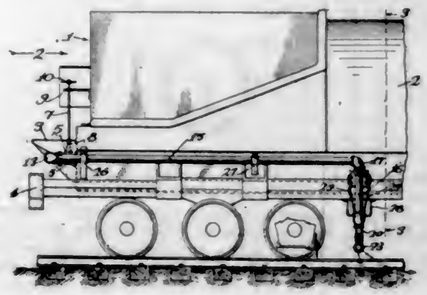
1,685,578. TIP. WILLIAM A. VOLLMER, Kenosha, Wis., assignor to Simmons Company, Kenosha, Wis., a Corporation of Delaware. Filed June 22, 1925. Serial No. 38,619. 4 Claims. (Cl. 16—42.)

1. A tip of the class described, comprising a convex base plate, the outer edge of which is rolled inward to form a rim for supporting a hollow post, oppositely disposed side members projecting upwardly and conformed substantially to the outline of the inner rim of the base plate and frictionally fitting the interior of the post, the upper ends of said members being bent inwardly and adapted to contact when the members are pressed together.



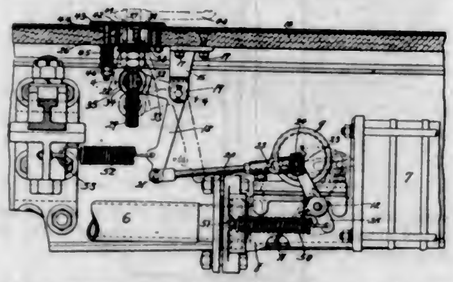
1,685,579. RHEOSTAT CONSTRUCTION. DAVID WALD, New York, N. Y. Filed Apr. 30, 1925. Serial No. 26,874. 4 Claims. (Cl. 201—55.)

4. In a device of the class described, in combination, a block of insulating material, a resistance unit carried thereby, a sleeve extending through said block, a pair of



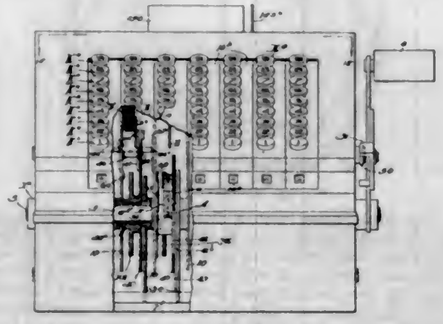
binding posts, one of which is connected with the resistance unit, and the other with said sleeve, said sleeve at its outer end being provided with a screw threaded part, and with one or more flat faces, a contact arm mounted upon said sleeve and having a contact point adapted to traverse said resistance unit, a shaft extending through said sleeve, and being provided with an operating knob or handle, a nut threaded upon said sleeve, and means extending through said nut adapted to hold said sleeve and said shaft in operative relation.

1,685,580. SEAL FOR INSTRUMENT CASES. CYRIL T. WALLIS, Rochester, N. Y., assignor to North East Electric Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 26, 1927. Serial No. 186,807. 1 Claim. (Cl. 292—307.)



In combination with an instrument comprising a frame-member, enclosed within a case having two overlapping members with coincident perforations: a seal consisting of soft metal and comprising a head and a shank, the seal being seated in said perforations and with the inner end of the shank upset against said frame member so that the seal cannot be withdrawn without mutilation.

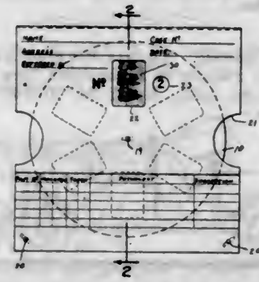
1,685,581. TRACK SPRINKLER. WILLIAM H. WHALEN, Los Angeles, Calif. Filed Oct. 5, 1925. Serial No. 60,663. 1 Claim. (Cl. 299—31.)



A track sprinkler comprising in combination a locomotive tender having a water tank mounted on a tender frame, a foot plate extending forwardly from the tank, a valve operatively connected to the forward end of the tank below the foot plate and outside the tank, a valve rod connected to the valve and extending upwardly through the foot plate and having a guide bracket adjacent the upper end thereof, a return bend pipe connected to the valve and leading to one side of the tank, a lead pipe extending along the tank rearwardly on the outside thereof, a drop pipe at the rearward end of the lead pipe extending downwardly, a transverse cross pipe extending underneath the tank to a mid-position, a centrally positioned stand pipe connected to the transverse pipe at substantially a central transverse position of the tank, a transverse spray pipe connected to the stand pipe, a rectangular-shaped bracket secured to the lower framing of the tender, supporting the cross pipe and a pair of yokes suspended from the framing of the tender supporting the spray pipe.

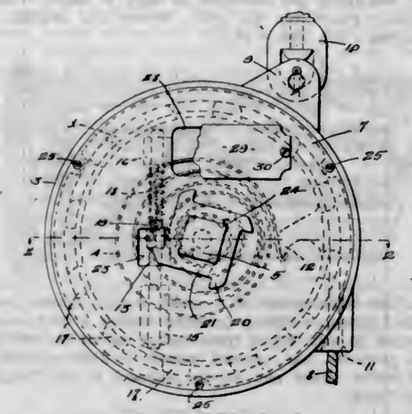
1,685,582. VALVE-OPERATING MECHANISM. FRANK A. WHITTEN, Detroit, Mich., assignor to American Car and Foundry Motors Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 1, 1927. Serial No. 180,184. 9 Claims. (Cl. 137—144.)

9. In combination, a plurality of valves, resilient means for each valve for normally urging the latter to closed position, an actuating lever, a bar pivotally connecting said valves and pivotally secured to the actuating lever, and resilient means connected to the actuating lever and acting upon the latter to normally urge the valves to open position.



1,685,583. COMPUTING MACHINE. GEORGE BROWNING, Chicago, Ill. Filed Jan. 15, 1920. Serial No. 351,647. 15 Claims. (Cl. 235—60.)

1. In a construction for the purpose indicated, in combination with a fixed support, a registering device mounted thereon; a master gear wheel by which the registering device is rotated; master-actuator; a locking dog carried by the master-actuator for engaging the master wheel with said actuator; a cam-encountering abutment carried by the dog; a cam for encounter of the abutment to force the dog into master-engaging position; a level pivoted on the dog for carrying said abutment movably with respect to the dog; a catch on the dog having means for engaging the abutment-carrying lever to lock it positively on the dog at cam-encountering position of the abutment, and means for releasing the catch in the latter part of the stroke of the master-actuator in the direction for the cam's encounter with the abutment, and after the abutment has passed the cam.

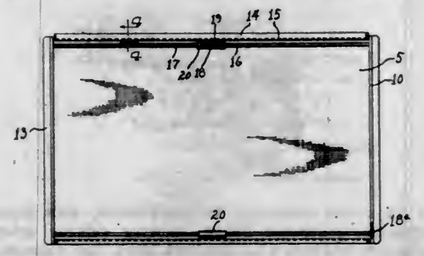


1,685,584. PRINT OR FILM HOLDER. MICHAEL F. DEAN, Indianapolis, Ind. Filed Mar. 14, 1927. Serial No. 175,403. 3 Claims. (Cl. 40—70.)

1. A holder of the character indicated, comprising a pair of casing forming plate portions each including an aperture registering with a corresponding aperture in the other, and a film and print holder pivotally supported therebetween and having a portion projecting beyond the same for finger engagement, said holder comprising a plurality of plates, each apertured and with the apertures registering with each other and adapted to register with the first-mentioned plate registering apertures, and spacing means between said holder forming plates for forming

a plurality of grooves therebetween each registering with one of the holder plate registering apertures for X-ray film and print reception, exposure and examination.

1,685,585. SAFETY LOCK FOR COUNTERBALANCING DEVICES. CHARLES P. GRIMES, Syracuse, N. Y., assignor to Pedwyn Balancer Corporation, Syracuse, N. Y., a Corporation of New York. Filed Jan. 6, 1927. Serial No. 159,284. 15 Claims. (Cl. 242—109.)



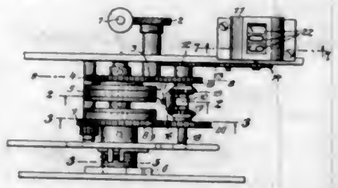
11. In a device of the class described, the combination of a winding drum, a spring coacting on the drum to wind it, a spring pressed lock for holding the drum from turning, the lock being normally in ineffective position, and means operated by the coil spring to hold the lock from actuation by its spring.

1,685,586. HAT PROTECTOR. GEORGE K. GUINZBURG, Chappaqua, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y. Filed Mar. 15, 1927. Serial No. 175,524. 1 Claim. (Cl. 2—187.)

A thin rubber hat protector of the character described, comprising a head element having two superimposed thin rubber discs integral with each other along their outer peripheries, the lower disc having a head opening and the upper disc being provided wtih a relatively small center opening, and a pocket element into which the two discs are capable of being folded through said center opening of the head element, comprising a disc shaped top and an inwardly tapering annular side wall, the outer periphery thereof being integral with the periphery of the disc shaped top and the inner periphery integrally connected to the wall of the small opening in the upper disc of said head element, said pocket element being of such size as to compactly contain the head element.

1,685,587. SCREEN FOR VEHICLE WINDOW FRAMES. HAROLD H. HAGER, Point Place, Ohio. Filed July 2, 1927. Serial No. 203,196. 2 Claims. (Cl. 156—14.)

1. In a screen for automobile windows having packing in the window-receiving grooves, a screen member, substantially L-shaped end members having one side thereof adapted to engage in the window receiving grooves and with the packing therein, the free edge portions of the other sides of the L-shaped end members being bent over the end edges of the screen member to secure the latter thereto, said other sides of the end members having apertures therein adjacent to the ends of the end members, rods having reduced outer ends received in said apertures, and releasable means to hold the rods in spaced position thereby to force the said other sides of the end members against the sides of the window frame.

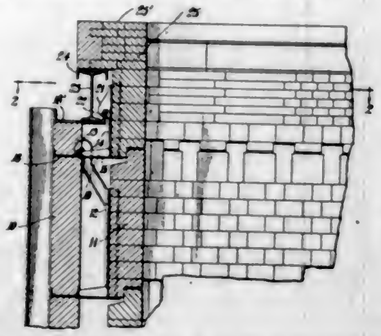


1,685,588. TABLE CUTLERY. CARL H. HEMMING, New Haven, Conn. Filed July 3, 1926. Serial No. 120,353. 3 Claims. (Cl. 30—9.)

1. The hereindescribed method of attaching cutlery blades having tangs to handles, which resides in forming a bore of relatively short length having closed sides and a bottom in the end of the handle to receive the tang, said bore having a portion of greater diameter than the tang and having lateral recesses opening thereinto, then in inserting the tang in the bore and enclosing the adjacent parts of the blade and handle in a mold, which latter has

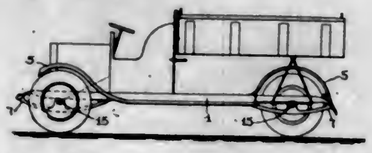
bolster molding faces, and finally in introducing fusible metal in the mold to fill the spaces between the bore and tang and the recesses, and to simultaneously fill said bolster molding faces, thereby to connect the tang to the handle and to form said bolster without exposure of the part of the filler within the handle.

1,685,589. FARE INDICATOR. LEO KERN, Villingen in Baden, Germany, assignor to Kienzle Uhrenfabriken Aktiengesellschaft, Schwenningen A. Neckar, Germany, a Corporation of Germany. Filed Jan. 13, 1927, Serial No. 160,842, and in Germany Jan. 15, 1926. 2 Claims. (Cl. 235—30.)



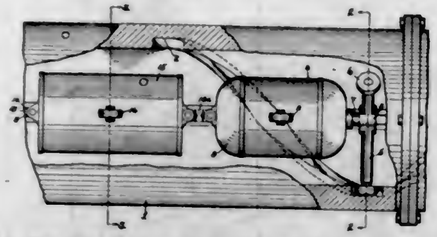
1. In a fare indicator, the combination, with driving mechanism controlled by the moving vehicle, driving mechanism controlled by the clock work, and registering mechanism including an operating member adapted to transmit movement to the registering mechanism in one direction and to run idle when operated in the opposite direction, and means intermediate said driving mechanisms and operating member for moving the same respectively in opposite directions.

1,685,590. CUTTER ATTACHMENT. FRED A. LEIGH, Chicago, Ill. Filed May 24, 1926. Serial No. 111,264. 2 Claims. (Cl. 30—20.)



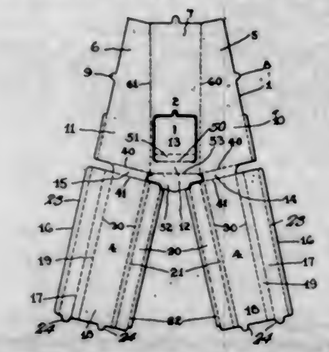
1. A cutter attachment comprising a metal guide bar, and means integrally formed on one end of said guide bar and provided with a plurality of grooves for removably receiving a knife with the blade of the knife seated in any one of said grooves at a predetermined distance from one side of the guide member.

1,685,591. WALL CONSTRUCTION. GEORGE ALLEN, Jr., New York, N. Y., and FREDRICK C. SIMPSON, West Somerville, Mass., assignors to George Allen & Son, a Firm consisting of Jane Allen, William Allen, and George Allen, Jr., New York, N. Y. Filed May 14, 1927. Serial No. 191,505. 5 Claims. (Cl. 72—101.)



2. In a wall having opposed wall parts, one of said wall parts being elevated above and having a horizontal extension over the other of said wall parts, a hanging element for retaining said wall parts in spaced relation and supporting said elevated portion, and means on the other wall part for supporting the hanging element and said horizontal extension.

1,685,592. CHASSIS. THOMAS RAYMOND ARDEN, Forest Hills, N. Y., assignor to Julius Chein, New York, N. Y. Filed May 10, 1926. Serial No. 107,906. 4 Claims. (Cl. 46—48.)

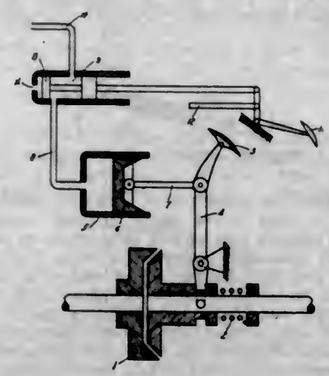


1. In a device of the character described, the combination of a U-shaped frame member, a pin bent inwardly from a flange of said frame, a spring having a finger extending therefrom adapted to lie betwen the base of said frame member and said pin and means to lock the spring to said frame.

1,685,593. MAIL-CARRIER MECHANISM. LAWRENCE AUBLE, Toledo, Ohio, assignor of one-third to Charlotte E. McCarthy and one-third to Karl F. Kapff, Toledo, Ohio. Filed July 11, 1927. Serial No. 204,825. 7 Claims. (Cl. 104—147.)

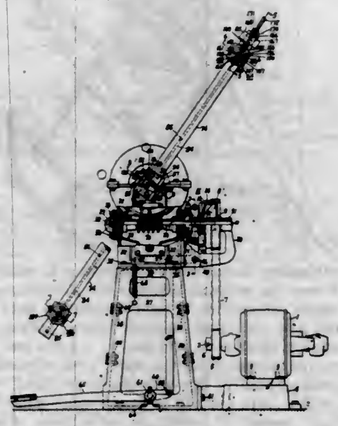
1. The combination of a spiral track, opposed longitudinal tracks, a rotary propeller having a part loosely mounted in said spiral track, motor means for rotating said propeller, and opposed means in fixed relation to said motor means and loosely disposed in said longitudinal tracks.

1,685,594. TOY BODY FORMED OF SHEET MATERIAL. ISADORE BERGER, Newark, N. J., assignor to Elizabeth H. Chein, New York, N. Y. Filed Feb. 8, 1927. Serial No. 166,628. 3 Claims. (Cl. 46—48.)



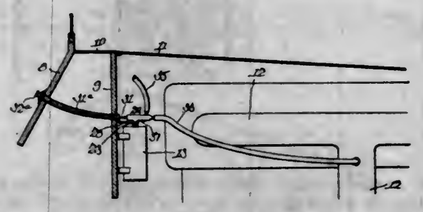
1. A toy body comprising a single blank of sheet material having a hood portion, a seat portion and a body portion, said body portion having side members with outwardly projecting panels, and an end section closing the end of each said panel and connecting said body portion to said seat portion.

1,685,595. COLLAR-BUTTON CLASP. ANTON BEIFUS, Newark, N. J. Filed Jan. 6, 1928. Serial No. 244,922. 2 Claims. (Cl. 24—64.)



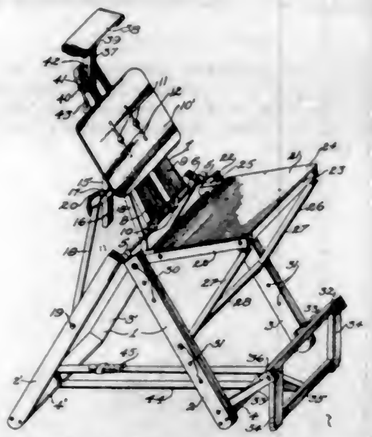
1. In a device of the character set forth, and in combination with a collar button having a flat shank whose edges are notched, of a plate having its edges formed with teeth and its corners provided with bendable finger extensions, and the teeth of the said plate designed for impinging engagement with the bow portion of a neck tie, and certain of the fingers designed to be bent over the plate against the impinged ends of the tie, a casing resting against the said bent fingers having an outer closure plate designed to be engaged by the remaining fingers of the first mentioned plate when the latter are bent over the casing and against the closure plate, a rod having an adherent resiliency which is centrally secured in the casing and which is bent upon itself to provide substantially rectangular portions, whose inner arms form spring jaws, stop elements carried by the closure plate for engaging the outer arms of said rectangular portions of the rod, the bow arms of the rods having their ends projected and extended through the ends of the casing and bent upon themselves to provide substantially U-shaped finger grips, and the closure plate having an opening therethrough opposite the jaw portions of the rod for the passage of a shank of a collar button therethrough.

1,685,596. MEANS OF DECLUTCHING. JOSEPH BETHENOD, Paris, France, assignor to Motor Industries, Inc., Chicago, Ill., a Corporation of Illinois. Filed Aug. 5, 1926, Serial No. 127,471, and in France Aug. 7, 1925. 1 Claim. (Cl. 192—0.01.)



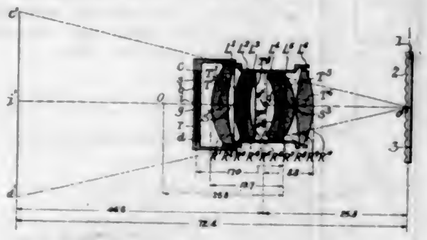
Automobile controlling mechanism including a clutch pedal, an accelerator, and an intake-manifold connection, in combination with a suction-operated device acting on the clutch pedal, and a valve for connecting said device to the intake-manifold connection and which is connected to the accelerator and which includes a cylinder and a double-piston valve in the cylinder, the space between the piston portions of said valve being in alinement with the intake-manifold connection and with the connection to said device when the accelerator is released, and with one of the piston portions of said valve arranged between the intake-manifold connection and the connection to said device when the accelerator is operated.

1,685,597. COIL-WINDING DEVICE. AXEL W. BJORKMAN, Brooklyn, N. Y., assignor to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 29, 1926. Serial No. 151,494. 14 Claims. (Cl. 140—92.2.)



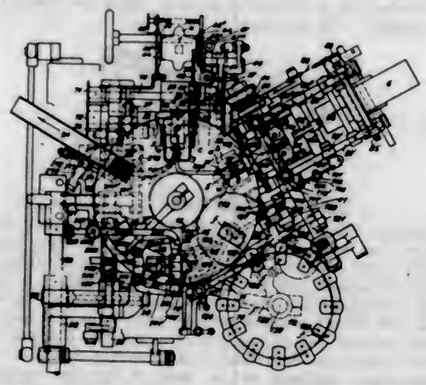
1. A coil-winding device comprising a winding bar, a wire clamp associated with said winding bar and arranged to grip the end of the wire to be wound, a winding block carried by said winding bar, and operating means, said operating means causing the winding bar to wind the wire upon the winding block.

1,685,598. AUXILIARY FUEL AND CLEANING DEVICE FOR INTERNAL-COMBUSTION ENGINES. WILLIAM DAVIS, Chicago, Ill. Filed Aug. 14, 1925. Serial No. 50,256. 5 Claims. (Cl. 123—25.)



1. In a device of the class described, the combination with an automobile having the usual dash-board, instrument-board, and an engine having an intake manifold, of a multi-fluid container mounted on the dash-board and having a perforated pipe vertically mounted therein and extended above its top, a valve casing mounted for communication therewith on the top of said pipe and having a port in communication with said manifold and an opening to the atmosphere, a needle valve mounted in said casing for reciprocation and a connection leading from said valve through said dash-board and instrument-board for operating the valve.

1,685,599. COLLAPSIBLE DENTAL CHAIR. JOHN P. FLETCHER, U. S. Army, Carlisle, Pa. Filed Aug. 13, 1927. Serial No. 212,824. 5 Claims. (Cl. 155—25.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

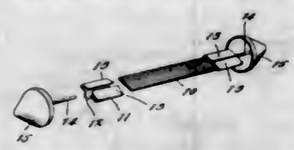


1. A collapsible dental chair comprising in combination front and rear leg sections, a hinge rod pivotally connecting the upper extremities of said sections, a back hinged to said rod and including laterally spaced leaves, a back rest adjustably carried by said leaves, a head rest adjustably supported intermediate the upper ends of said leaves, an extension pivoted to the back below the head rest and between said leaves, a brace in engagement with the rear leg section, means to effect a detachable connection between said brace and said pivoted extension, a seat pivoted to the upper portion of the front leg section, a supporting brace hingedly connected to the seat and detachably engaged with said front leg section.

1,685,600. OPTICAL SYSTEM FOR COLOR PROCESSES. CHARLES W. FREDERICK, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 20, 1927. Serial No. 207,213. 17 Claims. (Cl. 95—2.)

1. A photographic optical system for use in the formation, in a photographic layer having associated therewith numerous microscopic image-forming elements, of minute photographic images for projection through a projection system comprising a projection objective and a polychromatic screen, the virtual image of which occupies an ascertained position with respect to the rear focal plane of such objective, said photographic optical system comprising a photographic objective of different focal length from the projection objective, and a polychromatic screen similar to the first-named screen and positioned in front of the photographic objective at that point which is conjugate to a point distant from the rear focal plane of he objective by the distance which the said virtual image in the projection system is distant from the rear focal plane of the projection objective.

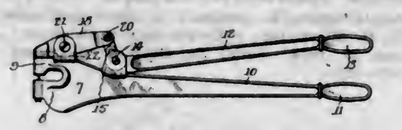
1,685,601. MACHINE FOR WRAPPING UP RAZOR BLADES. PAUL GANGLER, Esslingen, Germany, assignor to the Firm Fr. Hesser, Maschinenfabrik-Aktiengesellschaft, Stuttgart-Cannstatt, Germany. Filed Nov. 23, 1926, Serial No. 150,295, and in Germany Dec. 30, 1925. 14 Claims. (Cl. 93—7.)



1. In a machine for wrapping up razor blades in combination, a feeding device, means for placing an outer wrapper upon said feeding device, means for placing an inner wrapper upon said outer wrapper, means for depositing a razor blade upon said inner and outer wrappers, means for closing said wrappers, and means for taking the wrapped up blade off said feeding device.

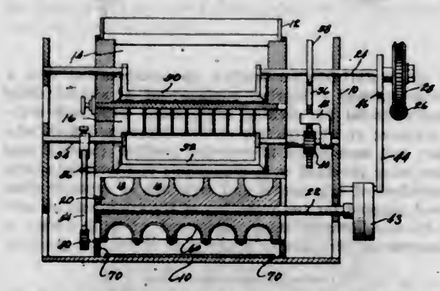
1,685,602. MODE OF PRODUCING WROUGHT IRON WITH INCREASED TENSILE PROPERTIES. GEORG GUDE GEDDA, Surahammer, Sweden. Filed Dec. 9, 1925, Serial No. 74,408, and in Sweden July 17, 1925. 2 Claims. (Cl. 75—45.)

2. The process of manufacturing wrought iron consisting in adding a predetermined amount of nickel to ordinary pig iron and then heating the mass and so puddling the same as to produce a wrought iron of increased tensile strength and elastic limit without decreasing its welding and contraction capacities.



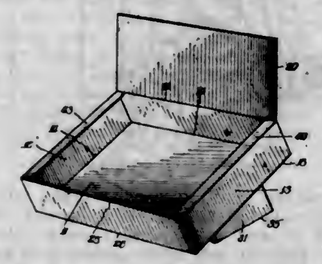
1,685,603. GRID LEAK. EDWARD V. GLUCK, Woodhaven, N. Y. Filed Nov. 12, 1925, Serial No. 68,673. Renewed Aug. 11, 1928. 2 Claims. (Cl. 201—64.)

1. A grid leak comprising a resistance element in the form of a strip, hollow headed terminal members disposed at opposite ends of said strip, stems on said members and extending beneath said strip, binding clips clamped over the opposite end of said strip and stems serving to maintain the stems in contact with the strip, and a rigid body formed of insulating cement moulded over said strip between said terminal heads, the insulating material extending ino the hollow heads of the terminal members and being held in service thereby.



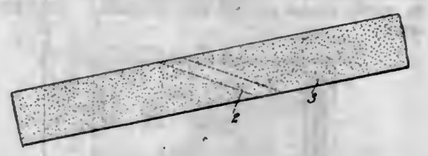
1,685,604. HAND PUNCH AND THE LIKE. JOHN JENSEN, Rockford, Ill., assignor to Whitney Metal Tool Company, Rockford, Ill., a Corporation of Illinois. Filed Nov. 27, 1925. Serial No. 71,518. 1 Claim. (Cl. 164—120.)

A tool of the class described comprising an arm having an enlarged bifurcated head at one end, a working tool mounted in one of said bifurcations for sliding movement toward and from the other of said bifurcations, a pair of supports rigid with and spaced longitudinally along one side of said head, a working lever pivoted on the forward one of said supports and having one end engaging said tool for actuation thereof, with the opposite end substantially overlying the other support, a bell crank



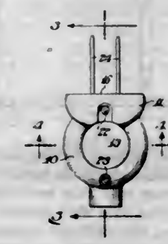
lever pivoted on the rear one of said supports, and a link pivotally connecting the rear end of said working lever and the forward end of said bell crank lever effecting a toggle joint therebetween, are pivotal points of said joint being substantially alined at the end of the working stroke in a line perpendicular to a line passing through the pivotal points on the working lever.

1,685,605. CANDY-MAKING MACHINE. JAMES N. KALKANIS, Detroit, Mich. Filed Feb. 18, 1926. Serial No. 88,988. 5 Claims. (Cl. 107—8.)



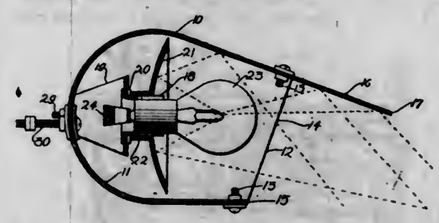
1. In a machine of the class described, a frame, a mixing chamber having a discharge opening, a rotatably supported mold carrier having a mold adapted to be brought into position to receive the discharge of the mixing chamber during the rotation of the carrier, means for rotating said mold carrier, a cutter operatively supported upon the frame in proximity to but exteriorly of the mold carrier adapted to be swung through the mold between the surface thereof and the product therein to loosen the molded product therefrom, and means coupling the cutter with the mold carrier for operation in coordination therewith.

1,685,606. DISPLAY BOX. SAMUEL N. LEOPOLD, Chicago, Ill., assignor to Rose Display Box Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 1, 1926. Serial No. 98,967. 4 Claims. (Cl. 206—44.)



1. A display box or the like, comprising a body portion having a bottom, sides and ends, an intermediate portion, integrally connected, to one end of the bottom and extending loosely up inside the adjacent end of the box, a cover connected to said intermediate portion, and inturned portions upon the upper edges of the sides engaging the intermediate portion to hold it in contact with the adjacent end of the box.

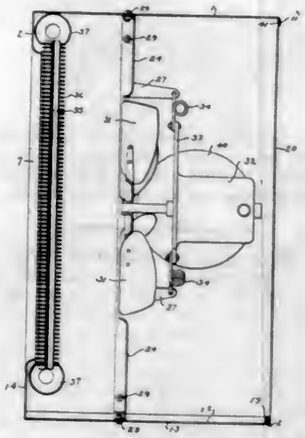
1,685,607. BINDING. MAX LEVINE, Brooklyn, N. Y. Filed Nov. 28, 1927. Serial No. 235,358. 1 Claim. (Cl. 28—1.)



A binding comprising strips of fabric having the threads of the fabric on the bias, said strips joined end to end by interweaving to form long continuous binding tapes and coatings covering one side of the fabric base.

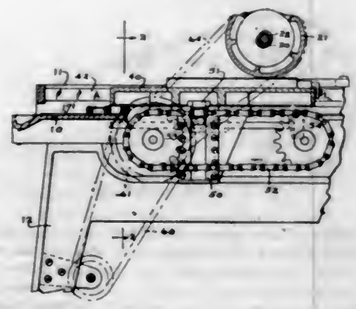
1,685,608. ELECTRIC ATTACHMENT PLUG. GEORGE LIPSCHUTZ, Philadelphia, Pa. Filed May 28, 1927. Serial No. 195,092. 4 Claims. (Cl. 173—361.)

1. An attachment plug comprising a pair of complementally formed main body members, said members being each provided with laterally spaced grooves and an enlarged finger receiving opening between said grooves, and means for securing said body members together with said grooves and opening of one of said members in registry with the corresponding grooves and opening of the other of said members.



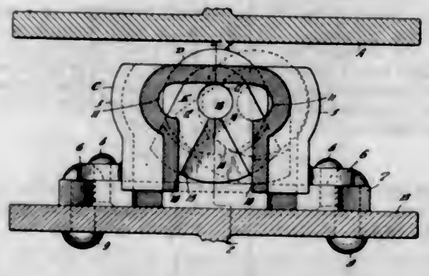
1,685,609. LIGHT-PROJECTING DEVICE. ELMER P. MCCLURE, La Grange, Ill. Filed Feb. 23, 1926. Serial No. 89,848. 1 Claim. (Cl. 240—41.)

In a device of the class described, a casing formed from a unitary sheet of material bent to that the edges thereof project in substantially the same direction, side walls on said casing to complete a chamber therein, a holder for a plurality of lamps entirely within said casing, and an adjustable reflector for each of said lamps, the lower edge of said casing terminating substantially in a plane including the extremities of said lamps, and the upper portion of said casing being inclined down-



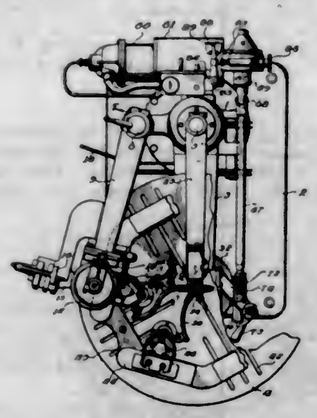
wardly in the form of a visor and extending substantially to a horizontal plane including the axes of said lamps, said casing permitting both direct and reflected rays to emanate therefrom.

1,685,610. HEATING AND VENTILATING APPARATUS. CLARK T. MORSE, Detroit, Mich., assignor, by mesne assignments, to American Blower Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 28, 1927. Serial No. 171,706. 7 Claims. (Cl. 257—137,)



3. In combination, a cabinet having integral top and side sections and radiator guard flanges, a radiator supported by and connecting said side sections, a detachable bottom section connecting said side sections having a radiator guard completing the radiator opening between the guards, a slidable cover connecting the rear edges of said side sections, a partition interposed between the walls of said cabinet having an opening therein, a fan suspended in said opening and a radiator located behind said guard flanges with its headers concealed thereby.

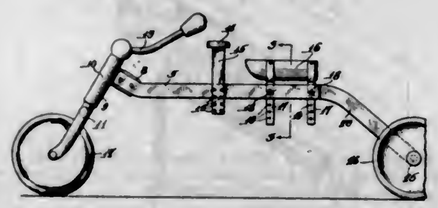
1,685,611. PRINTING PRESS. LAWRENCE H. MORSE, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Mar. 9, 1925, Serial No. 14,013. Divided and this application filed May 6, 1926. Serial No. 107,048. 12 Claims. (Cl. 184—5.)



1. In a printing press, the combination of a substantially horizontal trackway, a reciprocating member mounted thereon, an oil carrier carried by the reciprocating member, an oil receptacle into which the oil carrier dips at each cycle of operation of the reciprocating member, said oil carrier being adapted to convey oil to the trackway supporting said reciprocating member.

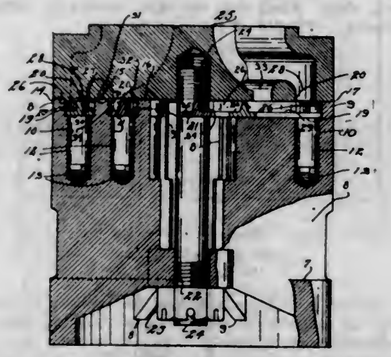
1,685,612. ANTIFRICTION BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Aug. 29, 1924. Serial No. 734,834. 7 Claims. (Cl. 308—226.)

6. In an anti-friction bearing, the combination with a retainer having a bearing surface; of a self-centering rocker mounted for rocking engagement with said bearing surface; an anti-friction element connected with said rocker, and maintained in centered position thereby, said rocker being provided with trunnions; and bearing means independent of said rocker and arranged at opposite sides thereof adapted for the reception of the trunnions on said anti-friction element upon movement of said rocker a predetermined distance to either side of central position.



1,685,613. WOODWORKING MACHINE. OSCAR ONSRUD, Chicago, Ill., assignor to Onsrud Machine Works, Chicago, Ill., a Corporation of Illinois. Filed Nov. 12, 1926. Serial No. 147,917. 10 Claims. (Cl. 144—145.)

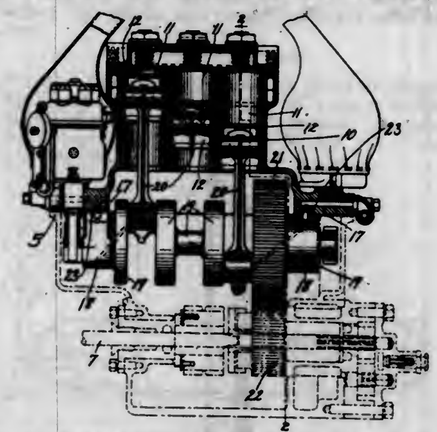
1. A wood shaping machine comprising a base, a horizontal work support table mounted on the base to rotate on a fixed axis, a rotary cutter mounted on the base and



supported in cooperative relation with the table, and a constant speed variable torque transmission mounted on the base for transmitting driving power for rotating the table and positively maintaining a predetermined rate of speed at which the work is fed to the cutter.

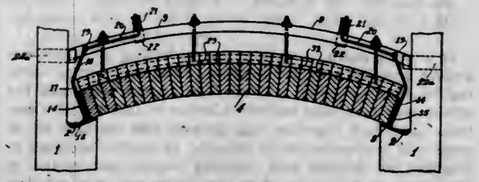
1,685,614. KICK BIKE. ROBERT A. PEACOCK, Delaware City, Del. Filed June 18, 1926. Serial No. 116,794. 8 Claims. (Cl. 208—165.)

1. A kick bike comprising a steering wheel and steering post, a central handle bar connected therewith extending to the rear of the steering post, a frame, rear wheels upon the frame and a knee rest toward the rear of the frame but ahead of the rear wheels.



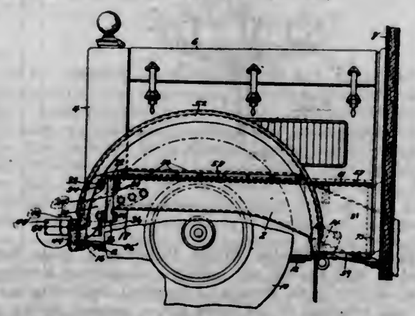
1,685,616. WARPLESS VALVE PLATE. DENT SANDFORD, Toledo, Ohio. Filed May 26, 1923. Serial No. 641,561. 3 Claims. (Cl. 251—119.)

1. A first-valve member embodying a pair of concentric seats disposed in a common radial plane, said seats having an endless circular opening therebetween with opposing side walls extending parallel to the opening axis and the common axis of said seats, a second valve member, and a ring closure plate for the opening movable toward the seats and housed by the second valve member, said plate having a pair of endless seats, and having a tongue from one side and outward from the plane of the plate to protrude between said seats of the first valve member for guiding the plate toward and from the seats.



1,685,616. AIR-COMPRESSOR UNIT. AUGUST B. SCHLESINGER, Detroit, Mich., assignor to American Car and Foundry Motors Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 18, 1927. Serial No. 169,194. 5 Claims. (Cl. 230—38.)

1. In an air compressor, the combination of cylinders, an attaching base, pistons, a crank shaft to which the pistons are connected, and bearings supporting the crank shaft and secured to the base, said base being adjustable with respect

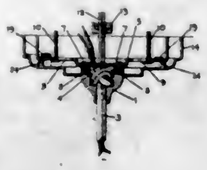


to the bearings whereby to simultaneously vary the clearance between the pistons and cylinders when the former are in their uppermost position.

1,685,617. SELF-SUSTAINING FURNACE ARCH. ENOCH P. STEVENS, Chicago, Ill.; Mary Ann Stevens executrix of said Enoch P. Stevens, deceased. Filed Mar. 4, 1922. Serial No. 541,062. 14 Claims. (Cl. 110—99.)

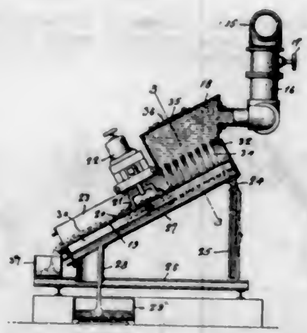
1. A furnace roof including in combination a supporting member, a course of bricks suspended therefrom, means for supporting said member, and yielding abutment means for the bricks, said abutment means also being carried by said member.

1,685,618. VEHICLE BUMPER AND FENDER AND MOUNTING MEANS THEREFOR. HUBERT WALKER, Royal Oak, and FRANK A. WHITTEN, Detroit, Mich., assignors to American Car and Foundry Motors Company, New York, N. Y., a Corporation of Delaware. Original application filed July 20, 1927, Serial No. 207,147. Divided and this application filed Jan. 26, 1928. Serial No. 249,590. 14 Claims. (Cl. 293—55.)



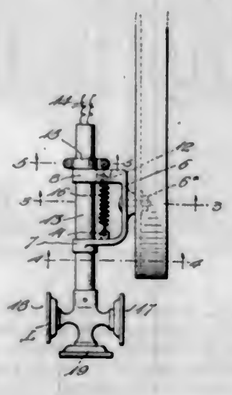
14. The combination with a vehicle chassis and a bumper channel supported thereby, of fenders and fender aprons secured to the chassis and to the bumper channel.

1,685,619. SAND PUMP. RALPH B. WELSH, Burkburnett, Tex. Filed Apr. 23, 1927. Serial No. 186,022. 1 Claim. (Cl. 166—19.)



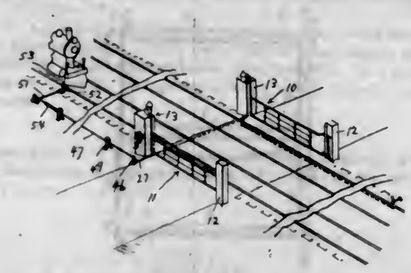
In a sand pump, a working barrel having an upper end section provided with a corrugated head and central opening to admit a cable, a lower end section arranged for attachment to a sand bottom, a series of intermediate sections so joined together and to said end sections as to permit of incorporation or removal of similar sections to lengthen or shorten said working barrel, and means to permit access to be gained to the interior of said working barrel from the side thereof.

1,685,620. ELECTRIC-LIGHTING FIXTURE. ERNEST CANTELO WHITE, New York, N. Y., assignor of one-half to R. Fenton Fisher, Philadelphia, Pa. Filed Nov. 6, 1926. Serial No. 146,730. 4 Claims. (Cl. 240—85.)



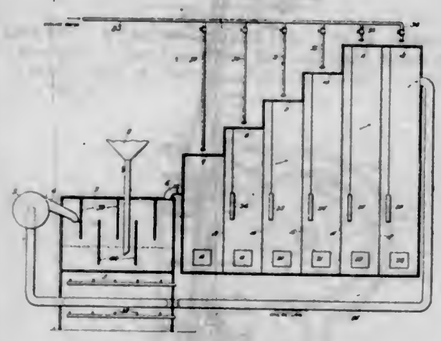
1. An electric lighting fixture including a cross bar adapted to bear against the ceiling, a supporting member for the electric cable formed of moulded insulating material and attached to the cross bar, a canopy having a central opening to accommodate the supporting member and spring clips carried by the canopy and adapted to engage the cross bar for supporting the canopy.

1,685,621. METHOD AND APPARATUS FOR SCREENING FLUIDS. FRANK L. ALLEN, Montclair, N. J. Filed Nov. 2, 1927. Serial No. 230,519. 6 Claims. (Cl. 210—196.)



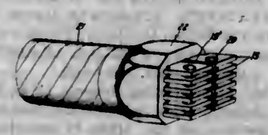
2. The method of preventing screen obstruction by withheld bagacillo on the screen of raw sugar juices, which comprises simultaneously directing the juices under pressure and in numerous jets against a large area of the screen and rapidly vibrating the latter in inclined position.

1,685,622. VEHICLE LIGHT. JAMES S. ANDERSON, Ames, Nebr. Filed Mar. 19, 1928. Serial No. 262,832. 2 Claims. (Cl. 240—7.1.)



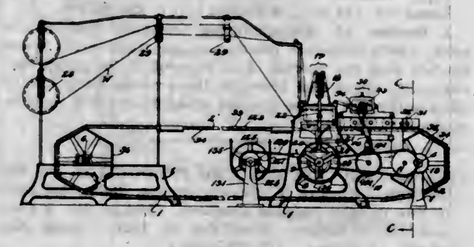
1. In a vehicle light, a bracket and means for attaching it to a vehicle, said bracket having laterally projecting horizontally spaced arms provided with horizontally alined bearing openings, one of said arms being provided with a spring anchor and the other being formed with an opening in addition to its bearing opening, a horizontally elongated light carrier slidable in said bearing openings, a coiled tension spring passing through said additional opening and anchored at one end to said spring anchor, and a projection on said carrier to which the other end of said spring is connected, said spring serving to yieldably hold said carrier in a position at which said projection abuts said other arm.

1,685,623. HIGHWAY-CROSSING GATE. JOHN ARTHUR ANDERSON, Port Arthur, Ontario, Canada. Filed Sept. 14, 1927. Serial No. 219,438. 5 Claims. (Cl. 246—293.)



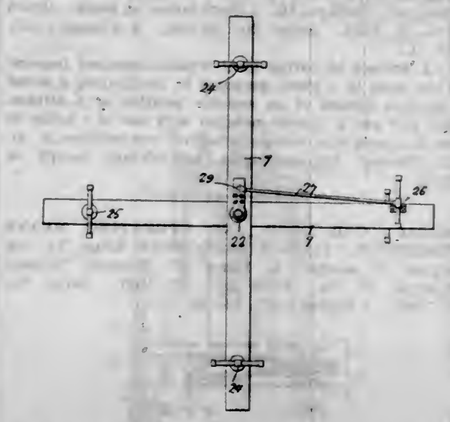
1. In a highway crossing gate of the class described, a gravity lowered gate, a retention means cooperable with the gate to hold the gate in an elevated position, and train actuated trip mechanism cooperable with said retention means.

1,685,624. PROCESS OF PURIFICATION. CHESTER E. ANDREWS, Pittsburgh, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 27, 1918. Serial No. 219,447. 10 Claims. (Cl. 260—123.)



1. In the manufacture of phthalic anhydrid, the step of separating phthalic anhydrid from naphthalene by vaporizing from a mixture containing such two materials, a plurality of normally solid substances into a flowing current of an inert gas, while heating such mixture to a temperature of about 200° C., and successively cooling the resulting gas-vapor mixture to separately crystallize therefrom the vaporous materials.

1,685,625. CABLE TERMINAL. DAVID BASCH, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 31, 1928. Serial No. 250,903. 8 Claims. (Cl. 173—353.)



6. A cable connector comprising a multiplicity of copper wires divided into a plurality of groups, a copper sleeve sweated around each group of wires, a metallic member adapted to separate and space said groups, a plurality of copper plates and a member of cast copper surrounding and joining said sleeves, spacing member and plates.

1,685,626. MACHINE FOR USE IN MAKING BOXES. SERAPHINE F. BAUWENS, Chicago, Ill., assignor to Wirebound Patents Company, a Corporation of Maine. Filed Aug. 9, 1923. Serial No. 656,555. 34 Claims. (Cl. 140—93.)

1. A machine for use in making boxes comprising, in combination, means to feed box parts; means to apply binding wire to the box parts; mechanism to supply said wire with fastening means; and a chain having blocks thereon to move said mechanism with the work.

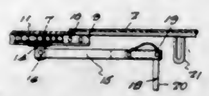
1,685,627. ROUNDABOUT. ARTHUR W. BRYNGELSON, Augusta, Ga. Filed June 29, 1926. Serial No. 119,347. 1 Claim. (Cl. 272—33.)

In a roundabout of the class described, a vertical stationary supporting post, a pair of cross seat boards mounted for rotation upon the post below the upper end thereof, a ratchet unit including a disc keyed on the upper end of the post, ratchet teeth formed in the outer peripheral edge of said disc, bosses formed on the opposite sides of the disc, a pair of spaced metallic plates disposed on opposite sides of the disc, the inner ends of said plates being formed with openings to accommodate the respective bosses, said plates being rotatable around the bosses, a spring pressed pawl arranged between the plates for normal engagement with the ratchet teeth of said disc, a vertical pin extending between the outer ends of the plates, posts carried by the outer end of said cross board, and means upon the outer end of one of the cross boards for actuating said plates to effect the rotation of the cross boards, said means including a vertical lever loosely piv-

oted at its lower end on said board, and a rod loosely connected at one end to the lever adjacent its pivoted end, the other end of said rod being loosely connected to the pin between the outer ends of the plates.

1,685,628. PROCESS OF MANUFACTURING COMPLEX HYDROFLUORIC SALT. MAX BUCHNER, Hanover-Kleefeld, Germany, assignor to Albert Meyerhofer, Zurich, Switzerland. Original application filed July 22, 1924, Serial No. 727,545, and in Germany July 30, 1923. Divided and this application filed Jan. 28, 1927. Serial No. 164,371. 8 Claims. (Cl. 23—88.)

1. Process of manufacturing complex hydrofluoric salts, which comprises reacting on an alkali earth metal fluoride with the fluoride of an element of the group consisting of silicon and boron in the presence of a salt of the alkali metal whose complex hydrofluoric salt shall be produced.

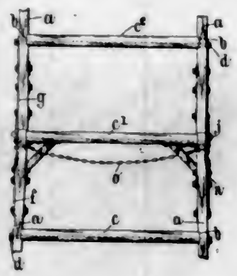


1,685,629. PROCESS FOR THE PRODUCTION OF NITRITES. EUGENE T. DRAKE, Omaha, Nebr., assignor to The Cudahy Packing Company, Chicago, Ill., a Corporation of Maine. Filed Feb. 8, 1926. Serial No. 86,963. 4 Claims. (Cl. 23—104.)

1. A bacteriological process for the conversion of nitrates into nitrites which comprises inoculating a series of cultures formed of an aqueous solution of sodium nitrate, sugar, common salt and amino nitrogen, with selected groups of non-putrefactive, non-pathogenic, nitrate-reducing, non-proteolytic, motil and non-motil, salt-tolerant bacilli having the property of converting nitrates into nitrites.

1,685,630. PROCESS OF CURING MEATS. EUGENE T. DRAKE, Omaha, Nebr., assignor to The Cudahy Packing Company, Chicago, Ill., a Corporation of Maine. Filed Feb. 8, 1926. Serial No. 86,964. 4 Claims. (Cl. 99—1.)

1. A process of curing meat which comprises immersing the meat in a pickle prepared by inoculating a series of cultures formed of an aqueous solution of a nitrate, sugar, salt and a protein material with one of a group of bacteria comprising non-putrefactive, non-pathogenic, nitrate-reducing, non-proteolytic, salt-tolerant bacilli or spirilli.



1,685,631. CAR DOOR AND OPERATING MEANS THEREFOR. FLOYD G. EVANS, Baton Rouge, La., assignor of one-half to Harry W. Mitchell, Webster Springs, W. Va. Filed Dec. 22, 1927. Serial No. 241,995. 2 Claims. (Cl. 74—33.)

1. In a structure of the class specified wherein the same embodies a ratchet wheel equipped with a rotating stud, a convertible hand crank for rotating said wheel, said hand crank comprising a lever connected to said stud, and a handle pivotally connected to the outer end of the lever, said handle being formed with a slot to permit passage of a staple therethrough, whereby to permit the handle to function additionally as a hasp.

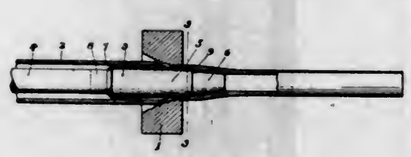
1,685,632. COMBINED STEP AND WALL OR EXTENSION LADDER. CECIL FEATHERSTONE HAMMOND and WILLIAM SHACKLETON, London, England. Filed Dec. 4, 1925, Serial No. 73,210, and in Great Britain Dec. 11, 1924. 2 Claims. (Cl. 228—23.)

1. In a combination ladder, ladder sections, hinges connecting together the ladder sections and comprising disc-like parts pivoted flatly together, locking bolts movable transversely to the disc-like parts, leaf springs carrying

the said bolts, and guide plates having slots therein in which the said springs are movable through a limited distance.

1,685,633. AUTOMATIC TORCH LIGHTER. FREDERICK J. HEYBACH, Savannah, Ga. Filed Oct. 15, 1926. Serial No. 141,823. 8 Claims. (Cl. 158—27.4.)

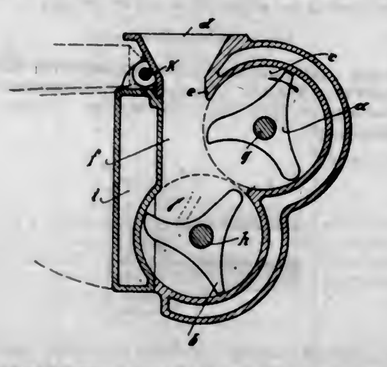
1. In a metal working torch, a flame nozzle, a lighter adjacent said nozzle, means for operating said lighter to move it to or from said nozzle, two pipes conveying, respectively, an inflammable and a non-inflammable gas to said nozzle, valves in said pipes, manually actuable controlling means for said valves, the valve controlling the non-inflammable gas being responsive to control by said lighter operating means when open for closing said valve before igniting the inflammable gas at said torch.



1,685,634. PURIFICATION OF BENZOIC ACID AND ITS DERIVATIVES. ALPHONS O. JAEGER, Crafton, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Oct. 19, 1927. Serial No. 227,358. 4 Claims. (Cl. 260—108.)

1. A method of separating benzoic acids from the corresponding phthalic acids, which comprises subjecting the aqueous dispersion of the acids to continuous leaching with a current of organic solvents for benzoic acid, separating the solvent from the water and removing benzoic acids from the solvent solution and phthalic acids from the water solution.

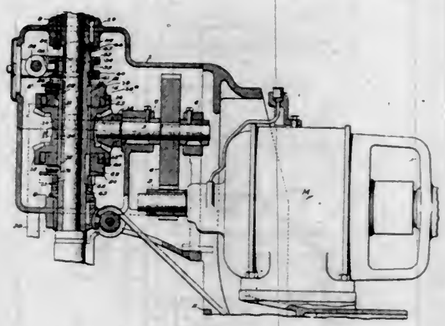
1,685,635. CATALYTIC OXIDATION OF ANTHRACENE. ALPHONS O. JAEGER, Crafton, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Dec. 23, 1927. Serial No. 242,297. 14 Claims. (Cl. 260—57.)



1. A method of oxidizing anthracene containing material to anthraquinone, which comprises causing vapors of anthracene containing material admixed with an oxidizing gas to react in the presence of a catalyst containing a zeolite.

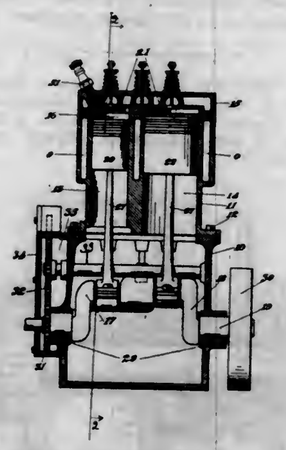
1,685,636. TUBE-DRAWING PLUG. JOSEPH KEMP, Baltimore, Md. Filed Jan. 20, 1928. Serial No. 248,253. 5 Claims. (Cl. 205—7.)

1. A tube drawing plug formed of metallic material and including a tapered body portion and a gripping nose extended from the forward end of said body portion, said gripping nose having its forward end possessing a malleable characteristic, the remaining portion of said nose and said body portion being hard.



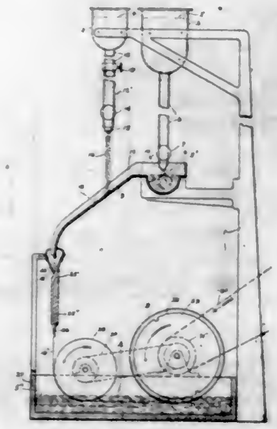
1,685,637. KNEADING MACHINE. FRITZ KEMPTER, Stuttgart, Germany. Filed May 21, 1926, Serial No. 110,715, and in Germany June 25, 1925. 1 Claim. (Cl. 18—2.)

Kneading machine comprising a trough, a kneader mounted for rotation in said trough, a charging hopper adapted to supply material to said kneader, a partition extending from the inner end of said hopper to a point intermediate between the highest point attained by said kneader and its axis of rotation, and a second kneader so arranged below said kneader that the line connecting the axes of both kneaders extends substantially in parallel to the tangent at the end of said partition.



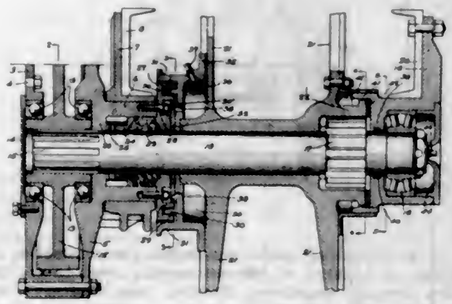
1,685,638. CONDENSED CLUTCH FOR REVERSING MECHANISMS. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Oakley, Cincinnati, Ohio, a Corporation of Ohio. Filed Jan. 6, 1925. Serial No. 805. 6 Claims. (Cl. 10—137.)

3. A reversing mechanism combining a housing, a spindle-driving sleeve journaled in upper and lower vertically disposed bearings carried by said housing; a horizontal drive-shaft; a pinion on said drive-shaft; two bevel-gears rotatably journaled on said sleeve and maintained permanently in mesh with opposite sides of said pinion, whereby they are rotated reversely; a friction clutch associated with each of said bevel-gears; a collar slidably mounted on said sleeve between one of said friction clutches



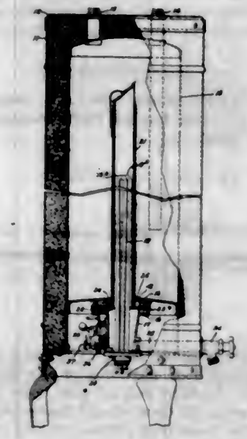
and the upper sleeve bearing; a detent cooperating with said collar to hold it impositively against movement on said sleeve; an operative connection between said collar and each of said friction clutches; and means to overcome the action of said detent and to shift said collar in opposite directions on said sleeve selectively to cause said clutches to lock said gears to said sleeve.

1,685,639. INTERNAL-COMBUSTION ENGINE. LEO LAGALI, El Reno, Okla. Filed Dec. 1, 1922, Serial No. 604,385. Renewed Aug. 15, 1928. 8 Claims. (Cl. 123—1.)



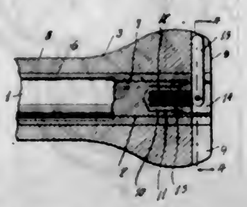
1. In an internal combustion engine, the combination of a pair of cylinders of different capacity, each having its own separate combustion chamber, each chamber being provided with a fuel inlet port, said chambers being connected by a constantly open passage, pistons operating in said cylinders, a crank shaft having crank arms separately connected with said pistons, and means for igniting the charge in the combustion chamber of the smaller of said cylinders, the length of said passage and relative arrangement of said crank arms being such that, when operating at normal speed, both arms will move past top dead center prior to the ignition of the charge in the combustion chamber of the larger cylinder.

1,685,640. METHOD AND APPARATUS FOR MAKING ARTIFICIAL SILK. JAMES M. LEAVER, Oakland, Calif., assignor to The Pacific Lumber Company, San Francisco, Calif., a Corporation of Maine. Filed Sept. 3, 1924. Serial No. 735,625. 32 Claims. (Cl. 18—8.)



1. The method of forming thread filaments from viscous solutions, which consists in discharging the material downward in a plurality of streams, permitting the streams to fall through the air to reduce them in diameter to a fraction of their starting diameter, and receiving the falling streams on a moving sheet of setting solution having a surface speed substantially synchronous with that of the falling streams at their point of contact therewith.

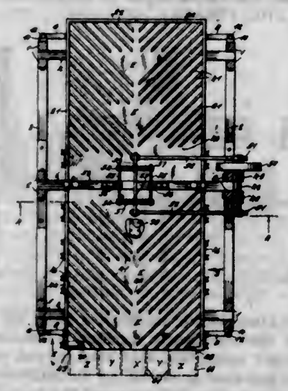
1,685,641. VEHICLE DRIVE. HOLMAN HARRY LINN, Morris, N. Y., assignor to The Linn Manufacturing Corporation, Morris, N. Y., a Corporation of New York. Filed Apr. 2, 1928. Serial No. 266,822. 16 Claims. (Cl. 74—99.)



1. In a drive for tractors and the like having in its organization a differential, a driving axle, and gear connections, a front supported housing for the differential, gear casings rigidly joined to said housing at either side thereof, and trunnions carried by the gear casings and affording together with the front supported end of the differential a three-point suspension for the unit.

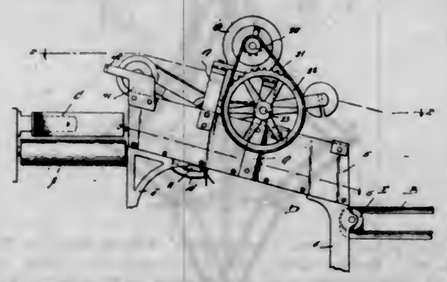
1,685,642. WATER HEATER. FRANCIS H. MCCORMICK, Glen Ellyn, Ill., assignor to Edison Electric Appliance Company, Inc., Chicago, Ill., a Corporation of New York. Filed Dec. 13, 1926. Serial No. 154,375. 14 Claims. (Cl. 219—39.)

1. A water heater comprising a tank, heating means for said tank, and temperature responsive means for controlling said heating means so as to heat a relatively small quantity of water in the top of the tank to a predetermined high temperature and thereafter heat the water in the lower regions of said tank without substantial increase in the temperature of the water at the top of the tank.



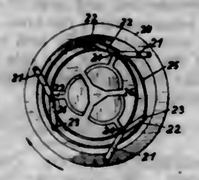
1,685,643. HANDLE-SECURING MEANS FOR SHANK-FORMING TOOLS. JOHN MICALI, Lawrence, Mass. Filed Aug. 18, 1927. Serial No. 213,838. 1 Claim. (Cl. 306—38.)

A device of the character described, comprising a spindle having a threaded terminal, a handle threaded onto said terminal and adjustable thereon, said handle having grooves in its outer end, a threaded member engaging in a threaded recess in the end of the spindle, and having a longitudinal opening therein, an arm pivotally engaging the threaded member to engage in said grooves to hold the handle in adjusted positions, and a spring in the opening in the threaded member and engaging the arm to hold it in adjusted positions.



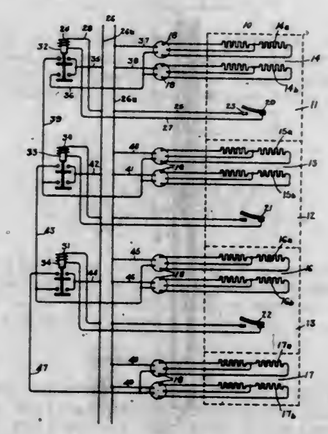
1,685,644. ORE-CONCENTRATING DEVICE. MERLE M. NEWTON, Cragmor, Colo. Filed July 1, 1927. Serial No. 202,848. 5 Claims. (Cl. 209—441.)

1. A concentrating device comprising an elongated, substantially rectangular table having its central portion formed from two rectangular sections whose adjacent edges are secured together by means of a strip of flexible material, means for supporting the adjacent edges, said supporting means being movable so as to vary the position of the adjacent edges of the table, a plurality of parallel ribs extending diagonally across the upper surface of each



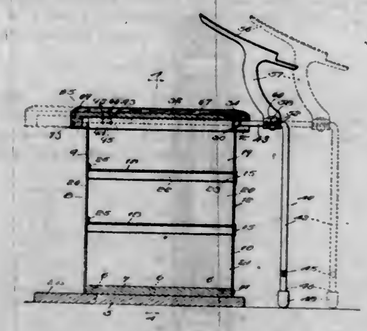
section, said ribs comprising two groups oppositely inclined, means for reciprocating the table transversely and means for permitting materials to escape over the sides during operation.

1,685,645. FRUIT-BRANDING MACHINE. ELWIN A. ROBBINS, Nashua, N. H. Filed Oct. 26, 1926. Serial No. 144,334. 2 Claims. (Cl. 101—40.)



1. In a machine for marking fruit, a die, and pivotally mounted means comprising an endless belt gravitally engaging said fruit for rolling it across the die, and a resilient tensioning means associated with the belt to accommodate the belt to different sized fruit.

1,685,646. OPTICAL SYSTEM. RICHARD RUHNAU, Essen-Ruhr, Germany, assignor of one-half to Max Stern, Essen-Ruhr, Germany. Filed Nov. 28, 1925, Serial No. 72,034, and in Germany Jan. 12, 1925. 5 Claims. (Cl. 88—16.8.)

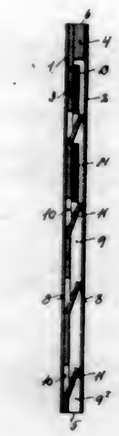


1. Optical system for moving picture projection comprising a plurality of segments of a circular lens and means for causing each segment to travel in a straight line with a film picture and to simultaneously rotate about its optical centre point.

1,685,647. METHOD AND MEANS FOR REGULATING TEMPERATURE. JACOB L. SHROYER, Oak Park, Ill., assignor to Edison Electric Appliance Company, Inc., Chicago, Ill., a Corporation of New York. Filed July 2, 1924. Serial No. 723,837. 12 Claims. (Cl. 219—20.)

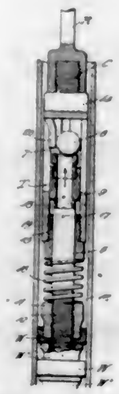
7. The combination with a multiple compartment electric oven provided with a plurality of heating units distributed throughout the compartments, some of said units radiating heat into two adjacent compartments, a plurality of switching devices for controlling the circuits of said heating units, said switching devices being connected and arranged so that said second named units are controlled jointly by a plurality of switches, and temperature responsive devices in said compartments for controlling said switching devices.

1,685,648. SHOE-SHINING STAND. JOSEPH SILVERMAN, Chicago, Ill. Filed Apr. 4, 1927. Serial No. 180,700. 9 Claims. (Cl. 15—265.)



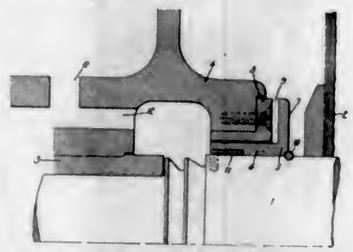
1. In a device of the class described, a base, a box mounted upon said base, tubular margins at the top of the box, and a foot rest having a support engaging telescopically in said margins for extension and retraction into different positions and for application to and removal from said box.

1,685,649. WRAPPER FOR COINS AND THE LIKE. MINNA BERG SONNE, Nexoe, Denmark. Filed June 17, 1927, Serial No. 199,597, and in Denmark June 17, 1926. 1 Claim. (Cl. 229—92.9.)



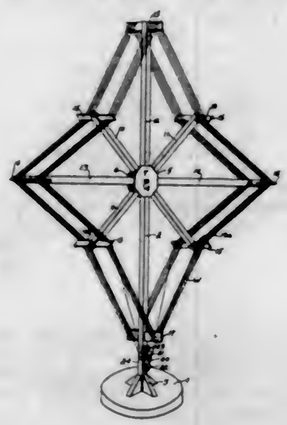
In wrappers for coins and the like, the combination of two outer covering sheets of any suitable material, with

two inner sheets, in one of which is made an incision, open at one end and closed at the other, while the second inner sheet is cut out to form a number of laps projecting into



the said incision to divide the same into compartments for coins retained by the said laps, the said outer and inner sheets being mutually connected to form a card, substantially as set forth.

1,685,650. PUMP VALVE. JOHN M. STREICH, Clarendon, Pa. Filed Apr. 14, 1928. Serial No. 270,113. 7 Claims. (Cl. 103—221.)

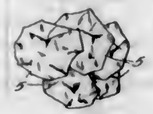


1. In a pump valve, a tubular body having a valve seat at its upper end, a valve cage whose lower portion slidably surrounds the upper portion of said body, means for limiting the upward sliding of said cage on said body, spring means acting on said cage and reacting on said body for upwardly forcing the cage to the extent permitted by said limiting means, and means carried by said cage for laterally forcing said valve from said seat upon downward forcing of said cage against the action of said spring means.

1,685,651. DYNAMO-ELECTRIC MACHINE. EMILE TESTEIL, Paris, France, assignor to General Electric Company, a Corporation of New York. Filed Sept. 21, 1926, Serial No. 136,827, and in France Oct. 31, 1925. 6 Claims. (Cl. 172—36.)

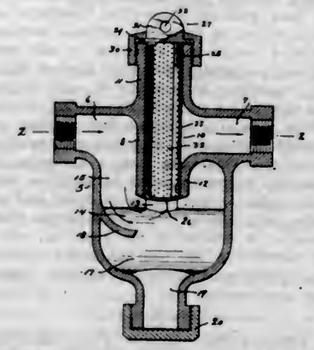
1. In a dynamo-electric machine, a shaft for the armature of said dynamo-electric machine, a bearing for said shaft, a bracket supporting said bearing, and means movable by the pressure produced by an explosion in said machine for preventing the escape of the products of combustion along said shaft.

1,685,652. LOOP AERIAL. TIMOTHY THAIPT, Cleveland, Ohio. Filed May 23, 1925. Serial No. 32,472. 3 Claims. (Cl. 250—33.)



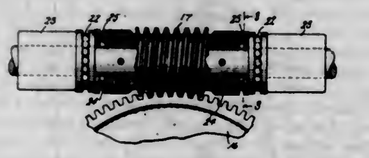
1. A loop aerial comprising in combination radially extending members, one of said members serving as a support for the aerial, cross arms carried thereby, retaining means for the members engaging the members at the point of radiation, two of said members being continuous and intersecting, the others abutting the continuous members at the point of intersection, and loops of wire engaging the cross arms, said loops engaging the arms of the continuous members on the side adjacent to said point of radiation and the arms of the others on the side remote from said point, whereby the loops maintain the abutting members within the retaining means.

1,685,653. MAGNESIUM ALLOY AND METHOD OF MAKING SAME. WILLIAM R. VEAZEY, Cleveland Heights, Ohio, assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Dec. 19, 1924. Serial No. 757,035. 7 Claims. (Cl. 75—1.)



1. As a new product, an alloy of magnesium with from one-hundredths to one-tenth of one per cent of chromium.

1,685,654. PROCESS OF TREATING COKE AND PRODUCTS. CHARLES L. WAGGONER and FRANK B. THACHER, Chicago, Ill., assignors to By-Products Coke Corporation, Chicago, Ill., a Corporation of Illinois. Filed Apr. 9, 1928. Serial No. 268,630. 10 Claims. (Cl. 44—1.)

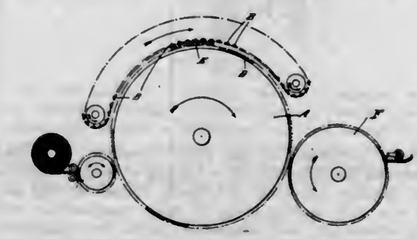


1. The process of improving coke formed by high temperature distillation process and brought to a porous condition of relatively low density with the oily substances and volatile constituents substantially completely removed, which comprises treating the porous mass subsequent to the high temperature distillation process with a moisture-absorbing substance of the barium group.

1,685,655. LIQUID STRAINER. IGNACE J. WENZKA, Depew, N. Y. Filed Mar. 2, 1927. Serial No. 172,110. 15 Claims. (Cl. 210—165.)

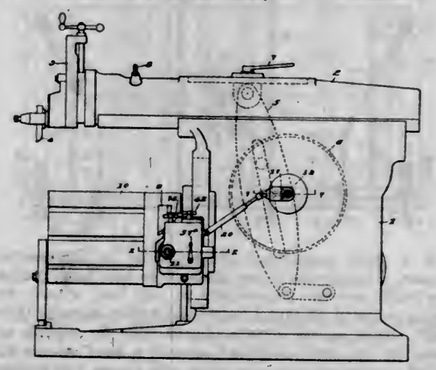
2. A liquid strainer comprising a casing having inlet and outlet openings, the casing being formed with a vertical passageway connected at its upper end with the inlet opening, a sump formed in the lower part of the casing, a removable strainer element arranged in the upper part of the casing, and a laterally extending deflecting wall arranged below the vertical passageway and the strainer element, whereby the incoming fluid is prevented from stirring up the accumulated foreign matter in the sump.

1,685,656. INDUCTION VOLTAGE REGULATOR. HARRY R. WEST, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed May 25, 1927. Serial No. 194,173. 4 Claims. (Cl. 171—119.)



1. An induction voltage regulator including a rotor and a stator, means for adjusting the position of the rotor with respect to the stator, a support for said adjusting means, and resilient means for reducing transmission of vibration from the rotor through said adjusting means to said support, said resilient means including one set of springs to cushion the force between said adjusting means and said rotor and a second set of springs weaker than said first set to exert pressure on said adjusting means when said first set of springs is relieved of compression.

1,685,657. COMPOSITE METAL ARTICLE. WILLIS R. WHITNEY, Niskayuna, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 19, 1922. Serial No. 576,125. 6 Claims. (Cl. 78—93.)

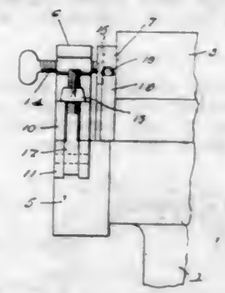


2. The method of joining a body of ferrous metal with a body of cupreous metal which consists in bringing the regions to be joined while pressed together into contact in a reducing gas with a molten alloy of copper and silver.

1,685,658. CARDING ENGINE OR MACHINE. JOHN PLATT, WILLIAM PLATT, and HENRY PLATT, Harrow, England. Filed Sept. 12, 1927, Serial No. 218,887, and in Great Britain Apr. 4, 1927. 2 Claims. (Cl. 19—111.)

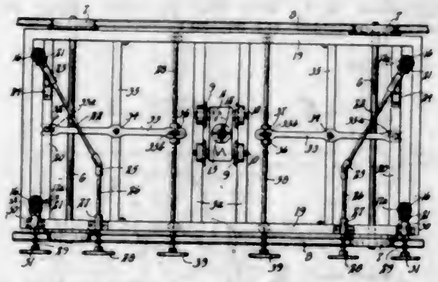
1. In a carding machine, the combination with flats or workers provided with a clothing comprising resilient teeth, of a swift clothed with a clothing having straight, rigid and pointed teeth.

1,685,659. SHAPING MACHINE WITH VARIABLE-POWER TRAVERSE. WILLIAM F. ZIMMERMANN, Maplewood, N. J. Filed Mar. 13, 1926. Serial No. 94,622. 14 Claims. (Cl. 90—39.)



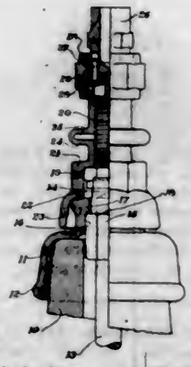
1. A shaper combining a cross-rail; a table; a propelling-transmission therefor; a feed transmission adapted to impart intermittent motion to said table-transmission in

a given direction; a feed rate-adjuster located at the cross-rail; a quick-traverse transmission adapted to impart continuous motion to said table transmission; and a shift-mechanism arranged to cause either said quick-traverse transmission or said feed transmission to drive said table.



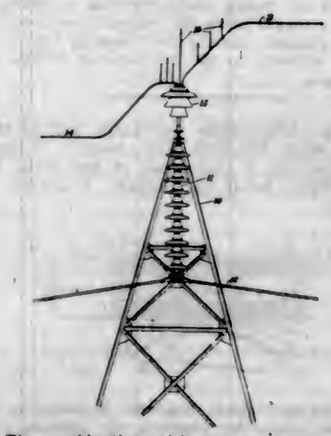
14. A shaper combining a body-casting; a ram; a unidirectional bull-gear; a cross-rail; a table; a transmission-system leading to said table and comprising a single unidirectional shaft from the side of said body-casting adjacent said bull gear to said cross-rail; a bull-gear transmission; an intermittent-motion transmission driven by said unidirectional shaft synchronously with said bull-gear and comprising a feed-stroke regulator located adjacent said cross-rail; a fast-motion transmission; and a single motion-reverser located at the cross-rail for simultaneously reversing the directional effects on the table of both of said transmissions.

1,685,660. MOLDING RING. EUGENE ZGELLIO, Hamilton, Ohio. Filed Feb. 26, 1927. Serial No. 171,253. 2 Claims. (Cl. 22—123.)



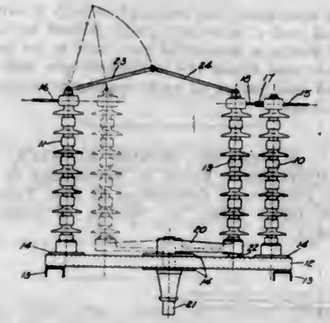
1. In a structure of the class described, a closure forming and molding ring for a bearing structure comprising an annulus composed of hingedly connected half sections, one half section being in turn composed of relatively stationary and adjustable parts, the adjustable part being movable toward and from the bearing cap, the parts of said last section being of a combined thickness equal to the thickness of the complemental section.

1,685,661. TABLE FOR CARRYING STONE FOR CUTTING. WILLIAM J. ALLEN, St. Cloud, Minn. Filed Sept. 7, 1926. Serial No. 133,874. 7 Claims. (Cl. 125—35.)



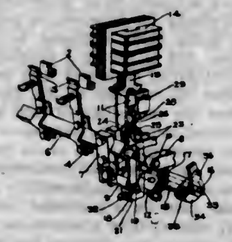
1. A stone supporting device having in combination, a base, a supporting frame disposed on said base, a member bodily movable transversely on said base, a table centrally mounted on said member and bodily movable therewith, means at the corners of said table for raising and lowering the same including operating hand wheels disposed at one side of said table and means for horizontally moving either or both ends of said supporting frame transversely of said base, including hand wheels disposed at one side of said table.

1,685,662. TERMINAL FOR BUSHING INSULATORS. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 3, 1922. Serial No. 579,349. 13 Claims. (Cl. 173—353.)



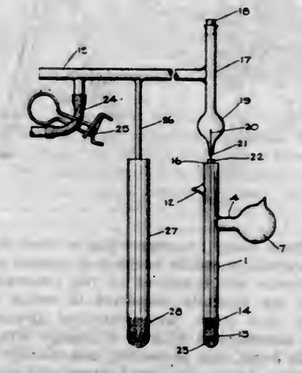
12. A dielectric bushing, a metallic fitting thereon having an opening through said fitting, a conductor extending through said bushing, contacting shoulders on said conductor and fitting to limit the outward movement of said conductor, a closure cap threaded on said conductor for drawing said contacting shoulders against each other to hold said conductor in position in said fitting, said cap engaging said fitting to close the opening through said fitting, resilient means in said cap for exerting pressure on the threaded surfaces of said cap and conductor, a lead conductor engaging said cap, a clamping member having differently acting threaded connections with said cap and lead conductor and acting to draw said cap and lead conductor into contact with each other when said clamping member is rotated in one direction, and means to lock said closure cap and lead conductor against relative rotation while said clamping member draws said lead and cap into contact.

1,685,663. INSULATED PERCH FOR PREVENTING BIRD TROUBLE IN CONNECTION WITH ELECTRICAL TRANSMISSION LINES. ARTHUR O. AUSTIN, Barberton, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Aug. 11, 1924. Serial No. 731,505. 15 Claims. (Cl. 173—251.)



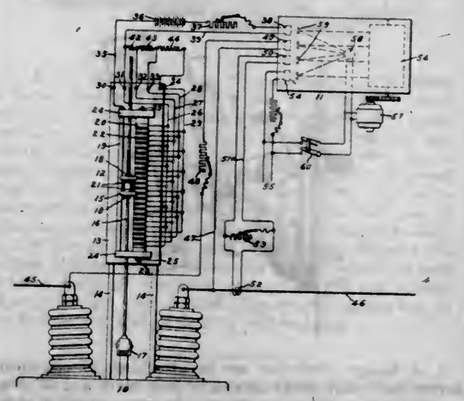
15. The combination with a support of an insulator string suspended therefrom, a conductor carried by said string, an insulator mounted on said support above said string, a perch carried by said insulator and extending therefrom substantially in the vertical plane of said conductor and means for preventing birds from resting on said support and perch adjacent said string but permitting them to rest on said perch at points more remote from said string.

1,685,664. ELECTRIC SWITCH. KUNO BAUERSCHMIDT, Karlshorst, Germany, assignor to General Electric Company, a Corporation of New York. Filed Apr. 7, 1925, Serial No. 21,320, and in Germany May 3, 1924. 7 Claims. (Cl. 200—48.)



1. An electric switch comprising two stationary line terminal supports, a contact mounted on one of said supports, a cooperating movable contact and means for actuating said movable contact to and from circuit closing position with the stationary contact, comprising a support having its axis substantially parallel to the stationary supports and mounted for revolution about an axis intermediate said stationary supports from a position adjacent one of them to a position adjacent the other.

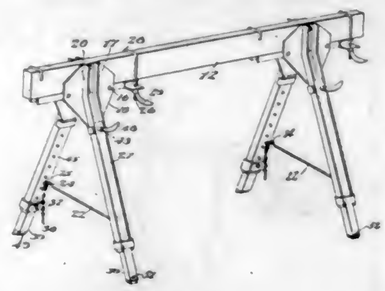
1,685,665. MECHANISM FOR OPERATING ELECTRIC SWITCHES. LESLIE W. BOND, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 25, 1927. Serial No. 235,412. 2 Claims. (Cl. 200—106.)



2. In combination, an electric switch having a stationary contact mounted on a base, a cooperating movable contact carried by an operating crank pivotally mounted on said base, a toggle mechanism between said crank and said base biased to open circuit position, a closing solenoid having a plunger, a link connection between said plunger and said toggle for actuating said toggle to close the switch, an extension on one link of said toggle carrying a roller, a lever pivotally connected to said base and biased to the position corresponding to closed circuit, one end of said lever being adapted to engage said roller and the other end being connected to said base through a second toggle mechanism whereby the switch is mechanically latched in closed circuit position, a tripping solenoid having a plunger and a link connection between said last mentioned plunger and said second toggle mechanism whereby the lever and crank are released to open the switch when the tripping solenoid is energized, and manually operable means pivotally mounted on said base adapted to rotate said crank to close the switch when moved in one direction, and to break said second toggle through a link mechanism when moved in the opposite direction, to open the switch.

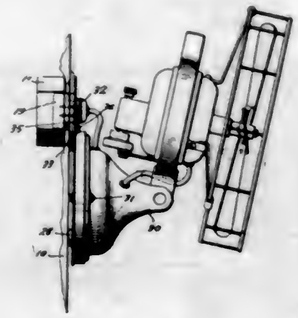
1,685,666. METHOD AND APPARATUS FOR STORING ALKALI METALS. DOROTHY H. BROPHY and WILLIAM A. RUGGLES, Shenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Aug. 29, 1927. Serial No. 216,118. 6 Claims. (Cl. 23—239.)

4. The method of storing readily oxidizable material in capillary tubing which comprises placing the metal under oil, placing a capillary tube in a casing closed at its lower end, inserting the casing and tube through the oil and into the metal, removing the lower end portion of the casing, and filling the tube.



1,685,667. RECORDING SYSTEM. GUY F. DAVIS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 3, 1924. Serial No. 704,070. 4 Claims. (Cl. 234—1.5.)

1. Recording apparatus for investigating the operation of electric controllers comprising, in combination with such a controller, a current regulator responsive to the mechanical movement of the controller, an electric circuit controlled by said regulator, an electric circuit responsive to electrical changes effected by the controller and a recording device responsive to the currents flowing

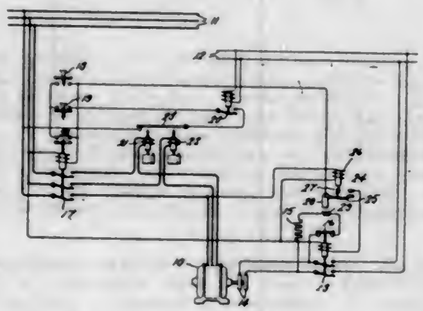


in said circuits for simultaneously producing coordinated graphic records indicative of the direction and extent of the mechanical movement and of the electrical changes produced by said current controller.

1,685,668. FOLDABLE HORSE FOR TRESTLE BEAMS. JAMES G. DAVIS, Buffalo, N. Y. Filed July 2, 1926. Serial No. 120,030. 7 Claims. (Cl. 304—6.)

1. A foldable horse for supporting a beam to form a trestle, comprising a saddle adapted to engage said beam on its underside and composed of two longitudinal sections which are pivotally connected to swing vertically relatively to each other, jaws projecting upwardly from said saddle sections and adapted to engage with opposite sides of said beam, legs projecting downwardly from the saddle sections, and means for holding said beam down on said saddle comprising a bracket arranged on one of said saddle sections and a bolt having a vertical shank passing through said bracket and a hook at the upper end of said shank adapted to engage over the top of the beam, and a screw nut arranged on the lower end of said shank and adapted to engage with the underside of said bracket.

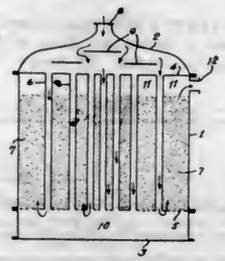
1,685,669. HANGING MEANS FOR ELECTRIC FANS AND THE LIKE. FRANK C. DE REAMER, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed May 24, 1923. Serial No. 641,254. 2 Claims. (Cl. 173—330.)



1. A hanger plate for use in attaching an electrical device to a wall outlet having a face plate and a plug receptacle, comprising an attaching portion provided with means for making mechanical connection with the face plate, said attaching portion having an opening through which the plug receptacle is exposed when said mechanical connection is made, and a supporting portion which depends from one edge of the attaching portion and is provided with means for engaging the wall below the outlet.

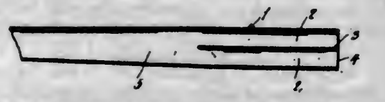
1,685,670. SHOCK-ABSORBING HANDPIECE. LEO E. EVSLIN, New York, N. Y. Filed Aug. 25, 1925. Serial No. 52,372. 7 Claims. (Cl. 32—15.)

1. In a hand-piece, the combination with a barrel having a head and a rotatable spindle housed in the head, said head having a cylindrical axial bore in its outer end, of a rubber tube fitting the mentioned bore, and a bushing in said tube having an axial opening to receive a tool carrying shank.



1,685,671. AUTOMATIC MOTOR STARTER. LLEWELLYN C. HARDESTY, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 15, 1924. Serial No. 743,804. 6 Claims. (Cl. 172—280.)

1. In combination, an alternating current motor having a field winding arranged to be connected to a direct current source of supply for synchronous running of the motor, the said motor being arranged to start as an asynchronous motor and to run as a synchronous motor, and a time interval device connected with said motor to be set in operation in response to the energization of the motor to effect the connection of said field winding to said direct current source, the said device being provided with means controlled by the motor for regulating the timing thereof to effect said connection when the motor accelerates normally to substantially synchronous speed, and in case there is a prolonged acceleration of the motor so that substantially synchronous speed is not reached before a certain time interval has elapsed after the energization of the motor, to effect said connection at the expiration of said time interval.



2. In combination, an alternating current motor arranged to start as an asynchronous motor and to run as a synchronous motor, electroresponsive switch mechanism for connecting the field windings of said motor to a direct current supply circuit for running, and means for controlling the said switch mechanism comprising a time interval relay set in operation responsively to the energization of said motor and retarded responsively to the speed of the motor to operate when the motor accelerates normally to substantially synchronous speed and in case there is a prolonged acceleration of the motor so that substantially synchronous speed is not reached before a certain time interval has elapsed after the energization of the motor to operate at the expiration of said time interval.

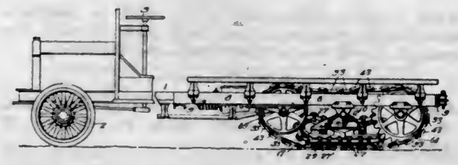
1,685,672. CATALYTIC APPARATUS. ALPHONS O. JAEGER, Pittsburgh, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Oct. 27, 1926. Serial No. 144,496. 9 Claims. (Cl. 23—288.)

1. Catalytic apparatus comprising a layer type converter, a catalyst layer therein, heat exchanging elements embedded in said catalyst having such a non-uniform relative spacing, dimensioning, design and heat exchanging capacity as to produce a substantially uniform cooling throughout any horizontal cross-section of the catalyst layer.

1,685,673. FIREARM. FELIX B. JONES, Chicago, Ill. Filed Feb. 10, 1927. Serial No. 167,221. 3 Claims. (Cl. 42—76.)

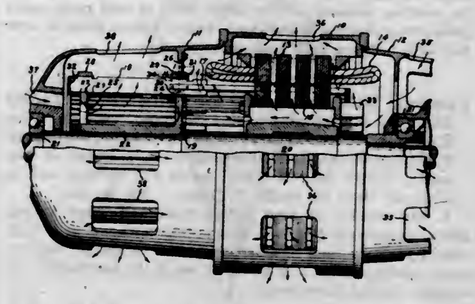
1. In a shot gun, a barrel having a plurality of bores at its breech and extended towards the muzzle, and the barrel in advance of the plurality of bores having a single bore communicating with said bores and tapered to the muzzle.

1,685,674. BATTERY COMPOSITION. PATRICK J. KELLEHER, Salem, Mass. Filed Mar. 16, 1926. Serial No. 95,149. 3 Claims. (Cl. 136—165.)



1. A substantially dry composition capable of preventing the formation of sulphate in storage cells comprising substantially 84 parts by weight of magnesium sulphate, 3 parts by weight of ammonium sulphate, 6 parts by weight of potassium sulphate, and 7 parts by weight of aluminium sulphate.

1,685,675. SYSTEM FOR STORING AND HANDLING MATERIAL. FRED T. KERN, Milwaukee, Wis. Filed Feb. 20, 1926. Serial No. 89,522. 12 Claims. (Cl. 214—10.)

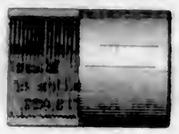


1. A system of the character described comprising a plurality of bins for storing graded material, means associated with said bins for supplying the same with graded material, means for discharging the material from said bins, storage yards, conveying means associated with said bins and yards, each of said bins being provided with means for discharging material upon said conveying means, means for operating said conveying means whereby material discharged from any one of said bins may be deposited in any one of said yards, and means having a range of operation substantially equal to the area of said yards and adapted to move the material from said yards to a common point convenient for the further disposition of said material.

1,685,676. TRACTOR. HOLMAN HARRY LINN, Morris, N. Y., assignor to The Linn Manufacturing Corporation, Morris, N. Y., a Corporation of New York. Filed May 13, 1924. Serial No. 713,022. 12 Claims. (Cl. 305—9.)

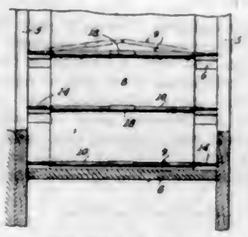
12. In a tractor equipped forwardly with steerage provisions and with a power plant and equipped rearwardly with traction units and with a final drive for propelling the same, the combination of a load carrying platform above the traction units, articulated load transmitting elements between the traction units and said platform, said traction units having flangeways and said load transmitting elements having ribs and rollers having flanges adapted to said flangeways and spindles adapted to said ribs.

1,685,677. INDUCTION MOTOR. HOWARD MAXWELL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 17, 1924. Serial No. 720,688. 8 Claims. (Cl. 172—280.)



1. In an induction motor, the combination of a frame, a stator structure mounted within said frame, a shaft rotatably mounted and projecting through said stator structure, a rotor structure secured to said shaft and having conductor slots adjacent said stator structure, a fixed support secured to said shaft and axially displaced from said rotor structure, and a winding for said rotor structure having one portion located within the slots of said rotor structure and another portion connected thereto and arranged endwise and in the same plane as the portion located in said slots, said latter portion of said winding being of relatively high resistance and located on said support and adapted to produce a circulation of air for cooling said portion of said winding.

1,685,678. METHOD OF MANUFACTURING PIPE COUPLINGS. GEORGE E. MIRFIELD, Youngstown, Ohio. Filed Apr. 22, 1922. Serial No. 556,113. 2 Claims. (Cl. 29—156.)

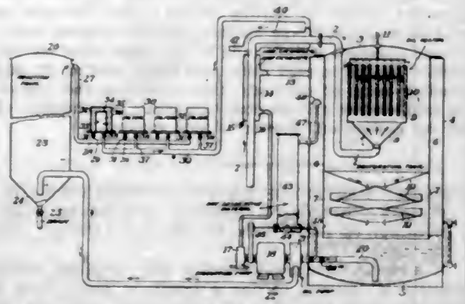


1. A method for manufacturing pipe couplings which consists in initially cutting a length of metal from a relatively thin flat piece of rolled stock, punching an elongated slit in the length of metal so cut with the slit extending in the direction of the greatest width of

the strip and maintaining the greatest width of the strip substantially the same, said slit being punched co-axially of the rolled length of the stock, then expanding the slit

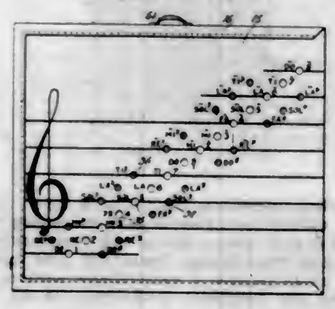
length of metal transversely of its width to develop a substantially cylindrical form, and then drawing the developed length to a suitable length and diameter.

1,685,679. STAIR ROD. CHRISTIAN MUENTENER, Bogota, N. J. Filed Nov. 30, 1927. Serial No. 236,686. 5 Claims. (Cl. 16—12.)



1. A stair rod composed of two tubular sections jointed at one end to permit relative angular motion, rods telescopically engaged in the opposite ends of said tubular sections, means to retain said rods in adjustment therein, cushion elements at the outer ends of said rods, spurs protruding from said cushions, and a sleeve slidable over the joint between said sections.

1,685,680. FULLING WOOL AND THE LIKE. JOSEPH NÜSSLEIN, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Aug. 13, 1926, Serial No. 129,087, and in Germany Jan. 21, 1925. 7 Claims. (Cl. 8—21.)



1. The process of acid fulling wool and other animal fibres comprising the step of treating with an acid bath containing less than one per cent of an aromatic sulfonic acid substituted by a side chain which is practically unsuitable for use in tanning.

1,685,681. PROCESS AND APPARATUS FOR RECONDITIONING MINERAL OILS. CLARENCE J. RODMAN, Wilkinsburg, and MAX HECHT, Pittsburgh, Pa. Filed Nov. 11, 1925. Serial No. 68,360. 13 Claims. (Cl. 196—16.)

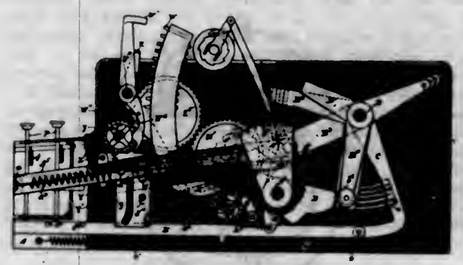
1. A method of reconditioning electric insulating mineral oil which comprises first evacuating the oil, then introducing an evacuated adsorbent into the oil and while maintaining the oil out of contact with atmospheric gases and then filtering the oil to remove the adsorbent while maintaining it out of contact with atmospheric gases.

1,685,682. APPARATUS FOR TEACHING SIGHT SINGING. MICHAEL B. ROCK, New York, N. Y. Filed Nov. 4, 1927. Serial No. 231,125. 13 Claims. (Cl. 84—471.)

4. A portable apparatus for teaching sight singing comprising a casing including top, bottom and side walls, a rearward box-like extension at the lower end of the casing, a keyboard arranged on said extension and including a plurality of switch controlling keys, a staff board at the front of the casing, lamps representing musical notes associated with the staff board and controlled by the switches.

1,685,683. SPECIAL SLIDING TRAPDOOR VALVE AND GAS-METER PROTECTOR. RAMON SALBADOR, New Orleans, La. Filed Apr. 7, 1927. Serial No. 181,811. 5 Claims. (Cl. 73—1.)

1. In combination, a gas meter casing provided with an opening, a fitting having a hollow body secured to the casing over the opening therein, a valve box element arranged within the body and provided with an opening registering with said first opening and an opening communicating with the interior of the body, and a valve body slidably arranged in said element and normally occupying a position below said openings and adapted to close said opening when the meter is shifted from its normal vertical position.



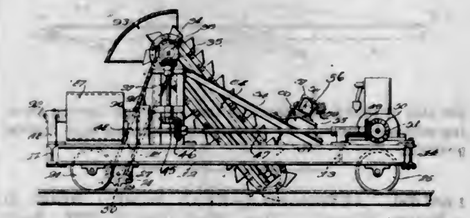
1,685,684. INSULATOR SUPPORT. BURTON M. SMALLEY, Chicago, Ill., assignor to Joslyn Manufacturing & Supply Co., Chicago, Ill., a Corporation of Illinois. Filed June 22, 1925. Serial No. 38,622. 6 Claims. (Cl. 173—321.)

6. In a device of the class described, the combination of a U-shaped bracket frame comprising a yoke member and two integral leg members, said members being formed of continuous channel section, the flanges of the yoke member having integral laterally extending lugs perforated to receive attaching bolts for supporting said U-shaped bracket frame directly upon a supporting surface, and a

channel bar nesting within and secured to the channel of the yoke member to hold the U-shaped bracket member against rocking on the lugs.

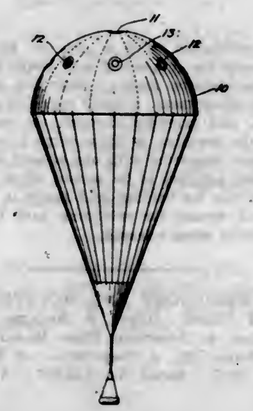
1,685,685. BOOKKEEPING MACHINE. ABRAHAM SMITH, Erie, Pa. Filed Apr. 26, 1924. Serial No. 709,180. 15 Claims. (Cl. 101—102.)

5. The combination with several groups of type carriers, means for operating individual carriers of each group independent of the other groups, means adapted to control the movements of individual carriers of any group of type carriers from identical key mechanism.



1,685,686. HANDLE FOR STEERING WHEELS. JOHN REGINALD CRISPIN SMITH, Victoria, British Columbia, Canada. Filed Apr. 26, 1927. Serial No. 186,780. 2 Claims. (Cl. 74—33.)

1. In a steering wheel, a handle, an adjustable flexible band with a half round threaded end at each end thereof, a cushioning strip attached to said band, a threaded sleeve, a recess in said handle, a recess in said sleeve, and an annular spring ring.



1,685,687. ROAD-BUILDING MACHINE. HARRY F. THOMPSON, Stratford, N. Y. Filed Mar. 8, 1927. Serial No. 173,782. 2 Claims. (Cl. 37—108.)

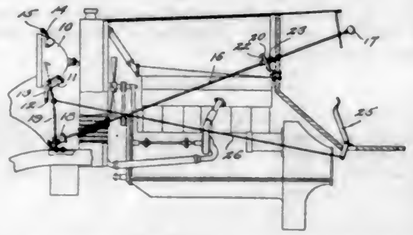
1. A device of the character described comprising an open frame, wheels for supporting the frame, a shaft rotatably mounted on the frame, an elevator supported within the open frame and including a bucket equipped chain, a sprocket slidably mounted on the shaft and driven thereby at the upper end of the elevator, the lower end of the elevator projecting through the bottom of the open frame, bars connected to the frame at the sides thereof and located at an angle to the horizontal, an I beam secured to

the bars and located in a plane at an angle to the vertical, a carriage embracing opposite faces of the I beam and mounted for longitudinal movement on said beam, a chain connecting the carriage with the lower end of the elevator, and providing means for adjusting the said lower end in various horizontal positions.

1,685,688. PARACHUTE. AXEL RAOUL THÖRNBLAD, Stockholm, Sweden, assignor to Aktiebolaget Fallskärm, Stockholm, Sweden, a Corporation. Filed Apr. 13, 1926, Serial No. 101,819, and in Sweden Apr. 14, 1925. 1 Claim. (Cl. 244—21.)

A parachute having a single body portion provided with a plurality of outlet openings spaced circumferentially over the middle part of the surface of said body portion and having a total area of not less than 0.2% of the total area of said body portion, whereby the suction behind the body portion is utilized for decreasing the shock which arises when the parachute opens.

1,685,689. RUG-SIZING FRAME. ARTHUR L. STEWART, Danville, Ill. Filed Nov. 10, 1926. Serial No. 147,586. 6 Claims. (Cl. 45—24.)



1. Apparatus for temporary mounting of rugs to hold them while applying sizing and drying, comprising a frame adapted to lie flat on a floor and hold the rugs under tension in applying sizing, and adapted to be stacked vertically for drying, said frame comprising two flat rectangular sections adapted when extended to lie flat on a plane horisontal surface, extensibly adjustable hinge means on said sections permitting one section of said frame to be swung up without causing any part of the frame to pro-

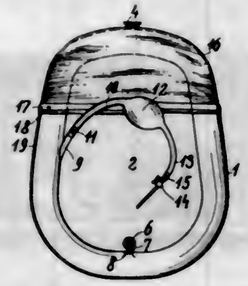
ject below the original bottom surface of the frame, and means on each end and one side of the upper face of said frame for removably securing a rug thereon, and means on

the side of said frame opposite that on which the rug securing means is located for supporting the frame in a vertical position.

1,685,690. AUTOMOBILE HEAD LAMP. HENRY H. WITZEL, Mitchell, S. Dak. Filed June 11, 1927. Serial No. 198,146. 2 Claims. (Cl. 240—61.)

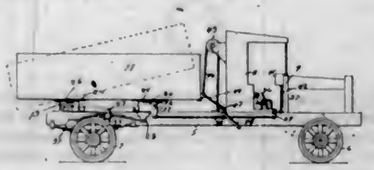
1. The combination with a pair of automobile head lamps, of means for supporting said lamps for lateral and downward movements, means connecting said lamps for simultaneous adjustment, a hand operated shaft mounted for rotation, and extended through the dash board and radiator of the machine, a drum carried by said shaft, a flexible element connected with one of said lamps and with said drum and adapted to be wound about and unwound therefrom, means for holding said lamps in their adjusted positions, and means for returning said lamps to their normal positions when released.

1,685,691. HEADLIGHT AND MOUNTING FOR TOY RAILWAY CARS. HARRY S. BECKER, River Forest, Ill., assignor to American Flyer Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 14, 1927. Serial No. 219,537. 3 Claims. (Cl. 46—48.)



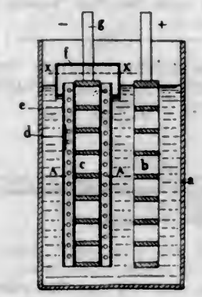
1. A headlight construction for toy locomotives comprising in combination a car body having a roof portion projecting beyond one end thereof and also provided with an opening, a car chassis having a front pilot portion adapted to project beyond the end of the car body when the latter is affixed to the chassis, an interior wheeled frame carrying the chassis, a lamp support mounted on the interior frame behind said opening in the car body thereby to receive a lamp whose bulb will be positioned partly within the opening and having a minimum projection beyond the car body.

1,685,692. CALENDAR. JOHN FREDERICK BENNET, London, England. Filed Mar. 25, 1927, Serial No. 178,411, and in Great Britain Mar. 29, 1926. 3 Claims. (Cl. 40—110.)



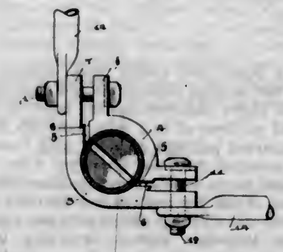
1. In a calendar of the class described, a transparent strip and a slide to carry the strip, said slide having prongs integral therewith, extending through the material of the strip and securing the latter to the slide.

1,685,693. BED BIDET. BRUNO CLAUS, Magdeburg, Germany. Filed June 11, 1927, Serial No. 198,256, and in Germany Sept. 23, 1926. 2 Claims. (Cl. 128—231.)



1. A bed-bidet comprising in combination a tube of heat conducting material bent to form an oval seat, a solid bottom plate fixed on the lower surface of said tube, a suction tube branching off the inner side of said bent tube in inward direction, a suction valve in said suction tube, a rubber hose comprising a suction ball mounted on the end of said suction tube, a pressure valve in the free end of said rubber hose, a rose extending from said pressure valve, a cock in said rose, an outflow tube at the front end of said bent tube, a screen in said outflow tube, and a suction valve in the same.

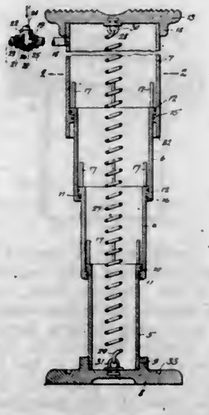
1,685,694. COMBINED WEIGHING AND DUMPING BODY FOR MOTOR TRUCKS. THOMAS R. DUNCAN, Richmond, Calif. Filed Nov. 22, 1927. Serial No. 235,054. 2 Claims. (Cl. 265—41.)



1. In a device of the character described the combination with a vehicle chassis, a body positioned thereon, a plurality of beam arms mounted on said chassis, each of said arms having a nose adapted to be moved into contact with the bottom of said body, a spring having one end secured to said chassis, means for raising and lowering the opposite end of said spring, said spring being adapted to be contacted by said beam arms, for the purpose specified.

1,685,695. SEPARATING DEVICE FOR LEAD STORAGE BATTERIES. CHARLES JEAN VICTOR FÉRY, Paris, France. Filed May 18, 1926, Serial No. 110,035, and in France May 25, 1925. 2 Claims. (Cl. 136—143.)

1. A separating device for the protection of the negative plates of lead storage batteries against the oxidizing products which become disengaged from the positive plates and against the oxygen of the air, comprising a protecting sheath surrounding the negative plates and open at the opposite ends, said sheath consisting of a material which after impregnation by the liquid in which it is immerged is impervious to gases, a partition wall arranged between the protecting sheath and the faces of the negative plates in order to form between the walls of said casing and the plate a free space for the circulation of the electrolyte around said negative plates; means for preventing the admission of the oxygen of the outer air to the upper part of the negative plates and to permit the escaping to the outside of the hydrogen which is discharged on said plate.

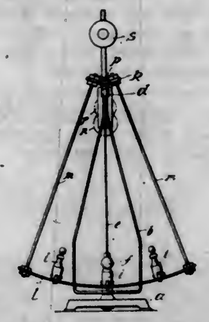


1,685,696. CLAMP. GUSTAV FRANK, Wichita Falls, Tex. Filed Oct. 11, 1926. Serial No. 141,019. 4 Claims. (Cl. 189—19.)

1. A clamp comprising a pair of elongated semi-sleeve like sections having the inner faces thereof curved concavely transversely thereof, whereby said sections are adapted to embrace the adjacent ends of substantially alined tubular members, spacer members, one of said spacer members being located within each of said sections intermediate the ends of the sections for engaging with one end of one of the tubular members to position said clamping sections on said tubular members, and retaining tongues extending from said spacer members into one of said tubular members.

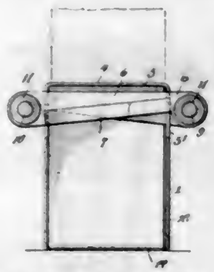
1,685,697. JACK. CORNELIUS F. GUERIN, New York, N. Y., assignor of one-half to Nathan M. Guinsburg, New York, N. Y. Filed July 30, 1926. Serial No. 126,026. 1 Claim. (Cl. 254—93.)

A jack including a plurality of telescopically associated tubular sections, the outermost sections having closed outer ends, and means for introducing fluid pressure to and exhausting the same from the interior of the sections for distending the jack and permitting of the collapsing thereof, the outer closed end of one outer section having a projecting flange formed with an annular groove



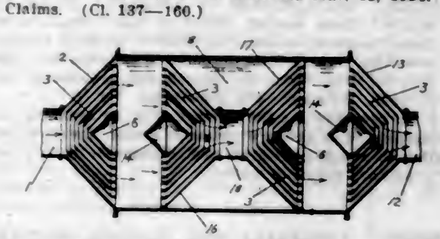
and the innermost end of the other outer section having a projecting end adapted to engage within the groove for sealing the working peripheries of the jack sections against the collection of dust, dirt, grit, or other foreign matter.

1,685,698. HALOGENIDES OF AROMATIC OXAMINIC ACIDS. JOSEF HALLER, Wiesdorf, near Cologne-on-the-Rhine, Germany, assignor to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 26, 1926, Serial No. 151,006, and in Germany Nov. 25, 1925. 9 Claims. (Cl. 260—124.)



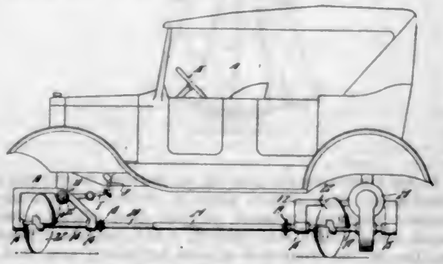
1. In processes for the production of an oxaminic acid halogenide of a primary aromatic amine, the step consisting in reacting with an oxalylhalogenide upon a salt of a primary aromatic amine.

1,685,699. APPARATUS FOR PLAYING SKITTLES. JULIUS KRAUTH, Sontheim-Heilbronn, Germany. Filed Dec. 23, 1927, Serial No. 242,209, and in Germany Feb. 1, 1927. 9 Claims. (Cl. 273—98.)



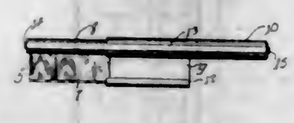
1. An apparatus for playing at skittles, comprising in combination with a base plate, a vertical frame-shaped support rotatably mounted on said base plate, a horizontal arm fixed in said support, a ball suspended pendulum-like in the front end of said horizontal arm, and a swing-like holder for the skittles oscillating perpendicularly to the swinging movement of said ball.

1,685,700. BRICK-ICE-CREAM CUTTER. CARL A. KULENKAMPFF, New York, N. Y. Filed Apr. 22, 1926. Serial No. 103,929. 1 Claim. (Cl. 107—21.)



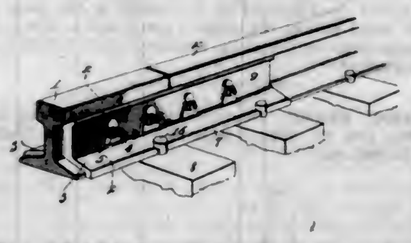
In a brick ice cream cutter, a support having slots in its top, said slots extending into the sides of the support, a knife carrier separate from the support and adapted to slide thereon, the carrier comprising members having flanged upper ends forming handles, and a plurality of cutters mounted between the upper ends of the end members, the cutting edges of the knives being inclined from one end to the other and the cutters being arranged with the edges of each individual knife inclined in one direction with alternate knives being inclined in opposite directions.

1,685,701. EXHAUST-GAS MUFFLER FOR INTERNAL-COMBUSTION ENGINES. JOSEPH BLANCHARD, Sydney, New South Wales, Australia. Filed Sept. 14, 1926, Serial No. 135,392, and in Australia Mar. 18, 1926. 5 Claims. (Cl. 137—160.)



1. A muffler comprising a cylindrical chamber with ends of truncated conical shape one of which is adapted for connection to an exhaust pipe and the other terminated in an open tail piece, a nest of concentric partition members fitted in said chamber adjacent one of its truncated conical ends and arranged in spaced relation to form concentric gas passages of different lengths, and a coned spreader plate fitted within the chamber adjacent the other truncated conical end.

1,685,702. SPIRAL DRIVE DEVICE. FREDERICK PAUL BREEN, Springfield, Mass. Filed July 11, 1925. Serial No. 43,056. 2 Claims. (Cl. 180—3.)

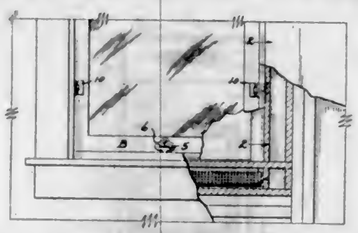


1. A drive mechanism for a motor vehicle from which the front and rear wheels have been removed, comprising frame members mounted upon the front axle spindles, other frame members of angular form mounted upon the end portions of the rear axle housings, shafts journaled within the respective frame members, spiral blades mounted on said shafts, and telescopic shafts having universal joint connections with the first named shafts at each side of the vehicle.

1,685,703. RAZOR-BLADE HOLDER. CYRUS A. CLARK, Claremont, Calif. Filed Aug. 25, 1926. Serial No. 131,472. 1 Claim. (Cl. 30—25.)

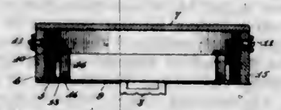
A device of the character described comprising a metal blank bent adjacent its upper extremity to define a tubular top portion and having a flap on its lower extremity, a tubular razor blade carrying member slidably positioned in the tubular portion of said blank and means carried by said blade carrying member for limiting its lateral movement relative to said blank, said means comprising a metal strip in parallelism with said tubular member and having its extremities connected thereto.

1,685,704. RAIL JOINT. ABRAHAM LINCOLN COLLINS, Sr., Amite, La. Filed Nov. 11, 1925. Serial No. 68,380. 1 Claim. (Cl. 238—181.)



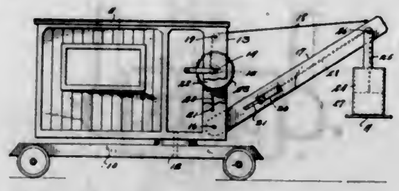
In a rail joint, two alined rails having registering notches in the meeting ends of the web portions thereof, a pair of fish plates disposed against opposite sides of the meeting end portions of said rails, said fish plates having laterally enlarged portions provided with transverse openings said enlarged portions extending down the web of the fish plate to its base and being larger at the bottom portion than at the top and the web portions of said rails having transverse openings alined with the openings of the fish plates, fastening devices extending through said alined transverse openings and clamping said fish plates to the rails, the portions of the fish plates which extend past the line of juncture between the rails being imperforate, and a solid lateral lug on the imperforate portion of one of said fish plates entering and engaging with said registering notches in the meeting ends of the rails, said fish plates having down turned flanges at their outer edges abutting the edges of the base flanges of the rails.

1,685,705. SCREEN-CLAMPING DEVICE. WILLIAM J. DUFFICY, Denver, Colo. Original application filed July 29, 1927, Serial No. 209,340. Divided and this application filed Mar. 12, 1928. Serial No. 261,111. 1 Claim. (Cl. 156—39.)



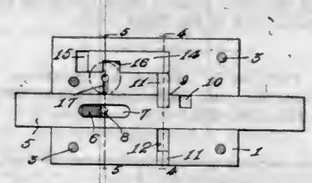
Means for holding in adjusted position a screen having one end fastened to a spring roller mounted in a window frame, with the other end of the screen detachably connected with the sash, comprising guiding strips for the side edges of the screen, one strip of each pair of guiding strips being movably arranged, manually operated

means for moving the said strip toward and away from the other strip, such means comprising an extension on each strip having an opening therein, a crank shaft jour-



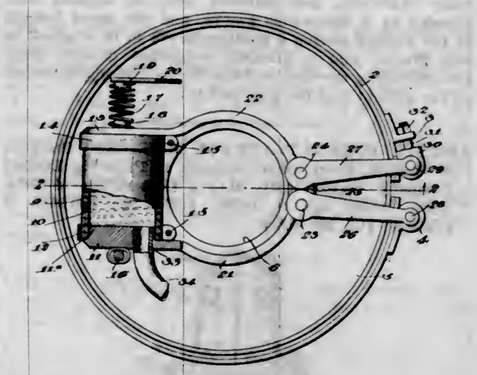
nailed in the window frame with one end engaging the opening in the extension and a handle connection with the outer end of each shaft.

1,685,706. MUSICAL INSTRUMENT. FREDERICK GRETSCH, Brooklyn, N. Y. Filed Mar. 1, 1926. Serial No. 91,527. 1 Claim. (Cl. 84—271.)



A stringed musical instrument having a bridge, and comprising a rim, a back closing one end of said rim, a plurality of right angled brackets supported within said rim intermediate the ends thereof, with the free ends projecting inwardly, a diaphragm supporting ring supported on the free ends of said brackets and within said rim, a diaphragm extended over said diaphragm supporting ring, a clamping ring spaced from the rim and surrounding said diaphragm supporting ring, means for securing said clamping ring to said brackets and over the diaphragm supporting ring whereby said clamping ring secures said diaphragm in place, a neck connected to said rim, and vibratile strings connected to said clamping ring but out of contact with said rim, and supported on said bridge and extending across the diaphragm and along the neck, and means for securing one end of said strings to said neck.

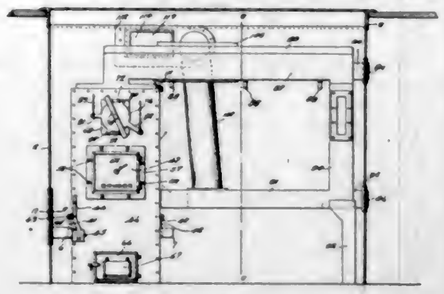
1,685,707. TOY MAGNETIC CRANE. EDWARD J. KEBBY, Schenectady, N. Y. Filed Sept. 15, 1927. Serial No. 219,723. 8 Claims. (Cl. 46—49.)



6. In a magnetic toy, a non-magnetic magnet housing, a support therefor permitting the housing to be raised and lowered, a magnet within the housing and means operable to raise and lower the magnet within the housing to thereby reduce or increase the distance between the lower end of the housing and the magnet to thus permit the magnet to transmit magnetism through the lower end of the housing and thus magnetise an object to be lifted, or by increasing said distance cause the detachment of the object from the magnet.

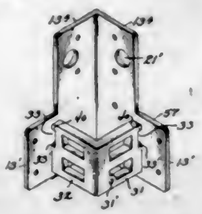
1,685,708. LOCK AND LATCH. ADOLPH KNESCH, Rule, Tex. Filed May 21, 1926. Serial No. 110,798. 1 Claim. (Cl. 70—76.)

A lock of the character described comprising a casing having a longitudinal passage formed therethrough, a bolt formed with an elongated opening and mounted for slidable movement in the passage with its ends projecting beyond the ends of the casing in a manner whereby one end provides a handle, a pin secured to the casing and extending into the opening, a coil spring positioned in the opening and having its end convolutions engaging the pin and one end of said opening for normally maintaining the bolt in a retracted position, said bolt being formed with spaced parallel notches, said casing having a vertically arranged slideway having its lower end open, said slideway communicating with the longitudinal passage, a tumbler mounted in said slideway and operable by placing a finger in said opening and adapted for engagement with either one of said notches to retain said bolt in a projected or retracted position, said casing being provided with a horizontal guide-way, a substantially L-shaped locking tumbler provided with a notch and having one arm thereof mounted for slidable movement in said horizontal guide-way, and means engageable with said locking tumbler and within the notch thereof for moving said locking tumbler in the path of the first mentioned tumbler for locking the latter in the notches of said bolt.



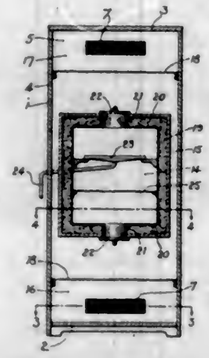
1,685,709. BRAKE. ADELBERT E. LEE, Akron, Ohio. Filed Oct. 30, 1926. Serial No. 145,281. 2 Claims. (Cl. 188—152.)

2. The combination with a brake drum and its band, of a pair of members having portions located within the brake drum and having outer end portions pivotally connected with the ends of the brake band, links connecting the members intermediate the ends of the members and constituting fulcrums for the latter, a flexible tubular member, heads closing the opposite ends of said tubular member and respectively connected with the second ends of the members, a fixed support for one of said heads, spring means acting against the other head and tending to force said last named head toward the first head, and a pressure fluid conducting conduit having communication with the tubular member, said tubular member be-



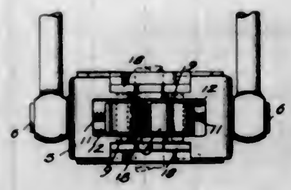
ing circumferentially reinforced, one of the members constituting an actuating lever for contracting the brake band upon admission of fluid pressure into the tubular member, and the other member constituting an anchorage for the opposite end of the brake band.

1,685,710. FURNACE. HENRY A. LEONHART, Bangor, Wis. Filed Mar. 31, 1928. Serial No. 266,285. 4 Claims. (Cl. 126—101.)



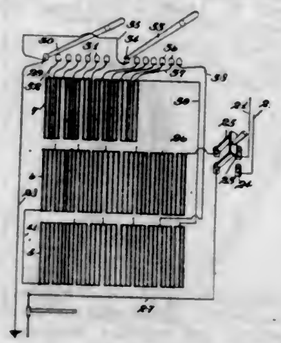
1. A heating plant comprising a fire box, a casing surrounding the fire box, and a grating arranged over the open top of the casing, a heat circulating and radiating conduit comprising a substantially U-shaped member made up of connected sections, and the upper branch of the conduit forming the top of the fire box, the lower branch of the conduit having a closed end, supporting means between the lower branch and the fire box of the conduit, legs also supporting the conduit, transversely arranged arched ribs on the under face of the upper branch of the conduit secured to the sides of the casing, longitudinally extending ribs on the top of said upper branch of the conduit, a pipe member connected to the lower branch of the conduit and having an outlet end extending through the casing, and a damper in said end, said pipe member having a substantially rectangular box-like portion extending laterally therefrom, and provided with an opening surrounded by a continuous groove, and the upper branch of the conduit having a continuous rib to be received in said groove, and a pivotally supported damper plate for controlling the opening between the said upper branch of the conduit and the pipe member.

1,685,711. CORNER PLATE FOR DERRICKS. CHARLES W. LYNCH, Perry, Okla., assignor to Pickering Lumber Company, Kansas City, Mo., a Corporation of Delaware. Filed Apr. 9, 1926. Serial No. 100,950. 5 Claims. (Cl. 20—0.5.)



1. In construction of the class described, an outer corner plate including flanges provided with apertures, an inner corner plate comprising flanges including extensions adapted to pass thru some of the apertures of the outer plates and to be secured to said plates, the corner plates being reversely positioned with reference to each other, and the inner corner plate including a slotted portion providing a shoulder, and a girt having a slotted end portion and engaging said shoulder.

1,685,712. FOOD CABINET. DRAPER TREADWAY MARSHALL, Vancouver, British Columbia, Canada. Filed Aug. 6, 1926. Serial No. 127,673. 1 Claim. (Cl. 62—31.)



A food cabinet comprising a casing having top and bottom openings for the circulation of air therethrough and provided with upper, lower and intermediate doors giving access to corresponding interior portions of the casing, the upper and lower portions of the casing being provided with shelves designed to support food or other articles therein without obstructing the passage of air through the casing, an insulated compartment occupying the intermediate portion of the casing and secured to that wall portion of the casing by which the said intermediate door is carried and being accessible through said door, said insulated compartment being spaced from the remaining surrounding wall portions of the casing to provide air flow passages connecting the upper and lower portions of the casing between which the insulated compartment is situated, refrigerant and article supporting means contained within said insulated compartment, there being openings formed in the top and bottom wall portions of the insulated compartment to permit air to pass through as well as around said compartment when outside temperature conditions are such that circulation of outside air through the casing and compartment is sufficient to preserve the articles contained therein and means for closing the openings in said compartment when temperature conditions are such as to require the use of a refrigerant therein.

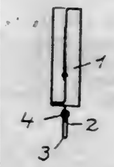
1,685,713. OIL-WELL ELEVATOR. JOSEPH F. MOODY, Tulsa, Okla. Filed Sept. 1, 1925. Serial No. 53,856. 8 Claims. (Cl. 294—91.)

1. An elevator comprising a body having a rod receiving slot, the walls of said slot being provided with grooves, wear resisting members detachably received in said grooves and extending into said slot to space the rod from contact with the walls of the slot, dogs adapted to extend into said slot for engaging a rod, and pivot elements connecting the dogs to said body, said pivot elements having their ends confined between said wear resisting members whereby the pivot elements are securely held in place.

1,685,714. RHEOSTAT. THADDEUS BAKER MOORER, Charleston, S. C. Filed Sept. 16, 1924. Serial No. 738,033. 4 Claims. (Cl. 201—48.)

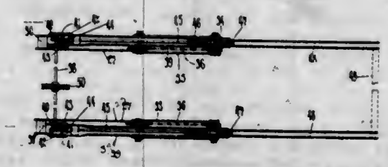
1. A rheostat comprising a succession of insulated grid sections in series connection with a series of successive sections forming part thereof provided with separate cut-out connection to successively arranged switch contact members, and a single blade switch member mounted for movement progressively to engage and connect in series said successive contact members whereby movement of the switch blade to engage said contacts is effective progressively to decrease the grid resistance interposed in the circuit.

1,685,715. DRY FUNGICIDE. EMIL MOLZ, Halle-on-the-Saale, Germany, assignor to Chemische Fabrik Ludwig Meyer, Mayence, Germany. Filed Sept. 8, 1925, Serial No. 55,170, and in Germany Sept. 24, 1924. 2 Claims. (Cl. 167—3.)



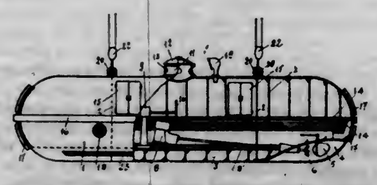
1. A dry fungicide comprising a mixture of mercury chloride and an alkaline iodide, said chloride and iodide forming mercury iodide in the presence of the water in the soil.

1,685,716. OIL-DERRICK ANCHOR. GEORGE B. MULLEN, Stroud, Okla. Filed May 17, 1926. Serial No. 109,686. 2 Claims. (Cl. 189—21.)



1. The combination with a derrick including a foundation, legs rising from the foundation, and braces connecting said legs, of anchors embedded in said foundation at the lower ends of the legs, and guy wires connected to said anchors and having portions embracing said legs at different heights of the derrick immediately above said braces, said wires crossing one another at the different sides of the derrick and being disposed in substantially the same planes with said sides.

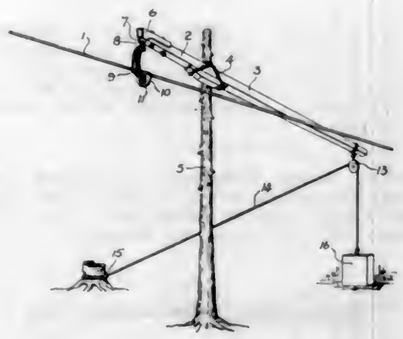
1,685,717. TUNING DEVICE. LEOPOLD MULLER, Schonbach, Czechoslovakia. Filed May 31, 1927, Serial No. 195,518, and in Germany Oct. 6, 1926. 4 Claims. (Cl. 84—456.)



3. A tuning device comprising a holder consisting of a strip of material bent into U-shape in cross-section, a series of tubes each containing a reed and having a lug at one end, and a pin passing through said holder and lug to constitute a hinged connection between each tube and the holder.

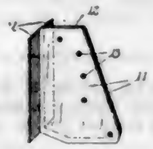
1,685,718. LEVER LINKWORK APPARATUS. ALEXANDER GEMMELL MURDOCH, London, England. Filed May 3, 1926, Serial No. 106,584, and in Great Britain May 7, 1925. 13 Claims. (Cl. 156—44.)

1. In a roller awning construction, a lever linkwork apparatus comprising a primary arm mounted to turn on a suitable support, means for turning the primary arm about its pivot, means for supporting the primary arm in any adjusted position, a secondary arm pivoted to the primary arm at a desired distance from the pivot thereof, cooperative gearing arranged at the pivotal connection between, and operatively connected to, the primary and secondary arms, and means for actuating the said gearing to cause the secondary arm to move about its pivotal connection with the primary arm for the purposes set forth.



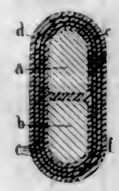
1,685,719. LIFEBOAT. DAVID S. NEILL, Genoa, Italy. Filed Dec. 17, 1927, Serial No. 240,790, and in Italy Nov. 19, 1927. 2 Claims. (Cl. 9—4.)

1. In lifeboats, a thoroughly closed hull of substantially cylindrical shape with hemispherical fore and aft ends; a suitable number of doors on the upper sides, suitable



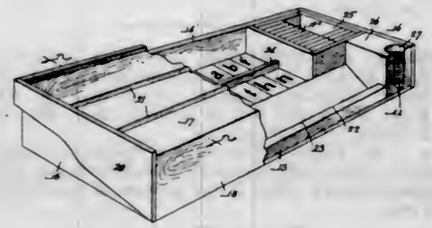
ventilator tubes and means for hermetically closing same from the interior, suitable horizontal fenders arranged towards the periphery of the largest horizontal sectional plane; a number of vertical fenders arranged stem, and sternwards and a number of outwardly projecting stirrup members arranged below the plane of the horizontal fender and supporting each of a pivoted ball-like cork-fender for ensuring the safe lowering of the lifeboats down the inclined side of a heeling ship; and suitable driving, governing, and steering means, as well as storage and other tanks and commodities as usual or prescribed in lifeboats.

1,685,720. FLOATING TENSION FOR CABLEWAYS. GUST NELSON, Vancouver, British Columbia, Canada, assignor of one-half to Frank R. Pendleton, Vancouver, British Columbia, Canada. Filed Nov. 9, 1927. Serial No. 232,143. 4 Claims. (Cl. 104—116.)



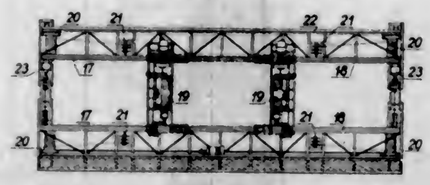
1. An intermediate support for an aerial cable track comprising a pivotally mounted cantilever having a hanger at one end by which the cable is supported, and means at the other end for applying a yielding downward tension thereon.

1,685,721. COMBINATION SAW AND SQUARE. ALBERT ADOLF NEILSON, Beachwood, N. J. Filed Apr. 12, 1928. Serial No. 269,454. 1 Claim. (Cl. 7—13.)



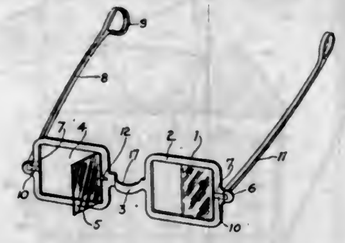
The combination with a saw comprising a handle having a kerf, a blade having one end portion in said kerf, and securing elements extending through said handle and blade, of an attachment comprising a doubled plate fitting astride said blade with its bend seating on the upper edge of the blade, the plate having side portions disposed in the kerf of the handle and provided with apertures receiving said securing elements, the side portions having outstanding flanges at their outer edges disposed at right angles to said bend, said kerf being of a width equal to the aggregate thicknesses of said blade and side portions.

1,685,722. INSULATION OF CONDUCTORS USED IN ELECTRICAL APPARATUS. CHARLES ALGERNON PARSONS and JESSEL ROSEN, Newcastle-on-Tyne, England; said Rosen assignor to said Parsons. Filed Mar. 19, 1925. Serial No. 16,835, and in Great Britain May 1, 1924. 8 Claims. (Cl. 171—252.)



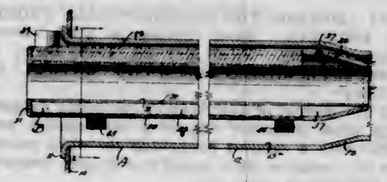
1. In combination in electrical apparatus having an electro-magnetic field, a main winding consisting of a conducting element and auxiliary windings composed of sheaths surrounding said conducting element and varying in number lengthwise thereof, said conducting element and sheaths being in inductive relation to said field as set forth.

1,685,723. GAME APPARATUS. MAY J. ROBINS, Katonah, N. Y. Filed Aug. 25, 1927. Serial No. 215,417. 9 Claims. (Cl. 273—135.)



1. A game apparatus including a box and a flanged cover, the box including a low forward wall and the cover including a deep flange at the forward side to overlap said wall and to cause the cover when removed, to rest in inclined position, the cover flanges extending upwardly above the cover edges and cooperating with longitudinally extending ribs on the cover to form word racks.

1,685,724. OVERHEAD TRAVELING CRANE FOR LIFTING RAILROAD VEHICLES. JULIUS ROSENTHAL, Cannstatt-Stuttgart, Germany. Filed Nov. 12, 1924, Serial No. 749,481, and in Germany Nov. 16, 1923. 2 Claims. (Cl. 212—11.)

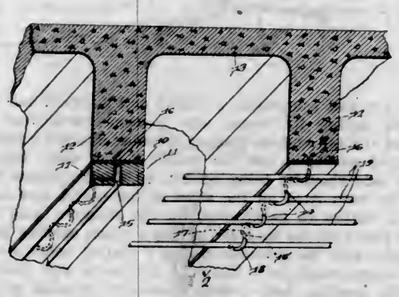


1. In an overhead traveling crane, a pair of widely spaced tracks, a substantially rectangular frame comprising trucks riding on said tracks and girders extending between the ends of said trucks and secured thereto, winches mounted in fixed positions on said girders, driving means for said winches, lifting cables secured to said winches and adapted to be wound thereon, and means for connecting said cables to an object to be raised, the space above, below, and within the inner limits of said rectangular frame being substantially unobstructed by any part of the crane.

1,685,725. SPECTACLES. FREDERICK AUGUSTUS ROWE, Vancouver, British Columbia, Canada. Filed Dec. 14, 1926. Serial No. 154,807. 3 Claims. (Cl. 88—41.)

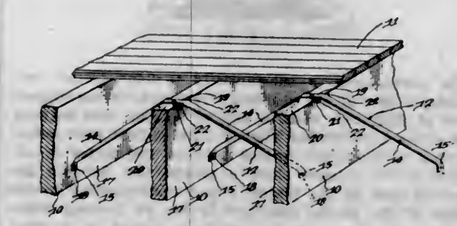
1. A spectacle comprising an eye piece in the form of an expansible rectangular frame having pintle sockets provided in the upper and lower inner edge portions of the frame, there being angularly related grooves formed in the said inner edge portions of the frame in immediate proximity to each of said sockets, and a rectangular lens having upper and lower pintles insertable in said sockets when the frame is expanded to the required extent, the edge portions of the lens adjacent to the pintles being selectively engageable in said grooves and adapted to be yieldingly retained in said grooves by the resilient gripping pressure of the frame.

1,685,726. SUPERHEATER. HARRY R. STEVENS, WILLIAM S. PARKER, FRANK W. SHUPERT, and JARED C. BENSON, Sanford, Fla. Filed Dec. 7, 1923. Serial No. 679,159. 3 Claims. (Cl. 122—462.)



1. As an article of manufacture a superheater unit comprising an inner cylindrical shaped casing, an outer cylindrical shaped casing having slots at diametrical opposed points thereon extending from one end toward the other end for the major length thereof, partition walls welded to said inner casing on the outer circumference thereof and welded in the slots of said outer casing, and means sealing the inner and outer casings at the ends thereof, said outer casing having inlet and outlet openings communicating with the space between the inner and outer casings.

1,685,727. DISPENSING APPLICATOR. ROBERT STEWART, New York, N. Y. Filed May 27, 1927. Serial No. 194,760. 3 Claims. (Cl. 215—73.)



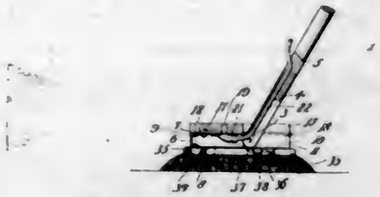
1. In combination, a container, a plug fitting within the mouth of the container and having an outlet passage therein, a closure cap rotatably mounted on the container and covering the plug, and having an opening therein adapted to be selectively aligned with the passage in the plug by rotating the cap, the cap and plug including means acting to mechanically seal the passage when the cap is in passage-closing position, said means comprising a hollow flexible nipple on the plug encircling the outer end of the passage and folded over by the cap.

1,685,728. HANGER. PETER A. STONE, Chicago, Ill. Filed Sept. 9, 1926. Serial No. 134,490. 1 Claim. (Cl. 72—118.)

The combination with a soffit of a floor construction and two parallel extending supporting bars disposed beneath the soffit and in spaced relation with respect to each other, of a supporting member disposed between the soffit and the supporting bars and spanning the upper end portion of the space between the bars and having a plurality of aligned openings formed therein, and a wire woven through said openings and providing oppositely disposed projections, certain of the projections on one side of the supporting member being adapted to be embedded into the concrete forming the soffit, the remaining of the projections being adapted to receive pencil rods for supporting lathing.

1,685,729. BRIDGING CONSTRUCTION FOR JOISTS. PETER STONE, Chicago, Ill. Filed July 27, 1927. Serial No. 208,841. 1 Claim. (Cl. 20—9.)

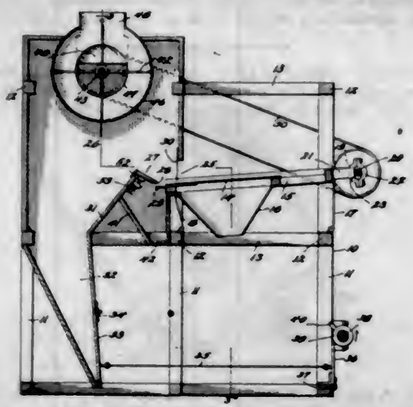
A bridging for floor joists including an elongated member having a substantially flat portion at substantially the mid point in the extent thereof, said member including substantially oval shaped portions extending outwardly from said flat portion at an angle thereto, said flat portion having ears struck from the edges thereof adapted to join said member at the juncture between said flat portion and said oval shaped portions, said ears being adapted to extend substantially at right-angles with respect to said flat portion, said flat portion being adapted to be disposed on the upper side of the joists whereby the sides of said joists may be engaged by said ears, said flat portion having an opening therein through which a securing element may be extended, and substantially flat portions at the free ends of said oval shaped portions adapted to extend at an angle



with respect to said oval shaped portions, said last named flat portions having openings provided therein through which securing elements may be extended whereby said member may be secured to the sides of joists juxtaposed said first named joist.

1,685,730. GUN. GEORGE W. TIPPETTS, Spanish Fork, Utah. Filed June 28, 1926. Serial No. 119,152. 1 Claim. (Cl. 124—14.)

A toy gun comprising a barrel and a stock, and said barrel having its upper edge grooved throughout the length thereof, and merging, at its inner end into a slightly inclined shoulder, and the groove for a short distance from said shoulder being beaded, an elastic element having its ends fixed on the sides of the barrel and carrying a button to be received on the shoulder, said gun, in a line with the shoulder having a round opening therethrough and the shoulder having a central notch extending therethrough in a line with the outer wall provided by the opening, and a cross sectionally rounded pin designed to be received through the opening and the notch to contact with the button when the latter rests on the shoulder and an arched flexible guard having its ends secured to the gun and to which the pin is centrally connected.



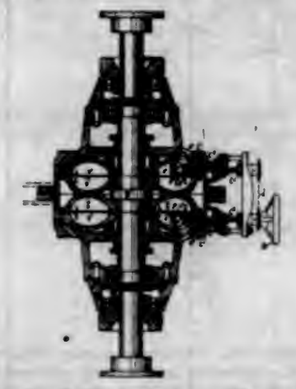
1,685,731. MOP. CLAIR TREVENA, Bellevue Hill, near Sydney, New South Wales, Australia. Filed Mar. 3, 1927, Serial No. 172,512, and in Australia Apr. 6, 1926. 1 Claim. (Cl. 15—124.)

In combination, a substantially V-shape frame comprising a pair of flat spaced apart plates having aligned slots at their rear ends, a pair of spacing bars between the plates adjacent the aligned slots, a fluid inlet nozzle located in the space formed between the plates in advance of the aligned slots, a spacing bar between the forward ends of the plates, a pad corresponding to the shape of the plates, said pad having an opening registering with the nozzle, a handle supported on a pivot mounted in the spacing bars and extending across the plane of the aligned slots, and means carried by the handle to supply fluid to the nozzle.

1,685,732. SEPARATOR FOR CORNCOBS AND THE LIKE. CHARLES C. TRUAX, Columbus, Ohio. Filed Oct. 21, 1924. Serial No. 744,963. 7 Claims. (Cl. 209—35.)

1. An apparatus for separating shelled corn, husks and the like particles from corn cobs, comprising in combination, a vibratory sieve for separating the shelled corn, a chamber arranged at the tail end of said sieve and having an opening through which the remaining material passes from said sieve into the chamber, an upwardly directed incline arranged in said chamber adjacent said opening and the tail end of said sieve so that the cobs are required to pass upwardly over the same upon entering the chamber, a settling chamber into which the upper end of the incline delivers, and means for creating

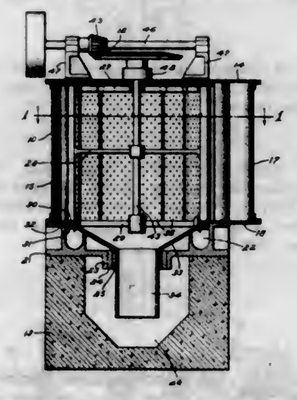
a forced draft up said incline to lift the cobs over the same to permit them to drop into the settling chamber and to simultaneously draw off the husks and like particles.



1,685,733. METHOD FOR PURIFYING GASES. GEORG FRIEDRICH UHDE, Bovinghausen, Germany. Original application filed Feb. 6, 1926, Serial No. 86,635, and in Germany Feb. 9, 1925. Divided and this application filed Apr. 15, 1926. Serial No. 102,305. 3 Claims. (Cl. 23—2.)

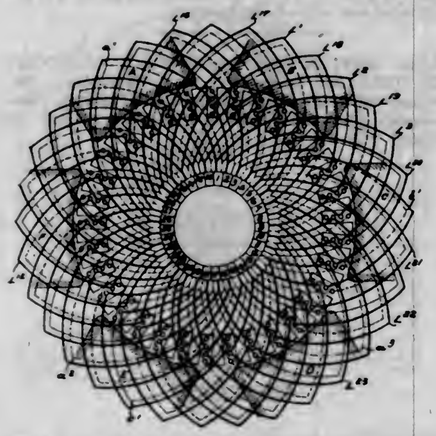
1. The process of purifying gases which comprises intimately contacting the gas to be purified with alkali forming metals dissolved in amides of alkali forming metals.

1,685,734. METHOD FOR SYNTHETICALLY PRODUCING AMMONIA. GEORG FRIEDRICH UHDE, Bovinghausen, Germany. Filed May 28, 1926, Serial No. 112,409, and in Germany June 4, 1925. 3 Claims. (Cl. 23—198.)



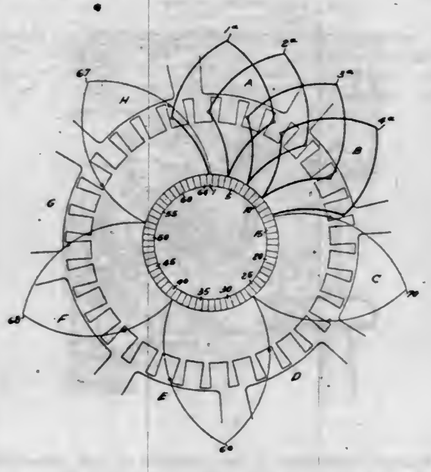
1. In the process of synthetically producing ammonia, the step which comprises contacting the ammonia forming gases with a catalyst comprising the dried reaction product of a complex alkali metal iron cyanide compound with a hydrolizable metal salt.

1,685,735. HYDRAULIC DYNAMOMETER. GEORGE HENRY WALKER, Worcester, England, assignor to Heenan & Froude Limited, Worcester, England. Filed Mar. 31, 1927, Serial No. 180,019, and in Great Britain Sept. 1, 1926. 5 Claims. (Cl. 188—90.)



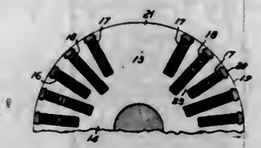
1. In a hydraulic dynamometer of the type referred to having pockets formed between the vanes of the stator and rotor the combination with said vanes of depth controlling devices arranged in said pockets and means for moving said devices radially, whereby the radial depth of water forming the vortex in the pockets can be positively regulated independently of the rate of supply of water to the pockets.

1,685,736. MACHINE FOR PAPER-MAKING PROCESSES. HAROLD D. WELLS, Glens Falls, N. Y. Filed Sept. 9, 1927. Serial No. 218,534. 6 Claims. (Cl. 92—36.)



1. In a machine of the class described, a casing for the stock, a rotor arranged within the casing, said rotor being of hollow construction, closed at the top and having an outlet at the bottom, said rotor having a perforated side wall which serves as a filtering means, and said rotor having sealing strips adapted to move in contact with the side walls of said casing.

1,685,737. DYNAMO-ELECTRIC MACHINE AND WINDING THEREFOR. GEORGE M. ALBRECHT, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed June 5, 1926. Serial No. 113,904. 20 Claims. (Cl. 171—206.)

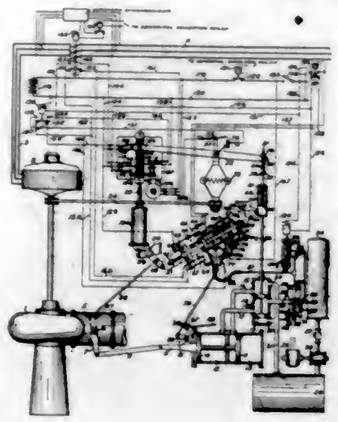


14. A winding for a multipolar dynamo-electric machine having an odd number of pairs of poles, including a lap type winding reentrant an even number of times, and a wave type winding interconnected with said lap winding.

1,685,738. DYNAMO-ELECTRIC MACHINE AND WINDING THEREFOR. GEORGE M. ALBRECHT, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed July 6, 1926. Serial No. 120,573. 14 Claims. (Cl. 171—206.)

6. A winding for a multipolar dynamo-electric machine, including a multiply reentrant lap type winding reentrant an odd number of times, and a wave type winding interconnected with said lap winding.

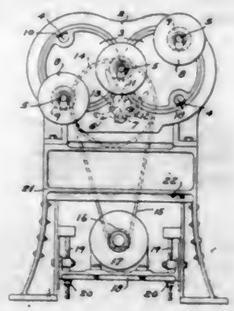
1,685,739. ROTOR FOR DYNAMO-ELECTRIC MACHINES. ARTHUR J. BROWN, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed July 18, 1921. Serial No. 485,652. 6 Claims. Cl. 171—252.)



1. In a dynamo-electric machine, a rotor comprising a core provided with radially extending peripheral slots of substantially the same width and different depths, and a winding disposed in said slots, adjacent slots containing different total cross-sectional areas of said winding, and winding elements in one slot being connected in series relation with winding elements in the adjacent slot.

1,685,740. PRIME-MOVER DYNAMO PLANT. RALPH H. EARLE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed June 18, 1924. Serial No. 720,721. 42 Claims. (Cl. 290—7.)

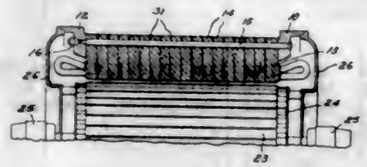
1. In combination, a prime mover, means for automatically starting said prime mover including, a gate, means for initially causing said gate to admit operating fluid to said prime mover, and means for again closing said gate if predetermined abnormal conditions involving the starting operations obtain.



13. In a system for antomatically starting a prime mover having a gate for admitting operating fluid thereto, a generator driven by said prime mover, means for connect-

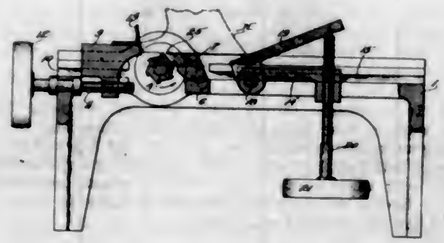
ing said generator to a distribution system, means for operating said gate, means for predetermining the maximum gate opening during a portion of said starting period,

and means responsive to the operation of said connecting means for changing the predetermined maximum gate opening.



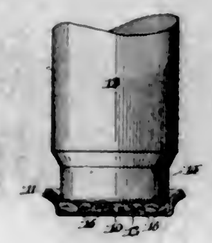
1,685,741. CANDY-PULLING MACHINE. WALTER GEIST, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 22, 1925. Serial No. 51,796. 14 Claims. (Cl. 107—30.)

3. In combination, a pair of rotary disks, a roller movable by and periodically transferable from one of said disks to the other, a support carried by said roller, and a pin carried by said support, said pin being freely removable from said support.



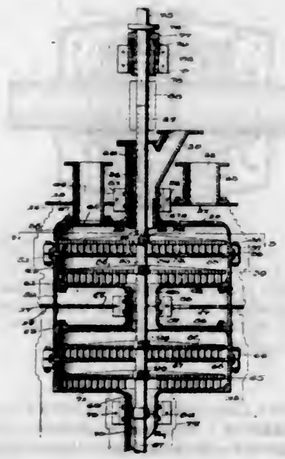
1,685,742. CORE FOR ELECTRICAL APPARATUS. EDGAR C. GEORGE, Norwood, Ohio, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 27, 1926. Serial No. 157,043. 11 Claims. (Cl. 171—252.)

2. In a core for electrical apparatus, assembled core laminæ provided with circumferentially spaced peripheral enlargements, enlargements on several laminæ being axially alined, thin spacers between the peripheral enlargements of certain adjacent ones of said laminæ, and clamping means for said laminæ associated with the peripheral enlargements of said laminæ and said spacers and effective to clamp said laminæ in assembled condition with a



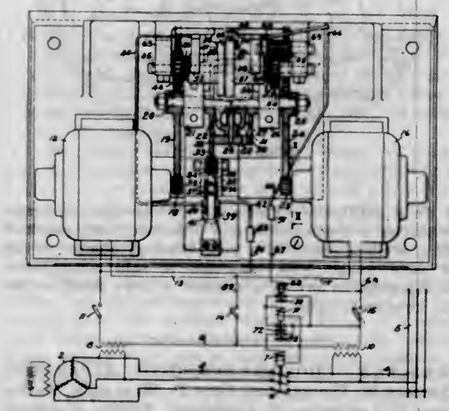
less degree of compression between the normal flux-carrying portions of said laminæ than between the peripheral enlargements thereof.

1,685,743. HEEL-DROPPING MACHINE. NICHOLAS LEWIS GUILFORD, Peabody, Mass., assignor to Gregory & Read Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 17, 1924. Serial No. 744,282. 11 Claims. (Cl. 12—46.)



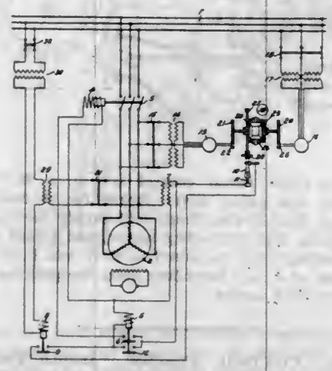
1. A heel dropping mechanism comprising a cutter; a work rest adjacent said cutter occupying a fixed and immovable position with relation to the latter, and heel engaging means adjacent said work rest for tilting the heel to cause the cutter to engage the breast end portion of the heel seat of a heel and bevel the same when the heel is slid on said work rest toward said means.

1,685,744. BOTTLE SEAL AND METHOD OF FINISHING THE SAME. JACKSON O. HAAS, Philadelphia, Pa.; Gertrude M. Haas executrix of said Jackson O. Haas, deceased. Filed Dec. 18, 1926. Serial No. 155,643. 12 Claims. (Cl. 215—39.)



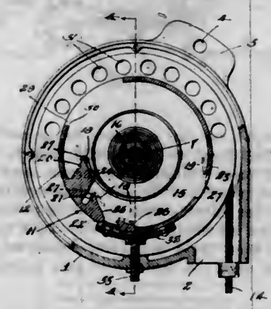
1. A cork seal having its surface abraded and its pit holes or pores stopped with the pulverulent cork resulting from the abrasive action.

1,685,745. REVIVIFYING FURNACE. JOSEPH HUNT HOLT, Wilmington, Del., assignor to Darco Corporation, Wilmington, Del., a Corporation of Delaware. Filed Feb. 14, 1927. Serial No. 168,194. 5 Claims. (Cl. 263—26.)



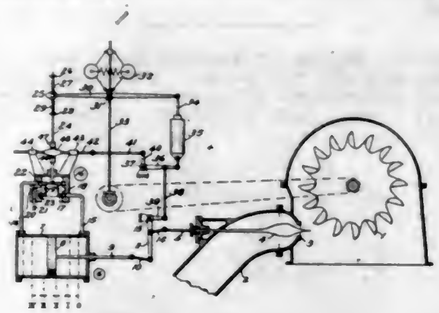
1. Apparatus for the revivification of decolorizing carbon or the like comprising a plurality of metallic cylinders of relatively large diameter, connecting portions of materially less diameter extending between the cylindrical portions, hearths formed with apertured portions disposed within the cylinders, and stirring means positioned within the cylinders adjacent the hearths.

1,685,746. SYSTEM OF DISTRIBUTION. HENRY V. NYE, West Allis, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 1, 1924. Serial No. 753,229. 12 Claims. (Cl. 171—118.)



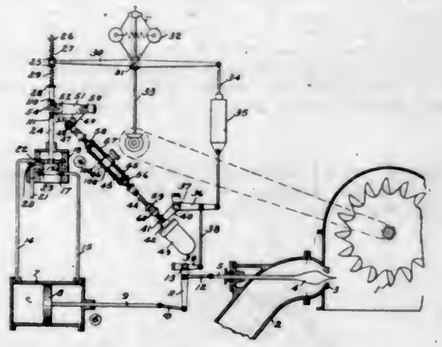
1. In a system of alternating current distribution, an alternating current generator, means responding to the frequency of said generator, means responding to the frequency of said system, means differentially responsive to both said frequency responsive means, additional means effectively actuated by said frequency responsive means in response to substantial equality of phase thereof, and means for connecting said generator to said distribution system in response to effective joint actuation of said differentially responsive means and said phase responsive means.

1,685,747. SYSTEM OF DISTRIBUTION. HENRY V. NYE, West Allis, Wis., assignor to Allis-Chalmers Company, Milwaukee, Wis., a Corporation of Delaware. Filed Mar. 3, 1924. Serial No. 696,487. 14 Claims. (Cl. 171—118.)



3. In a system of A. C. distribution, an A. C. generator, a synchronous motor fed by said generator, another synchronous motor fed by said distribution system, differential gearing driven by said motor, means for actuating an electrical contact in response to said gearing when the speed of said first named motor is a predetermined amount less than that of said second named motor, and means whereby said contact is maintained in its actuated position as long as the speed of said first named motor remains above said speed required for said actuation of said contact.

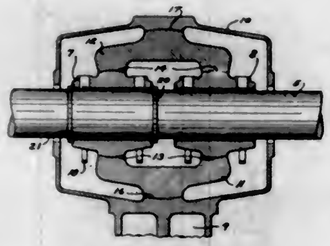
1,685,748. COUNTERBALANCING DEVICE. HAROLD G. PEDERSON, Syracuse, N. Y. Filed Dec. 30, 1924. Serial No. 758,857. 7 Claims. (Cl. 242—98.)



1. In a counter-balancing device, the combination of a case, a shaft mounted therein, a reel mounted on the shaft, a coil spring having one end secured to the frame and its other end anchored to the reel and a load supporting cable winding on the reel, the reel having means located different distances from the axis of the reel for attaching the outer end of the spring thereto.

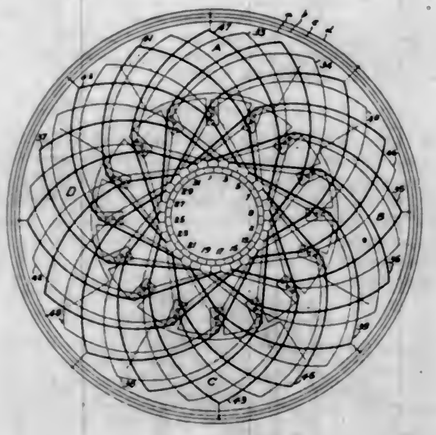
1,685,749. CONTROL SYSTEM. ARNOLD PFAU, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 8, 1924. Serial No. 754,538. 12 Claims. (Cl. 121—42.)

1. In a prime mover control system, a fluid supply means for said prime mover, means for controlling the amount of fluid flowing from said supply means, means for operating said controlling means, and means whereby said operating means is caused to move said fluid controlling means at a rate dependent upon the position of said fluid controlling means.



1,685,750. CONTROL SYSTEM. ARNOLD PFAU, Milwaukee, and BENJAMIN GROB, West Allis, Wis., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 26, 1924. Serial No. 758,277. 24 Claims. (Cl. 121—42.)

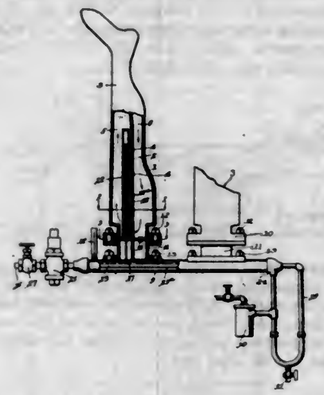
1. In a control system, a device to be moved, means for transmitting force to move said device, means for operating said force transmitting means, and means including means positioned in accordance with said operating means for causing said operating means to apply a predetermined maximum impulse to said transmitting means and to then cause the latter means to move at a rate dependent upon the position of said latter means.



1,685,751. BEARING. ARNOLD PFAU, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Jan. 19, 1925. Serial No. 3,272. 2 Claims. (Cl. 308—72.)

1. In combination with a horizontal shaft which is subjected to lateral end loads and an intermediate load, of bearings coacting with said shaft between said intermediate load and each of said end loads, each of said bearings comprising a pair of independent longitudinally tiltable bearing elements coacting with said shaft directly adjacent to each other and a support formed to

permit relative vertical displacement of said adjacent elements, and means for preventing longitudinal displacement of said shaft in either direction relative to one of said elements of each bearing.



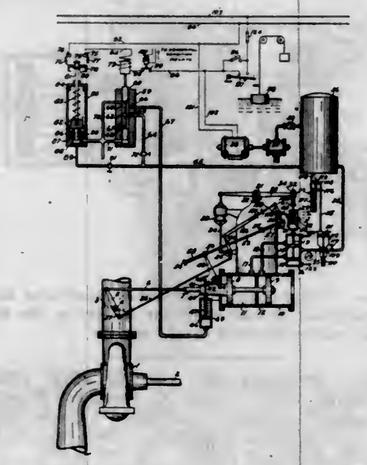
1,685,752. DYNAMO-ELECTRIC MACHINE AND WINDING THEREFOR. WILLIAM H. POWELL, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed July 29, 1926. Serial No. 125,666. 8 Claims. (Cl. 171—206.)

2. In a multipolar dynamo-electric machine, an armature having a commutator, said armature being provided with a winding including a predetermined number of lap and wave wound coils connected to said commutator, said commutator having a number of bars equal to the total number of coils.

1,685,753. HOSIERY-FINISHING APPARATUS. THOMAS W. PROSSER and JOHN H. WAHLBECK, Kankakee, Ill., assignors to Paramount Textile Machinery Co., Chicago, Ill., a Corporation of Illinois. Filed May 6, 1926. Serial No. 107,165. 9 Claims. (Cl. 223—17.)

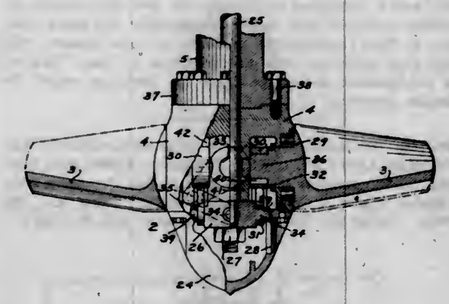
1. A drying-structure including a drying-form hollow to contain a secondary heating agent adapted to impart heat through its walls to hosiery superposed thereon, a conduit for containing a primary heating agent operatively connected to and in communication with the interior of the form, and an extension of the conduit extending into the form for conveying the primary heating

agent from the conduit into the form to heat the walls of the extension and thereby heat the secondary heating agent in the form.



1,685,754. METHOD OF RECOVERING SULPHUR DIOXIDE FROM WASTE GASES. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed July 14, 1923. Serial No. 651,591. 2 Claims. (Cl. 23—178.)

1. A process which comprises discharging the hot digested contents of a sulphite digester into a blowpit, passing the hot sulphur dioxide and vapors liberated in the blowpit in direct contact with and in counter-flow to cold water supplied in amount so that the largest fraction of sulphur dioxide is cooled without being absorbed and passes on in a cooled condition for absorption while a substantial recoverable fraction is absorbed and remains in solution in the resulting hot effluent water; and recovering the sulphur dioxide from the hot effluent water.

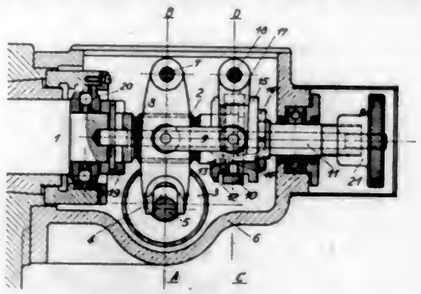


1,685,755. CONTROL SYSTEM FOR PRIME MOVERS. JOSEPH J. RING, Milwaukee, and CARL SCHINDLER, West Allis, Wis., assignors to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 22, 1923. Serial No. 682,212. 38 Claims. (Cl. 137—158.)

1. In combination, a prime mover, means for controlling the admission of operating fluid to said prime mover, a governor, responsive to the speed of said prime mover, for said controlling means, including a servo-motor and a regulating valve therefor, means for holding said regulating valve in a position corresponding to the closed position of said controlling means, means for releasing said holding means including a fluid pressure operated device, an electromagnetically operated valve for controlling said fluid pressure operated device, a source of fluid under pressure including an electrically operated pump, means responsive to said fluid under pressure for controlling said electromagnetically operated valve, and means responsive to a predetermined condition for controlling said electromagnetically operated pump and said electromagnetically operated valve.

15. In combination, a prime mover, means for controlling the admission of operating fluid to said prime mover, a fluid pressure operated motive device for operating said admission controlling means, a source of supply of fluid under pressure other than said operating fluid, a connection between said source and said motive device, a regulating valve for controlling the movements of said motive device interposed in said connection, a shut-off valve interposed in said connection between said regulating valve and said source, and means responsive to the fluid pressure of said source for causing said shut-off valve to close at a predetermined minimum pressure.

1,685,756. ROTOR. JOSEPH J. RING, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed June 3, 1926. Serial No. 113,398. 5 Claims. (Cl. 253—148.)



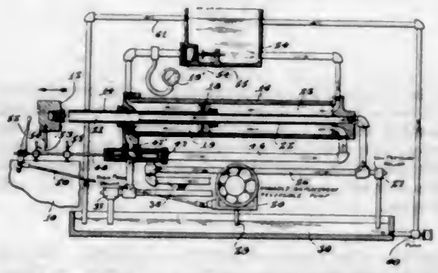
1. In combination, a hub having a chamber therein, a cap normally enclosing said chamber, said cap having guideways therein, a plurality of vanes pivotally associated with said hub, a block movable within said cap, rollers for guiding said block along said guideways, and motion transmitting mechanism connecting said block and said vanes.

1,685,757. CIRCULAR GRINDING MACHINE. WALTER STORCK, Berlin-Halensee, Germany, assignor to Ludw. Loewe & Co. Aktiengesellschaft, Berlin, Germany, a Corporation of Germany. Filed Mar. 5, 1926, Serial No. 92,437, and in Germany Sept. 4, 1925. 5 Claims. (Cl. 51—34.)

1. In a circular grinding machine or the like, a machine frame, a reciprocable grinding wheel spindle mounted therein, a lever pivotally mounted in said machine

frame, means operatively connected to said spindle and engaging said lever for imparting oscillating movement thereto, and means transferring oscillating movement of

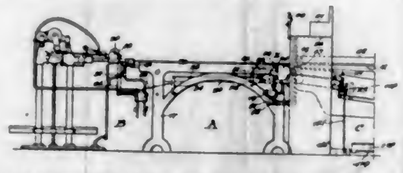
said lever to said spindle, said means comprising adjustable mechanism on said shaft for regulating the extent of the movement imparted to said spindle.



1,685,758. PREPARATION OF BETAINE HYDROCHLORIDE, ETC. DONALD K. TRESSLER, Pittsburgh, Pa., assignor to Larrowe Construction Company, Detroit, Mich., a Corporation of Michigan. Filed July 13, 1925. Serial No. 43,396. 8 Claims. (Cl. 260—112.)

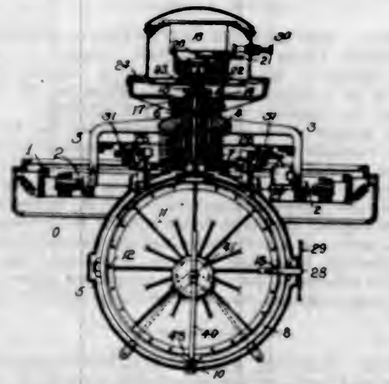
1. The method of treating concentrated residual liquors of beet molasses which comprises adding a mineral acid and a soluble chloride to the concentrated liquors.

1,685,759. DIFFUSION REACTION. HANS WALTER, Mainz-Mombach, Germany, assignor to Verein für Chemische Industrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation. Filed May 1, 1926, Serial No. 106,103, and in Germany May 22, 1924. 3 Claims. (Cl. 260—116.)



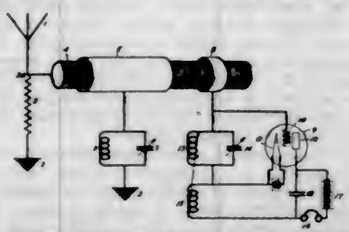
1. The art of causing reactions between different gases or mixtures of gases that react but slowly in simple mixtures, which comprises separating the two gas volumes by a porous partition and under substantially the same pressures, so that the diffusion tendency of both volumes will cause their entrance into the partition to react therein, and the product to emerge from the partition under its diffusion pressure.

1,685,760. HYDRAULIC DRIVE FOR BROACHING MACHINES AND THE LIKE. DONALD H. WEST, New London, Conn., assignor to The J. N. Lapointe Company, New London, Conn., a Corporation of Maine. Filed Mar. 26, 1924. Serial No. 702,054. 22 Claims. (Cl. 60—52.)



1. A hydraulic drive for a reciprocating element, having in combination, a pump, having a predetermined output; a cylinder with piston, constituting an expansible chamber; a rod extending through the chamber, rigidly connecting the piston to the said reciprocating element and arranged to pull said element on the working stroke; and a cylinder of smaller cross section than the net cross section of the said chamber through which said rod extends, said smaller cylinder being arranged to effect the return stroke, whereby for the same predetermined pump output the return is more rapid.

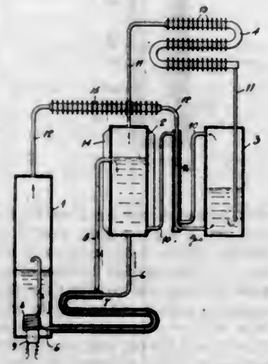
1,685,761. INSPECTING APPARATUS. ALBERT BROADMEYER, Harrisburg, Pa., assignor to The W. O. Hickok Manufacturing Company, Harrisburg, Pa., a Corporation of Pennsylvania. Filed Apr. 28, 1926. Serial No. 105,173. 48 Claims. (Cl. 214—11.)



2. In apparatus of the character set forth, the combination with a supporting frame, of a plurality of lamps located therein, endless carrier belts operating over said lamps, an automatic feeder delivering to the belts at one end, and means for supporting an inspector above the carrier belts and adjacent to the other end.

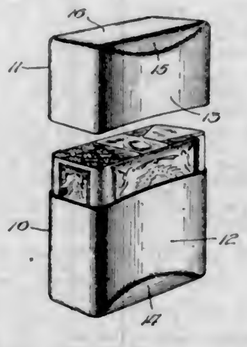
1,685,762. LATITUDE INDICATOR. ERIC C. SPARLING, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed June 27, 1925. Serial No. 39,926. 5 Claims. (Cl. 33—204.)

1. A latitude indicator, comprising a gyroscope, means for mounting the same in neutral equilibrium for oscillation about a horizontal axis and for turning about a vertical axis, a repeater compass, and yielding means supporting said gyroscope from said repeater compass for applying a torque about the vertical axis of the gyroscope.



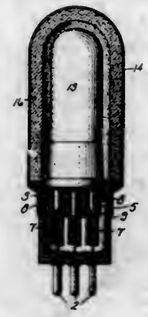
1,685,763. RADIO RECEIVING SYSTEM. LOUIS COHEN, Washington, D. C. Filed May 11, 1923. Serial No. 638,257. 2 Claims. (Cl. 250—20.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. In a radio receiving signalling system wherein the signals are received on a high resistance untuned antenna



circuit, means for transmitting the effect produced on the said antenna to a wave coil electrically associated with said antenna, an indicating instrument electrically associated with the said wave coil for detecting said signals.

1,685,764. REFRIGERATOR. BALTZAR CARL VON PLATEN and CARL GEORG MUNTERS, Stockholm, Sweden, assignors, by mesne assignments, to Electrolux Servel Corporation, a Corporation of Delaware. Filed Oct. 1, 1925, Serial No. 59,907, and in Sweden Apr. 20, 1925. 14 Claims. (Cl. 62—178.)

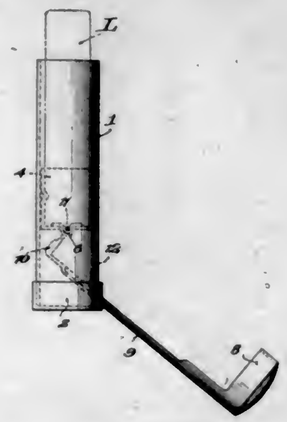


1. Method of refrigerating which comprises evaporating a condensable cooling agent in the presence of a non-condensable gas; absorbing the non-condensable gas in absorption liquid and separating the cooling agent; condensing the cooling agent; heating the absorption liquid to separate therefrom the non-condensable gas; and again evaporating the cooling agent in the presence of the non-condensable gas.

1,685,765. CIGARETTE-PACKAGE HOLDER. MICHAEL J. MANGAN, Des Plaines, Ill. Filed Nov. 30, 1923. Serial No. 677,599. 2 Claims. (Cl. 206—41.)

1. A cigarette holder comprising in combination a resilient body section open at one end only, and adapted to accommodate a package of cigarettes, the side walls being concave to yieldingly grip said package intermediate their vertical corners, and a resilient metal cover section adapted to fit over and to grip said body section near the vertical corners thereof, said cover having a bulged out portion having transverse edges to afford a grasping surface when pulling said sections apart.

1,685,766. SUPPORT FOR VACUUM TUBES. JAMES H. MOSHER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 2, 1926. Serial No. 113,321. 2 Claims. (Cl. 250—27.5.)



1. In combination, a cup-shaped member provided with a plurality of projecting terminals, a socket flexibly mounted in said member and adapted to support an electric discharge device, means electrically connecting said socket and terminals, and a cap mounted on the cup-shaped member and adapted to substantially enclose said electric discharge device, said cap being provided with means adapted to substantially prevent transmission of vibrations therethrough.

1,685,767. ADAPTER FOR VACUUM TUBES. CLARK R. PHIFFER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 23, 1926. Serial No. 124,503. 3 Claims. (Cl. 173—344.)

1. In combination, a cup-shaped member provided with a plurality of projecting terminals, a socket adapted to support an electric discharge device, said socket being spaced from and flexibly supported in said cup-shaped member and provided with a plurality of openings, contacts mounted in said openings and electrically connected to said terminals, and means independent of said flexible support for limiting the longitudinal movement of the socket member when a discharge device is inserted in or withdrawn from the socket.

1,685,768. LIP-STICK HOLDER. ARTHUR H. NOBLE, Pawtucket, R. I., assignor to Theodore W. Foster & Brother Company, Providence, R. I. Filed Dec. 10, 1926. Serial No. 153,814. 2 Claims. (Cl. 206—56.)

2. In a lip stick holder, a slotted body having a slotted closure on one end thereof which slots register, a lip stick carrier slidable in the body, a closure slidable on the opposite end of the body and having an arm formed with a slot, said arm being slidable in said slots, and means to hingedly connect the arm to the carrier.

1,685,769. LIP-STICK HOLDER. ARTHUR H. NOBLE, Pawtucket, R. I., assignor to Theodore W. Foster & Brother Company, Providence, R. I. Filed Dec. 10, 1926. Serial No. 153,815. 2 Claims. (Cl. 206—56.)

2. In a lip stick holder, a tubular body having a closed end, an open end and a longitudinal slot, a closure for the open end slidable on the body, a lip stick carrier slidable in the body, an arm carried by the closure and a connection between the arm and carrier extending through the slot and secured to a side of the carrier and hingedly mounting the arm, said slot terminating adjacent to the open end of the body and having said terminal engageable with the connection to limit outward movement of the carrier.

Pharmaceutical products. W. Schoeller, A. Feldt, M. Gehrke, and E. Borgwaldt. 1,685,342; Sept. 25.
Phonograph. D. D. Mounts. 1,685,433; Sept. 25.
Phonograph and radio apparatus, Combined. J. W. Bishop. 1,685,394; Sept. 25.
Photographs, Production of colored. W. F. Fox. 1,685,281; Sept. 25.
Pipe connection. G. Egloff and H. P. Benner. 1,685,483; Sept. 25.
Pitcher or similar article. R. E. McEldowney. Des. 76,409; Sept. 25.
Placard and holder therefor. W. K. Auchincloss. 1,685,080; Sept. 25.
Planning stormproof zones around or through wood districts. E. Stock. 1,685,343; Sept. 25.
Planter attachment, Cotton-. O. E. Morris, G. E. Crumrine, and W. Grounds. 1,685,554; Sept. 25.
Plaster board, Reenforced. C. O. Walper. 1,685,254; Sept. 25.
Plastic compounds, Manufacture of. G. E. Zelger. 1,685,443–4; Sept. 25.
Plate. E. L. Schnepf. Des. 76,426; Sept. 25.
Plate or similar article. W. H. Tams. Des. 76,433; Sept. 25.
Playing skittles, Apparatus for. J. Krauth. 1,685,699; Sept. 25.
Plow, Hillside. C. W. Ladd. 1,685,365; Sept. 25.
Plow, Self-leveling wheeled. J. H. Groenke. 1,685,321; Sept. 25.
Plow, Tractor. B. R. Benjamin. 1,685,267; Sept. 25.
Plug, Electric attachment. G. Lipschutz. 1,685,608; Sept. 25.
Plug, Flashing. N. Abramson. 1,685,515; Sept. 25.
Pot: *See*—
Tinning pot.
Potato digger. T. Giberson. 1,685,230; Sept. 25.
Pouch, Game. J. W. Rich. 1,685,243; Sept. 25.
Power transmission. C. R. Nichols. 1,685,371; Sept. 25.
Preparation of fur for shrinking and felting. J. H. Martin. 1,685,168–9; Sept. 25.
Preparing spinach and the like for canning. W. E. Thomas. 1,685,511; Sept. 25.
Press: *See*—
Printing press.
Press for drawing sheet metal. G. W. Berry. 1,685,308; Sept. 25.
Pressure-responsive instrument of the Bourdon spring type. D. C. Lamb. 1,685,457; Sept. 25.
Printed fabric. J. H. Gardner. Des. 76,387; Sept. 25.
Printing press. L. H. Morse. 1,685,611; Sept. 25.
Pulley, Magnetic. P. J. McCullough. 1,685,498; Sept. 25.

Tool, Machine. W. W. Potter. 1,685,556; Sept. 25.
Tool, Oil-well. G. D. Watson. 1,685,472; Sept. 25.
Tool, Scraping. L. B. Shultz. 1,685,380; Sept. 25.
Towel-bar bracket. J. H. Balmer. Des. 76,369; Sept. 25.
Toy baseball game. M. J. Lowry. 1,685,428; Sept. 25.
Toy body formed of sheet material. I. Berger. 1,685,594; Sept. 25.
Toy magnetic crane. E. J. Keedy. 1,685,707; Sept. 25.
Toy, Spark-producing. C. Arnold. 1,685,412; Sept. 25.
Toy speed boat. C. R. Buchet. 1,685,350; Sept. 25.
Toys with changing pictures, Interchangeable transparent disk on spark-producing. C. Arnold. 1,685,411; Sept. 25.
Track for sliding sashes. R. I. Eustis. 1,685,535; Sept. 25.
Track sprinkler. W. H. Whalen. 1,685,581; Sept. 25.
Tractor. G. W. Engstrom. 1,685,279; Sept. 25.
Tractor. H. H. Linn. 1,685,676; Sept. 25.
Tractors, Side-draft control for. W. L. Paul. 1,685,375; Sept. 25.
Traffic button or signal. D. H. Durand. 1,685,449; Sept. 25.
Train-control apparatus. T. E. and J. E. Clark. 1,685,479; Sept. 25.
Transmission. A. Y. Dodge. 1,685,523; Sept. 25.
Transmission, Gear. C. R. Nichols. 1,685,461; Sept. 25.
Transmission system. E. V. Griggs. 1,685,357; Sept. 25.
Trap: *See*—
Insect trap.
Trap doors, Holding means for car-vestibule. A. A. Constantine. 1,685,124; Sept. 25.
Tray and making same. A. Barchoff. 1,685,116; Sept. 25.
Tray, Vanity. L. Levien. 1,685,237; Sept. 25.
Treating coke and products. C. L. Waggoner and F. B. Thacher. 1,685,654; Sept. 25.
Treating hats and the like. R. H. Oakes. 1,685,199; Sept. 25.
Treating material and making same, Liquid-. A. Schreier. 1,685,204; Sept. 25.
Treating pearl chips and product. G. H. Gebhardt. 1,685,451; Sept. 25.
Treating polluted acid wastes, Process and apparatus for. J. T. Travers. 1,685,300; Sept. 25.
Treatment of polluted wastes. J. T. Travers. 1,685,301; Sept. 25.
Trestle beams, Foldable horse for. J. G. Davis. 1,685,668; Sept. 25.
Trestle, Collapsible. J. P. Gibson. 1,685,283; Sept. 25.
Trimming, Narrow woven. C. S. Wackerman. Des. 76,440; Sept. 25.
Trolley-wire clamp. S. S. Matthes. 1,685,431; Sept. 25.
Truck wheel, Motor-. J. D. Rauch. 1,685,294; Sept. 25.
Trussed structure. G. H. Dawson and H. F. Frease. 1,685,353; Sept. 25.
Trussed structure. H. G. Treglilus. 1,685,107; Sept. 25.
Tube: *See*—
Thermionic tube. Vacuum tube.
Tube-drawing plug. J. Kemp. 1,685,636; Sept. 25.
Tubing, Making finned. H. W. Bundy. 1,685,270; Sept. 25.
Tubing, Method and apparatus for making. H. W. Bundy. 1,685,269; Sept. 25.
Tuning device. L. Muller. 1,685,717; Sept. 25.
Turbine, Hydraulic. W. M. White. 1,685,261; Sept. 25.
Typewriter. J. M. Angeletti. 1,685,391; Sept. 25.
Universal joint. G. W. Benedict. 1,685,446; Sept. 25.
Universal joint. W. H. Thiemer. 1,685,509–10; Sept. 25.
Vacuum-cleaner attachment. W. S. Simpson. 1,685,299; Sept. 25.
Vacuum tube, Thermionic. J. D. Jordan. 1,685,326; Sept. 25.
Vacuum tubes, Adapter for. C. R. Phiffer. 1,685,767; Sept. 25.
Valve. E. U. Siena. 1,685,298; Sept. 25.
Valve and gas-meter protector, Special sliding trapdoor. R. Salbador. 1,685,683; Sept. 25.
Valve, Fluid-pressure-control. J. M. Larson. 1,685,286; Sept. 25.
Valve for gaseous-fuel burners, Control. H. H. Dodge. 1,685,275; Sept. 25.
Valve-operating mechanism. F. A. Whitten. 1,685,582; Sept. 25.
Valve plate, Warpless. D. Sandford. 1,685,615; Sept. 25.
Valve pump. J. M. Streich. 1,685,650; Sept. 25.

Valve, Tire. W. P. Porter. 1,685,376; Sept. 25.
Vapors, Recovery of. R. T. Osborn. 1,685,501; Sept. 25.
Vegetable cutter. C. Russo. 1,685,245; Sept. 25.
Vehicle body, Closed. A. E. Northup. Des. 76,410; Sept. 25.
Vehicle drive. H. H. Linn. 1,685,641; Sept. 25.
Vehicle light. J. S. Anderson. 1,685,622; Sept. 25.
Vehicle stop. M. Stockov. 1,685,467; Sept. 25.
Vehicle suspension. C. F. Rodin. 1,685,205; Sept. 25.
Vending jar and base, Combined. O. Y. Schnering. Des. 76,427; Sept. 25.
Vending machine, Coin-detecting. J. H. Mann, jr. 1,685,550; Sept. 25.
Ventilator for chimneys. A. McDonald and W. O. Smith. 1,685,170; Sept. 25.
Voltage regulator, Induction. H. R. West. 1,685,656; Sept. 25.
Wagon, Separable tractor dump. W. J. McVicker and A. R. Sandt. 1,685,171; Sept. 25.
Walking beam, Derrick. W. R. McDowell. 1,685,238; Sept. 25.
Wall construction. G. Allen, jr., and F. C. Simpson. 1,685,591; Sept. 25.
Watch dial or similar article. S. D. J. Yuen. Des. 76,445; Sept. 25.
Water heater. F. H. McCormick. 1,685,642; Sept. 25.
Water heater, Electric. E. T. P. Kopatz. 1,685,364; Sept. 25.
Water motor, Gravity. M. D. Hays. 1,685,285; Sept. 25.
Water system. J. A. Smith. 1,685,099; Sept. 25.
Wear plate and centering device for draft-rigging keys for railway cars, Combined. S. L. Joiner. 1,685,455; Sept. 25.
Weather strip. D. H. Harnly. 1,685,324; Sept. 25.
Wedding ring. J. Granat. Des. 76,388–90; Sept. 25.
Weighing and dumping body for motor trucks, Combined. T. R. Duncan. 1,685,694; Sept. 25.
Welding arc, Stabilizing and modifying the metallic. J. B. Green. 1,685,082; Sept. 25.
Wheel: *See*—
Truck wheel.
Wheel structure, Vehicle. J. W. Holt. 1,685,130; Sept. 25.
Wheels, Apparatus for forming. C. L. Wilber. 1,685,513; Sept. 25.
Wind vane. F. Luipersbek. 1,685,134; Sept. 25.
Winding and unwinding yarns or threads. E. J. Abbott. 1,685,390; Sept. 25.
Wire, Insulated. E. A. Mau and O. F. Hutchinson. 1,685,369; Sept. 25.
Work holder. G. L. Ljunglof. 1,685,167; Sept. 25.
Woodworking machine. O. Onsrud. 1,685,572; Sept. 25.
Woodworking machine. O. Onsrud. 1,685,613; Sept. 25.
Wrapper for coins and the like. M. B. Sonne. 1,685,649; Sept. 25.
Wrapping machine, Bread-. H. F. Beehman. 1,685,146; Sept. 25.
Wrench: *See*—
Adjustable wrench. Socket wrench.

CLASSIFICATION OF PATENTS

ISSUED SEPTEMBER 25, 1928.

NOTE.—First number=class, second number=subclass, third number=patent number.

1— 3: 1,685,504
2— 23: 1,685,452
33: 1,685,091
43: 1,685,477
123: 1,685,305
187: 1,685,586
198: 1,685,190
248: 1,685,243
3— 2: 1,685,290
4— 67: 1,685,152
1,685,153
1,685,250
149: 1,685,180
236: 1,685,088
